ANY WEEK

APPARENTLY some mention ap-  
peared in this column about Benito  
Mussolini's future. As we remember  
it, a promoter was inquiring about the  
proper authorities to see in further-  
ance of his desire to make a wrestler of  
poor Musso and putting him on the  
Kansas City circuit. We are now  
reprimanded for publishing that. Mr.  
Gino Fontana of Philadelphia, Penn-  
sylvania, writes, "Can't you even wait  
till we catch the tramp before you  
make a bum out of him?"

AND Mr. Bill Repass of Houston,  
Texas, has just informed us that the  
fabulous Peck Kelley is now in the  
Army. Mr. Kelley is a pianist. A  
couple of years ago his story was told  
in this magazine. He has been credited  
by most of the best dance-band leaders  
as the greatest swing piano in the world.  
But what made him more remarkable  
was his philosophy. He had turned  
down offers of thousands of dollars  
to play with famous name bands. He  
preferred to work in his home town,  
Houston, for fifty dollars a week.  
"What good is money if you have to  
earn it some place you don't want to  
be?" demanded Peck. So now, at the  
age of forty-four, the Army has taken  
Peck. We've listened to him play.  
Maybe he's a little old to be a Ranger.  
Maybe he hasn't the stamina of a kid.  
But we suggest that they move Peck  
and his piano to a spot where the  
enemy can hear but not shoot him.  
Let Peck do his stuff—swing Johann  
Sebastian Bach. He'll stop the enemy  
in his tracks, stiffen him, Jap or Nazi.  
Trouble is that he'll probably stop our  
guys too.

WE'VE received nearly a thousand re-  
quests for the solution of the mathe-  
matical equation that Square-root Sam  
killed a Jap submarine with, in Jacland  
Marmur's short short story, Problem  
At Sea. And the demands are still pil-  
ing up. We're thinking of sending in  
one ourself. We're pretty sure that we  
won't understand it because we began  
to flunk in math right after we were  
graduated from long division at, we  
seem to recall, the age of eighteen. But  
we're more and more impressed by the  
scientific talents of a large number of  
readers who, scorning to ask for  
Square-root Sam's solution, have

worked it out to suit themselves. We're  
not only impressed, we're more con-  
fused, because no two of those who  
have solved it without the skipper's  
assistance agree on how it was done.  
But then we gave up when we read the  
Problem Editor's note at the bottom of  
Mr. Marmur's story: "All you need is  
a knowledge of simple calculus and  
plane geometry and patience." We  
have knowledge of none of these, as  
we've already explained. For years  
we were defeated by the simple prob-  
lem of where to find our pencil when  
eager to make a note of something. We  
licked that by carrying ten or twelve  
of them. You just can't lose ten or  
twelve pencils all at once, particularly  
if you keep them in separate pockets.  
Anyway, the demands for the solution  
of Square-root Sam's problem are still  
rolling in.

IF WE had had the courage to try an  
independent solution, we'd have tended  
toward the answer given by an officer  
candidate at one of our best Army  
schools. No sooner had General Ike  
Eisenhower's troops descended upon  
North Africa and begun to sweep east,  
than officer instructors began to badger  
the aspirants with such questions as:  
"Hitler's on a spot. What would be  
your tactical solution of his problem?"  
We are informed by a friend of ours  
who hopes soon to be a lieutenant that  
one of his classmates, after some heavy  
pondering, replied to the instructor,  
"Sir, if I were Hitler I'd be sort of look-  
ing around."

BUT that young man will probably  
wind up as we did. Way, way back in  
1917, our captain, Dick Coleman, sent  
us to an officers' training school. Cap-  
tain Coleman just had to send some-  
body, it being a matter of company  
pride to graduate some member out of  
the ranks into a commission. We didn't  
want to go—honest. But we reported  
to a gruff old warrior, Colonel Taylor.  
The Colonel took a look. "Well, Cor-  
poral, what is it?" he demanded, looking  
up from his desk. We told him that  
we'd been ordered to report for officer  
training. He looked again, hard and  
long. Finally he sighed, went back to  
his reading, saying, "Good God! Very  
well, Corporal. Report to Sergeant  
Lowell!" . . . W. D.

MORE AMERICANS  
DISCOVER TREASURE ON

VICTOR  
RECORDS

Now, when there is no room in our crowded  
days for anything but the finest in music,  
more and more people are remembering that  
"The World's Greatest Artists Are On Vic-  
tor Records." What has been a household  
axiom for years suddenly takes on special  
meaning, becoming a guide post to the ulti-  
mate in musical achievement. If you are not  
yet a Victor devotee, pay a visit to your  
nearest dealer and let him show you the great  
variety of music that is yours to take home  
and enjoy on Victor Records!

BEETHOVEN'S SUPERB  
FOURTH CONCERTO

Artur Schnabel, authoritative interpreter of  
Beethoven piano music, makes his first Amer-  
ican recording, on Victor Records. With the  
late Frederick Stock and the Chicago Sym-  
phony Orchestra, he performs the noble  
Fourth Concerto which won him such suc-  
cess at Ravinia Park last summer. Don't  
miss this rich musical experience! Album  
DM-930 . . . . . \$4.50\*

OTHER GREAT MUSIC

The immortal strains of Brahms' First Sym-  
phony in a majestic interpretation by Arturo  
Toscanini and the NBC Symphony. An un-  
forgettable Victor album to commemorate  
the great maestro's 75th anniversary. Al-  
bum DM-875 . . . . . \$5.50\*

To cherish as a collector's piece . . . Tschai-  
kowsky's vital Fourth Symphony, performed  
with rare genius by Leopold Stokowski con-  
ducting the NBC Symphony Orchestra. Al-  
bum DM-880 . . . . . \$5.50\*

STEPHEN FOSTER ALBUM—ten of the  
great American composer's best-loved songs  
... homey as doughnuts... sentimental as a  
valentine. Richard Crooks sings them, as-  
sisted by the Balladeers. Album M-354.

## KEEP UP WITH THE WORLD

By Freling Foster

The greatest shock ever experienced by the people of the Christian world was the discovery and announcement, during the Middle Ages, that men did not lack a rib, as everyone had been led to believe for centuries by the biblical story that Eve was created from a rib of Adam.—By Marguerite Gray, Plainfield, New Jersey.

While the Christmas card business has grown tremendously since such greetings were introduced in this country in 1875, it will be phenomenal this year because so many men and women are away from home in the services. Conservative estimates place the 1942 sale at 1,200,000,000 cards which will cost, with postage, about \$60,000,000.—By Ruth Smith, Brooklyn, New York.

After 122 years of international fame as "the tree that owns itself," the Jackson oak in Athens, Georgia, collapsed from old age on the night of October 9, 1942, and is now "lying in state" in the city stockade. In 1820, its owner wrote a deed conveying to the tree full possession of itself and the land on which it stood.—By Mrs. Forrest Additon, Flowery Branch, Georgia.

During the 1,300-odd performances that have been given by the Broadway cast of the play Life With Father, the roles of the four sons, whose ages are supposed to be seven, ten, fourteen and seventeen, have been played by a total of fifteen boys, so far, because they keep outgrowing their parts.—By Wanda Lee, Waterloo, Iowa.

The 85,000 diathermy machines in the United States are now registered with the Federal Communications Commission, because they not only seriously interfere with radio communication but because they may be used as high-power radio transmitters to send short-wave messages in code.

A new deodorant is said to be so powerful that it will kill any bad odor within thirty seconds. The compound is intended for use in zoos, fish markets, dog pounds, chemical works, public rest rooms and other places having distinctive aromas. It is also useful in the home for the elimination of stale tobacco smoke and food odors.

In a federal court, it is better to be sentenced for "one year and a day" than for "one year." With the longer sentence, the prisoner may have six days a month deducted for good behavior and be paroled after he has served one third of his time. With the shorter sentence, he may have only five days a month deducted and is not eligible for parole at all.—By John Fraser, El Reno, Oklahoma.

On July 31, 1942, the Soviet government created three new and exalted orders to be awarded to army officers for extraordinary achievements, one of these decorations being named in honor of Alexander Nevsky, a canonized saint of the Russian Orthodox Church.

Kansas is the only state in which males and females, when married, attain their majority at the age of eighteen years and then revert to minority, until they are twenty-one, if one partner dies or the couple is divorced.—By Judge Ellis Fink, Winfield, Kansas.

During the sessions of the first 75 Congresses of the United States, held between 1789 and 1938, 726,933 bills and joint resolutions were introduced in both Houses, yet only 60,142, or one in twelve, were ever enacted.

Five dollars will be paid for each interesting or unusual fact accepted for this column. Contributions must be accompanied by satisfactory proof. # There's a Heavy Production Schedule at the Willard Battery Plant . . . . and **TRUCK-TRAILERS HELP MAINTAIN IT!**

☆ Check virtually every type of our Army and Navy mobile equipment . . and you'll likely find Willard Storage Batteries doing some vital job. They're doing scores of extraordinary tasks for essential industries as well.

So it's easy to see why Willard production must keep right on schedule . . and Willard depends on Truck-Trailers to help maintain that schedule!

Take the delivery of battery boxes, for example. Many of the boxes used at the main plant in Cleveland come from Chicago . . thousands of boxes a day. That's a lot of bulk, so, with limited storage space, promptness and flexibility of delivery are of the greatest importance.

That's why, two years ago, they began using Fruehauf Trailers for this difficult haul. Several Fruehauf Trailers, each carrying 10 to 12-ton loads (but pulled by economical 2 to 3-ton trucks) make the 350-mile, door-to-door run in 15 hours . . . right on time-table schedule.

There's another important advantage for Willard, too. Fruehauf Trailers handle the loads so smoothly that an average of only 1 box in each 1,000 is damaged.

Thousands of companies in scores of kinds of war work are finding that Fruehauf Trailers do the difficult hauling jobs more efficiently and economically.

*World's Largest Builders of Truck-Trailers*  
**FRUEHAUF TRAILER COMPANY • DETROIT**  
*Sales and Service in Principal Cities*

## **TRUCK-TRAILERS** CONSERVE RUBBER, STEEL AND GASOLINE

A Truck-and-Trailer combination uses about 16% less weight of tires and 25% less steel than do the two trucks required to carry the same payload. Also, tires on Trailers run from 70,000 to 80,000 miles, while similar tires on the trucks pulling these Trailers run only 40,000 to 60,000 miles. And—a truck, with a Trailer, uses far less fuel than one large truck or several small trucks it replaces.

# **FRUEHAUF Trailers**

"ENGINEERED TRANSPORTATION" REG. U. S. PAT. OFF.

TRUCK-TRAILER TRANSPORT IS DOING AN ESSENTIAL JOB FOR ALL AMERICA

## *Convert*

**Your Present Trucks Into  
Tractors to Pull Trailers!**

Since any truck, pulling a Trailer, can haul for more than it is designed to carry, you can convert your trucks into tractors and make them do 2 to 3 times as much work as they've been doing. Conversion is simple and inexpensive. Ask your Fruehauf Branch about it.

**KATHLEEN NORRIS**

RIGHT 1942 BY KATHLEEN NORRIS

thought old times and old ways  
e best. But she was too wise a  
nan not to buy a piece of the future

✓OU'VE enlisted in the Navy? How do you mean you've enlisted  
in the Navy?" Adele Cazavant asked quietly.

Her son Sidney, tall, lean, twenty-two, answered her as quietly.  
"I wanted to," he said, simply.

"You wanted to?" She made each word a separate question. "Didn't  
know that Dad and Mr. Converse and Mr. Wilkins in Washington  
all getting you a job there?"

"I knew they were trying to," said young Sid. He had hung one leg  
the arm of the chair and was now cupping his hands before his face  
e lighted a cigarette.

"Then please tell me why, when your father and two influential men  
e trying to get you a job in Washington, you enlisted in the Navy?"

"Well, I wanted to," Sidney repeated. And he added thoughtfully,  
seemed a good investment."

Adele looked at her son suspiciously. Was he making fun of her?  
loved all three of her children, but this tall boy in tennis shorts, with  
old flannel shirt open at his round, brown, hard young throat and his  
hair tumbled, was the very heart of her heart. He would not joke  
out a thing like this.

"You think America's future is a pretty good investment?" Sid asked  
h his big white-toothed smile.

"I think your father will never permit you to enlist in the Navy,"  
ele countered. She would not get agitated about this until she had  
ced to Phil. "'A good investment!'" she echoed, half amused and  
f impatient; "and going into the Navy because 'I wanted to!'"

Yet even at this moment of uneasiness she realized that when any one  
the Cazavants had wanted to do anything or have anything in the last  
ppy years, their arguments had been exactly these. First, they had  
nted to do it. And second, it had been a good investment.

Adele's mink coat was bought when fur was cheaper than it had  
en in years. If she had waited another year or two to buy it, she would  
ve had to pay twice as much. Having the children's portraits painted  
is another wise investment; fine canvases were always valuable. The  
rtraits of Diana, Sid and Topsy looked down on the piano that Adele  
d bought because the big room looked so "lonesome" without a piano.  
had had a ridiculous square piano in it for fifty years; the man at  
hurman & Kelly's had convinced Adele that in the long run a new  
ano, and a concert grand at that, would cost less than repairs to the  
d one.

To do without was never the Cazavant way. So they bought

ILLUSTRATED BY  
WALTER KLETT

Adele knew fairly well the  
muddy, rambling lanes, and  
she found the Kinney house.  
Dogs and goats were hold-  
ing high carnival in the yard

everything they wanted and did everything they wanted to do and were simple and unaffected about it; nobody ever felt any resentment or had any opportunity to accuse them of ostentation.

This sort of thing went on for years and years, and there seemed no end to the Cazavant luck. Phil's Aunt Diana died and left them the handsome old place on Garden Hill; Adele spent a part of Aunt Diana's legacy in making over the old place—new furnace, tennis court, brick terrace on the northeast level of the garden.

"Anything that makes a home attractive to children," Adele said simply, "is not an extravagance. Phil says that it is the very best sort of investment."

Some of Adele's friends grew a little restive under this explanation as the years went by.

"Doesn't Adele's luck make you tired?" they sometimes asked one another patiently; or even, "Doesn't Adele give you a pain?"

ONE sorrow, however, common to all motherhood, Adele could not escape. Time would not stand still. The Cazavant children were children no longer. In the dark year of nineteen-forty-one Diana was twenty-four, Sidney two years younger, and Topsy an eager, gypsyish, independent, stubborn seventeen. They had been growing steadily more expensive in their tastes as they grew older, of course. "But kids aren't kids forever," Philip Cazavant and his wife told each other; "it's all a good investment."

Even after Pearl Harbor, Adele said firmly that she did not intend to let the mere fact that the country was at war change her way of living. She would do all she could in the way of relief, of course, but she had no respect for women who became hysterical over blackouts, who talked of taxes and money and upset their whole domestic routine for no reason at all. All the unpleasantness and change of which such women were so fearful was not going to happen.

When Diana joined the Civilian Defense Corps, ridiculous as that phrase sounded, and had to be in the city, thirty miles away, every third day, marking things on a large chart and taking telephone messages, Adele was somewhat startled, but not distressed. Checking the passage of airplanes over the city must be important or they would not make such a fuss about it.

The problem about Topsy had nothing to do with war; it was merely a part, Adele would concede, sighing, of children growing up. The family had gone to the lake as usual for the summer, except for Phil and Diana, who had their jobs to keep them in town, and Topsy, who had been crazy over horses and riding and stables and hunts and races since actual babyhood, had fallen in love with Art Atkins, the little English groom.

Unfortunately, Art's father was owner and proprietor of the Palo Sola stables in Atherton, so that the affair had not ended with the ending of the summer, as it should have. Art, with his faintly Cockney accent, his checked tweed coat, his friendly bright eyes, was now working with his father, only a few miles away, and Topsy managed to slip off nearly every day for a meeting with Art at the stables. All the peninsula's nicest girls went there and kept their horses there; still, Adele was uneasy about her.

So there were two worries, not very serious yet, but disturbing. Diana should

be at home in her twenty-fifth year, helping her mother with committee meeting and dinner parties, falling in love with some nice man, announcing an engagement. And Topsy should not be thinking of love affairs at all.

Other worries were smoldering too. Adele smothered them with plain common sense. Let Phil mutter as he liked about changed business conditions and hint at necessary economies; Adele would maintain the ship of home on an even keel. Her husband and children should have a serene and comfortable place to which to return from contact with the harassed world, and the best of service and food to sustain them. That was her business and she intended to attend to it strictly and continue to make a success of it.

Sidney might be drafted? Yes, but he was not drafted, and he would have his Washington appointment long before there was any talk of his being drafted. Diana would fall in love with someone entirely eligible. Topsy would forget her infatuation; she was only a baby. And as for Phil's business, well, it had weathered bad times before and it would again.

When Phil hinted that they might let one of the maids go, when and if Sidney got his Washington appointment, Adele was adamant.

"Darling," she said patiently, "we have lots in the bank. Your business is going along nicely. And we need three maids. Do be reasonable, Phil."

Adele felt that she was reasonable. That is, she had always felt so until this sober, heavy, darkening October afternoon, when young Sidney came into her room with the news that he had enlisted in the Navy.

"Will you be in Washington?" she asked.

"Might be," Sid answered lightly.

"Your father," Adele said, half to herself, "will see that you are in Washington. You know that Congressman Wilkins is getting you a comfortable berth there."

"But that's all off now," Sidney said.

She looked at him, a faint flush rising to her soft cheek. She had controlled all this little boy's activities once; was she going to be able to save him still?

AH, HERE was Phil. She stretched out a hand to him and raised her face for his kiss, before he sank wearily into a big chair near her couch.

"Sid," he said, nodding at his son. "Tired out, eh, Mommy?"

"I did a little too much today. Red Cross Committee and lunch at Georgie's. Then Cousin Sally in the hospital, and home about an hour ago, dead."

She smiled at him a moment, and then, her face growing serious, looked at Sid. "Sidney's enlisted in the Navy," she said. "Will that complicate matters?"

Philip Cazavant gave his son a startled glance. "When did you do that?" he demanded.

"This afternoon."

"Couldn't wait for Wilkins, eh?"

"No; it wasn't that, Dad. I simply had to get in."

His father repeated this phrase thoughtfully. "Simply had to get in. I suppose so. I suppose so."

"Are you sorry?" the boy asked.

"No, no." But there was a note of sorrow, of longing, in his father's voice that gave Adele her first twinge of alarm.

"But Mr. Wilkins will go right on, Phil? He'll still work for Sid's getting a berth in Washington?" she asked.

"Not now, dear," Philip Cazavant said.

"We're at war; I've enlisted," Sid repeated, an accent on the last word.

"You mean you simply can be ordered

Diana joined the Civilian Defense Corps, marking things on a large chart and taking telephone messages

(Continued on page 43)

# The Real Thing

by Elizabeth Decker

DORIE CRANDALL pressed the tissue to her lips lightening the shade of her mouth to the proper degree, and pushed the drawers of her dressing table shut. She stood up and gave her gown a last look.

Outside the windows the cicadas shrilled in the summer night, and in her mind's ear Dorie heard the sound of dance music across the lawn. The same sense of excited anticipation that she had felt all week swept over her as she laid her wrap on the bed. She sat down, reached for the phone, dialed a number.

When the phone clicked she said, "Helen? Hello. You're ready I'll be by for you in five minutes. Did you get the gardenias?"

Helen's voice sounded more purposeless than usual. "Oh, yes, I got them. And the pins and ribbons. We've got a lovely night and I'm ready, too."

As she hung up, Dorie smiled at the impression of efficiency that Helen's voice gave her. Nevertheless she knew that it was Helen who always remembered the many details so necessary to the success of Camp Night at the club. It was Helen who saw to it that the War Bonds went on sale promptly at midnight, whose vigilance prevented many a shy soldier from getting stuck in a group of dull people; and when the orchestra played Good Night, Ladies, it was Helen who made sure that the camp busses left with the right number of men in them.

As Dorie slipped on her wrap she realized suddenly that Helen was the only female she could spend more than an hour with and not feel the inevitable animus that the beauty of one woman can create between two. Not only that, Helen was the only friend she had had since Willa Fenwick had become so strange. Dorie found herself remembering the Christmas ball when Willa, home from college with her fiancé, had ended their friendship so abruptly. Dorie knew that some of the cattier members of Burkesport society had blamed her—Dorie—for what had happened, but good heavens, she'd naturally pay some attention to the man who was engaged to her best friend! Dorie shrugged her shoulders. It was perfectly obvious why Willa's romance had gone to smash. Willa was most unattractive anyway, and had made such a fool of herself that night crying and carrying on.

WITHIN five minutes Dorie's car stopped in front of Helen's house. Helen was coming down the walk, the box of flowers under her arm and, Dorie noticed, wearing a new black gown. Her rather undistinguished face and hair looked quite pretty but as usual some vital element, needed to complete the enchantment, was missing. Dorie didn't try to figure out what it was. It was hard for Dorie, so rich in beauty, to understand the lack of it in someone else.

"You look pretty gorgeous, my friend," said Dorie as Helen got in.

Helen laughed. "I know," she said, "but it took so long to achieve it. Hours on my hair alone. It's awful business trying to look pretty and besides, the dress doesn't look right unless I hold my breath." She lit cigarettes for them both. "You're doing all right yourself," she grinned. "The wicker-chair ladies will have something to say about that dress you're wearing." Dorie made a face at the mention of the wicker-chair ladies, those women whose age and lack of charm had placed them in the chaperon's row and who never failed to shoot little stilettos of malice at Dorie's person. Too many of their sons had nearly flunked out of school mooning over the incomparable Dorie. Too many of their husbands turned to butter under the gaze of Dorie's dark brilliant eyes. But for all the male attention Dorie had received, love had never really touched her. Until now.

Leaving town and turning out onto the highway, Dorie felt grateful for the changes that Pearl Harbor had made in her life. The Burkesport Country Club had initiated a Camp Night for the officers and men of the Air Corps stationed there. Camp Night was always an occasion. But tonight was special because on the Thursday before, it had happened that Dorie met a man. Not just a man, that's true. The man. Lennie.

That was why Dorie found she liked the sound of the cicadas that had droned every summer she could remember. That was why she found pleasure in Helen's gown. That was why Dorie was born. She knew

it. One week before, she had seen a man and had felt stirred for the first time. He was young, but that was nothing. So was Dorie. He was beautiful, too. Beautiful in the way he walked, in the way his head was held. His voice had the sound of a man still remembering his boyhood but his manner was that of a soldier—crisp, efficient, like the expert pilot he was. His eyes disarmed Dorie most of all. They looked out with candor, friendliness and a curious knowing.

As Dorie and Helen walked up the clubhouse steps, a batch of soldiers leaning against the porch railing made appreciative sounds. "There's your usual claque," laughed Helen, and Dorie felt her cheeks grow hot in the hope that Lennie was around and would see the demonstration. In the dressing room Helen busied herself getting the gardenias ready for the hostesses while Dorie stood before the long mirror and thought of Lennie. Oh, Lennie, she breathed to herself, I knew it the minute I saw you. You can go anywhere, I don't care, I'll wait. I'll wait. Forever.

Dorie and Helen made their way across the club lounge giving out the official flowers. When they reached the dance floor Dorie looked quickly among the uniforms for Lennie. Helen went to the kitchen to confer with Papa Gee, the Chinese cook who had served the club for thirty years.

Dorie danced an eternity with endless uniforms of the Air Corps. She smiled, laughed, responded, reacted, and behaved so bewitchingly the entire contingent stood about waiting for a decent interval to elapse so they might cut in and hold Dorie again in their arms. Still there was no Lennie, and Dorie began to feel ill. She suddenly remembered a horrible possibility. Perhaps Lennie had been shipped out. Perhaps he was even now on a transport. He might be going to his death without ever knowing that the beautiful Dorie loved him!

She found herself facing four officers each outdoing the other with outrageous compliments. Somehow she managed to keep a wooden smile on her face in spite of the anxiety she felt. As she stood there numb with fear she heard Lennie's voice piercing through the chatter about her, intimate and intense. And sweet.

"Of all the times in my career to get special duty it had to be last week. I thought of you often, though. I want to see you," he laughed, "again and again."

At last he had come, and more than that, seemed to know that she had been waiting all her life for him. Weak with relief and happiness Dorie turned. Behind her stood Lennie looking both serious and pleased. And before him looking up into his lean face was Helen, transfigured, almost beautiful. . . .

## HOLLYWOOD CANTEEN

By Bette Davis

**T**HE Hollywood Canteen was created with one idea in mind—to give the men in the Armed Forces fun and a chance to meet personally the people of the entertainment world in Hollywood.

Much has been publicized about the lack of co-operation, due to jealousies and countless other reasons, of the people of Hollywood. We have proved that this is not true—that the people of Hollywood can work together in harmony for a common cause with no thought of self—only with the objective in mind.

For those of us—painters, carpenters, laborers, electricians, actors and actresses—forty-two unions and guilds in all—this co-operation has been thrilling. We feel that the loyalty and unselfishness that has gone into our Canteen is a great tribute to the people in the entertainment industry of Hollywood, and also a tribute to their faith in the American way of life. ★★★

Glenn Anders, well-known legitimate actor now in Hollywood, daily supervises refuse cleanup at the Canteen, waits on table at night. Hedy Lamarr provides glamor for a group of boys who are "sailing tonight"

Begging off a dance, Marsha Hunt chats with soldiers who gleefully carried her off to a corner. Tremendous success of the Canteen is marked by the letters and comments from the appreciative men in the Armed Forces

John Pindar wasted no words. He grasped him around the waist and heaved him up and overboard

## The Turn of the Tide

By Don Waters

ILLUSTRATED BY HARDIE GRAMATKY

SITTING hunched over in his boat, John Pindar sculled slowly along the inside edge of the Abaco reef a mile offshore. All afternoon he had been searching through his glass-bottomed bucket for a sight of green turtles feeding on the growth below. He raised his head. An involuntary grunt of surprise escaped him. So engrossed had he been in his work that he did not notice the sudden storm clouds banking up heavy and black just behind the land. A curtain of rain like a wall of falling water was advancing rapidly toward him.

He barely had time to head his boat up into the white ripple of foam when it struck. The boat lifted, swung broadside to the wind, drove toward the reef not ten yards off, heeled down, shipped half full of water. The muscles on his arms stood out in quivering lumps as John Pindar struggled with the sculling oar. A heavier gust of wind, a deluge of pelting rain enveloped boat and man. A surge swung out of the turmoil and drove the dinghy smashing onto the coral.

At the shock of impact, John Pindar was thrown out. Another surge mounted,

towered over him. He dove through the roller that was just beginning to break, emerged beyond it. A few minutes later, hand over hand, he was swimming away from where the seas tumbled with thundering roars over the ragged fringe of rock and coral.

It was not long before the sound of the surf began to dwindle. He was being swept out to sea in the strong rush of the current ebbing off the coast of Abaco. The tide would not flood for hours. It was late in the afternoon when he capsize. Night would soon be on him. But he was a powerful swimmer and in this briny, dense water, he knew he could easily keep afloat till the tide turned. This was no short, vicious squall but had developed into a steady blow. The rain had slackened. The pall of evening was descending over the sea.

Darkness fell, a blue-black darkness that was only lightened by the phosphorescence of the breaking wave tops. With small motions, John Pindar kept himself afloat, conserving his energy. His wet dungarees clinging against his legs became an annoyance;

he slipped out of them. He needed no shirt; that was discarded too. Naked, he swam through the night, easily slipping like a porpoise under the high waves as they neared him. A few stars came out in breaks among the overhanging clouds. By them he kept a sense of direction, faced westward and slowly and methodically stayed afloat.

THE wind had set up a surface current and he was being steadily carried out to sea. The slow hours passed. The water was warm and he was not uncomfortable. Before midnight, he knew he was far from land in the depths of the ocean. The chances of his being picked up were small. No coasting schooner would be apt to come out this distance. Even the course of the steamers from Europe making for the Hole in the Wall and the Northeast Providence Channel around the end of Abaco was inshore from him.

This was not the first time he'd had to make a long swim. A few years back he had been caught on the west coast of Andros by a hurricane. He'd swum all

one night then, but he'd had a chance to rest in the tops of pine trees. He had no rest now. Grimly, doggedly he went through the motions that kept him afloat. He thought of other things. He should not have been out on the reef as late as he was today after the tide had turned. Necessity had driven him there as it had driven him for the past months since he had lost his schooner, the Tiburon, lost her through no fault of his own. There was a world war raging and, though far from where millions of men carried on their grim work of destruction, he had felt its effects.

The Tiburon had been a sweet craft, clean-lined and fast under sail. Since the day he'd lost her, all his energies had been directed toward getting another vessel. But it was no easy thing, that. It would take a long time netting green turtles to earn enough to buy drift-bolt and spike, rope and block, rigging and canvas, winch and anchors, all the many things that go into the making of a sailing vessel.

the inscrutable Japanese, using a peculiar brand of hospitality, to befriend and influence a group of American internees. They employ threats and torture—and get practically nowhere

# Torment in Japan

By Robert Bellaire

FORMER U. P. MANAGER IN JAPAN

QUAT, heavily bespectacled Inspector Kikuchi of the Metropolitan Police smiled broadly as he faced us in the Tokyo concentration camp. This was the first time we had seen him smile more than six months of our prison life after Pearl Harbor.

"The Home Office," he told us, "has received reports that Japanese interned in the United States—especially Japanese newspapermen—are being well treated. The Home Office is now trying to think some way to be nice to you. Please wait."

A few days later, Kikuchi appeared again with the Home Office decision. We were to be permitted to attend a luncheon "and entertainment" to be given in our honor by a group identified as the East Asia War Relief Committee.

In six months of concentration camp life, such as I described in an earlier issue of Collier's, we had never heard of any such relief organization. We inquired about this war relief committee, but to no avail. Kikuchi said he knew none of the details. When we said we did not wish to accept an invitation from a group completely unknown to us, Kikuchi frowned and said he must confer with the Home Office.

In a few minutes we had our answer. The Home Office ordered that we must attend the luncheon and "accept Japan's good treatment" whether we wanted to or not.

The next day, ten of us Americans together with a number of Japanese officials were driven from the concentration camp to the Sanno hotel under close police guard. The hotel for years had been the headquarters for numerous secret political organizations.

We were greeted at the hotel by more Japanese, most of whom spoke fluent English. Several of these we recognized as men educated in the United States. One was John Okie, former New York University football player. Another was the son of a Japanese Presbyterian minister in Seattle.

One of the Japanese who acted as chairman of the relief society addressed us on the subject of Japanese-American friendship. We looked at one another uneasily. Whenever the Japanese had spoken of Japanese-American friendship in the past, we had learned to duck. Usually it meant that something not quite in the friendly tradition was brewing.

The spokesman assured us that Japan had only the most friendly feelings for us, this was a war between governments, not individuals.

## Our Hosts Interpret the Newsreels for Us

I thought at the time of the frequent instances in which Americans imprisoned by the Japanese had been given the water cure, beaten with rubber hoses, forced to kneel for hours on iron bars, and generally tormented until some had been driven to suicide and others had suffered nervous breakdowns and permanent physical injuries.

The spokesman said the first item on the good-treatment program would be the showing of newsreels of the war. We were seated in alternate seats in an improvised theater in the hotel. English-speaking Japanese occupied the intervening seats to translate to us—in a most insulting and challenging manner—the titles on the screen.

The films mainly were about the Japanese occupation of Singapore and the Netherlands East Indies, and their primary purpose was to degrade the white race. We saw British and Dutch officers being slapped and having their hair pulled by young Japanese officers during the formal negotiations for surrender.

The final reel of the film, however, centered at Bataan and Corregidor. Here the impression given by the film was quite different from the Malaya and East Indies campaigns. No effort was made to make the Philippines campaign appear like a push-over. Japanese were shown being wounded and dying in great numbers on the battlefields. Pictures of the surrendering Americans showed that they had fought until they could fight no longer. They were "out on their feet" from exhaustion and the shock of weeks of almost continuous bombing and bombardment.

After the movies we were invited into the dining room. Before us was set the most luxurious meal we had seen in the past two years in Japan.

But we were uneasy, as we ate. In the center of the table were two microphones. When we talked, we lowered our voices in the hope that nothing we were saying would be broadcast.

Halfway through the luncheon, the Japanese spokesman rose to address us. He repeated word for word, the speech on Japanese-American friendship which we had heard earlier. Then he added that the East Asia War Relief Committee wanted to do everything possible to make us happy.

"The thing we know that all of you wish to do," he said, "is to communicate with your friends and relatives in the United States. Fortunately, we have here today men from the government radio station, JOAK. They will make records of any messages you care to send, and these records will be broadcast to the United States by short-wave radio."

After a few moments of silence, the spokesman added, "The only requirement for permission to broadcast is that you say you are being well treated in Japan and are enjoying your stay here despite the war."

WALLACE MORGAN

The Japanese chairman crushed out his cigarette and jumped to his feet. His eyes flashed angrily at me

Suddenly he grabbed me by the necktie and jerked my head back so sharply I thought my neck would break

When the spokesman translated my article into Japanese, the chairman beamed at me. "I am glad we do not have to kill you," he said

# BEHIND THE GUNS

PHOTOGRAPHS BY A. ERISS

An M-4 tank plunges at top speed through the water hazard at the Aberdeen Proving Ground. This is only one of the grueling tests the land battleships must go through before they are finally accepted by the Army

Below, left. Two-thousand-pound bombs being loaded into a B-23 bomber, which will take them aloft and drop them from a height of 10,000 feet. The Army wants to know what happens when they hit the ground

These husky ladies—Mrs. Viola Testerman, Py Md., and Mrs. Florence Wockenfuss of Jersey N. J.—call themselves “the fat women of Aberdeen.” The shells, for a 90-mm. gun, weigh 75 pounds

Combined strength of fifteen men is required to ram home a charge in a 16-inch gun proof-testing. This is one kind of hard work that the women haven't taken over

of the tests can be carried on in factories indoors. This technician, is firing a 37-mm. shell at the of armor seen through the doorway

AT THE Aberdeen Proving Ground in Maryland, where the Army tests its guns and munitions to determine if they meet specifications, more than 10,000 women have taken over jobs that have always been performed by men. Army officers say that their efficiency at ranging from truck driving to mathematical calculation has contributed largely to the success of Aberdeen's speed-up program.

Over 100 women, from girls in their teens to grandmothers, have been ordered to take down, inspect, assemble and test the Army's light- and medium-caliber guns. They place the powder in the shells, insert the projectiles, a dangerous task as an exacting task. Still others magazine the tips of the shells, so that an electrical reaction will take place when they are fired through the screens used to measure velocities. This work involves accurate measurements of time to within one hundredthousandth of a second.

Women also operate the central velocity-measuring station, which is connected with electric wires to the hoops installed in the test areas where the firing is done. When a projectile passes through one of the hoops, the velocity is recorded on instruments at the center.

Above, right. This odd-looking pipe is the tube, or barrel, of a 16-inch gun, in the grip of a big mobile crane. It will be fixed into a gun mount and fired

calculates the course of bullets fired from all types of small arms.

A selected group of women, most of them grandmothers, have become experts in the use of a new apparatus for firing certain types of guns. Many of these women are testing secret weapons and seem to be less inclined than men to talk about what they're doing.

As an Army officer said: "They have certainly disproved that old adage about the wagging of a woman's tongue."

The first group of women to work at Aberdeen was brought into the restricted firing areas last March. Army officers at first feared they would be gun-shy, but, surprisingly, the women paid little attention to the ear-splitting detonation of big guns fired only a few hundred feet away. They soon became absorbed in their work. Many of this first group have become foremen and are bossing large gangs of workers. They show a surprising knowledge of the mechanism of the guns.

"The results of hiring women at Aberdeen are significant," said Major General Charles T. Harris, Jr., commandant of the Proving Ground. "They demonstrate woman's capabilities in work far removed from her accustomed sphere. The women here have shown themselves to be intelligent, industrious, quick to learn, and willing to labor at the most arduous tasks without complaint." ★★★

Right. This solenoid screen, used in testing the velocity of a big gun, has been destroyed by the 16-inch in the background. A new screen is being installed for another shot

This 16-inch gun has just been test-fired at the solenoid screen shown in the background. The concussion from one of these monster cannon will knock a man down within 100 feet

# YOU'LL BE WARM

BY HENRY L. JACKSON

What's in a sweater?

How warm is a sweater?

How much does it cost?

How do you make it last?

How do you put it on?

When do you wear it?

Here's latest dope on sweater situation

**B**EING warm this winter isn't a matter of turning up the thermostat—or piling on a few extra shovels of coal or harrying the landlord. Not the way the government has it planned. Doctors have advised fuel-conservation heads that 65 degrees of heat will keep us healthy. That just isn't warm enough for most of us, used to overheated homes, jumping into heated cars. We'll be waiting on cold street corners for busses, walking, standing in drafty halls during air-raid drills. What we must do is wear heavier clothing, warmer underwear, sweaters indoors and out.

The Wool-Labeling Act provides that any garment containing wool must be labeled as to content. That goes for sweaters. You're likely to read 50 per cent wool, 25 per cent rayon, 25 per cent cotton; or 40 per cent mohair, 20 per cent rayon, 40 per cent cotton, or some such recipe. Don't worry about it. A fine-grade all-wool sweater is best. But rayon possesses elasticity and warmth, has a good texture and fine sheen. Cotton is durable. A judicious blending of all three materials will give you a good-looking, fine-wearing sweater.

The government approves of sweater-wearing—so heartily that they have released six million pounds of wool to sweater manufacturers. This is mohair, a fine wool from our own Texas sheep. Not suitable for military uniforms, it makes warm, sturdy sweaters.

Alpaca, camel's hair, cashmere and Shetland are luxury yarns, imported from all over the globe—India, Australia, Tibet, Scotland. They give warmth without weight, feel silky, are expensive. Frequently they are blended with coarser wools to make them sturdier and bring down the price. When available stocks of imports are gone, that will be the end of them for the duration. In the meantime, we can get along very nicely with domestic products.

Most important from the standpoint of warmth is the way a sweater is knitted. A close, tight stitch, known as interlocking, will keep heat in, cold out, and is particularly desirable in a sweater with a large cotton content. Loosely woven, open stitching is all right for indoor wear but permits too much air-circulation for outdoors. Look, too, at inside shoulder seams when you buy a sweater. They should be reinforced to prevent sagging.

You can buy a sleeveless sweater from

\$1.95 up, depending mainly upon the wool content. Up to \$5 you actually do better with a blend than with all-wool which is bound to be a low grade. Good wool, mixed with cotton and rayon wears better than sleazy all-wool. Over \$5 your chances of a superior grade of wool are looking up. A long-sleeved V-neck sweater, pull-over style, is the most popular and practical type for all-round wear. Best bet for a factory or civilian defense worker is the heavy worsted coat-sweater, tightly woven of 80 per cent worsted and 20 per cent cotton. You can get one for about \$6. A shake sweater, the kind college lads wear at football games with the school letter, is fine for outdoor wear. Made of heavy wool, it costs about \$7.50.

Pull-overs, sleeveless, are good with your regular business suits. They're warmer than a vest. Don't go haywire on color. Blue is best with a blue suit, blue or maroon with a gray suit; tan with a brown suit. A coat-style sweater is okay for work.

Don't be afraid to have your sweater washed. It's better than dry-cleaning. It eliminates perspiration completely and improves the sweater. Fibers mat down, become sturdier. Sweaters should be washed in lukewarm water with mild soap, carefully rinsed. Lay the sweater flat on a Turkish towel, pat it into shape, and let it dry out of the sun. Don't wash a multicolored sweater. It might run.

The right way to put a sweater on is to put your arm into a sleeve, pull the sleeve all the way up to your shoulder. Then put your arm into the other sleeve and pull it all the way up. Now duck your head in. That way, you won't pull the sweater out of shape, stretch and weaken the fibers. When you take it off, pull it up from the bottom. Don't lift it over your head by pulling at the back of the neck. And don't hang your sweaters on hangers when you're not wearing them. Let them air out, fold them and lay flat.

A sweater is the most comfortable kind of clothing for an active man. Every sailor is issued a long-sleeved crew-neck sweater of blue worsted, to wear under his blue jumper in the winter. Soldiers assigned to northern territories are issued sweaters. British officers wear them on the desert, tacking on epaulettes and wearing Sam Browne belts over them. Our own fliers own sweaters and wear them. You'll like them, too. ★★

Sweaters have now hit the Stork Club, which ought to prove you can wear them anywhere. Here owner Sherman Billingsley models his blue-gray alpaca which he considers the right touch with his blue worsted suit. Daughter Jacqueline shows you what the ladies will wear in place of décolletage to here. Pretty and cozier. Below, Petroleum Co-ordinator Harold Ickes, who says we'll all be healthier with less heat, stokes his own under a sleeveless pull-over

BOB LEAVITT

FOR THOMAS

Collier's correspondent takes you to church in the Russian capital, where the women of Russia pray for the safety of their living and the salvation of the dead

# Vespers in Moscow

By Irina Skariatina

BY RADIO FROM MOSCOW

ILLUSTRATED BY C. C. BEALL

ON a Saturday evening I went to vespers to the Bogoyavlensky Cathedral, belonging not to the "living church" but to the Orthodox faith in which I was raised. As the cathedral is situated in Elokovo district, which is quite far from the hotel, I took the subway and getting off at the fourth stop, walked a few blocks. Luckily there was a full moon, or I never would have found my way in the utter darkness of Moscow blackout.

In the distance as I walked I could see the spire and the dome of the cathedral looming ghostlike in the light of the harvest moon. Many people were going in the same direction, and following them, I got there without losing my way in the intricate maze of Moscow streets.

The service had already begun and the cathedral was full to overflowing. The usual church beggars that always terrified me in my childhood stood in their customary places on both sides of the main entrance, and in their chanting voices repeated the familiar old words that I had heard hundreds of times: "Give alms to a poor blind one—to a cripple—to an old woman, and I'll pray for your health, for your dead, for your warriors at the front."

For a while, pushed back by the crowd, I stood near the entrance close to the counter where wax tapers are sold. Then little by little, in Russian fashion, I began to work my way up toward the altar. At last I succeeded in reaching the center of the church, where on a square elevation covered with a thick rug stood the Metropolitan of Kiev, Nicholas, in glittering vestments, whom I had seen many a time in the years following the revolution when he was Bishop of Peterhof. The passing years had not changed him much, and his voice as it rang out clear and high had the same "golden quality" that his followers always admired.

Two choirs sang alternately, but occasionally the entire congregation took up the hymn and then throughout the cathedral it rolled impressive and sonorous. Due to wartime economy of electricity, which is scrupulously observed everywhere, only one electric lamp shone near the metropolitan's elevation. Otherwise, the cathedral was plunged into darkness save for the flickering lights of the wax tapers and numerous lampadas that burned in front of the icons. The congregation consisted mostly of old and middle-aged women, with a fair sprinkling of young ones, and the same applied to the men.

As I slowly made my way from the entrance door to the altar I had to stand for a while next to a very old man with a flowing white beard who looked exactly like a Biblical patriarch. In a perfectly audible undertone, he kept saying the words of the service just one second ahead of the clergy, and when a young priest stammered and omitted a line, the venerable patriarch shook his head reprovingly, murmuring, "What is the matter with you, my little father? Are you Hitler?" He repeated the whole line twice over for his own and my benefit, too. After that he had to pray fast so as to catch up and once more be ahead of the service.

A little farther I stopped for a few minutes near an elderly woman in a long black coat and a shawl wrapped around her head, and again I could not help

overhearing her, as in low voice, with frequent bows and signs of the cross, she prayed over and over again for the safety of her son Vassily at the front, and for the victory of the Russian army. And as I kept moving along, I heard on all sides deep signs and whispered prayers for the loved ones in danger, for the end of the war, for victory and peace, and the destruction of the Antichrist Hitler.

It was startling to hear that name in a Russian church and to realize that in some way or other it had brought pain and suffering to nearly everyone there.

Yes, there was the shadow of the "Antichrist Hitler" in that old Russian church and, as many times before in the thousand-year-old history of Russia, the people wept and prayed that the invader, whether a Tatar Khan, or Napoleon, or Hitler, be conquered and destroyed and the land once more free. And in their eyes, some overflowing with tears, some dry but red from crying, some shining with courage, I could see again that boundless love of Russia that is to be found everywhere.

At the end of the service, the metropolitan spoke. The theme of his sermon was the war, and that there is no greater love than to give one's life for others.

## The Well-Guarded Metropolitan

When it was all over I stood near the entrance door, where a small group of women were waiting for the metropolitan to pass on his way out. As I had known him slightly in the years gone by, I thought I would speak to him, too. Perhaps he would recognize me, perhaps he would be pleased to see me. With these thoughts I waited patiently as the congregation melted away. Finally the church was empty save for the small group that had joined a spruce old woman in a white apron and a fluffy green shawl who was busily putting out the lampadas and candles and rattling a bunch of big keys as she trotted around. Suddenly she caught sight of us, and stopping short in her work, shook her head and frowned. The next moment she advanced with a firm tread in our direction, a stern look in her bright old eyes and disapproval expressed in every movement of her short, sturdy figure.

"Now no loitering here, my dear ones," she said severely. "You've had a beautiful time, said your prayers, and our little father the metropolitan has prayed for you. What more do you want? It is all over now, and I am about to lock up, so go along in peace. Do you hear me? Go! Go!"

A little more and she looked as though she might wave her voluminous skirts at us and say "Shoo!" But I protested.

"I'd like to speak to the metropolitan," I began, only to be interrupted by her cry of indignation.

"Speak to the metropolitan tonight!" she exclaimed in shocked tones, throwing her hands up in dismay. "When he is so tired he can hardly stand after saying

The Metropolitan of Kiev, Nicholas, in glittering vestments, stood on a square elevation covered with a thick rug. The passing years had not changed him much and his voice as it rang out clear and high had the same "golden quality"

all those beautiful prayers for us all evening long! How can you even think of such a thing? You must be up to no good, my dear one. Where do you live? Where do you come from?"

"America," I answered hopefully, thinking that it would have the desired effect and either impress her or soften her heart. But the effect was contrary and unexpected.

"America!" she cried with a derisive little sniff. "America, if you please! That's a new one; I've never heard that fib before. That shows that you are up to no good, inventing stories like that, my dove. Listen to her, she comes all the way from America, speaking Russian like a Russian and looking like one, too."

She turned indignantly to an imaginary audience behind her, while the little group I had joined examined me with sudden suspicion. "No, my little mother, you cannot fool me. I've got to protect the metropolitan and see that no one bothers him. America, indeed! Now take yourself away, all of you, my dear ones, before I get cross." And she hustled us toward the door with such determination that reluctantly we obeyed and retreated.

Going back to the subway I walked with a young woman who was carrying her child, a frail girl of about four, with a thin pale face and enormous black eyes that stared into the moonlight night intently and anxiously as though she were listening for something or expecting to see someone there.

### The Terror-Stricken Child

"She can't forget the bombings of last year," said the mother sadly. "You won't believe me, but every time there's thunder or a door loudly slammed or a car backfires she will run to me crying: 'Bombiozhka! Bombiozhka!' and insists that I take her out of the room. Otherwise she will cry herself sick. At first during the bombing, I used to take her up in the middle of the night and dress her and carry her to the shelter in the subway, where we would sit till the raid was over. She's never forgotten that, and cries: 'Bombiozhka metro!—metro bombiozhka!' till I have to take her out of the room for a while. Then she sits down."

At the word "bombiozhka" the child started, and with a stifled little whimper buried her face into her mother's shoulder.

"There, you see? That's the way she always acts when she hears that word," sighed the young woman, "and I just can't make her forget. Oh, what a hard time I have with her and my father. He's old and half paralyzed, but all day long he listens to the loud-speaker in our room. For the last month he has been living for the coming of the second front. You should have seen him when the news came through about the raid on Dieppe. 'It's come! It's come, Natasha!' he shouted to me. 'The second front is here! Hurrah!' and he got so excited he began to shake all over. For two days he could not eat, he could not sleep, from excitement. Then when nothing came of it and there was no second front after all he just cried and cried like she does. It was pitiful. Yes, we are living in hard times when old people cry and cry from disappointment and little children scream with fright."

The next morning, Sunday, I walked to another church, situated this time not so far from the Metropole. When I reached the church, I found I had come too early, and there were only the cleaners doing their chores of washing, sweeping and dusting. They were all members of the parish, some with hats on, some with shawls, and some with gaily colored

kerchiefs. Presently the congregation began to arrive and soon the small church was filled. Here and there a ray of sunlight tried to break into the windows and filter through the chinks of the tightly closed shutters and through the little holes of the thick paper that covered the panes as an added protection in the blackout. For a fleeting moment, there would appear a little golden line of a pinpoint of light—then they'd vanish, and all would be black once more. Thus, in broad daylight, the church was dark but for the soft yellow glow of the wax tapers and the multicolored lampadas that shone like little globes of red and blue and green.

One large icon was decorated with autumn flowers, while several others had ribbons and streamers around them or finely woven towels embroidered by hand. This time the women were predominant, and only a few gray and white masculine heads rose above the feminine crowd. The Mass began, and

satisfaction to have my name read in your church, it's all right with me. A woman's business is her own, funny as it may be, and no one should interfere with it or tell her what to do.' Yes, he was good to me all through those years that we were together, and I don't know how I'll live without him. Life will never be the same—it's finished. Oh, to be sure, I will go on with my work and live from day to day, but what kind of existence is that, compared to life with one's own man and the thousands of little things that bound us together? It's empty now. It's finished. It's gone. I haven't any children to turn to and I'm too tired and not young enough or strong enough to begin all over again. If I could, I'd gladly be a *partizanka* and hurt them the way they've hurt me, but I can't do it. My spirit is willing but my flesh is too weak. The doctor tells me not to cry so much or I'll go blind. But how can one stop crying when everything has been taken away and one's heart is broken forever?"

"Why aren't you in the Army?"

the small choir of women sang softly and well. Presently, the service came to the part where the old priest prayed for the health of the warrior Ivan, the warrior Peter, the warrior Alexei—while the women, attentive and tense, waited to hear the names of their men, which they had written down on slips of paper and handed to the priest to mention aloud in his prayer. But when the familiar names had been duly pronounced, and in response the women had bowed low and crossed themselves fervently, they relaxed and rested for a few minutes, either on a step beneath a large icon or on one of the wooden benches that lined the frescoed walls.

At the part of the service where the dead are mentioned, again the women fell to their knees, now weeping softly and touching the floor with their foreheads as the priest intoned the prayers for the eternal peace of the warrior Stepan, the warrior Sidor, the warrior Ivan . . . who had given their lives for their country.

"My husband was not a believer. He was an atheist," a thin, pale-faced woman told me sadly, as I sat beside her on the bench after Mass. "But he never forbade me to go to church, and I know he would not mind that I had his name mentioned in the prayers for our dead. If he knew about it, he would probably laugh and hug me and say, 'Do just as you please, Manulia. If it gives you

Her eyes were sunken and dim and, as she spoke, the tears rolled slowly down her thin, weary face.

"Yes, that's what that Hitler has done for us. May he roast in hell!" sighed another woman on my left. "Look at me! Both my sons are at the front, and I have not heard a word from my youngest since January, when he must have fallen into the enemy's hands. I keep hoping against hope that he's alive and will come home some day. But then when I hear of the horrors of the German camps and the way they torture and torment the prisoners and throw them rotten meat and worms to eat and make them sleep in the mud and beat them and hurt them and humiliate them in every conceivable way, why, then I pray that my Vaniusha may be dead."

### A Russian Mother's Lament

"You won't believe me. But do you know that actually my body feels his suffering when I think he's being hurt. If I think they are beating him, my back hurts. If I think he's cold, I'm cold. If I think he is burning with fever, I burn, too. And with it all, my womb aches steadily all the time, day and night, doubtless for the babe Vaniusha it once carried. Then he was safe and warm, and I wish he was back there again."

She sighed and passed her hand over her eyes and was silent for one moment.

"Now that little girl over there," she continued, pointing to a sad-looking child of about eight, "she saw her mother killed right in front of her eyes. When the Germans came into their village, the mother did not want to let them into her house, so they killed her. And do you know that child has gray hairs from the horror she saw? She hardly ever talks just yes and no, and even that reluctantly. The brutes could not even spare a child's soul."

"Then take my sister-in-law—she has not heard from her parents for months and months, not since the Germans occupied the town they were living in. Of course, they are dead. They were old and weak. How can they be alive? How can anyone be alive where Hitler the Antichrist passed with his satanic hordes?"

At the head of the Russian church now stands the Metropolitan Sergius whose official status is also guardian of the patriarchal throne. Since the death of the Patriarch Tikhon in 1925, there has been no patriarch in Russia, and Sergius governs in his stead. Glancing back into the history of the church, we see that when in the year 1700, the last patriarch died, Peter the Great appointed the Metropolitan of Raizan, Stefan Yavorsky, guardian of the patriarchal throne, and then in 1721 declared the patriarchate of Russia nonexistent, creating in its place a ruling body called the synod.

### Church Under Government Rule

The synod was subordinated to the czar, and, according to the code of laws of the Russian empire, the reigning emperor became the head of the Russian church. "Thus it was not the synod that ruled the church through the medium of the temporal power, but the government that ruled the church through the medium of the synod."

In that year of 1721, the independence of the Russian church ended, and so it was until the revolution, when once more the church was separated from the state. In 1918, Tikhon was elected patriarch. When he died, Metropolitan Sergius took his place.

As soon as the war broke out, the entire church came forward in a body to offer what aid it could for the defense of the country. Special prayers were written for the victory of the army, and special services were offered at the end of each Mass, while members of the church communities all over the country began to work in their spare hours for the men at the front, and money was donated in a constant flow. For instance, on the day of the Red Army, the churches of Moscow alone contributed a million and a half rubles to be used for presents at the front, while the Trotsky community in Gorki collected a million rubles and several hundred thousand rubles' worth of warm clothing, and thus the donations came in from all over the land. There were even cases of priests whose parishes had fallen into the hands of the Germans, and who joined guerrilla units taking active part in the war. When in October, 1941, Hitler threatened Moscow, the Metropolitan Sergius addressed the orthodox communities with the following words:

"This is not the first time that the Russian people have lived through a foreign invasion, not the first time that they have received the baptism of fire for the purpose of saving their land. The enemy is strong, but patriotism has arisen like a mighty wave, and the hour will come when that wave will sweep away the foe from the face of the earth."

THE END

"Get in!" Tom yelled at Mrs. Lowe. She was a shapeless, frightened woman. "Lowe's gone! I got to stay and keep a light burnin'!"

## DEEP WINTER

A SHORT STORY BY ERNEST HAYCOX

ILLUSTRATED BY FRANK STREET

**The strong man of the settlement was Kertcher. The weak one was Lowe. But there was need for both of them**

ONE night the snow came, drifting soundless out of a sky that lay gray and close upon Ingrid settlement and the four hundred homesteaders scattered across the flats. By the fourth morning all fence lines were dark wrinkles dimly showing on the snow's crust, and drifts lay against homestead shanties four feet high. Breaking road between his quarter section and Ingrid, Tom Kertcher noticed how straight the smoke rose from shanty chimneys, through the very thin air.

He had mounted a wagon bed on homemade sled runners and had fashioned a sort of leathern snowshoe for his horses; even so the going was labored, the horses now and then plunging into the snow's soft spots.

He came into Ingrid, passed Mrs. Rand's hotel and Solomon's store, and drew up before Brewerton's blacksmith

shop and house. Letty Brewerton had seen him approaching and was at the shanty door, smiling for him. Kertcher said, "Sort of an American Siberia," and got off the seat. He was plain and solid, an easy and practical man with coal-black hair above a strong nose and mouth, and not much of a hand to give his feelings away. But when he looked at her she saw how pleased he was to be with her—there was that unreserved approval in his eyes. "I'm breaking road," he said. "Maybe you'd like to go for a ride."

She said, "Wait until I get my coat," and disappeared. Brewerton, Letty's father, worked in the adjoining shed, the sound of his blacksmith hammer very harsh in the thin air. Letty's mother appeared at the doorway to say a few words.

Kertcher said, "Likely to have a norther. You have plenty of wood?"

"It is piled beyond the shop," said Mrs. Brewerton.

"Not close enough. In a real blizzard you couldn't walk that far."

Letty came out and stepped into the sled and he tucked a blanket around her.

Mrs. Brewerton called, "Keep warm, Letty," and cast a curious glance at them as they drove away, never quite certain how things were between these two.

Letty said, "Miss me?"

"Four days is a long time"

"That's nice," she murmured. She bent her shoulder so that it touched Kertcher and thus they drove along the road, two calm and reticent people who had reached some kind of an understanding without ever speaking of it. They passed Swenson's house at the junction of the schoolhouse road; they continued south, coming by Ben Lowe's place—a small shack and attached tent, housing Lowe and his wife and four children. A mound of snow in the yard indicated where Lowe, the most shiftless of men, had left his plow and cultivator to rust away. Letty said, "I don't think they've much wood or food."

"He sat around all fall, cryin' about hard luck when everybody else worked."

"I can't think of his family being hungry."

"Put him in the middle of a store and he'd be too lazy to reach up to a shelf."

They moved on, following the first

ruts cut by Kertcher and, five miles from Ingrid, they turned into Kertcher's quarter section and stopped before the shanty.

He sat still for a moment, staring straight before him. He said slowly, "If I take you into the house, Letty, I'll kiss you—and maybe we shouldn't be hiding a thing like that behind four walls." He turned to her, drew her against him and looked down at her so that she saw the sharp angles of his heavy mouth. She lifted her head and knew she provoked him into the kiss and was glad of it; she was smiling when she pulled away from him and got out of the sled and waited for him to open the door.

He had built larger than most homesteaders, and he had built with more care. The house had three rooms, all of them sealed in with finish lumber. A rear door connected to a shed which was filled with wood. Beyond the shed was a small lean-to barn.

She knew the house had been built for her; it was one of those unsaid things between them. But she also knew he would not ask her to marry him until fall had come and he had put away his

Shorty and Freda Lewis (Kay Walsh) pose for their wedding picture with relatives and friends. In *Which We Serve* has its gay, bitterly tender scenes but they remain subservient to the ship and the Torrins emerges the star of the film

Noel Coward, wet and covered with oil slick, takes off a few minutes from acting to give orders to his cameramen. Coward, in addition to writing the film and playing in it, also produced and directed it, and wrote the music for

# WHICH HE SERVES

BY QUENTIN REYNOLDS

The sensitive Mr. Noel Coward, who found inspiration in the terrible London blitz makes his first film on the life and death of a ship as seen through the eyes of her men. Critics are calling it the most brilliant picture to come out of this war

SOME DAY a book or a play will be written about Titch's Bar. It was a small room on the Embankment side of the Savoy Hotel. During the bombing of London it was quite impossible to sleep, and the Savoy opened this all-night bar and restaurant for residents of the hotel. Titch was the bartender and we all became very fond of the little redhead who kept smiling no matter how close the bombs dropped. He was only annoyed once. A land mine dropped just outside, shook the whole hotel badly and knocked a dozen glasses off his bar. Titch was so mad at the Germans that he enlisted the next day as a mechanic in the R.A.F.

There were always a dozen correspondents in Titch's Bar during a raid. We had phones installed and had typewriters there and cards and chips. The herd instinct is strong when bombing comes, and none of us felt comfortable alone in our rooms. We were usually a rather gay and noisy group at Titch's Bar. One night we had a very silent visitor who didn't join in our gaiety. His name was Noel Coward.

Coward had just arrived in London and, to put it mildly, he was no dream prince to the local citizenry. A combination of circumstances over which he had no control had put Coward directly behind the eight ball and, being a sensitive man, he suffered. We were all on his side. We knew that since the war began he had done his best. First, he had

done an anonymous job with Naval Intelligence in France, and when France fell he had gone to explain Britain's cause to the United States and Australia. Whether he had done well or badly was not the question—he had tried.

A picture appeared in London newspapers showing Coward in evening dress being entertained by Hollywood stars, and people didn't like that. Sure, the affair was a British benefit—but they all missed that point. They only saw Coward in his white tie and with champagne bottles on the table. People going through a nightly blitz are apt to lose their sense of perspective and they lost it about Coward.

Questions were asked in the House and never satisfactorily answered. "Who was paying Coward's expenses? Who had sent him on this mission? Why wasn't he back in Britain where all Britons belonged?" So Noel Coward came back. He came back just in time to be the defendant in an income-tax case. Oh, he was given an absolutely clean bill of health by the court, but what of it? The stigma remained.

Noel sat there, a very unhappy man. It was a nasty night, May 10, 1941, the worst bombing we'd ever had in London. It was Coward's first experience with the blitz. He got up and reached for his hat.

"If you're going out, that hat won't help you," I suggested, never believing that he'd be idiot enough to leave the building.

Stuff was dropping all around, and even if a bomb fragment didn't get you, bits from our own anti-aircraft shells might.

"Take a look with me," he said, and I did. We walked out of the Savoy and stood on the banks of the Thames. What we saw was an unbelievable sight. Warehouses across the river had been fired by bombs, and a solid sheet of flame stretched for nearly a mile. Futile streams of water thrown by the river fire boats hissed above the roar of the flames, and from above, cutting through it all, whined the uneven drone of the German bombers. They were too close for comfort.

"Let's get out of here, Noel." I grabbed his arm. "Only suckers stay out when they drop this close."

"I'd like to see it all," Coward said, and then added apologetically: "It's my first blitz, you know."

I ran back sweating into the Savoy and into Titch's Bar. I ordered a drink and told the boys about Coward. He was still

out there, I said, and I'd bet anyone even money that he'd be dead in ten minutes.

"He's either a fool or a very brave guy," someone said.

"No one ever called Coward a fool," someone else reminded us.

I phoned Coward the next day and very much to my surprise he was still alive. We had lunch and he wasn't the discouraged, hurt man he'd been the night before. That experience had done something to him. He was part of it all now, part of the London he grew up in and loved. Now, having been through the worst blitz of all, he could feel that he was one with the citizens of London, and in those days that was no mean distinction.

"I've got an idea," he bubbled over, "it's foolish for us to attempt to do things for which we aren't trained. My job is the theater and I've been away from it too long. I'm going to write a play that will entertain people—not a war play. I'll go away and do it right now."

He came back a week later with the manuscript of *Blithe Spirit* which is still running in London and in New York. Bombings became part of his daily life. He played benefits wherever he was asked. Long Island, Newport, New York night life, wouldn't have recognized this Noel Coward. He was brisk, direct, he was, in short, part of Britain's war effort. In his own way he was serving.

## Death of H.M.S. Kelly

In London we all knew the story of H.M.S. Kelly, the ship that died three times. The Kelly was a destroyer commanded by Lord Louis Mountbatten, who now heads Combined Operations. Twice she had been hit badly, and each time Mountbatten's genius and courage had brought her back to a British port. Then he took her to the Mediterranean, and the Kelly received her death blow off Crete in May, 1941. Mountbatten survived, but the Kelly died.

In London we had begun to think of the destroyer as a human being. Each of us felt a sense of personal loss when the ship was finally sunk. We knew that Mountbatten was heartbroken too, for he loved this ship that died so hard.

The story especially intrigued Coward. He often talked about it and of how Mountbatten and the Kelly should be immortalized. And then one day Noel went to the country, locked himself away from the world as he does when he's working, and then emerged with a rough

The destroyer, H.M.S. Torrin, has been sunk off Crete and some of her survivors cling to a raft. One of them, "Shorty" Blake (John Mills), lies wounded, strafed by a German plane. Three of the men, feeling that death is near, keep flashing back to episodes in their lives and recreate the story of the ship and their own memories of home

"Captain D" makes the last moments of a gunner peaceful by telling him that he has been a hero. Previously the boy, gripped by fear, had deserted his battle station and had been pardoned by his understanding commander

from the aftermath of Dunkirk was never more realistically and grimly filmed. The Torrin is loaded with men of the B.E.F., their faces empty with exhaustion. Seaman Blake tries to cheer the weary survivors as he passes out hot cocoa and biscuits

Before the Torrin is hit she surprises an enemy convoy in the Mediterranean. German soldiers abandon ship when the Torrin's guns blast the heavily laden transport

manuscript which he called *In Which We Serve*.

The news broke that Noel was about to begin production of a film based on the career of the Kelly and Mountbatten. He had written it, would produce it, direct it, write the music—and play the part of Mountbatten. Noel's choice of Coward to play Mountbatten invoked a storm of criticism. What right had he to play the part of Britain's greatest sea hero of this war? The *London Daily Express* was most vitriolic in its denunciation. Coward made a mental note of that and later put into the film a sly dig at the *Express*.

Coward didn't listen to the criticism. He went to the Admiralty and begged the use of three hundred sailors. He could have them—if he could use them when they were on leave and if they wished to appear in the film. To get three hundred willing sailors whose leaves coincided was a production problem never faced by a Hollywood producer—but Coward persisted.

He had actually to build a destroyer on his set at Denham some twenty miles from London. Of course it was only a wooden shell of a destroyer and it was hard to get the wood. All wood had long since been allocated to war use. He borrowed the wood and promised to give it back after the film was made. Every prop and bit of furniture used had to be obtained the same way.

This was the first film Coward had ever made. He had once appeared in the Ben Hecht—Charles MacArthur film, *The*

*Scoundrel*, but that had been his only picture experience. Warder Street (London's film headquarters) chuckled and waited for this crass amateur in picture-land to stub his toe. Coward plugged away, and when Noel is plugging away, it means he is working twenty hours a day. He said that the picture would take three months to film. It did, despite delays.

The delays were caused by German and British aircraft. The sound of an airplane motor can penetrate any studio, and half a dozen times a day, Coward had to halt until the planes flying above had gone away. He finished the picture in three months.

Then he cut it—usually a long laborious task. He cut it in a week and only cut 750 feet of film out of the 10,000 feet he'd shot—a miracle according to Hollywood standards, but in Britain you can't waste film.

When it opened in London, the picture was given rave notices. Even the *Daily Express* went completely overboard on it, despite the dig Coward took at the *Express* in the picture. When war comes, the screen shows a three-day-old copy of the *Daily Express* floating in the water and then sinking. The headline reads: "There Will Be No War."

I did not see the picture in London. I saw it the other day in New York at a private showing and I think it's the greatest picture ever put on celluloid. It is the story of the Kelly and of the man who commanded her. The picture could loosely be called a tribute to the Royal

Navy. This would be misleading because this is no artificial tribute—it is actually the story of the men of the Royal Navy and of their wives and girls. The titles comes from the prayer read by the captain at ship services: "Be pleased to receive into Thy Almighty and most Gracious Protection the persons of us Thy servants and the Fleet in which we serve."

#### History in the Filming

This established, the picture gives you a sense of awe and humility in the presence of great events: it presents, in fact, the religion of the sailor. This is a strange theme for a story which must pass the ungodly portals of the box office—and yet the story does just that.

Coward shows the British Navy as it is, not glorified or coated with sickening cinematic mock heroism. This film makes history, not simply because it is so sensitive, so expertly made and so imaginative—but because it is history. Considered as a work of fiction (which it is not), it would be superb. Considered as a factual document, it achieves greatness. And it presents us with a Noel Coward no one knew existed.

Coward was not very good at presenting Britain's cause to America two years ago. He was working in a medium foreign to him—the lecture platform, the public rostrum. In an element no one thought to be his at all, he now does what he tried to do then. He does it so magnificently that even the most carping critic of the British war effort must

reconsider and acknowledge that the armed forces of Britain must be exempt from such criticism.

The behavior and lives of the seamen in the picture reflect the behavior of their families at home, and this is shown strikingly.

The film critics will rhapsodize (they have after viewing private showings) about the acting of Coward, who falls so completely into the part of Captain Edward Kinross or Captain D (so named because he is in command of a destroyer flotilla designated by the letter D) that you absolutely forget that this is Noel Coward on the screen. They will praise the direction and the underplaying of great emotional scenes which so easily might have become mawkish and sloppy. They will tell of the deft comedy touches—comedy lifted straight from the decks of a thousand destroyers.

They will not perhaps tell (unless they know him well) of the Noel Coward who emerges from the stress of creating *In Which We Serve*, as a patriot who, in presenting Britain as Britain really is, has done something which no Britisher or American has been able to do convincingly to date.

The new Noel Coward was, I believe, born that dreadful night of May 10, 1941—the Noel Coward who had no fear of bombs or of fire; the Noel Coward who by going through what his countrymen had been going through for so long, became one of them. This Noel Coward deserves the title "Citizen of London."

THE END

Shorty Blake meets Freda (center) for the first time on a train. John Mills, who plays Blake, almost steals the picture from Coward

Time off for a well-earned cup of tea. Seated in the raft is C.P.O. Walter Hardy (Bernard Miles), whose acting won critics' cheers

# All or Nothing

By Nancy Titus

ILLUSTRATED BY GILBERT DARLING

The story of a man and a girl who found out that there are no exclusive rights to love

THE big black convertible sedan stopped for the light. The top was down and the hot, blazing sun in the intense September sky beat down on the man and the girl in the front seat. The few people waiting for the bus turned to look at them.

Wherever they went, people looked at Rory Carr and his daughter; in a shoddy world they were so gratifyingly perfect, so handsome and assured. They were laughing together now, easily and intimately, not noticing that they were being observed, for they had long ago learned to take such attention for granted.

The light changed and the car rolled smoothly forward.

Brigid was saying, "Well, I never *am* going to be married."

"Oh, aren't you?" Rory grinned. "An old maid, eh? Lumpy cotton stockings and a cat?"

"I won't be the cat sort," she said. Her thick dark lashes lifted mischievously. "I'll be a *femme fatale*—I'll lure men into my net—and then laugh at them."

"I see," Rory said. "So that's what you're doing to young Baldwin, is it?"

Brigid said, "Oh, *Phil*," in a tone of dismissal.

"He's been hanging around enough since last spring. I've an idea you're not my girl any longer."

He was teasing, but there was hurt beneath his voice.

Brigid said, "I'm not anybody else's."

He rumbled her hair. "Go on with you, Brigid Carr..." he said, but she knew he was secretly pleased.

They pulled into the drive by the stables, and Morse, the old stable hand and chauffeur, with a face like a knot of wood rubbed to a glossy mahogany sheen, came to put the car away.

"We'll ride when it's cooler," Rory said. "Do you want to ask Phil to go with us?"

Brigid shook her head. "No. It's not the same when anyone else is with us." It was true. She could not explain it, even to herself—but Phil was Phil. Rory was Rory. Somehow she wanted each exclusively to herself.

Rory said, "All right, man-hater," as they climbed out. He was laughing, but as they went up the drive and saw Brigid's mother on the terrace, his smile disappeared.

Helen saw Rory and rose, very tall and slim in a dark green dress. She put a hand to her hair that was black and soft as the under feathers of a raven's wing, and turned her back and went into the house. Rory's lips tightened against his teeth. Brigid saw the shadow of pain that crossed his face.

She thought suddenly, and with the sickening sensation that always accompanied the thought, "I hate her. I can't help it; I hate her."

Then she heard a whistle and turned. Phil was coming across the wide lawn. She forgot everything—Rory—her mother—everything but Phil's light hair shining in the sun and the strong set of his shoulders.

"I'll be in later, Rory," she said casually. She did not let him see her eyes.

"Hello, Stupid." Phil leaned against an elm.

"Hello, yourself."

"Where you been?"

She brushed a moccasined toe over the grass, lightly bowing the blades. "Wouldn't you like to know?" She smiled a small, secret smile. Within, she was trembling.

She did not know what was so different about Phil. He was nineteen, a sophomore in Princeton. She knew any number of boys like him. Yet a special quality was there. She had discovered it that night last April when he took her in to the city for dinner. For

Phil and Leila had their shoes off and were standing in the water just where it lapped the white sand. They had been wading but they weren't wading now

first time in her life a date became more than a date. Miraculously, over a berry sherbet in a silver dish, she looked at Phil—and *this* date turned into a date.

They had been together constantly all summer and none of the wonder had worn off. Yet when he looked at her like this, with his heart in his eyes, even though she was so crazy about him, she had a curious desire to taunt him.

"I've just been around," she said. "What'd you want me for?"

"I just wanted to see you," he said. "Not for anything?" Her eyes widened.

"You know what for—don't you ever want to be with me for no particular reason?"

She dropped down in the grass, locking her hands under her head, and stared up at the jigsaw pieces of sky through the leaves of the elm. "Oh, I don't know." He sat down beside her, cross-legged, frowning. "Last night you said you did. You said you'd rather be alone with me than anything."

Brigid's lashes veiled her amber gaze. "What was last night?"

"Oh, Brigid." He leaned on his elbows. "Sometimes I don't know—if you love me." It was still hard for him to say the words in broad daylight. "Do you?" He leaned closer and she kept her eyes on his face.

"I'll tell you tonight," she said. "I'll tell you tonight at the dance."

"Why can't you ever tell me when I want to know?" he persisted.

"Because you ask me at the wrong times."

Phil turned a deeper shade of red under his sunburn. He leaped up. "You make me sick! I'm not going to hang around forever, letting you do anything you want to with me."

HE saw he was angry and at once she was frightened. She put a hand out to him in a gesture of complete appeal. "Oh, Phil, please don't be mad. I'm just teasing." She smiled, and the sun slanted down on her hair and her face and on her bare brown arms.

Phil said, "You get me all mixed up." But he sat down next to her again. . . .

As Brigid climbed the wide stairs to change into her riding clothes she heard the voices coming from her mother's room. They were quarreling again, her mother and Rory.

She stopped, her face raised and frozen, and all the excitement of being with Phil was swept from her.

"For Pete's sake, don't sit there like that—don't look at me like that!" Rory was shouting. "You're not a woman—you're made out of ice."

"You'd like me to tear my hair, wouldn't you, Rory? Scream."

"Anything!" he cried. "To know you were human. I'm wrong; you aren't even ice. Ice melts. Or are you waiting for Major Brunner to come back, to melt you?"

"You're very funny, Rory," Helen said coolly.

Brigid wanted to turn and run but she couldn't. Her feet had turned to lumps of lead so she had to stand there, listening. . . .

It was worse than a quarrel because it was so terribly one-sided. Brigid knew. To fight when no one would fight back was to be a fire consuming itself because fuel was denied it. When she fought, she wanted to yell, to strike out. But Helen would not. Always she kept her serenity.

She heard her mother say now, softly, "There is no point in these scenes of yours, Rory."

There was no answer, but a moment later there was the slam of the door into Rory's room—and as though chains had

fallen from her, Brigid was free to go on upstairs. . . .

They thought she did not know—or perhaps hoped she did not. But she had been behind Rory that day when they had come from the stables last February and she had seen what he saw, though he was not aware of it. She was tall and she had looked over his shoulder into the library—at her mother in the arms of Major Brunner.

He was kissing her and her hands were white and tight against the tan of his uniform. In that moment, Brigid felt like a lost and terrified child. Major Brunner was Rory's friend—Helen was her mother.

Rory strode into the room, and Helen stepped away from the major.

She smiled her slow smile. "David and I were saying our goodbys."

Rory said, "So I see." He stood squarely before them and Brigid crept down the hall.

The quarrels began after that. Brigid could not help overhearing scraps of

way. Lashing their tails and gnashing their teeth."

He grinned. "Let's lose some more, then. I'll race you when we get to the golf course."

And, as they rode boot to boot toward the open space, in easy companionship, the thought came unbidden to Brigid, "I'm not really sorry it's the way it is with Helen and Rory. It's terrible of me, when it makes him so unhappy. But it's much more fun having him alone."

BRIGID danced with Phil in the club pavilion. Lovely, lovely dancing like this, her cheek close to his, the motions of their bodies fluid. Lovely, lovely place to dance. The pavilion was octagonal, open at the sides. The fresh salt air drifted in off the Sound, tinkling the prisms in the lanterns hung under the ceiling, and now when Phil turned her she could see a black stretch of water with its silver smear of moonlight and the beaded lights of Long Island.

"Wouldn't it have been awful if there'd

the table. "But I don't know—it's so degrading dancing with your brother, isn't it?"

She was still looking at Phil. And as though his hand were not around Brigid's, he leaned forward toward her vivid face. "How about me?"

"If you're sure it's not just pity," she said brightly.

Phil loosened his fingers from Brigid's. "You don't mind, Brigid?"

"No." But she did. She was furious. Furious at the girl and even more furious at Phil.

Gordon Baird, turning a drink in his hands, looked at her. "Be a little more subtle," he said wryly. "Lee's a man-trap. But aren't you all?"

"It's not that—" She stopped.

"You could dance with me," he suggested. "Degrading as it is, isn't it better than sitting on the side lines filing your teeth?"

She cast him a dark glance. "Thank you just the same."

"Just as you say," he laughed.

She looked away, angrily, back at the floor. Leila's hand was against the back of Phil's neck and she was dancing close to him.

THE others were all on the floor but Brigid and the girl's brother. He touched her arm. "Look here, Brigid—isn't that your name?—if you won't dance with me, come for a walk. You can push me off the pier for bringing her here."

"All right." Brigid's lips were trembling with hurt and anger.

They walked out along the pier that ran from the club lawn, above the beach, out into the water, and stood in the summerhouse at the end, looking down at the drowned and wavering stars. Gordon lit a cigarette and leaned beside her.

"They gave you the wrong name, Brigid," he said. "They should have called you Circe."

For the first time she looked at him with interest. "Why?"

"What was Circe's forte?"

She could not help smiling. "Turning men into pigs. Is that what you mean?"

"Not exactly. But she turned men into pigs so they couldn't leave her island. Remember?"

"Yes."

"But men into pigs aren't much good," he said. And then before she could understand what he meant, he added, "Now that I know you can talk, I want you to go on."

They both laughed and then he began to talk more seriously about himself. He was in a law office, but waiting for his commission as a lieutenant junior grade in the Navy; he had moved out to Crestwood with his sister because she hated the city. He talked amusingly about his law-school days, gave her caricatures of people in his office, anecdotes about his difficulties over the commission.

She was beginning to like him, but she couldn't tell whether he liked her. She was not sure whether he was being kind to her—or making fun of her. That uncertainty piqued her.

Finally, as they moved to return, he said, "Brigid, I wonder what you would do if I put my arm around you?" His voice was teasing and yet there was something else in it.

"I wouldn't let you," she said so vehemently he laughed as he had before.

"Don't worry. I wasn't going to. I was only wondering—"

She said, "If you're in love—you couldn't be—be tempted. You couldn't want to be."

"God help the man who marries you!"

But she was not listening to him. It swept back over her what Phil had done to her tonight. How could he?

"I meant, they're becoming very hard to get on account of the Revolutionary war"

them. And she sided so passionately with Rory that she knew, even were it all right between him and Helen again, she could not forget. . . .

When she met Rory half an hour later he was dark of face and silent. She longed to say something to comfort him, but there was nothing she could say. They rode in silence the two miles across the back pasture, down the macadam road to the beginning of the bridle path.

Once on the dappled path, Rory turned to look at her. "Feel like some good riding, my girl?"

"Sure."

HE BROUGHT his crop down smartly against the flank of Mona, his young chestnut mare, and she reared once, then plunged forward down the dirt way. Brigid spurred on her roan and was after him. They rode like that for an hour. Hard. Fast. Through the woods, across an open field, and onto the path once more.

Rory did not slacken the pace until they came to a rough wooden bridge crossing a noisy brook. He reined in then and waited for Brigid. His shirt was sticking to his back, his face was wet and his hair, but he was laughing, and the line of his shoulders that had been rigid was relaxed.

"Brigid," he said, "there's only one way I know to drive the devils from you—and that's to ride 'em out."

Now he was her Rory again. "I know. They were jumping out of me all the

been a blackout tonight?" she said against Phil's ear.

"I'd like to be in a blackout with you."

"It sounds like a song," she said as she leaned her head far back, so her hair brushed her shoulders, and laughed up into his face.

He pulled her tighter. "You do love me, don't you, Brigid?"

"Yes." Now she wanted to tell him.

They went back to their table and the others in their crowd when the music stopped. Another couple had joined the group. A dark young man, older than the rest, in a business suit, and a small dark girl in scarlet linen, a sports dress which, instead of appearing out of place, had a distinction of its own among the pastel evening gowns.

Someone introduced them: "They're new—Leila Baird—her brother, Gordon. They didn't know about the Saturday dances."

"It's disgusting," the girl said, making a grimace with her bright lipsticked mouth. "I had to meet Gordy at the train when he came back from work and we drove right out here for dinner—if I'd only known, I could have worn the right thing. I stick out like a bandaged toe on the beach."

"Lee, I can take you home any time and let you change," her brother said. His smile was amused.

She shook her head. "And miss everything?" She glanced around the table and her eyes fell on Phil. Instinctively Brigid's hand tightened over Phil's under

They retraced their steps, and then, as they came to the section of the runway that went above the beach, Brigid's hands clenched hard. Phil and Leila were down there. They had their shoes off and they were standing in the shallow water, just where it lapped the white sand. They had been wading, but they weren't wading now. Phil was kissing her.

Gordon reached down and took one of Brigid's tight hands, trying to force the fingers open. "It's all right," he said.

She snatched her hand away. "I'll never forgive him," she said through her teeth. She broke away, running.

"I DON'T know why I did it. I just couldn't seem to help it," Phil said miserably.

They stood on the walk to her house.

"Don't talk to me. Don't tell me," Brigid said fiercely. "I don't want to hear. I never want to see you again."

"Oh, Brigid, please. It's you I'm crazy about. She's—she's just that kind of a girl. And she isn't like you. She acts as though she likes a person. Half the time I never know, with you. She wanted to go wading—I knew you'd be mad—but, honest, Leila's the sort of girl you—"

"I don't believe you," she cried. "If you loved me you'd never have done it."

"Brigid, if you'd only be—"

"Get out," she cried. "Go away!"

She went sobbing up the walk and though he called her name she would not turn around. He was the only boy she would ever love and he had broken her heart.

When she came into the hall she heard her parents again. They were in the library. But their voices stopped when they heard the door close. Rory came out into the hall.

"Hello, honey. You're home early. Have a good—" He saw her face. "Brigid, what's the matter? What happened?"

She ran to his arms, burying her face against his shoulder.

"What's wrong, Brigid?"

She was telling him. She hadn't meant to let him know the way she felt about Phil, but she couldn't keep it back. "He danced with her all night—they went wading—I was walking with her brother and I saw them, and Phil was—kissing her. Rory, I told him I never wanted to see him again."

"There, sweetie, of course you don't. He's just a kid. He doesn't matter. You show them they can't do that to you, Brigid. I'd like to tan the young—"

"Brigid, stop that crying."

She had never heard her mother's voice so sharp. Helen stood in the doorway in a white housecoat.

Rory said warningly, "Helen, can't you see the kid's—"

Helen ignored him. "Brigid, are you crying because of what the boy did? Or because of what you have done to him?"

Rory flushed. "What do you think she should have done?"

Helen said, "Brigid, I don't want you to be hurt. But I don't want you to do any hurting." Her eyes were on Brigid's face. "I don't want you to take things lying down. But I don't want you to be cruel. I know your heart is broken, but you've got to learn to understand, or you'll break too many hearts yourself."

Rory said quietly, still holding Brigid: "That's for me, isn't it?"

"No," She put her hands together. "It's for Brigid. She's my child, too, but you want her yours alone. You're making her in your image—I wish for her sake she could learn another pattern."

Brigid pulled from her father's arms.

"Mother, how could I just let him say he was sorry—and act as though he hadn't done anything? I'm right. You know I am."

Helen stood looking at the two. "You're both right. So terribly right."

She went past them, up the stairs.

She left the next morning. She came into Brigid's room before she went. She wore a sheer black dress and a hat of flowers, and there was a faint scent of perfume about her. She sat on Brigid's bed, pulling on lacy black gloves. Brigid stood stiffly by her desk.

Helen said, "Brigid—" For a moment her voice lost its calm. "Brigid, I'm leaving."

There were no words for Brigid to say.

Helen worked at the fingers of her gloves. "Parents keep their differences from their children as long as possible. I don't know why. I suppose we think of our children as our last line of pretense." She smiled briefly. "But you aren't a child. You know that your father and I no longer understand each other. I'm sorry, because I've loved him—and I love you. But I know how you feel about Rory. I wish I could justify myself to you. Any mother would. You're old enough now so that I could talk to you if—"

She got up and went to the window looking out over the lawn and the bright beds of zinnias and marigolds. "If you were my daughter; but you're Rory's. Maybe I should have tried harder. But some people can't. Some of us don't show emotions easily." She faced her daughter again. "Brigid, I hope when you're older you'll remember this—there are some people whose feelings are complicated, who don't see everything in black and white, but see the gray as well—people who know they have to be wrong at times."

Brigid said, "Mother," in a strained voice, "I don't know what you mean."

"I know you don't," Helen's eyes were glittering as she left the room.

The phone rang while her heels were still clicking on the stairs and Brigid was still standing by the desk in the clutch of an emotion she could not understand.

It was Phil. "Brigid, won't you let me come over? Won't you let me talk to you about last night?"

"I don't want to talk to you." She pressed her finger down on the bar, and his voice was abruptly gone from her ear.

Then she put her head down on the phone table. She did not know why the tears came spilling from her eyes and dropped over the backs of her slim brown hands.

THE confusion that had shaken her that afternoon by the phone table was with her all the week after Helen went. There should have been relief but there was none, any more than there was satisfaction in viciously slamming down the receiver whenever Phil called.

Over and over Brigid told herself, "It's right—it's right. Both things are right. He hurt me and I'll never forgive him, and I'll never forgive Mother, either, for what she's done to Rory."

She and Rory would ride together and laugh over meals and talk. But he was strange and sullen even with her. He stayed late in the city and when he came home she knew he had been drinking—and Rory never drank. He rode with her evenings, but he was silent throughout the rides and he rode too hard, too fast. He was bad-tempered and when he talked to her, he talked to her as though

Students of TWA's school for aircraft mechanics also train in Commando tactics, crawling through sewer pipes being only one of their many ac-

## WING TALK

EVERY day now finds one group or another completing a training course in some specialized branch of the armed services, as the stepped-up program reaches greater momentum for a perfectly balanced fighting force on land, sea and in the air. But few, if any, of these graduating classes will equal the record of a class of sixteen which recently completed a specialized aircraft course in Kansas City.

No member of that group could even imagine, upon receiving his diploma that seventy-two hours later he would be on the other side of the world, in the midst of real action, doing the things he had been taught to do. But it happened.

The graduates were no more surprised than certain high-ranking officers were pleased. The progress of the plane on its long flight was followed closely by the higher-ups. It was a precious cargo of aircraft mechanic specialists, vitally needed at the front to keep warplanes flying.

There is nothing so worthless in a war zone as a fighting plane that cannot fly. Sometimes it is a simple operation to get it back into the air, but in most cases a specialist is required.

The young men selected for these post-graduate courses in the maintenance of aircraft are from every walk of life. Many had started in careers as professional or business men when they suddenly found themselves as selectees or enlisted men in the Army. They are the above-the-average type—keen-minded, alert, ready to adapt themselves to this new job of taking care of Uncle Sam's most important weapon, the airplane. But the specialist phase is just one of many branches of the Army Air Forces Technical Training Command, under the able guidance of Major General Walter R. Weaver. The boys who graduate from Army Air Corps technical schools play a much more important part than most persons realize. They know how to get a damaged plane back quickly into service, be it transport, fighter or bomber. They make up that important "ten" of the famous 10-to-1 air force ratio—ten men on the ground for every one in the air.

Every sixty days a new group enters the specialist school operated by Transcontinental & Western Air, Inc., in Kansas City for the Army Air Forces. Early next year, this one school will send forth

highly trained men to all parts of the world at the rate of several hundred a month.

During their eight-hour day of room work, they learn to tear minor assemblies, study the function of every working part. Some specialize just the air frame; learn how to mend a damaged wing. In order to teach students to be resourceful, the instructors sometimes take away half the tools, deny the use of benches or other equipment.

"That's what you will run up against on the African desert or on some island in the Pacific after the enemy has made a raid," the instructor warns.

WHERE dads and mothers used to admire nice new cars in showrooms on "motor" days, their sons are now learning to be aircraft mechanics or specialists. In Kansas City, as in many other cities in the nation, buildings formerly used by car agencies are serving as schools for these students. The TWA specialist school is housed in the four-story building—the veteran of the age—at the head of Kansas City's famous river row.

In keeping with the changed nature of buildings on the nation's motor days, many used-car lots (which, of course, are now conspicuous by the absence of cars) are playing a part in keeping aircraft students fit. They have become school playgrounds for a Commando type recess.

Training-school contractors or some cases, municipalities, have obstacle courses on these lots. Between classes, students may be seen running around a course with the same aim and spirit that mark those who specialize in Commando warfare. Over low hurdles they go, across a wide trench, over a seven-foot wall, through narrow ziplines, up one side and down the other a high perpendicular ladder, up a rope to leap eight feet to the ground, and end up by crawling through a section of sewer pipe.

It is a far cry from adjusting a carburetor, finding a "short" in a complicated wiring system or repairing hydraulic landing gear of a plane, even the aircraft specialist, still a soldier, must be prepared to take care of his plane as well as of a fighting plane. . . . J.

# TIRES

## FROM THE TEST TUBE

Y J. D. RATCLIFF

**The fascinating story of Thiokol, the easy-to-make synthetic that will keep your tires in retreads for the duration. All because of a lucky accident in a laboratory thirteen years ago**

**T**HE chances of obtaining tires for the average automobile seemed utterly remote six months ago. We were going to have to find other ways of getting the kids to school, doing the marketing, riding to work. This has changed. It now looks as if we are going to have tires—not for vacation trips or for casual gadding about, but for *necessary* travel. Thanks are due a piece of brilliant chemical achievement—magic performed while the smoke of Pearl Harbor was still clearing.

This work created a completely new synthetic rubber. It is called Thiokol N and it has some overwhelming advantages. It is made from relatively plentiful materials. Unlike the other synthetics we have heard of—the bunas, neoprene, Ameripol—it requires no elaborate plant equipment. In a pinch, it would be possible to make Thiokol in a bathtub—if the tub were specially equipped.

Speed of manufacture is another point. It takes five years for a rubber tree to produce latex. Thiokol can be made in five hours. While this new material isn't good enough for the rigorous demands of the military, it is a godsend to the civilian motorist. Recaps made from it give 5,000 to 10,000 miles. More important at the moment, this new rubber is already in large production; and this production will be stepped up tremendously in the next few months.

The story of Thiokol N begins in Kansas City—with an accident. Doctor Joseph C. Patrick, fifty, is a medical man. He is small, bald, intense; has the flat voice of the plains. He was born in Jefferson City, Missouri. He went off to medical college, off to France to war, off to Argentina to work for Armour & Company. Somewhere along the way he lost all interest in medicine—and replaced it with an interest in chemistry.

After spending two years working as a packing-company chemist in a small town outside Buenos Aires, he came home to Kansas City to start a laboratory of his own. It was the kind of laboratory usually found in any city. Patrick analyzed fuels, studied meat preservatives, acted as an expert witness in court—all for hire.

On the side, he carried on a line of research with problems that interested him. He was particularly interested in ethylene gas—a waste material from oil-cracking plants. Not knowing what else to do with this gas, refiners burned it under their stills. A pity, thought Patrick. Here was a potentially valuable hydrocarbon—if anyone could find a use for it. Maybe it could be made into an antifreeze solution for automobiles. If so, people would buy it—and thus a chemical ideal would be satisfied. He would have converted a waste product into something people would pay for. Such ideas always interest chemists.

He was thinking along these lines one afternoon when he poured two chemicals into a beaker: ethylene dichloride and sodium polysulphide. He put the beaker under a mechanical stirrer and went on about his business. From time to time he'd look at the mixture—and he saw that it was beginning to thicken. This wasn't a very hopeful sign to a man looking for an antifreeze. But he left the mixture under the machine. We can all thank our stars that he did.

That night he set the mixture aside. When he came in next morning, a thick coating of something was on the bottom of the beaker. Patrick fished it out and washed it off. He felt it with his fingers. It was spongy. He didn't know that chemical history was being written or that he had got one of the luckiest breaks any chemist ever got.

This was strange stuff, this spongy mass. Sirupy things are ordinary in chemical research. So are crystalline things. But rubberlike substances are rare. Still,

Patrick held any enthusiasm in check. Chemistry is a tricky science. Something may start off as a rubbery substance—then end up a few hours or a few days later as a sirup. So Patrick put the amber-colored blob aside and waited, while he went back to the dull but money-making business of analyzing a sample of coal.

Days passed, and that ball of spongy amber stuff didn't change. He put it on the window sill to see what effect sunlight would have on it. It did no harm. Then he sliced off pieces and soaked them with solvents—oil and gasoline among them. Still nothing happened. This, too, was odd. Gasoline and oil tear natural rubber to pieces. Things were beginning to get exciting. Patrick scratched his bald head and waited. He knew something of the history of synthetic-rubber research, particularly about the costly flops on which Germany had lost millions of marks.

Things were at this stage when Patrick got another lucky break. He was puttering around the lab one day when a husky, athletic-looking man walked in. This was Bevis Longstreth. Longstreth had gone to Princeton, where he was on the football, track and wrestling teams. After the war, he came home from France to take over the family business—salt mines in Kansas.

The mines were a major headache. For years they had produced a good income—as long as Kansas City packers bought their salt. Then the packers opened mines of their own, and Longstreth's business evaporated. But he didn't come in to see Patrick about this headache. He had a more personal problem.

He explained. He was having a party next night, he said, and had bought some whisky. This was during prohibition. Well, he explained, he didn't want to take any chances on poisoning his guests—a thoughtful person, in other words. He wondered if Patrick would run an analysis.

#### Beginning of a Friendship

Patrick said he was sorry; he didn't do that kind of work. Then, for some reason, he changed his mind. Longstreth seemed to be a nice person. Patrick, being softhearted, didn't want to see him and his friends poisoned. As a favor, he said, he would do the job. Everything turned out all right, and a few days later Longstreth dropped in again. This time he wanted to talk about salt.

Was there anything, he asked, that a chemist could do with a salt mine? Any chemicals he could get out of it or anything like that?

Not much, said Patrick. If you had cheap power, you could break salt down into chlorine and caustic soda. But there was no cheap power around, so that was out. But you might be able to combine salt with hickory smoke and make a compound which you could rub on hams—and thus cure them without having to bother about a smokehouse. Longstreth was interested, so Patrick started work.

As the work progressed, the friendship grew. Patrick showed Longstreth the dozens of samples of the spongy stuff he had been making, that looked like rubber. It wasn't much good, he explained. At zero, it cracked. At the boiling point of water, it was a gooey mass. It had no tensile strength and little resistance to abrasion, and, as Longstreth could detect, it smelled to high heaven. Held close to the eyes, it gave off some gas that brought tears.

Could anything be said for it? Yes, said Patrick. Quite a lot. Oil, gasoline, and many acids didn't touch it. These were good properties. Such a material should be able to find uses. Hoses for gasoline pumps, for example. And gaskets for engines, linings for pickling vats at steel mills, and in making boots and gloves for chemical workers. Oh, there were lots of places where its peculiar properties should find uses.

As time passed, Longstreth got more and more interested. He took a sample of Patrick's rubber to Akron—and found that city notably gun-shy. Akron had been burned too many times by starry-eyed people who had found ways to make rubber at home on the kitchen stove. One of these fellows had been on a selling spree only a short time before. He had a process that was completely baffling—for a while. He threw all kinds of assorted chemical junk into a big tank, passed a few words over it, and pure latex flowed out of a spigot. The rubber people were ready to throw the bankbook at him until they discovered his secret: a pipe line running to a tank car of pure Sumatra latex.

But Longstreth managed to get some good advice from one of the Seiberling brothers, with whom he had gone to college. Seiberling felt the rubber,

Worn tire, above, is "buffed," or ground down to form rough surface, as first step in recapping process. Below, Edward Williams, then applies the "camel-hair" brush to any unvulcanized rubber stock. That used here is Thiokol N.

Tire recapped with Thiokol comes out of mold vulcanized and good for another five to ten thousand miles.

PHOTOGRAPHS FOR COLLIER'S BY ALBERT FENN-PIX

Dr. Joseph C. Patrick fishes the rubber-like mass of Thiokol from the bottom of a beaker. Hunting a use for ethylene gas some thirteen years ago, his discovery of the synthetic made chemical history and may keep civilians on rubber for the duration

...wed at it and gave his verdict. This was interesting, no doubt about that. Longstreth should hire a rubber chemist and get busy on it.

In the end, Longstreth sold his mines, and Patrick sold his laboratory. Together, they set up in business to make synthetic rubber.

They rented a small, abandoned building in East Bottoms—Kansas City's industrial district along the banks of the Missouri River. They bought vats from an old brewery and started out to make rubber.

That was in 1929. They had no hope of competing with natural rubber, which was selling at the time for 20 cents a pound (and was diving toward the all-time low of 3 cents reached in 1932). Thiokol cost 50 cents to make. Therefore, it had to do jobs that natural rubber couldn't do. And it did.

The business wasn't a howling success at first, as Patrick puts it, "We didn't miss meat." Jobs for the new rubber turned up everywhere—with the help of Longstreth's probing. He arranged dinners. After possible customers were fed, he would give them a couple of vials of chemicals, an old-fashioned glass, and a stirring rod—and let them make synthetic rubber at the dinner table. The endless talk about the properties of this rubber followed.

The petroleum industry found dozens of uses for Thiokol: in hoses for loading and unloading tankers, in hoses for gasoline pumps. It went into boots, shoes, and gloves, and it found jobs in steel plants. Painted on the inside of tennis rackets, it made an airtight cell that gave longer life to the balls. The auto industry found scores of specialty jobs—in hoses, gaskets and so on. Today, almost every recent-model car on the road carries a certain amount of the stuff. The printing industry used Thiokol for ink rollers and press blankets, and it was used in tubing for paint sprays.

While business wasn't exactly booming, everything was going nicely. Production outgrew the little Kansas City plant—which neighbors suspected of being a synthetic halitosis factory—and it moved nearer to its raw materials. The new plant was at Yardville, New Jersey—a suburb of Trenton. Demand still increased and the Dow Chemical Co. of Midland, Michigan, took over the manufacture of Thiokol. This left Longstreth to handle sales and promotion, and Patrick to boss a growing research staff. Things stood this way when Pearl Harbor went off.

### Thiokol Goes to War

Up until then, Patrick had wasted little time thinking of his synthetic as a possible competitor of natural rubber in making tires. Pearl Harbor put him on a new course. We were cut off from our supply of natural rubber in Java, Sumatra and the Malay States. Anything that would bend became potential tire material. It was evident from the outset that every ounce of Thiokol then in production would be needed by the Army and Navy.

What was needed was an entirely new material—a synthetic with the basic properties of Thiokol, but one that could stand the heat and abrasion of road wear. It had to be made from plentiful raw materials—in plants which could be constructed simply and quickly. Patrick went back to juggling his chemicals—and came up with Thiokol Type N.

He tested it in the lab and it looked good. Then he ran up a batch, took it to a Trenton tire shop, where it was applied to an old tire carcass. Patrick bought a test car and ran the retread day

and night. It stood up for a little better than 5,000 miles.

About that time—this was last spring—the rubber and motor industry set up a committee to study any materials with tire possibilities. They gave Thiokol an enthusiastic okay as the most promising thing brought before them. Last summer the Baruch Committee went over the same ground. It decided that, as a nation, we were flirting with a breakdown by allowing America to roll to a stop. Our whole life was geared to motor transport and cars had to keep moving. On what?

### Synthetic Keeps Us Moving

There wasn't enough crude rubber in the stock pile to fill demands. All the synthetic buna rubber would be needed by the Army and Navy. The military also put tremendous demands on available scrap; at best, civilians couldn't tap this source for more than 6,000,000 tires a year. How, then, was the country to keep moving? There was a ready answer—Thiokol. The Baruch Committee recommended construction of an industry to provide 60,000 tons of Thiokol a year—enough to retread 24,000,000 tires.

Patrick and Longstreth, a little dizzy,

went to work. Up to this point, production of Thiokol had never exceeded 2,000 tons a year. Now they had a large part of the responsibility for keeping America on wheels.

They checked over necessary raw materials. Type N was made from salt, sulphur and ethylene gas. There were no priorities on salt, and we have over 90 per cent of the world's sulphur. Ethylene, however, was another problem. A bottleneck had developed here—but one that was quickly opened.

Ethylene is one of the basic building blocks of tetraethyl lead—the antiknock fluid added to gasoline. Since people were driving their cars less, the demand of ethyl fluid had diminished. Lowering of octane rating had further decreased the demand. As a result of these things, two plants of the Ethyl Gasoline Corporation were available to produce ethylene. Two plants at Baton Rouge could produce enough to meet almost 90 per cent of the demand. This solved the raw-material problem. The question of plants came next.

Du Pont had a large chemical plant at Deepwater, New Jersey, which they could spare. It was equipped with vats which could be used to make the new tire rubber. Work began immediately

on the minor alterations necessary—and it is now in production. It will make 24,000 of the 60,000 tons recommended by Baruch. A plant to produce the remaining 36,000 tons should be under way by the time this article appears.

Other products of Patrick's wizardry are playing a big part in the war. There are eight commercial types of Thiokol. One of them is ground to powder, then applied like paint with a spray gun. This one is being used to cut corrosion on propeller shafts and exterior supports of Liberty Ships. This same product is used on tanks that will fight in the desert. A sandstorm has been known to cut paint off a tank in as little as three minutes—leaving a mirrorlike surface which makes a perfect bomb target. The new material can stand the worst sandstorm for ten hours.

Still another type of Thiokol is being used to coat the inside of self-sealing gasoline tanks for planes. The Navy is finding Thiokol invaluable in coating concrete tanks used for gasoline storage. When exposed to concrete, the octane rating of aviation fuel drops dangerously. But a layer of synthetic rubber stops this loss.

Fabric impregnated with rubber allows the passage of air. Thiokol doesn't. This feature is finding scores of applications. The synthetic is being used on the Mae West life jackets, gas masks, life rafts, blimps and barrage balloons.

### Collapsible Tank Cars

One of the most striking features of this new substance is that it can be sprayed on ordinary burlap sacks to convert them into emergency storage tanks for gasoline. This same idea makes it possible to use ordinary boxcars as tank cars. The cars are filled with collapsible cloth and latex cells. When the gasoline is delivered, the cells are collapsed—and the car can haul freight on the return journey.

Another projected application of Thiokol has fascinating possibilities. Oil and gasoline storage tanks along coastal regions are prime bomb targets. Why not sink great sacks of oil and gasoline in harbors where they would be safe from bombs? Pressure at the bottom of the harbor would force the fuel up through a tube to the surface—where planes, subs and ships could refuel.

Such uses as these make every pound of the older type of Thiokol precious. But the Type N for tires is a program entirely apart.

Huge production of the new tire rubber should cut costs radically—perhaps to 25 cents a pound. Patrick has no illusions about the new product as it stands today. It isn't as good as natural rubber. Still, he has a nice point to make:

"The auto tire of 1910 was good for two thousand miles. Today's tire runs for twenty thousand. But both contained the same rubber. The only thing that has been added is brains. Today's tire is a mixture of brains and rubber. To say that today's synthetic tire isn't as good as a tire of natural rubber is foolish. Of course, it isn't as good. But I would hate to get down on paper with the statement that it won't be as good—or better—twelve months hence."

However this turns out, one big comforting fact remains: The lucky accident that happened in a Kansas City laboratory will rank as one of the outstanding chemical achievements of our day. It paved the way for rubber plantations in New Jersey, Michigan and other states. If we are still driving our cars on necessary errands a year hence, we will have that accident to thank.

THE END

"I met a boy who won the Congressional Medal of Honor and he wasn't at all good-looking. That's what I like about democracy!"

# Not So Dumb

By Struthers Burt

ILLUSTRATED BY RONALD McLEOD

Old Man Erth had a way of dealing with his new hand. And it wasn't appeasement

THE young man had appeared out of nowhere, down the road to the ranch, over the hill through the timber, asking for work. And because all the young men of the valley, the neighbors' boys, the boys you hired first, were away at the war, and also the drifting cowboys who each spring made their appearance, coming north from Arizona and New Mexico, John Erth, Jr., who had managed the outfit since his father's injury six years before, signed the young man on.

"We can fold the dude end of it up," he said, "for the duration. But cattle can't take care of themselves, neither can horses—and then, there's the haying."

He was a tall, lean, dark man of forty, John Erth, Jr., sunburned, with straight gray eyes like his father's, and his father was proud of him, although he would have died rather than admit it.

For the most part, John Erth, Sr., praised his son in his own way. "He's a good rancher," he would say, waving a huge gnarled hand dismissively. "Yes, sir, a good rancher and a good hand. Good with horses and stock. Although he's kinda puny"—John Erth, Jr. weighed a hundred and seventy pounds—"he favors his mother. But he's a good rancher. That there college education don't seem to have hurt him none. Took him a couple years to get over it, but he come through all right."

This particular speech amused John Erth, Jr., greatly. He knew how his father had skimmed and saved to send him to an Eastern university. "None of these here jerkwater cow colleges," the old man had said. And he also knew how his father had felt about both the appearance and character of his dead wife. John Erth, Jr., having got into the tail end of the last war had wanted to go again, but his wife Lola, who was as small and blond as he was tall and dark, and who had even more determination, put her foot down.

"Don't be a fool," she said. "You've done your job once, and now you're a mature man with a wife and three young children and a crippled father."

John Erth, Sr., sitting in a wheel chair on the front porch of the ranch house, his great arms and hands spread out along the arms of the chair, quiescent, the way he always sat, had seen the young man come down the road out of the timber, a stick with a small pack tied to the end of it, over his shoulder. It was a quiet, warm afternoon early in July.

For a moment, the young man had paused and looked about—he was only about seventy yards away—before setting out for the corrals where John Erth, Jr., and two of his hands were injecting the horses against sleeping sickness. Presently John Erth, Jr., had come up to the porch and had sat down on the edge of it, fanning his perspiring face with his sombrero.

"That young fellow's looking for a job," he said, reaching into the breast pocket of his blue denim work shirt for a cigarette. "Shall I take him on? You saw him?"

"Yes," said his father. "I seen him."

He did not take his eyes off the sharp snowcapped peaks, fifteen miles across the valley, but he was pleased that John Erth, Jr. had consulted him, as always, even about so minor a detail as this. He didn't have to; he didn't have to consult a useless old hulk who had been that way ever since the October dusk six years before when, getting out house logs in the timber, a thickheaded Swede had felled a tree across his legs.

John Erth, Jr., inhaled his cigarette thoughtfully. "He's an Austrian," he said. "Refugee. Been in

Hans got abruptly to his feet, still pointing the automatic at John Erth, drew himself together and clicked his heels. At that moment he no longer looked like a blond young ranch hand, but like a hawk against the sun

this country four years. Born a farm boy, he says. Has a couple of good letters from dairymen he worked for in Wisconsin." He laughed deprecatingly. "It isn't fair," he commented, "is it? There are plenty of good ones, of course, but I've got so that their accent gets on my nerves. Makes my hair bristle. But it isn't fair."

"No," said his father, "it ain't fair, although I feel the same way myself. But it ain't fair. Some of the finest men I ever knew was of that blood. But they're kinda different nowadays—got a new idea. Still it ain't fair."

He barked suddenly, his deep, rare, slightly contemptuous laugh. "But what's that got to do with hiring a ranch hand?" he asked. "We need labor. In fact, we got to have it. And what could that feller get away with here? He might try to steal a horse or a saddle but he wouldn't get far. There's eleven men on the ranch, counting Domingo in the kitchen and not counting me who's helpless, and two women and three children. No, sir, he'd have hard sledding. I'd hire him, son, and forget it. But as for them letters, they don't mean nothing. Never did. Any fellow can write 'em to himself."

John Erth, Jr., stood up. He seemed relieved.

"That was the way I was figuring it," he said. "Well—I'll be seeing you at supper."

JOHN EARTH, SR., sat for a few minutes longer staring at the sharp snow-covered peaks showing above the green of near-by ridges of pine and fir.

He had got to know those peaks intimately in the last six years. Before then he thought he had known them, but he hadn't really. But now he knew every changing shadow of them; their acid sharpness against the blue of the morning, the way they seemed to grow as the afternoon waned; their violet immensity and unreality at dusk. And they had come to mean something to him.

He looked down at his two huge hands, lying so quiet and outspread on the arms of the chair. He had been the strongest man in the valley until he had been hurt; he had been famous for his strength. He raised his eyes to the peaks again.

Well, if they could take it—all the storms and weather and snows—he guessed he could, too. Which was foolish, he knew, because they were mountains and he was merely an old man, but nonetheless it was comforting. They were mighty solid and upstanding, anyway. Unquestioning. And then his thoughts changed. Queer, wasn't it, mighty queer the way this thing reached out—this war? The last war you knew where it was, but not this one. It was like a creeping forest fire—this present war—burned underground and then flared up in the most unlikely places. Imagine having to figure out whether you'd hire a ranch hand or not because of his accent!

John Erth, Sr., reached out his left hand and grasped the huge gnarled stick that was resting against his chair, an aspen stick John Erth, Jr., had whittled and polished for him. It wasn't much good, he could only walk with his crutches, he was pretty much confined to his chair and his bed, but the stick was useful for summoning Domingo. He rapped three times peremptorily on the boards of the porch.

A distant and annoyed voice answered him:

"What you want?"

"It's five minutes to four, you dumbest fool," bellowed John Erth. "Wheel me in so I can hear the news."

"Awright! Awright!"

Almost every morning when it was fair, John Erth, Sr., sat out on the porch looking at the peaks across the valley, and in the afternoons he did the same until the mountain chill drove him in at dusk. Five or six times a day he summoned Domingo, usually to hear the news, and it was always as if he had interrupted Domingo at a crucial moment. John Erth loved Domingo, and he knew that Domingo loved him, but as a rule they exchanged no more than thirty words at a time.

Domingo had been with John Erth for years. He puzzled John Erth—it must be lonely up here for a Filipino, but Domingo did not seem to mind it. For eleven months he cooked for the J E Bar, and for one month went to Salt Lake City for his holiday.

our native streams, golden as our sunsets." A small chime rang softly three times and another voice spoke, a more matter-of-fact one: "It is exactly thirty seconds past four o'clock, war time. This is KUK the intermountain West's most powerful station. You will now hear the latest news of the world."

John Erth sat huge and immobile, his face as still and carved as one of the peaks at which a little while ago he had been staring.

Hans—that was his name—Hans Halfner, turned out to be a pleasant surprise. He was a tall, graceful, slim young man, blond, with ice-blue eyes, but he had a slow ingratiating smile and good manners, and he was especially nice to Jackie, ten, Ellen, eight, and "Piper," whose real name was Peter, five—Lola

John Erth, Sr., was deeply touched and pleased.

"Like old times," he commented. "Like a real ranch again. None of them dumb dudes that John and Lola brought in. A man can savor his victuals." But he did, every now and then, probe in what he thought was a sly manner into Hans' political mind. Hans satisfied him. He realized that Hans didn't want to say much; he had a father and mother, brothers and sisters, still in Austria, and he was a silent young man, anyway, but in answer to direct questions he was explicit enough.

"What I can't understand," John Erth would say, "is the way them people of yours like to take orders. I've taken orders all my life and given 'em. You can't run a ranch otherwise, but they got to be reasonable. If they ain't, you move on."

Hans would flush and his ice-blue eyes would be expressionless.

"They arnd't my pee-pul," he would answer in his soft guttural—he spoke fluent English and without too much accent. "I'm from Vienna. I'm taking out my first papers."

"Now?" asked John Erth, Jr.

"I'm doing my best. Maybe you help me?"

"Sure."

"What really do you think of that fellow, Hitler?" asked John Erth, Sr., once.

Eddie Hickok raised his head.

"That son of a ———, Excuse me, Lola."

"Crazy," murmured Hans, looking down at his plate.

JULY, hot and abundant, paced toward August. The hay was cut and raked and lay ready to be stacked when it was sufficiently cured. John Erth, Jr., took advantage of this interval of a few days to drive downcountry two hundred miles to a convention of cattlemen, and he insisted that Lola and the children go with him. "It may be the last chance of a trip together for a long while," he said. "What with this tire and gasoline situation." John Erth, Sr., sitting on the porch, watched the car go up the hill and disappear into the timber. John Erth, Jr., grinning, had turned the ranch over to the old man.

"Think you can take care of it for three days?" he asked. "I've left the money in the safe. There's around a thousand dollars. It'll save you writing out checks. The bills can wait until I get back. Think you remember the combination? I've put it on this slip of paper."

"Combination? What's that?" asked his father with mock gravity. "Run along, boy, and don't drink too much liquor. I ran ranches when you was still wet behind the ears."

He sat on the porch looking at the peaks across the valley. Despite war time . . . it was only three although the clocks said four . . . the peaks were beginning to take on the softness and height of late afternoon. "By golly," thought John Erth, "they been there a long while, and they'll be there a long while still, after all this mess and runnin' around killing people is over. Yessir, a long while."

The ranch was very quiet now that the children were gone. There was no one down by the corrals. Bill Cassidy and Butch Reynolds had gone to a neighboring ranch to see about a bull; two of the boys were out looking for horses; and Eddie Hickok and the rest were beyond the north fence cutting poles. Presently John Erth rapped on the porch for Domingo. "Five minutes to four" he bellowed. "What about that radio?"

(Continued on page 40)

## BUTCH

by CPL. LARRY REYNOLDS

"Lady, will yah gimme th' recipe for this delicious pie I found in your refrigerator?"

Domingo appeared in the doorway of the porch, his shoebutton eyes expressionless, his cook's cap set at a rakish angle on his black, close-cropped hair. Without a word he seized the back of John Erth's chair and wheeled him through the dining room, and the sitting room beyond, into the small neat ranch office. He stepped before the radio and without a word went back to his kitchen.

THE office, not much used during the summer months except once a month when the hands were paid off and the accounts made up, was severely functional. At one end was an open fireplace for the intermediate seasons, and in one corner a stove. Against the east wall was a large neat desk with many pigeonholes filled with letters and papers. On the desk was a telephone. Across the room from the desk was a table reserved for the radio. Back of the table, reaching halfway up the log wall, were homemade bookshelves filled with volumes and pamphlets on cattle breeding, agriculture, and the diseases of horses. The most imposing feature of the room was an iron safe with the ranch brand painted on it. John Erth turned the dial of the radio. A mellifluous male voice spoke.

"And so," it said, "in these times of stress, when it is important to plan and to save all you can, you can do no better than to use Aspen Maid Butter, that strictly intermountain product, pure as

and John Erth, Jr.'s, children. He seemed to understand children and they understood him. He had a direct way with them and treated them as equals.

Often after supper he would sit out on the porch and, with long, deft small-boned fingers, carve chains and little ships and small men and women from strips of board. The children watched him wide-eyed with admiration. Even John Erth, Sr., had to admit that he seemed a pretty good fellow, and John Erth, Jr., said he was surprisingly good with horses and quick to learn about other forms of ranch work.

"He's all right, I guess," he decided. "Most of these Austrians are."

Since the dude business was in abeyance for the duration, the entire outfit ate together, John Erth, Sr., at the head of the table, as was his right, and stretching away from him down the long board, his son, and Hans and the children, and Eddie Hickok, who had been with the J E Bar for years and was its foreman, and Bill Cassidy, and "Butch" Reynolds, and four newer hands, and a couple of pink-cheeked and slightly moronic boys of sixteen, who, because of conditions, had been hired to do, very badly, a man's work. Every now and then the two cowboys, summer-herding the cattle back in the hills, would drop in for a meal. Lola sat at the other end of the table.

There was hardly any conversation. The country had gone back to the old-fashioned Far Western idea that food was to be eaten, not talked over.

# FIVE WHO VANISHED

By George F. Worts

ILLUSTRATED BY GILBERT DARLING

he Story Thus Far:

WAKENING one night in his San Francisco apartment, Jason Amboy—inventor of a revolutionary airplane engine—finds a girl in his bedroom. The girl has a flashlight; a handkerchief is tied around her face. Jason says, "Who is that?" The girl responds by knocking Jason unconscious. When he awakens, he is trussed up and gagged; and, after searching the apartment, the girl goes away. She takes with her only some letters from Jason's brother.

A few seconds later, Flack, Jason's manservant, finds him, releases him, and rushes out to see if he can find the intruder.

In Hawaii, Jason has some powerful relatives—the Grazzards, who own extensive plantations. Wayne Amboy, Jason's brother, has a job with them. After Flack departs, Jason's telephone rings. Jason answers it, and Peter Durkin (in Honolulu), a former employee, informs him that Wayne has disappeared, and his wrist watch, smeared with blood, has been found!

The war with Japan is on. Nevertheless, Jason decides to go to Hawaii. Meanwhile, Flack has found the girl, followed her and learned that her name is Luana Topping and that her home is Kokala, Kauai Island, Hawaii (headquarters of the Grazzard clan). Investigating further, Jason learns that Miss Topping is a famous island beauty, who is employed by Mrs. Grazzard, widow of old Hiram Grazzard, Jason's uncle.

Flack, on the telephone, begs to be permitted to accompany his employer. Jason says that he cannot go. Whereupon, the man announces that he is changing his name to "Rodney K. Kitchener," and that should they meet again, "Mr. Kitchener" may be wearing a disguise! Jason demands an explanation. Flack hangs up on him.

Jason goes to his boat. There he encounters—Luana Topping. She has lost her money and cannot pay her taxi fare. Jason pays it for her. Later—after he has visited his stateroom—he sets out to find her. And find her he does—on B-deck, where they have a pleasant chat. They are interrupted by a loud-speaker announcement, instructing the passengers to wear their life jackets at all times, to observe the blackout and so forth.

Miss Topping listens to the end. Then, looking at Jason—"If anything happens," she says, "I think I'll decide to be near you. You're so efficient."

## II

THE Tasmania, aided by tugs, backed out of her slip, turned slowly and started toward the Golden Gate. There was no hesitation. She would evidently not anchor. The convoy was made up and ready to sail.

Luana Topping was gazing at the city. She looked sad.

"I suppose," Jason said, "you love San Francisco as all good little islanders do."

"Yes, I adore it." Her eyes were still slightly blurred, but they were dry, and she was quite controlled again. "I always cry when I'm leaving either San Francisco or Honolulu."

"I've forgotten Honolulu," Jason said, and he was wondering what sort of man her fiancé Lorrin Grazzard was. "It's been so long, and I never saw much of it, anyway. You see, I lived on Kauai—until I was ten."

"Not really!" Miss Topping cried. "Why! How exciting! I live on Kauai—Kokala." Her eyes were glistening into his with what appeared to be unaffected excitement and pleasure. And he wondered if she had the remotest suspicion that he recognized her as the girl who had climbed in and out of his bedroom window that morning at a scandalous hour.

"I suppose," she said, "we should really introduce ourselves. My name is Luana Topping."

"Yes," Jason said, "I'd gathered that. Mine's Jason Amboy."

She sent him one of her narrowing sidelong glances. "Yes," she said.

Jason decided that she was more mysterious than ever. Either she was sure that he hadn't recognized her, or she didn't care a hoot if he had. He decided to try a straw in the wind.

"You know, Miss Topping," he said with a thoughtful frown, "it will sound terribly banal, but it seems to me I've met you before. At least, I'm sure when I look at your eyes. I'm not quite so sure about the rest of your face, but I'm certain about those eyes. They're eyes that a man wouldn't forget very quickly."

"So many men have told me that," Miss Topping said sweetly. She was scrutinizing his face, his eyes, his nose, his mouth. She slowly nodded her head. "It's very funny," she said. "It's very, very funny, but I have the same feeling about you."

"Oh, here you are, honey," a man's deep voice said.

Jason glanced away from her face to the man who had come up. He was a tall, dark-skinned man of about thirty in light brown (Continued on page 41)

The shadowed figure of a man sprang up. "I seem to have the habit of opening wrong doors," Jason said

# CANINE CORPS

By Avery Strakosch

PHOTOGRAPHS FOR COLLIER'S  
BY W. EUGENE SMITH

Today even dogs are jumping at the opportunity to serve their country. What's more, after being put through the training hoops described here, they'll be a credit to any man's army

**T**HERE are those who say no good can come from cocktail parties. Let them forever hold their peace. For it was at a cocktail party, with several dog-lovers present, that the non-profit organization, Dogs For Defense, was born. Today, with Mr. Harry I. Caesar, its president, and several other well-known canine fanciers also volunteering their services, DFD is giving many a dog the chance to have his day and at the same time serve his country. Many women, like Mrs. Bradley Martin of Old Westbury, L. I., and Miss Marie

Leary of Greenwich, Connecticut, are hard at work as amateur trainers on their grounds, at established kennels, and even in the limited space of back yards.

If you don't believe it, visit DFD's central office at 22 East 60th Street, New York, or one of the training centers, or talk with a regional director. Ten to one, if you haven't a pooch to donate, you'll dig down in your perhaps already depleted pocket to contribute toward expenses for maintaining this canine militia during its preliminary training period. That is, before it is sent to the dog finishing school at Front Royal, Virginia, to become the property of the U. S. Army for the duration.

With the DFD officially recognized by the War Department last April, it was in July that Quartermaster General Edmund B. Gregory decided to make the DFD recruits a section of the Remount Division. In this military establishment at the northern boundary of the Shenandoah Park, dogs who have successfully

passed training tests, together with soldiers trained by experts to handle them, leave daily for active service. Many coastal stations, inland camps, munitions and defense factories, and plants where food, medicine and clothing are stored for the Army or Navy, are protected by sentry teams, animal and human.

In early August, Major General Gregory wrote DFD, requesting 125,000 dogs as soon as they could be trained. Some will go overseas for use in both Army and Navy. Even Scotties and other self-important little dogs can do their bit. They are useful in barking warnings at such places as naval supply warehouses.

This demand for so many dogs has not surprised American and English dog lovers. During the past ten years, they've been reading between the lines of foreign kennel reports. They figure that Germany, in that time, trained approximately 200,000 dogs for police and military duty.

The dog fancier also found out that

Ricky, a Doberman, being trained for sentry duty, rejects the friendly advances of Assistant Instructor Quigley. Seaman 2d Class Olejniczak of the U. S. Coast Guard is holding the leash

some 25,000 animals were shipped to Japan several months before December 7, 1941. Information has since come, through escaped prisoners from Hong Kong, that that city was won largely by snipers, many of them with trained dogs. The dogs could scent an enemy and give the Japs the second's warning that meant the difference between their death and that of their foe.

Since Pearl Harbor, the owners of some 17,000 dogs in the Hawaiian Islands have offered them to DFD. Trained under the direction of Mr. Harold Castle, long a resident of Honolulu and a noted judge of dogs, more than 3,000 recruits are already in service.

Army officers say that, after dark, the well-trained canine guard is equal to half a dozen or more human sentries. A single dog may save thousands of lives through his alertness. In a West Coast city one black night not long ago, a polka-dotted Dalmatian, pacing a wharf with his soldier-handler, suddenly came to attention, emitting a low growl. A search was made of the pier without result. Yet the dog grew more and more insistent, and the soldier finally decided that the trouble was beneath the pier. He quietly signaled a passing harbor patrol. In no time they routed out a Jap in a rowboat, well supplied with the tools of a saboteur.

It's a simple matter to prove the efficiency of a well-trained sentry dog. Try wandering into a proscribed military or defense area some moonless night, where a soldier with a sentry dog stands guard, say 200 or 2,000 feet from you. Before you know it, the animal will have you spotted and will instantly give the signal he has been taught.

In its early stages, DFD promised that when the war was over, your pet would be returned to you, his disposition unimpaired. Now official orders rescind this promise. The plan is to have always on hand a large reliable unit of war dogs. So, when you take him for induction, you had better steel your heart to a parting that may be final.

To get into the K9 (for canine) Corps your dog must learn within eight or ten weeks to obey four commands. The lesson is taught daily and should last from one and a half to two hours. But some dogs tire quickly and lose interest. Others are too enthusiastic at first, then suddenly refuse to concentrate. But more often, a dog's intelligence increases as training goes on. Never bore your dog with training. If he seems to lose interest, stop and let him rest. Right-thinking dogs require constant encouragement and even extravagant praise when they do well.

Here are the commands in the order they are taught. The dog's name should always precede the command.

1. **HEEL.** Whether sitting, standing or walking, the dog remains close to the left of the handler, on or off a lead. (Left side, to keep the soldier's right hand free.) This is taught by pressing down on the dog's head or neck and repeating "Heel" over and over, until he understands.

2. **STAY.** After the dog has learned to heel, he is taught to remain motionless, standing or sitting. This is also taught with a firm pressure of the left hand to keep him in place. He must remain where he is whether the handler stays by his side or goes away.

3. **OUT.** The dog should range in any

direction indicated by the signal—a wave of the hand and the word “Out” repeated. All dogs naturally like to range, but the trainer, in exceptional cases, may have to push the animal forward and encourage him.

4. COME. The dog, at any distance from the handler, under any circumstances, must return to him. This is sometimes taught by putting the dog on a long leash, yanking the leash and patiently repeating the word “Come.”

At school, a dog first wears either a light chain or a leather slip collar with lead attached. This enables the trainer to control his pupil without undue severity. The lead varies in length from six feet upward, according to the command being taught. If the pupil goes too far forward, a light jerk will bring him to correct position. If he lags behind, the collar tightens. All commands are finally given under various distracting conditions, including gunfire.

It seems to be natural for most dogs to wish to warn their masters of possible danger by growling or barking. In training DFD dogs, danger is simulated. Boy Scouts and others often serve as the enemy. At night classes, they hide behind bushes or buildings until the dogs scent them out.

If you've decided to donate that smart hound of yours to DFD, and he is a warmhearted fellow who has been petted a lot and likes it, better give up the idea. It's hard enough to turn an unfriendly dog into a friendly one. But as any trainer will tell you, it's next to impossible, as well as unfair, to make a dangerous, suspicious beast out of an inveterate tail-wagger.

#### Bird Dogs Go A.W.O.L.

The canine training camps are strictly co-educational. Any smart, medium-sized, pure-bred dog or bitch, physically sound, between one and four years old, with a natural instinct for guarding, should qualify for the Army. Bird dogs are politely requested to stay home, for in spite of their wonderful noses, their sharp ears, and almost catlike eyesight, hunting dogs are temperamentally unfit for the set responsibilities of military life. Even the best-trained hunting dogs can't resist sneaking off whenever they get the chance.

The Army has needed medium-sized sentry dogs so badly that the giant type of working dog is only now being called up. Newfoundlands, Great Pyrenees, St. Bernards, mastiffs and their like will do the job that is instinctively and traditionally the large dog's—rescue work. As in England, these dogs will also be trained by professional teachers to do messenger work, to carry water and supplies, and to lay telegraph wires.

Don't think the Army was being snooty because in the beginning they asked for purebred dogs only. The reason is sound. When you know a dog's antecedents, you can better judge his reactions to discipline, and that saves time in training. But now crossbreeds as well as purebreds are eligible.

Crossbreeds and even the progeny of champs will find themselves out on their ear if they don't show an aptitude for military routine within three weeks after their induction. A trainer worth his salt can decide in that time whether a canine recruit is too casual, too stubborn, or just too plain dumb. So far, less than 10% of the dogs donated have been sent back to their owners.

One of the most dependable MP dogs on an inland post, a tough pink-eyed English bull terrier with a canine I.Q. which puts him in the genius class, was a problem dog from the day he first

sniffed about a DFD training center. Butch barked every waking moment except when eating. In spite of his good field record, the trainers decided to toss him out.

The day he was to leave, Butch piped down—almost. His pincushion jaws went through the motions, but the sounds were ludicrous.

“Acute laryngitis,” said the vet.

“Uproariously funny,” said everybody else and doubled up with laughter.

At first, Butch looked puzzled, then ashamed. Finally he realized he was ridiculous and shut up for keeps, except when it was his job to give warning.

In the first World War, British war dogs under the direction of the internationally famous trainer, Lieutenant Colonel E. H. Richardson, saved the lives of countless men while on sentry duty along the Aisne in France. Heroic four-footed messengers at Amiens kept up communications between outposts and batteries during heavy bombardments when telephones became useless and human runners couldn't get through. But man's memory is short, and in September, 1939, in spite of Colonel Richardson's warnings, countless British dog-lovers, in a panic over food-rationing and encouraged by their government, had their dogs “put to sleep.” According to reports received by Mr. Warren W. McSpadden, director of the American S.P.C.A., approximately 750,000 dogs and cats were destroyed in England in the two weeks after war was declared.

Less than a year later, prominent and coldly furious members of Parliament were demanding to know why dog power wasn't saving manpower in the war effort. Rex, a five-year-old Airedale, employed to trace leaks for a London gas company before the war started, was cited as an example and symbol of what could be done, and is now the most popular dog in England.

Since then, many dog-training schools, their locations a military secret, have sprung up throughout the United Kingdom. Thousands of graduates guard the invasion coast from Sheerness to Lands End. Among the best are Alsatis, generally called, in this country, German Shepherds.

The effect of the good work of Dogs For Defense has already gone beyond its military program. The youngsters are showing a keen interest, and many letters from girls, as well as boys, imply that they would like to learn how to train their pets themselves. Regional directors encourage them and often invite them to watch dogs at work.

One day, before the Army ruled to accept crossbred dogs, a boy stopped outside a kennel on the outskirts of New York City. Curiously he watched a fawn-colored boxer, a silver Alsatian and a black, unclipped poodle going through their lessons. Suddenly he disappeared. In a little while, he was back proudly leading a worried-looking yellow-and-white hound of sorts.

“I'm too young for the war,” he said. “but I want my dog to do his part.”

Obvious ancestral confusion then barred the pup from a useful military life. The kennel owner kindly explained.

The boy thought a moment. “Then may I learn the rules?” he asked eagerly. “I don't see why Sport shouldn't have manners even at home.” ★★★

## MEXICO PITCHES IN

By Alice Leone Moats

Mexico is doing a fine job of training on her tiny army of 70,000 men and her practically nonexistent air force. It's the best she can afford, but it's not nearly enough, considering her problems. It seems to be up to the U. S.

IN THE last couple of years, whenever there has been a scarcity of news in Mexico, the story of the Axis caches and hidden airfields has been dusted off and refurbished. Recently these rumors have been concentrated on Lower California, and one of the Mexican army's toughest assignments there has been tracking them down.

According to General Rico, the commander of the peninsula zone, his reconnaissance parties have combed the countryside without finding any traces of enemy supply depots. With the topography what it is—high mountains and big

stretches of sandy desert—the parties of soldiers have had a difficult time, and several men have been lost through hunger, thirst and exposure.

One group of seventeen ran out of food before reaching their objective. Just when it looked as though they were going to face starvation, the men killed two wildcats and lived on them for two days. Another party, consisting of four privates and an officer was sent forth to investigate a ranch far back in the mountains which was said to be an enemy cache. They were gone for so long that General Rico ordered a plane out to search for them and to drop food if they could be found. After three days they were sighted. One had died of hunger; another had gone mad. The remaining three finally reached the ranch and made a thorough search. There was no sign of any arms or ammunition and no suspiciously large amounts of food and gasoline.

That is the kind of discipline there is now in the Mexican army. When soldiers are sent out to reconnoiter they

don't turn back until they have carried out their orders. The same sort of discipline keeps small detachments of men at lookout posts that have been set up all along the coast. They have radios to communicate with headquarters in case they sight anything out of the ordinary. Otherwise they are completely on their own. They have to get their food and water where they can find it, and that usually means walking miles to the nearest village where, with luck, they may be able to buy a few grains of corn, some beans and rice.

The morale is just as good as the discipline; so good, that no one ever thinks of discussing it or doing anything to improve it. It is doubtful if most of the soldiers have even heard the word. General Rico, who has made several visits to the United States and been left open-mouthed by the living quarters, food and amusement provided for our Army, finds that American troops are coddled and spoiled. The same cannot be said of Mexican troops.

The officers in Ensenada live, by chance, in unusual luxury because the only place big enough to serve as headquarters is La Playa Hotel. This means that they even have a lot of bathrooms, but there is no hot water because it would be too expensive to start up the heaters. The kitchens are not open for the same reason, and the officers eat in the restaurants in town at their own expense.

They work all day and most of the night. It was nine o'clock in the evening when I happened to arrive at the hotel and, handing a letter of introduction to an orderly, was told that General Rico would receive me immediately. After stumbling through several dark patios (electricity is being economized on also), I reached the general's quarters. I passed the officers of his staff sitting at desks in a long hall and was finally ushered into his office, furnished with a table and two chairs.

A man about fifty years old—short, slightly bald, olive-skinned and with a very reserved manner—rose to greet me. For a moment I was uncertain whether or not I was to address him as "*Mi general*," for he was dressed in an ordinary sack suit. Apparently, he seldom wears a uniform except when he is out with troops.

At first he wasn't very forthcoming and expressed surprise at the idea that the American public should in any way be interested in the Mexican army.

"We are a poor nation, you know," he said, "and we can't afford a big, well-equipped armed force; all that is possible now is to do the best with the little we have on hand."

"That is the point," I explained. "It is important that the American public should know what efforts you are making and under what handicaps you are laboring."

#### Praise from the General

After that, he answered all my questions quite frankly, exhibiting a simple realism and shrewd humor. "I can complain of the quantity," he ended, "but not of the quality of my men. They have an enormous amount of work to do, and all leaves have been canceled, but there is no grumbling." That, from General Rico, was high praise, since he is noted as an officer who knows his own job thoroughly and is extremely exacting with his subordinates.

By this time it was midnight. The general suddenly said, "I haven't had any supper. Have you?"

I admitted that I hadn't, so we picked up his aide, put him in the back seat of the car and, with the general at the wheel, drove into Ensenada where we had chocolate and rolls at a fly-blown café in a somewhat doubtful quarter of the town. It was the only place open at that hour of the night. By then, we had exhausted the subject of the Mexican

army and we began discussing the larger issues of the war.

General Rico is a graduate of the military academy and a career officer who did not enter the revolutionary forces until after the defeat of Villa. He, like the other career officers I met, surprised me by the range of his knowledge. With the magnificent command of language and the gift for colorful phrases which characterize every Mexican, he talked of the various battle fronts of the war, of international affairs and economic systems, and he ended by propounding an extraordinary theory for a Mexican: That men had made such a mess of the world it was up to the women to take over now and see what they could do with it.

At two-thirty he dropped me at my "bungalow court." His working day wasn't over; he had to go back for conferences with his officers, who had waited up for him and, a few hours later, he left by plane to meet General Cárdenas in La Paz.

The troops stationed in Ensenada are living under canvas at present, while they build their own barracks. When I went out to the camp I found them, stripped to the waist, making the bricks. General Rico's chief of staff (formerly military attaché in Madrid), General Hajar, tall, handsome and very neat in his olive-green gabardine uniform, apologized for the men's appearance, explaining that they wore their old clothes when they worked and that they were really quite well dressed at other times.

I had already noted this, with surprise, for the last time I saw the Mexican army on a war footing was during the revolution when it was made up of men who, though brave, were undisciplined and ragged. More often than not, they wore sandals and rolled their breeches above their knees. Now, they have good uniforms—shirts and breeches of khaki cotton drill for warm climates; of wool for cold climates, with brass-buttoned tunics

and long overcoats. They all wear Sam Browne belts, lightweight shoes, leather puttees and visored caps. Their steel helmets are in the French style.

Usually, their breeches are a bit baggy in the seat, for Mexican soldiers have too many other things to do to devote much time to style. They are working troops and must have plenty of room in their clothes for stooping. Aside from putting up their own barracks, they work from reveille at five-thirty in the morning until roll call at six in the evening, laying out new roads and improving old ones, building up radio stations, installing new telephone lines, deepening harbors, improving port facilities and constructing breakwaters. While all this is going on, military training obviously has to be reduced to a minimum of an hour or two a day.

#### The Army of Camp-Followers

By evening, the men are too tired to walk several miles into town in search of amusement. They remain at the camp and, when I was in Ensenada at least, had feminine company, for, next to their camp, was another occupied by the *soldaderas*—the wives and girl friends who accompanied troops even on campaigns.

Until just recently, the *soldaderas* have been an indispensable part of the Mexican army because it was they who marketed for and cooked the food which the soldiers bought out of their pay (two pesos a day, now increased to four pesos—about eighty cents—in zones on a war footing). Without the *soldaderas* the army didn't eat.

The commissary system is now being introduced into the Mexican army to do away with these women, who presented a problem when troops were moved.

To make sure that the *soldaderas* will completely disappear, married men are no longer being accepted into the armed

Mexico's small air force has the big job of patrolling 5,000-odd miles of coast line. She has 300 pilots, mostly U. S. trained, plus 100 aviation cadets and 300 commercial pilots. Biggest need is for light patrol bombers

All Mexican soldiers are working troops and have only a few hours available for training each day, at present. Men below made the bricks with which they are building barracks. They also build roads, radio stations, port facilities

A gunner practices with a light antiaircraft machine gun. The shortage of guns of all kinds, big and small, and the lack of facilities for making them, is the greatest handicap to the expansion of the Mexican army

# THE HUNTERS

By Mary Hastings Bradley

ILLUSTRATED BY ELMORE BROWN

mits that she is unhappy with her husband. But Bob refuses to discuss the matter.

Michael is a veteran hunter. In the days that follow, he does everything better than Bob; and Bob is jealous—he mistrusts Michael, suspects that Claire is far more interested in him than she should be.

Claire is circumspect in her actions, except when she is alone with Michael—and she permits him to take her in his arms, kiss her. . . . One night, Michael suggests that he show "Mrs. Winston" some hippo, in a near-by river. Claire gladly accompanies him to the hippo colony.

Michael puts his arms around her, kisses her. She responds rapturously. But, when he asks her to marry him (after the needed divorce) she refuses even to consider the idea! . . . Alone in his tent, that same night Michael—who now knows Mrs. John Winston for what she is: a shrewd, unscrupulous flirt who is out to get a title—wonders just what his feelings toward her are. He should, of course, avoid her in the future. But can he? He flinches from answering that question.

V

MICHAEL needed a drink. He'd like to drink himself blotto. There was a bottle out there in the mess tent, before their tent. If he went quietly and didn't clatter about . . .

He wanted that drink. His nerves screamed for it. Just a quick one. Two, maybe. No more. . . . Don't be an ass, Michael, said a cold little voice of wisdom in him. You'd be a drunk tomorrow and what a pretty sight that would be to the glamorous Mrs. Winston.

Mirthlessly, he grinned into the dark. The great romance of his life! Romance was dead. That ghost would never walk again. Now to carry on, through the rest of the safari, playing up, playing the happy Casanova to show her he'd not felt let down. . . . There would be a wry satisfaction in worrying Bob.

"Good night."

"Good night."

"Quaheri."

"Quaheri mzuri."

The threesome was breaking up. Tommy had stuck it out to the bitter end. That "Quaheri" was from Claire—tourists loved to use the Swahili they picked up. And the "Quaheri mzuri"—lovely farewell—from Bob. He sounded happier. His voice was briskly cheerful, calling to the porters, ordering no more talking. "Hapana kilali." Michael closed his eyes for fear his wife would bring a light into the tent.

Some minutes passed before she came in. Evidently she had walked on to Mrs. Winston's tent with her. Now she was coming, slipping through the mess tent. She moved softly, getting to bed with as little noise as possible. He heard her tucking her small belongings into the wall pocket of the tent above her cot—neat little Tommy! Then she stretched out, pulling up the covers and lay still. He could tell she was not sleeping. He felt her lying there, wakeful, staring up into the dark as he was doing.

He spoke suddenly: "Having a good time?"

"Oh, I waked you!" Her voice was startled. "Sorry, Michael."

"No, I was awake. . . . Planning that boma . . . We must get the boys at it, tomorrow. Can't waste another night of moon. Not if we want a lion."

"Oh—the boma." She sounded as if she had forgotten about the lion hunt. Then she said, hesitant but resolved, "Let Bob engineer it, Michael. He's her host, you know."

Astonishing creatures, women! Sensitive for Bob's pride even when he was throwing her over. . . . Or perhaps she was afraid only for the peace of the camp. A little of both, perhaps.

Michael grinned to himself. "Right-o. He can engineer it to the last thorn." He said, deliberating, "You get your lion, too. If two come in. Don't give her both."

"Oh, I'll get one."

"Having a good time, Thomasina?"

"A lovely time, Michael."

That cheerful, convincing voice! He wondered why the sadistic devil in him wrung that effort from her.

She must be suffering the tortures of the damned. She might not believe, though, that she was damned; she might hope there would be reprieve. There wouldn't be. Claire would be Lady McNare. She'd put Bob in her pocket and walk off with him. Her money would make a new life for him. London. Nairobi for part time, perhaps. A big place there, with racing stables. You could do yourself well in Nairobi on half the money it took in England.

And he had thought to save Tommy's hope for her. . . . The dashing lover diverting the siren, giving the unloved wife her freedom—freedom in which she was to console Bob McNare. Neat little plot.

Everybody happy. Everything for the best.

Only it hadn't worked. A pity. They didn't come any better than Tommy. Bob McNare was going to be a sorry man, once he had his eyes opened.

How about opening them now? It might be done. Claire was canny, but she thought Bob was thicker witted than he was. Bob was no fool. If he could be made to see what Claire was like—

It wouldn't hurt Claire. She'd find herself another baronet. Well, it was a thought.

BOB McNARE was up before his boy brought the early morning tea to the tents; he liked to wash and shave outdoors, at the back of his tent, where he could splash comfortably, and as he shaved he kept his lathered face turned alertly toward Mrs. Winston's tent, so he could disappear if she emerged.

His ill-humor had vanished but a residue of unease remained. Mrs. Winston—quite innocently, of course!—was treating Michael with too much intimacy and Michael Garrick, very definitely should not be encouraged by moonlight strolls and a gay, "Méchant!" flung familiarly at him.

There was a certain irony in this seriousness of his, coming from a man who had been taking moonlight strolls with Michael's wife for some five years but that was altogether a different affair. He and Tommy—

He was sorry about Tommy. She was so good and so gay and she worked so hard on that infernal farm, looking after the natives, the crops, managing, economizing, putting up a good show—well he had done what he could, these five years, to make things easier for her and it was not his fault if he could not go on forever.

No use looking back. He had to look ahead, to decide. He had not seen Mrs. Winston alone since their long talk; he had wanted time to think, and he'd had time, yet he didn't quite know what he was going to say or do.

If only he knew exactly where he stood! He hesitated to put it bluntly to her, to ask, "Can I be sure of you, if I give up my life here, and have a go at politics?" because she might not be sure herself, she might very well want to see whether he was a success or not before

The snarling lion tore out of the thicket, straight at them . . . a vast, oncoming circumference of mane. Claire fired. Then Bob fired almost instantaneously

## The Story Thus Far:

IN AFRICA, Michael Garrick learns that his fiancée—Claire Alloway, who is in England—has jilted him to marry a wealthy older man: John Winston. Terribly hurt, he becomes a hard drinker; then he marries and settles down on a coffee plantation in Uganda.

Among the Garricks' neighbors is a young Englishman: Robert ("Bob") McNare. Inheriting a baronetcy, Bob goes to England to claim it—not, however, until he and Michael's wife, "Tommy," have admitted to each other that they are in love.

Tommy awaits his return impatiently. When he finally arrives, he is "Sir Robert McNare;" and he is accompanied by a fascinating blond widow—Mrs. John Winston!—with whom he is very much in love.

Tommy accepts the situation as philosophically as she can. And Michael, a shrewd judge of human nature, wonders if Claire (who gives no indication that she had ever seen him before) really loves Sir Robert and his title—or Michael Garrick. . . .

The four—the Garricks, Bob and Claire—start on a long hunt, a safari arranged by Michael, in the Congo. They have hardly reached their camping place when Tommy—watching everyone carefully—realizes that dangerous undercurrents are all about her. Once, in a weak moment, when she is alone with Bob, she ad-

she committed herself. But he felt he ought to know what his chances were and he tried to think how he could put that. There was always the possibility that she had been counseling him out of friendship, that no promise was implied, except said in his election.

Abruptly he ducked into his tent as a slim figure in a blue dressing gown came out into the dawn.

ALL four of them went out that morning for another of those futile hunts—especially exasperating with a lion roaring in the distance—and then they searched for a good place for the *boma*.

They chose a spot about two miles from camp, a scattering of thickets encouragingly strewn with antelope bones, where a big thornbush faced a grassy stretch of plain. That bush, the men decided, would be good protection for the rear, and they set their two gun boys and a couple of porters they'd brought along to cutting thorn and stacking it in a circle before the bush.

"We'll make room for steamer chairs," said Bob. "Might as well sit as crouch."

The notion of steamer chairs in a thorn *boma* tickled Michael. "What price sport! A bally promenade deck."

"The chairs can be close together—they won't take too much space," Bob explained. "I dare say no more than three of us will want to go out at a time."

"Right as rain, my lad," Michael showed no sign of offense. "Bomas are no treat to me. You may sit with the ladies."

Chairs would be splendid, Tommy said. She listed the things to bring out—blankets or coats, for the nights were chill, and a water bottle and a spirit lamp with some supplies, so they could have a spot of tea before starting back in the morning.

"I'll send the porters out early," Michael told them. "To carry in your lions. If I hear shots." . . .

The making of the *boma* was inspiring; they sat in the shade of a thicket, smoking companionably, watching the natives pile up the thorn circle. This was jolly, thought Bob McNare; this was the friendly way he had thought it would be. He felt happy, very conscious of the lovely lines of Mrs. Winston, sitting relaxed beside him, of the charm of her low, lazy-sounding voice. The *boma* grew fast, looking astonishingly natural; the thorns were hard to handle and the blacks grinned and guffawed at one another's mistakes.

"Cheeriest beggars in the world," said Michael. He gazed out across the plain and added musingly, "The last dwelling place of laughter."

It had a slightly lyric ring and Claire Winston said, "Still writing poems?"

Abruptly her face stiffened to absolute expressionlessness, her dropped lashes unstirring on her cheeks.

Michael looked oddly at her.

*"A thatched roof is no shelter for your head,*

*Matting would scarcely serve your slender feet;*

*For Africa your beauty was not bred,*  
*I know too well—but Oh, my Very Sweet—"*

She had been married when he wrote that, and he did not know it. The poem must have reached her sometime on her honeymoon. He had never put rhyming words together, after that. . . .

Tommy began, "Why Michael never—"

then stopped. Michael said, serenely, "Oh, I became inspired on this trip. Lake Bunyoni started me off. . . . Mrs. Winston quite liked a little thing I did there."

He smiled, impudently, at Mrs. Winston, who, very slowly, began to smile back. She murmured, "Some of your later efforts were better, though."

"Think so?" said Michael interestedly. "With encouragement, you know, I could surpass myself."

She made no answer to that, except a subtle deepening of her smile. There was an awkward silence. Then Tommy said, with forced enthusiasm, "Why, Michael, that's splendid. There's been almost no poetry about Africa, has there? You might write a book of poems." Her eyes turned to McNare, who had contributed no comment on this discovery of talent, and found his look quite as aloof as she had feared.

Bob was digesting his unpleasant conviction that Michael had been writing poems to Mrs. Winston—just the presumptuous, troubadour sort of thing that Michael would do. Lake Bunyoni. He recalled that Michael had been insistent about having Mrs. Winston in his car at the approach to Lake Bunyoni. Perhaps he already had a poem in mind. Blue of the lake—blue of her eyes. You say a lot in a poem you could not say in a conversation. Michael must have been

shoot before the lion got away with it!"

"You might not see. Cloud over the moon and all that. You can't always count," said Michael, in a very innocent voice, "on having as bright moonlight as we had for our hippo."

"And you can't always count on it, either," said Mrs. Winston with a vicious inflection.

"I don't always want it."

Claire Winston laughed, as if in spite of herself. Then she glanced toward Bob McNare. "He's incorrigible, isn't he, Sir Robert?" she said in a gay voice.

"I?" Michael looked at her in black-eyed amazement. "I'm a blameless husband, my dear lady. It's Sir Robert who's the devil-take-it incorrigible."

TOMMY felt her cheeks burning. Michael was in one of his moods when it amused him to toss out verbal bombs, and she had a terror, not new to her, of what he might say next.

"It's hot," she said. "Let's start back."

Bob jumped to his feet, holding out a hand to her. "Come along then." Her fingers clung a moment to his hand; in her eyes was an anguished and mortified

scribbling things ever since and handing them secretly to her. . . .

A good deal seemed to have been happening behind Bob's back. There had been too many conversations broken off at his approach, too much sudden laughter for which there seemed no reason. All the pleasantness which Bob had been experiencing was gone. The unease of the morning returned to him, and a new, indefinable distrust.

HE STARED fixedly off at some antelope, grazing on a distant rise, and remarked, "I think I'll go get one of those cobs. For a bait for tonight."

"Too soon," said Michael. "Get it last thing in the afternoon and have the blacks drag it in. You want a fresh blood trail."

Michael knew so damned much! But he was probably right, this time. Bob's judgment concurred, and he relinquished his sudden impulse to get away by himself.

"And have it well staked down," Michael added; and Claire asked, "Why stake it?"

Michael told her, "Lions have a way of walking off with things. You'd feel damned silly sitting there all night without a bait."

There it was again, that too-familiar tone! Michael had no business telling Mrs. Winston she'd look "damned silly."

Mrs. Winston was saying, "I would

entreaty to disregard Michael's mockery.

There was familiar kindness in his answering glance and she felt better. They left the natives to carry on with the *boma* making and started back to camp.

It was hot. The sky was a burning brightness from which the sun had drained the blue, and the air above the plains was dancing with the heat. No one had much to say.

Michael was thinking, "Suppose I said to Bob, 'She let the cat out of the bag then!' and told him all about us—would that put him off? No. He wouldn't turn against her for having thrown me over sixteen years ago. Nor for keeping quiet about it now—she'd find some pretty explanation, consideration for my feelings and all that. No, there's nothing to be gained by that. That wouldn't show her up. . . . But wouldn't he burn up if he knew what she meant by her, 'Some of your later efforts were better, though!' Gad, she's a sly-tongued minx! 'My later efforts.' . . ."

Bob was thinking, "What did Michael mean—? 'The blameless husband!' That seemed to say, 'I shut my eyes to you and Tommy—now, hands off!' But he knows there was nothing wrong—only what we felt. He said it to make me uncomfortable because he was uncomfortable at having his poetry brought out in the open. . . . What sort of poems were they, anyway? She must have liked them or she wouldn't have let him go on. . . ."

Why did I bring him—? Oh, to hell with him! He spoils everything. Good thing he won't be along tonight."

At tiffin, everyone was rather elaborately polite. Then Mrs. Winston went off for a siesta, to fortify herself, she said, and Michael went to his tent. Tommy had things to do. You couldn't trust the boys to have the water boiling when they filled the canteens; you couldn't trust them not to add unboiled water, if the boiled supply was not enough. You had to stand over them and watch.

She saw to that; she saw that the big, felt-covered canteens were filled, then dipped in water so the evaporation would cool the contents; she gave out soap to the wash boy and charcoal to fill his hollow iron, so clothes could be washed and pressed; she checked over supplies, she bought chickens from a native who drifted into camp from Heaven knows what distance with a pair of wretched fowls dangling, feet foremost, from a stick, she bandaged the cuts and sores the porters were always presenting for the white man's *dawa*.

As she went to and fro she smiled at Bob, who was cleaning and oiling the rifles before his tent. He smiled back at her, and an illusion of happiness and companionship buoyed her. Michael, coming out of his tent, caught the look in her gray eyes, and his own narrowed in sudden calculation.

He strolled over to McNare. "Haden't you better be after that buck? May not be as easy to find as you think."

"Plenty of time," Bob squinted at the sun. "Want to make sure these are all right."

MICHAEL glanced at the sun, then at his wrist watch, then at Mrs. Winston's tent. He lit a cigarette, walked away, then came back.

"I'll finish these if you want to go."

McNare looked rather hard at him. Michael had changed to a fresh white shirt, of fine Chinese silk, open at the throat, planter style; it was a style that flattered his dark, piratical good looks.

"Thanks," said Bob shortly. "I'm about done."

In a few minutes he put down Mrs. Winston's rifle, picked up his own and shouted for a couple of porters. Michael was near him again. He said casually, "You don't need to come back, you know. The chairs and things are all sent out. I'll start the girls along to meet you there at sundown."

"I'm coming back," said Bob, stowing cartridges in his pockets.

"Most unnecessary. Miles more walking. Save time if you all meet out there."

"I don't want it that way. I'll be back for them."

Michael shrugged. He looked at the sun. He said, "It's about two miles out—" He was not arguing, now; he seemed to be estimating the distance.

Bob looked sharply at him, his brown eyes suspicious, then strode off, the two blacks at his heels. Michael, looking very pleased with himself, strolled over to Tommy who was sorting half-depleted chop boxes. "Stop your housekeeping, Tommy, and go get some shut-eye. You have to stay awake tonight."

When Bob got back to camp, hours later, hot with haste and exertion, Michael and Mrs. Winston were finishing what appeared to have been a very leisurely tea off under a little thorn tree. Tommy Garrick was nowhere to be seen. Michael explained negligently that she was napping.

It seemed to Bob that Mrs. Winston would have been much better off to be napping, too: tea was unnecessary when dinner was to be so early. In fact din-

ner was ready then; the boy was already calling, "*Chakula tayari!*"

Tommy came out from the back of her tent, buttoning her khaki jacket; its pockets were bulging with cartridges, jackknife, electric torch, matches and cigarettes. The four ate a hurried dinner, for the sun was sinking fast. "We rather took the edge off our appetites," said Michael smilingly, as Mrs. Winston declined the yams.

The hunters started off with their attendant porters, Claire Winston in the carrying chair. "We'll change off," she said to Tommy, but Tommy shook her head, declaring she preferred to walk. You couldn't talk much, going single file at a fast gait, a guide ahead, a porter behind, but it was like old times, trudging after Bob, and there was happiness in it for her, even with the reflection that it might be one of the last times.

Darkness was on them when they reached the *boma*—the swift, sudden dark of Africa when the sun goes down. It would be black as the bottom of a well until the stars came out. The native who had been left to guard the buck crawled out of the thorn shelter to hurry off with his returning mates, and the three whites crept into it, Bob blocking the entrance with brush.

They settled themselves with cautious flicks of their torches, with little smothered laughs at the cramped quarters, Claire Winston in the middle to have the widest field of vision. A small peephole in the thorn had been made before each chair, and the hunters put their rifles through the holes, letting the barrels protrude as little as possible, sighted them on the dead buck with the help of the electric torches, then settled back in the darkness, waiting and listening.

THE night was vibrant with the thin, high shrilling of insects that starts up the instant the sun is down, a shrilling so incessant in the African night, so accepted, that their ears paid it no heed; they heard the call of a bellbird, clear, melodious, precise as a mechanical toy, they heard the snarls of two small creatures in a bush, they heard the far-off chatter of angry baboons, roused at some alarm. They heard a lion grunting, far out on the plains. It was a wilder sound, heard in the open, than when heard in camp.

They sat, tense and alert, peering into darkness, but the grunts came from farther and farther away and then ceased altogether. There was a silence in which nothing happened at all. The stars were out now, unbelievably bright, throwing a pallor on the plain in which the dead antelope before them and the occasional shrubs and thickets were revealed as blurs of darkness.

Minutes went by, minutes that added slowly to an hour, to two hours. Mrs. Winston sat watchful and alert. She was a good sport, Tommy owned; she had not behaved at all as Tommy had hoped. Yet Tommy had no faith in her.

She had very complicated feelings about Claire Winston. She was achingly jealous, but she was not resentful that Mrs. Winston was preferred—she felt humble before Claire's beauty, a candle to a rush light. The resentment in Tommy Garrick was that Claire had no appreciation of the man she was appropriating.

Bob was not showy like Michael; there were no glittering facets to Bob, but he had an endearing charm all his own, and he had strength and kindness and sincerity. It enraged Tommy to have Mrs. Winston so insensitive to his worth, yet she was forlornly glad that Claire was not warm and sincere, for then it would have been too meanly selfish to hope against the match. Now she could say

stoutly to herself that Claire was not good enough.

So she thought, sitting there in the night, trying to fight off the sleep that would not come last night but that now made her head heavy.

The moon came out; the light was not as brilliant as the night before, for a thin haze of cloud gave a diffused and misty aspect to the whiteness of the plain, but it was moonlight, making the world visible, and the lion sounds started up again. There was quite a chorus of them now, off to the right and others out ahead, hoarse, menacing vibrations telling of hungry lions going implacably about their business, the age-old, nightly business of their food getting.

"Ugh, ugh, ugh—ugh, ugh, ugh!"

That was out ahead, ahead and to the left. It sounded nearer than it had before.

It came again, growlingly louder. "He's

## NOT WANTED for the Duration

## SHARPER

Ex-supersalesman of shoddy nonessentials who is still clawing around in the Lost World of sucker lists and quick dough

coming closer," Bob breathed, and the three exchanged excited glances. They could see each other now, for the moon was almost overhead. Noiselessly they leaned forward to their peepholes.

"Ugh, ugh, ugh—ugh, ugh, ugh!"

The lion was coming in, along the blood scent apparently.

"Got your safety off?" Bob articulated.

Claire nodded, crouching forward to peer along the barrel.

"Watch your sights. . . . Go for the brain or else the heart."

She nodded again. Then he applied himself to his own peephole. He had wanted to fire after Claire, to second her shot, to make sure of the lion, but she had said she did not want that—she wanted the lion to be actually her own.

They waited, tense with excitement. Then the sounds stopped. Minutes went by. They listened, keyed up for a time, but ultimately the tension relaxed and expectation ebbed.

"He got our scent," Bob whispered. He said, hearteningly, "But he may come on, though."

They listened; there was no more

sound from the lion. Apparently he had decided that the buck smell plus the scent of humans was not worth the risk and that an antelope or a wart hog would be a better idea. The other distant sounds of lion, to the right, grew farther away and infrequent and died out.

Claire leaned back disappointedly, and Tommy closed her eyes. Bob stayed resolutely at his watch hole, staring fixedly at a dim, empty world of shifting light and dark.

Then slowly, soundlessly a shadow moved in from the left. Bob nudged Claire and she leaned forward, looking out, and Tommy roused at the faint stir and looked out, too. The shadow was vast, formless, unstirring, then another silent movement brought it against a patch of moonlit plain and it became the silhouette of a lion, a gigantic-looking silhouette, like something cut from monumental cardboard, a dark projection of a great head and mane and swell of shoulder. It looked larger than any lion could possibly be.

Claire fired. Her rifle shot rang out, shattering the stillness, reverberating like thunder across the plain. The lion roared and vanished. They heard a hard, galloping sound, like the galloping of a horse.

For a moment no one said anything, then Claire breathed, "Gone!" in furious chagrin.

"I should have fired," said Bob under his breath. "You should have let me fire."

"No! If I can't hit a lion myself—"

"You'll get the next," he encouraged.

That wasn't quite fair, Tommy thought. Claire had had her chance. You took your turn, in a shoot. After all, she and Michael were paying their share. . . . But this was a different sort of shoot; this was especially to have Mrs. Winston get a lion, Tommy reminded herself.

She heard the whispering beside her going on.

"What did you shoot for?"

"The brain. You said the brain."

"Take the heart, next time. The brain is a tricky shot—all that meat and muscle. I shouldn't have advised it."

"No, it's not your fault, Robert."

"He may be hit at that. He may lie up and we'll find him tomorrow."

"How can you find him?"

"Vultures. They sit and wait."

"How gruesome! . . . Do you really think he's hit?"

"No, I don't," said Bob honestly. "He went off too fast."

Claire sighed.

"You'll do it, next time," said Bob.

The warm sympathy in his voice was bitter hearing for Tommy. They seemed to have forgotten her, but she thought she ought to say something, so she murmured, "There's bound to be another. It's early yet."

THEY waited, silent again, motionless at their watch holes. The hours seemed endless. Once a lion called, far out on the plain, but only once. They heard a hyena's laugh, appalling as the laugh of an idiot, and when the moon went under a cloud they heard noises near the buck, and Bob flashed his torch and a hyena scudded off. Nothing else happened. Nothing but sitting and staring into shadows and moving cramped muscles as soundlessly as possible.

Tommy's head slid back against her chair and she slept. It was light when she opened her eyes, and she saw that Claire had slept, too, leaving Bob at the watch. Claire was just rousing, yawning sleepily. Bob looked across at them and grinned, a smudge of darkness on his unshaven face.

"There's the porters," he said, grimly ironical. "Michael heard that shot a right."

Half a dozen natives were squatting patiently outside the *boma*, shivering in the morning air, their arms folded across their chests, hugging themselves for warmth.

Bob dragged the brush away and the three crept out, glad to stand up, to move their cramped bodies. "I feel extremely disheveled," said Mrs. Winston, languidly, pulling out her compact, and red dening her lips. Even being disheveled was becoming to that hair of hers. Tommy thought critically, though she thought, too, that Mrs. Winston looked a bit heavy-eyed.

Tommy hurried to make tea, and Bob told off a couple of porters to stay to guard the buck from jackals and hyena. "It will do for tonight," he told them. He grinned. "It will speak with authority, but so much the better."

"Tonight!" said Mrs. Winston.

After a moment she smiled ruefully at Bob. "If I hadn't been such a poor shot you wouldn't have to come back to do this all over again."

"Oh, yes we would," said Bob. "Tommy has to get her lion."

"How stupid of me!" Claire gave Tommy a charmingly apologetic glance. "I'm terribly forgetful."

"Of other people," thought Tommy grimly, pouring out the tea.

THEY drank their tea, munched biscuits, lighted cigarettes and started back, Bob scanning the horizon hopelessly. The sun was up, sending a lovely level light across the plain, bringing out color everywhere—the blue-green of the dew-drenched grass, the pale pink of tiny plains' flower, the gold on a heron's crest as it sprang into flight.

The path wound through a shallow depression, studded with thickets. Ahead of them three topis dashed off, strung out like race horses, their clumsy-looking bodies stretched in panic, their beautiful maroon-bright skins glinting like watery silk in the sun.

They were looking after the topis when they heard a snarl and stopped dead in their tracks. Bob was carrying his gun; he raised it and Tommy and Claire reached swiftly for theirs from their following porters. The snarl came again; it came from a thicket a little ahead, the thicket from which the topis had just sheered away. One of the natives pointed excitedly, calling, "Simba!"

"Your lion!" said Bob, his voice taut. "Keep close to me. . . . He may be wounded."

Step by step they moved forward, the three of them, their guns leveled. The natives had promptly vanished from sight. The snarling sounded again, menacing, peremptory. Then came a succession of snarls, like a crackling of furious firecrackers, Tommy had just time to think, when the lion tore out, straight at them.

For a split second he was a streak of lion, close to the ground; Tommy saw that streak, then she saw a lion in the air, a vast, oncoming circumference of mane, and all the time she heard the fearful, bloodcurdling sounds a lion makes when charging for the kill, and it was as if she could do not to fire, not to press the trigger her finger was curling about, to remember that this was Claire's lion, that Claire had the first shot, that Bob was there to bring him down if Claire missed.

Claire fired. Bob fired almost instantaneously. The lion seemed to rear, to throw himself backward. Then he was on the ground, roaring horribly. The roaring stopped. He lay motionless.

## Not So Dumb

Continued from page 30

"Awright! Awright!" answered Domingo impatiently.

He wheeled the old man into the office and turned the dial for him. Then he went back to the kitchen.

"Aspen Maid Butter," said the mellifluous voice, "pure as our mountain streams, golden as our sunsets." John Erth raised his head and looked over his shoulder. A shadow had fallen across the floor. On noiseless feet young Hans Haffner had entered the room and was standing by the door. He was smiling. "Meester Ert," he said. "I haf something I would like to consuld with you about. May I come in?"

Looks like he had trouble on his mind, thought John Erth. He turned off the radio.

"Sure," he said. "Come in. Sit down. I thought you was out with Eddie Hickok. . . . Only make more noise, will you? I don't like fellers coming into a room that way."

Hans shut the door softly behind him and crossed the room with his noiseless catlike tread and sat down opposite John Erth. His blue eyes were curiously brilliant and smiling. "So-o!" he said comfortably, and reaching into the hind pocket of his overalls, pulled out a small automatic and pointed it at the pit of John Erth's stomach.

"Now ve can talk. . . . No—don't call. If Domingo comes in, I shoot him. Meester Ert, I go away from here—just now, these minute. You vill gif me the money you haf in this safe." He jerked his head sideways.

A RIPPLE of light passed across John Erth's eyes and was gone, leaving his eyes gray and expressionless.

In the silence a bluebottle fly buzzed angrily against one of the closed windows.

"Well," said John Erth genially, "so you're a stick-up man, are you? That's interesting. But you ain't very smart, Hans. All you had to do was to come and ask for your time and I'd have opened that safe. How'd you know I had money in it?"

Hans' smile was deprecating. He shrugged his shoulders.

"I vas in the dining room when your sohn vas talking. You are all very simpul, you pee-pul. You Americans talk too much."

"I guess we do," sighed John Erth. "but we ain't used to hiring gunmen and bandits. It's unusual." The corners of his mouth lifted slightly under his heavy mustache. "What you want the money for? I could lend it to you and that might keep you out of the pen."

The ice-blue eyes boring into his were thoughtful for a moment, and then Hans got abruptly to his feet, the automatic still pointing at the pit of John Erth's stomach, and drew himself together, and clicked his heels and bowed. He was dressed in his work pants and heavy shoes and a plaid shirt, open at the neck, and at that moment he no longer looked like a blond young ranch hand, but like a hawk against the sun.

"John Ert," he said, "you stoopid old man . . . you conceited, stoopid old man, you leetle king in your poor leetle kingdom, you haf the honor to be addressing Oberleutnant Hans von Broeckner of the German Luftwaffe, captured a year ago of London, until two months ago a preesoner in Canada. Now I go back where I come from and return to bomb your beeg and foolish country."

He stood straight and menacing, his

blue eyes as dark as the inner recesses of an ice cavern, and then he laughed dismissingly, and relaxed, and sat down again.

"I vaste my time," he said. "Open the safe."

"Well—!" John Erth said in the same genial, surprised voice.

When he spoke again it was in a fatherly fashion.

"Why are you telling me all this, Hans?" he asked. "It ain't bright. I'll open the safe and give you the money because I can't do nothing else—you got the drop on me—but they'll catch you sure as I'm sitting here. And now it's even worse than a stick-up. You won't go a hundred miles. What are you telling me for? It ain't healthy, no, sir, not nowadays, not from the Atlantic to the Pa-

you? And you talk pretty good English, too. How'd that come about?"

"I lived in this country four years," said Hans. "I vas a boy. I vent to school. My fader vas a banker."

"That's what gets me," said John Erth reflectively. His eyes staring at Hans were puzzled. "It sure does. If you'd never known better, it'd be clearer. But you had your chance and missed it. We've got our faults, sure we have, lot's of 'em, but look at us, Hans, look at us. Lord Almighty, we're free men, we're going somewhere, and if we're not too much interfered with, it'll be somewhere a whole lot better than we are now, but what you fellows want is to make slaves of yourselves and everyone else."

He shook his heavy, maned head. "I don't understand it," he said regretfully,

cific, to be what you say you are. Why are you telling me?"

Hans smiled faintly and shrugged his shoulders.

"Why am I telling you?" His eyes were for a moment withdrawn and thoughtful. "Because for two months now I haf no von to talk to and I get lonesome. Now I can talk and no von vill efer know. Besides—" He threw back his head. "I pay you back, John Ert. For three weeks now I sid at supper and hear you insuld my pee-pul and my Fuehrer, and I take it. Now I tell you."

"NO ONE will know?" inquired John Erth, mildly.

Hans shook his head.

"No von. Look!" He held up his left hand, the long, delicate-boned thumb bent. "See? I take both thumbs so and press them under your jaws—you are dead. No sound, no struggle, no mark. They find you; it is nadural, you are an old man. By then, I am four—five hundred miles away. I haf Eddie Hickok's car. You are so careless, you pee-pul. He leafs his keys in. And the other cars . . . they are oudt of commission, even the trucks. I see to that. I haf cut the telephone, too. Someone walks or rides a horse twenty miles to gif the alarm. Not so far away I haf friends, but where do I go—nordt, south, east, vest?"

John Erth's voice was admiring:

"Well, you ain't so dumb after all, are

especially with someone like you who's had his chance. It looks to me plain dumb. Yessir, plain dumb." His voice changed and became matter of fact: "I'm going to open the safe and then you're going to kill me. Is that the idea? If you're going to kill me anyway, why should I open the safe?"

Hans shrugged his shoulders.

"It makes no difference. Suidt yourself. In the pocket of your shirt is a paper with the numbers. I get it anyway. But I can hurt you bad or not before I ged it."

"All right," said John Erth abruptly. And as if he were tired, "You win. I know when I'm licked. And you're right—I'm an old man and a crippled one. It don't make much difference You couldn't have done this to me ten years ago, Hans."

"No?"

John Erth had shrunk into himself. His eyes were half closed as if he had reached the limit of his endurance. His head, with its mane of white hair, had fallen against the back of his chair.

"An old man and a weak one," he repeated. "What time is it?"

Hans consulted his wrist watch.

"Egactly thirteen minutes past four." "Mind if I'd turn on the radio. It'd be more cheerful. I always did like music."

"No, it would be better—more noise."

John Erth, leaning back in his chair, his eyes still half closed, reached out

feebly. His huge gnarled hand was trembling visibly.

"There!" he said weakly.

The mellifluous voice poured into room.

"In these times of stress," it said, "we not both eat well and save? Aspen M. Butter, pure as our intermountain streams, golden as our sunsets. And now in the absence of Bart MacDonald, your regular announcer, I'll introduce Son Masters and his orchestra myself. It's exactly a quarter past four, war time. The first number on this daily program is the deservedly popular piece, Swing. Gi Swing." Without any introduction, screeching, roaring, breathless, it ripped apart the comparative silence.

"Awful, ain't it?" murmured John Erth. He reached blindly into the pocket of his shirt and brought out the slip of paper with the combination of the safe on it. His hand dropped to his side. "Here," he said, "come and get it. I'm too bad to open that safe myself. I'd better think over that killing. If I give you my word, I won't tell. I say you were mad and drew your paper that is, until you get a head start."

"Phut!" said Hans contemptuously.

HE STOOD up, the automatic pointed, and crossed the room gingerly, and standing off as far as he could reached down swiftly to pluck the paper from John Erth's hand. For an instant his head was on the level of John Erth's shoulder. "You damn' fool!" said John Erth, and with his huge gnarled hand caught the back of Hans' neck and pressed him toward the floor. With the other hand holding the paper, he struck upward and out, throwing Hans' right arm up until the muscles cracked. Hans gave an exclamation of pain as the automatic flew across the room and exploded. John Erth caught the injured arm by the wrist as it fell and held it with a grip of steel. With his other hand he continued to press downward.

"Kneel," he said grimly. "Kneel. I don't like you. Get down on your knees. You got bones like a girl. And the next time you're a-going to kill a man, don't talk about it, don't savor it, do it. No, don't bite! I'll break your neck. What did you think you was with, anyway?"

The door opened and Domingo stood regarding John Erth with wide, rebellious eyes.

"What you shootin' for?"

"Fun," said John Erth. "Here—don't stand there aping. Get a rope and hang this fellow. You're always talking about your jujitsu and the knots you know. Why didn't you come when that music begun? You know that's my signal. I hate that there jazz. I could've killed when I had him, I suppose, but I like like fooling them fellers—they think they're smart."

Three more figures stood in the doorway: John Erth, Jr., and two well-built young men in civilian clothes.

"I thought you was heading south," said John Erth. He was holding Hans while Domingo, having taken the ancient lariat from the wall, was methodically and expertly tying him up.

"I met these gentlemen on the highway," said John Erth, Jr. "They're federal agents. They had Hans located. He's a bad actor. I was scared to death."

"About me?" asked his father contemptuously. He looked down at Hans bowed head and then up.

"You hired him," he said.

THE END

## Five Who Vanished

Continued from page 31

He had dark brown eyes and thick, curly hair. He bent down and kissed Jason on the curve of her cheek. "You're beginning to think you'd like the ship," he said without humor. "I suppose," Lorrin Grazzard said. "He was undeniably handsome, in a sort of way. He looked as if he was big-boned and slow and powerful. He seemed to Jason, who acknowledged that he was prejudiced, that the man radiated arrogance. Miss Topping glanced at Jason and said, 'Do you know each other? Jason and Lorrin Grazzard.' Lorrin reached out to shake Lorrin's hand. Miss Topping's fiancé gave him a lazy, speculative stare, and then he shook hands briefly. "I think Mr. Amboy's the man who built the airplane engines," the girl said. Lorrin Grazzard said heavily, "Oh, I just heard you sold your engine to the British." "There's nothing to that rumor," Jason said. "Well, I don't know anything about engine. Is it a radial?" "No. An in-line." "Well, I prefer the radial myself," Lorrin Grazzard said. "I have a Wasp on one of my ships and a Whirlwind in another." JASON could not decide whether this silence was deliberate or not. His face was growing warm. "Oh, yes," he said, "those built-in wind jobs." "Some people," Lorrin Grazzard said, "seem to prefer them. I used to do a great deal of over-water flying before the war and I like an engine that's got the bugs worked out of it." "There seems to be a slight difference of opinion," Miss Topping said. "Well, maybe it will all be settled by the time the war is over." "It's settled now," said her fiancé. "I don't see you from the islands, Amboy? It seems to me I've heard you were." "Yes, Grazzard. I used to live on the islands a great many years ago." "About twenty," Miss Topping said. "That makes you thirty, and you're not thirty. Tall, thirty and terribly efficient." Lorrin Grazzard's dark eyes were fixed on Jason's. "You two are related, you know," Miss Topping said. "Really?" said Grazzard. "Yes, really," she said. "Third cousins." "There's a great deal of that in the islands among the old families," Jason said. "I've heard it's a bad thing," Miss Topping said. "Luana!" Grazzard said sharply. She looked up at him with innocent green eyes. "What, Lorrin?" "Stop trying to be so funny." She took his arm. "Come and help me find your mother, Lorrin." "Well, what are we waiting for?" he said. Jason wondered if Lorrin Grazzard was chronically disagreeable, or whether he was peevish at the moment at having found his fiancée talking with another man. He was inclined to suspect it was both. There seemed to be a tension, perhaps the result of an unresolved quarrel, between the two, and Jason had

the curious impression that, although Luana Topping was in love with this darkly handsome young man, she either disliked him at the moment or was rebellious about something.

"You really must have her meet Mr. Amboy," she said. "And I'm sure Mr. Amboy would enjoy meeting her. They would get along like doves."

"Stop it, Luana." Lorrin Grazzard's face was red. He appeared to be losing his temper.

"By the way," she said, "I had to borrow a dollar and a half from Mr. Amboy to pay for my taxi. Will you pay him?"

"With pleasure." Grazzard took some

sure, left it unlocked, and he supposed that his room steward had locked it. He unlocked and opened the door.

Only one dim light was burning. It was shaded with green silk and it filled the room with a curious sickly glow.

The shadowed figure of a man seated on one of the beds lengthened as the man sprang up.

"I beg your pardon," Jason said, and laughed. "I seem to have fallen into the habit of opening wrong doors." He started to close the door, then glanced at the number. It was 327. It was his stateroom.

"This is your cabin," the stranger

"I saw you come aboard. I knew something about you. So I decided to take the chance and hide in here. I knew your room number and—"

"How?" Jason stopped him.

"I got it from the man who brought your luggage aboard. As you've probably guessed, Mr. Amboy, I'm a stowaway and—"

"How did you get on this ship?"

"I carried luggage aboard. I just stayed."

The man's voice was rough and jerky with nervousness.

"Who," Jason said, "are these fellows who are after you?"

"They're wearing shabby clothes. They must have got on as defense workers—at the last minute."

"But," Jason protested, "you can't get away with this. You'll have to explain yourself to someone."

The stowaway was stubbornly shaking his head. "No, Mr. Amboy. Now that we're under way, no one will question me. From now on, I'm just another defense worker."

The quick way the muscles about his eyes contracted and the expression about his mouth when he talked rapidly reminded Jason more and more of Wayne.

"I see," said Jason. "So you just came down here and walked in."

"Yes, Mr. Amboy. I had to hide in a hurry. I knew something about you and I hoped you wouldn't mind helping out a man in a very bad jam."

"Who are you?" Jason said.

"I'm Arthur N. Garson, Mr. Amboy. Perhaps you've heard about me. Until this recent election, I've been the assistant district attorney of Los Angeles."

ARTHUR N. GARSON was something of a comic figure in southern California politics; something of a modern Don Quixote who used newspaper headlines as lances with which to tilt at the southern California gambling ring.

"So you're Garsie," Jason said.

The man managed a feeble grin. "That's right, Mr. Amboy—I'm Garsie. As you know, my crowd was defeated in the last election. And as you may also have read, the gang of hoodlums I was fighting got into my office on election night, beat up a watchman and got away with all the records I've been collecting on them and other crooks ever since I've been in office."

Jason nodded.

"I've got enough on that gang—five of them—to hang them," Arthur Garson went on. "In my head. And no one else has it but me. You see?"

"I'm beginning to see," Jason said. "So now you're on a spot."

"I'm on a very hot spot, Mr. Amboy. Two attempts were made on my life before I left Los Angeles."

Jason said, "Well, what do you expect me to do about it, Mr. Garson? You certainly aren't planning to hide in this stateroom all the way to Honolulu."

"Why not?" the stowaway said.

"Because you couldn't get away with it," Jason replied.

"I could if you'd be willing to co-operate, Mr. Amboy. All I want is to hole up until we reach Honolulu."

Jason gazed at him steadily. "Are you dead sure—Mr. Garson?"

The man who reminded him of his brother met his eyes with equal steadiness. "Yes, Mr. Amboy. Dead sure."

Jason was still undecided. He was sorry for this man, and he was intrigued by his resemblance to Wayne. But he

change out of his pocket and held out three half dollars to Jason.

"Thank you so much, Mr. Amboy," the girl said. She was smiling at Jason and her green eyes were large and dark and bottomless. "Goodbye," she said with finality.

"I'm apt to recall at any moment," he said, "where it was we met."

"Don't hesitate to give me a ring, will you?" she said, and laughed softly, as if they shared a joke.

JASON wondered if they did. He had been aware of strange undercurrents in that conversation. She and this dark, heavy-handed man to whom she was engaged either had had a bitter quarrel recently or were about to have one. It had almost come to that. And the crux of it all had seemed to be Lorrin Grazzard's mother. Jason recalled very little about Mrs. Hiram Grazzard except that she was a domineering woman, as all the Grazzard women had been since the first of them, Faith Grazzard, the wife of the dying Captain Ebenezer Grazzard of the brig Sweet Hope, had stepped ashore on the little out island of Kahuna, in her stout Massachusetts boots, some hundred and twenty years ago.

The Tasmania was passing under the Golden Gate Bridge. Navy planes were flying near by. Ahead, two small black trawlers, mine sweepers, were trolling a net.

Jason went below to his stateroom. The door was locked. He had, he was

said, "if you're Jason Amboy. Are you?"

"Yes," Jason said warily.

"Will you please close the door, Mr. Amboy?"

Jason flipped the toggle of the wall switch near him, and a strong light in the ceiling glowed. He had been thinking of his brother, and the tall lean man standing between the beds reminded him of Wayne. He had a narrow dark mustache and that, with his height and leanness and the slope of his shoulders, created this illusion that was instantly gone. He had light blue eyes and sandy hair that was now disordered. There was a smudge of soot or black grease high on his left cheekbone. And he was pale and he looked frightened.

"Why?" Jason said.

"I must not be found here, Mr. Amboy. Will you please lock that door? I'm very anxious to explain."

Jason closed the door and put his back against it. The man was staring at him. He was trembling.

"I assure you, this was necessary, Mr. Amboy. I've got to throw myself on your mercy. There are two men on this ship who will kill me if they find me."

He stopped and stared rather wildly at Jason and Jason stared steadily at him.

"I was up on the boat deck when I saw the pair of them come aboard. They've followed me from Los Angeles and I thought I'd shaken them. After we'd sailed, I slipped down and saw them on deck. So I came down here and hid."

"Why here?"

knew that the man was lying. He had once met Arthur N. Garson—"Garsie"—and the stowaway was not Arthur N. Garson. Jason was tempted to let him stay, at least for a while, at least until he found out why the stowaway had selected this stateroom as a hiding place.

Jason shrugged. "Well, all right," he said. "If you can fix it with the room steward, it's all right with me."

Arthur Garson took a deep breath. His face became red. He grinned with relief. "Thank you, Mr. Amboy. You can't realize what a relief it is to hear you say that. You've given me a chance at staying alive—and I'm not exaggerating. I'll never forget this. Some day I'll repay it."

The telephone rang. Jason started to answer it.

"Wait a minute!" the stowaway cried.

"You're having the jumps," Jason said. "Relax." He answered it.

A man's muffled voice said, "Mr. Amboy?"

"Yes."

"Kitchener reporting, sir."

"Who?"

"Kitchener, sir. Rodney K. Kitchener."

"Flack?" Jason cried.

"Kitchener, sir."

"Are you on this ship?"

"Yes, sir."

"HOW in—" Jason began. "So that's what all that mysterious talk was about! How did you get aboard?"

"I'm sorry if it upsets you, Mr. Amboy. At least five times I've been within a few feet of you, but you didn't recognize me." Flack chuckled softly. "I wanted to test my disguise, sir. It must be very effective. I've been circulating about in a quiet way and inspecting the groundwork, so to speak."

"For what?"

"For what's going to happen, sir."

"Is something going to happen?"

"I'm definitely sure of it, Mr. Amboy. Can you meet me at once at a rendezvous I have selected?"

"Where?"

"On the boat deck, sir. Just abaft the after funnel is a paddle-tennis court. It is reached by a short flight of steps on either the port or the starboard side."

"But how will I recognize you?"

"Mr. Amboy," his valet said stiffly, "I have something of serious importance to tell you."

"I'll be right up," Jason said.

The boat deck was a cold and eerie place. The fog drifted past in a swirling white mass. Beyond the second of the fat funnels Jason found the paddle-tennis court. He climbed a short flight of steps and opened a door of heavy steel net. A dim glow in the west gave the scene an appropriately dim and misty illumination.

A short man was standing near the net in the middle of the court. He wore a gray hat and a gray suit. He was gray-haired and gray-mustached. In the foggy twilight, he looked like a respectable middle-aged bookkeeper.

"Flack!" Jason said.

"Kitchener, sir."

"I'm sorry, Kitchener. I would never have recognized you. . . . How did you get on this ship?"

"I shipped as a defense worker, sir. You will recall that before I became your valet I worked for a time as an operating engineer."

"A rig operator," Jason corrected him. "A crane operator."

"Yes, sir. They need operating engineers in the worst way on construction jobs at Pearl Harbor and on the outer islands, Mr. Amboy. When I showed the personnel man at the contractors'

employment office my union card and expressed my willingness to go anywhere, he secured me a 1-A priority without delay. It got me instantly aboard this ship, as I had hoped."

"Why did you want to be aboard this particular ship, Flack?"

"To be of service to you, Mr. Amboy. Look at you, sir. It's just as I said. The captain issued the most explicit instructions for you to wear your life preserver at all times. Supposing this ship were torpedoed now!"

"Do you mean," Jason said in a marveling voice, "that you went to all this trouble to get aboard this ship, merely to keep reminding me to wear my life preserver?"

"Not entirely, Mr. Amboy. After all, I am bound to you by law. I am still under parole to you. And I feel it my duty to see you through this present very dangerous situation. I am not referring now to the possibility of torpedoes from a wolf pack of Jap submarines, or a pos-

"Well, I'll confess I've been entertaining that idea myself, Flack, but did you know that she's engaged?"

"If you'll pardon me again, sir—what of it?"

"Yes, I see your point," Jason said. "At least, you've given me something to think about."

His valet laughed. "I don't believe I have, Mr. Amboy. I've served a great many large and small dinner parties for you in my time, sir, at many of which beautiful women were present, and I've had an excellent opportunity to observe your reactions, but I've never seen the expression on your face I saw while you were chatting with Miss Topping on deck."

"Were you there, too?" Jason exclaimed.

"Yes, sir. To quote my own words, if you'll permit me, I think she has only to crook her little finger to lure you to your destruction. *She is a dangerous girl, Mr. Amboy!* I'm beginning to see a pat-

tern—a bright dark pattern, sir, of intrigue and danger. And she's at the heart of it. I'm convinced she's up to much more serious mischief than we've given her credit for. I'm convinced she knows about the murder of your brother."

"Did you learn definitely that my brother was murdered?"

"No, Mr. Amboy. Not definitely. But I learned that this party of five people—the Grazzard party—left Kokala just two days after your brother was murdered—I mean, vanished, sir. He vanished on the night of December third. They left Kokala on the morning of the fifth—not quite two days—and sailed from Honolulu on the afternoon of the same day—two days before war started."

"What else did you learn?"

"That this same party—these same five people always make an annual trip from Kauai to the mainland early in June. They made their usual trip this year. They've been doing so for the past eight years. This present trip is unusual and exceptional."

"Yes, Flack, but let's not draw important conclusions until all the evidence is in."

"I have a curious sense, a sort of sixth sense, about such things, that has never failed me, Mr. Amboy. I am convinced that one of the five members of the Grazzard party killed your brother and that it all has to do with a plan of such intricacy, such terrifying cold-blooded-

ness—"

"Flack, you're running wild."

"I insist, Mr. Amboy, that these five

people are sinister. I've seen and

sible bombing from planes from a roving carrier. I am referring to the Grazzards, sir."

"All right," Jason said. "Let's have it."

"Yes, sir. I've checked up on all the members of the Grazzard party. I've had an opportunity to scrutinize them and to form an opinion of each of them. And I searched Mr. Grazzard's room, hoping to find those letters. There wasn't time to search the others. Incidentally, sir, all their rooms are on C deck."

"FLACK," Jason said with alarm, "you're going a little too far. There's a war on. The discipline on this ship is very strict. You're apt to land in the brig."

"I'm not afraid of landing in the brig, sir. I know my way around. And it's necessary that we have all the available information on these people. I've reached some important conclusions and I'm anxious to compare notes with you. The personalities of these five people are a very important part of the pattern that's taking shape, so, if you don't object, sir, shall we take things up in their natural order and begin with Miss Topping?"

"Very well, Flack," Jason said. He was impatient but he was delighted by these bold new blossoms that Flack's humble personality was putting forth. "Tell me about Miss Topping."

Flack coughed gently. "She is that rarest of all jewels—a truly beautiful woman with character, intelligence and cleverness. If you'll pardon me, sir, there's the girl for you."

JASON entered the dining room and found a table for six at which was an empty seat. He was hardly seated when a steward said, "Are you Mr. Amboy?"

"Yes."

"Mrs. Grazzard sends her compliments, Mr. Amboy, and requests you sit at her table."

Jason was surprised and more than a little mystified.

The steward conducted him to Mrs. Grazzard's table. On the way over Jason identified two of its occupants: a girl with the remarkable copper-colored skin was Luana Topping. And the woman with the black hair, the thick brows and the dark skin on her left hand was her fiancé Lorrin Grazzard.

Then Jason discovered a third person whom he had seen before—a blond girl who sat beside the empty chair he was to occupy. She was the girl into whose stateroom he had walked by mistake. She was smiling slyly at him with a little corner of her mouth.

The man on her right was about thirty with dark red hair, a narrow dark mustache, small gray eyes, a thin-lipped mouth. His ruddy face was square and his shoulders were those of a wrestler.

But none of them impressed Jason so much as the woman who would sit on his left. She was Mrs. Hiram Grazzard. Everything about her suggested strength—her large, slightly yellowish face, its firm mouth and its capable chin, her shoulders which were heroic, her capacious broad chest, even her thick black hair touched with gray at the temples.

Mrs. Grazzard was appraising Jason with dull amber eyes, coolly and thoroughly. She reminded him of portraits of Queen Victoria. There was the same solidity about her, the same confidence in her powers.

She tapped the arm of the chair beside her. "Sit here, young man," she said in a deep voice and with an authority that could not be questioned. She introduced him to the others. The blond girl was Mrs. Channing Mace. The man next to her was Channing Mace.

Miss Cudlip, who sat almost across from Jason, and was evidently not one of Mrs. Grazzard's minions, resumed what Jason suspected was a monologue about paddle-tennis. She was a homely, freckled woman, a strawberry blonde, with magnificent shoulders and sharp green eyes.

Jason seated himself between Mrs. Grazzard and Mrs. Mace, who was smiling slyly. He glanced across at Luana Topping and met a green-eyed gl

## For Instance ...

... from Hawaii came news that Lieut. Gen. Emmons was to discuss maneuvers and defensive plans with officers and men by radio. Brig. Gen. Boyd commenting in a radio broadcast said: "The use of commercial radio by the commander to contact his troops spread over many square miles is a new and important means of communication." (news item)

... one of the objectives at Dieppe was "destruction ... of a radio location station which plays an important part in German attacks on ... channel convoys." (news item)

## Interesting!

Watch for radio use in the war news—you'll find it in the air—an the ground—and at home.

WITHOUT radio, the movement of war would still be anchored by telephone lines—the physical hazards of the courier and visual signals.

Now war moves swiftly over the whole face of the earth—instantaneous radio communication thru the ether instead of over copper wires has blasted the barriers of space and time.

So today all our radio production centers on war use.

But what of tomorrow—what effect will this have upon the future—after victory?

One thing is certain—it will revolutionize and speed the great new future form of transportation.

Radio has never been universally necessary in transportation before. In automobiles—on trains—it has been entertainment—in boats it has been a great aid but not an essential.

But today for the future, in that great new universal transportation that is forming itself—the airplane—radio is essential as the engine itself.

Zenith's leadership in the radio industry has been established by a constant achievement of "firsts." Repeatedly, ideas "brand new" when Zenith "first" introduced them, later became essentials on all radios. And that same "forward thinking" of engineers and factory and organization now concentrates on war production of the thing we know—radio—exclusively radio. We are progressing—we learn every day—and this new experience will inevitably reflect itself when Zenith again produces for peace.

For over seven years Zenith Radio Corporation has advertised on short wave sets—Europe, South America or the Orient—every day or your money back. It has never been called upon for a refund.

—a Zenith Radio Dealer near you is giving reliable service on all radios—regardless of make. ZENITH RADIO CORPORATION—CHICAGO

was steady and unfathomable. She wasn't smiling.

"I wanted to talk to you, Mr. Amboy," the formidable woman on his left stated. "My son tells me you used to live on Kauai. Just where on Kauai?"

"Kokala," Jason answered.

"Have you an older brother?"

"Yes, Mrs. Grazzard."

"And you are Jason?"

"Yes, Mrs. Grazzard."

"I shall call you Jason. Your father my cousin. He was my mill superintendent for eleven years at Kokala. Your parents left with you and your brother the mainland in nineteen-twenty-one. What is your father doing now?"

"He died less than a year after we went to the mainland."

"The dull amber eyes, in their heavy black pouches, were watching him steadily."

"Where is your mother now, Jason?"

"She died six months after my father's."

"Who brought you up?"

"I did."

"Where was your brother Wayne?"

"Wandering."

"H'mm," said Mrs. Grazzard. It seemed Jason that her mental processes were slow but as sure as a heavy Army tank.

"He was a very formidable woman, but she had the feeling that she was not necessarily a cruel or even an unkind woman, at least according to her own lights. She might be merely a middle-aged white queen on a tropical island, strong of character, imperious in viewpoint."

"Where do you live, Jason?"

"In San Francisco."

IT WAS evident that she did not intend to ask him where Wayne was. With her penetrating curiosity, it would have been a natural question. Jason deliberated mentioning Wayne's mysterious disappearance—weighed the advisability of dropping it as an experimental bomb. He decided against it. If Mrs. Grazzard or any of her party had had anything to do with Wayne's disappearance, nothing would be gained.

She was playing with a long, thin gold pencil which she carried on the end of a long, rather heavy gold chain. She was tapping on the table with the tapering end of it and he saw that the top of it was crowned with a sapphire.

"What do you do, Jason?"

"I've been working for the past two years on an airplane engine."

"You mean, you're an engineer?"

"Yes, Mrs. Grazzard."

"Does your engine work?" she asked dryly.

"The Army's been testing it all the past week," her son said in his heavy voice, "and they rejected it."

She considered him. "What's wrong with it?"

"Bugs," said Lorrin Grazzard. "It's full of little bugs, isn't it, Amboy?"

"That means," Luana said, "he hasn't quite perfected it, Aunt Bertha."

"I know what bugs are," said Mrs. Grazzard firmly. "Two years should be long enough to perfect any airplane engine."

"My engine," Jason said, "is perfect except for a few very minor details. A child could get rid of them."

Mrs. Grazzard resumed eating. Jason supposed that he was, for the time being, dismissed. Miss Topping was gazing at him with dark and thoughtful eyes. Miss Cudlip was telling Mr. Mace about tennis. Miss Topping said, "Mr. Amboy, what do they do about stowaways?"

Jason glanced at her quickly, but her expression was innocent. He said solemnly, "They lock them in a dungeon and throw the key away."

"No, really," the girl said. "How do they find them on a ship as large as this?"

"The old-fashioned stowaway who used to hide in lifeboats and such places has gone out of style," Lorrin said. "And the war has put an end to stowaways."

"Has it?" Miss Topping asked innocently.

"There is a new law," Mr. Mace said, "under which a stowaway is punished for his sins with a six months' sentence."

"I suppose," Miss Topping said, "that also applies to anyone giving aid and comfort to a stowaway."

"It does," Mr. Mace agreed.

"Now, getting back to Tilden's backhand—" Miss Cudlip began determinedly, and Channing Mace gave her his attention.

"So you left Kauai when you were a little boy," Mrs. Mace said.

"I was ten," said Jason.

"Remember it much?"

"Not much."

"Well, it hasn't changed much."

She had her head turned so that she could see his eyes. For a moment, their eyes were mutually exploratory. Jason thought he saw shrewdness and liking in the blue depths. And he became aware that he had not really looked at Mrs.

Channing Mace before. In her blond way, she was very pretty.

"I suppose," Mrs. Mace said, "you'll be going to Kokala sooner or later?"

"I may," Jason said.

"But you must!" She spoke very softly. "When you do, we'd love to have you stay with us. We've a perfectly huge house and we'd love to show you around. It would be fun to take you to the scenes of your childhood."

"I'm afraid I've forgotten most of them," Jason said.

"Even if you once lived there," said Mrs. Mace, still watching him with her shrewd, friendly eyes, "you'll still be a malihini."

"I'm afraid I've forgotten all my Hawaiian, too," Jason said.

"Malihini means tenderfoot," said Mrs. Mace. "And a tenderfoot in any language gets himself so easily into pilikia."

"Pilikia?"

"Trouble."

"But I'm not looking for pilikia."

"Aren't you?" she drawled. "I thought you said you were coming to Kokala."

"Does that mean the same thing?"

She laughed. "I don't know, I'm sure. I'm afraid I'm just fishing."

"And I," said Jason, "am just trying to find my way around."

She nodded. She said in so low a voice that it was almost a whisper: "I don't want you to be opening any more wrong doors. I think you need a friend."

JASON glanced quickly about the table. Lorrin Grazzard was staring at him. Mrs. Grazzard was not eating. She had put her fork down and was tapping the edge of the table with her gold pencil. Miss Cudlip was talking with vivacity about the last match she had seen at Forest Hills. Channing Mace was gazing at Jason with gemlike eyes. And Luana was looking at Jason with dark, clouded eyes.

"Jason," Mrs. Grazzard said, "will you be going directly to Kauai?"

"I haven't decided that, Mrs. Grazzard," he answered.

"When you do," she said, "you're to be my guest, of course."

The strange air of tension about the table delayed Jason's answer a little too long.

Mrs. Mace's faint whisper just reached his hearing: "The queen has spoken. And you'd better acknowledge it, you dope."

Jason said, "Thank you, Mrs. Grazzard. You are very kind."

(To be continued next week)

## Christmas Investment

Continued from page 8

anywhere they choose to send you, by anybody?" his mother asked in a challenging voice.

"Well, not quite that," Phil answered, troubled and yet amused. "It means that we don't have to do anything else to get him into the service, Mommy. He's in."

"I see." She was beaten and she knew it but she would not make a scene.

Two days later Sid's mother and Violet, the maid, put his room into perfect order, closed the windows, drew the shades, and went out of it, Adele Cazavant coming out last and carefully shutting the door. She made no comment to Violet, no complaint to any other member of the family. Outwardly she showed nothing. Inwardly she was conscious of a sensation as if her heart had swelled up and grown strangely heavy, but she did not speak of it. Life on Garden Hill must go on.

And immediately there was easement,

if not relief. For presently Sidney was at home for a day and a night; gone but back again in ten days for another flying visit—Sidney enthusiastic and brown and well; Sidney very much humbled as to the services he might render the country, but confident and willing; Sidney dearer than ever to father and mother and sisters.

"There is no reason for us to get excited and change everything," Adele persisted. "Things in this house are going on exactly as if the world was not at war."

"BUT I honestly think that this whole family is going crazy!" she added in bewilderment, when Topsy, on a certain November morning, turned her about with a wild embrace, indulged in a gale of laughter, and asked if her mother had any objection to her announcing her engagement to Arthur Atkins."

"You mean the—the—that little—engagement—" Adele stammered. She caught Topsy's shoulders and looked into her daughter's dancing dark eyes. "He didn't have the audacity to—he wouldn't—he hasn't asked you to marry him?" she said.

"Oh, but he has!" Topsy chanted. "And I said 'yes!' I'm going to help him and his father with the horses, and his mother will teach me to cook, and I'm going to have babies!"

"That is ridiculous!" Adele said.

The bright eyes met hers; slim, small, red-cheeked, rebellious, Topsy looked like the child she had been only yesterday.

But it was not a child's voice that spoke. It was a proud, resentful voice: "May I ask why 'ridiculous,' Mother?"

"Because it is, dear." But this would not do; Adele supplemented it: "Why, darling, what will all the other girls

think? It means no graduation at Castilleja next June—it means—”

“Mother, it's my life!” Topsy put in passionately. “Do you think I'm going to tell Art that I can't announce my engagement because of what the girls at school will think?”

“No; but I would suppose it would matter what Dad and I think,” Adele said, conscious of losing ground. “I am going to ask a promise of you, Topsy,” she went on, as the girl sat grimly staring into space with half-closed eyes. “I want you to promise me that you will graduate before there is any talk of an engagement or any announcement of an engagement,” Adele said.

“I know that Art is a very attractive fellow. Even I can see that. I mean he's clean and smart and amusing and friendly; I grant all that,” she pursued. “But I am sure Daddy never would consent to it. And in time to come—”

“In time to come, what?” Topsy asked, as her mother stopped. “You mean if he's killed in the war?”

“I mean that *if* in time to come you changed your mind,” Adele recommenced, more mildly than she had yet spoken, “it would be so much easier to free yourself. But I think we needn't consider that. All I want to impress upon you now—all I ask today is that you promise me to wait until you graduate. And then if you feel the same way, we'll see!”

“That miserable old ‘we'll see!’” Topsy grumbled childishly. And Adele knew that she had won.

“Promise me, darling,” she said.

“Oh, I promise!”

“No engagement, no talk of engagement, until after graduation?”

“Promise. Cross my heart.”

“You see,” Adele said, inwardly trembling at the magnitude of the triumph, “you see, I want to keep things here exactly as they've always been, for Daddy, and Sid when we can get him, and all of us.”

“But, Mother,” Topsy said, still smoldering, “everything has changed!”

“Everything elsewhere has changed,” Adele conceded. “All the more reason why our home should not. I want this one little spot in the troubled world to be all family love and peace.”

“Oh, yeah?” Topsy said under her breath. But this sauciness was so unlike her that her mother decided not to hear it.

IT WAS in mid-December that Philip told her seriously that he feared they would have to change their way of living. The manufacture of some of the staple articles in his business was no longer possible—priorities and WPB rulings. The handsome dividends to which they were accustomed were bound to dwindle in the coming years. Except for occasional glimpses Sidney was away; Diana stayed more and more often at night with her fellow airplane observer, Mary Clements, who had a small, romantic apartment hung like a nest above the docks and the shipping on Telegraph Hill. But Adele carried on, as did Wong in the kitchen, Violet upstairs, and Grace with her silver polishing, her progress with the vacuum cleaner through the library and dining room and halls.

“We could let Violet go,” Adele conceded doubtfully, on this occasion, when she was momentarily impressed by Philip's anxious earnestness; “but putting one poor girl out of a position at this particular moment in our national affairs, does not seem to me economy. . . . Are things really very bad at the office?”

“No; things aren't really very bad at the office,” Philip said. “They're not really very bad at the office because

they've practically ceased to exist at the office. We're shutting down.”

“You're—” Adele couldn't say it. “You're shutting down?”

“We're closing the Petrero plant,” he said, “and on the first of the year—if I get the Seattle order—I'm going to combine forces with Brandt and Tucker.”

“CHARLIE TUCKER!” Adele cried. “Why, he was your office boy!”

“Same Charlie,” Philip said. “He came to see me the other day—he knows how things have been going with us. He asked me frankly if we had the Seattle order. I said yes, it was in the bag. He asked how were we going to handle it, with so many of our men drafted and Davis sick most of the time—and unable to get the things we need.”

“Nerve!” Adele breathed.

“Well, I told him I didn't know, but that I'd scare up some men somewhere, and then he put his proposition to me. There aren't any men to get; he knows

next week and see what you can do about that order. Tell them your difficulties and see if perhaps one of them will make some suggestion that will straighten it all out. When's your lease on the city office up?”

“First of the year. We've told them we wouldn't renew.”

Adele's stream of helpful suggestions was silenced. For a moment she wore a daunted expression. She had a disturbed impression that Phil looked not merely tired, he looked old. Philip old! Well, she would do something to cheer him up—have his favorite dishes on the week-end menus.

But Wong's famous crab creole and vanilla soufflé did not seem to have their usual effect, and it was a weary, quiet man to whom Adele said goodbye when Philip started on the Seattle trip. She left him at the train and went home with a certain soberness of spirit settling upon her; her heart was heavy.

Well! There must be something to do

of the long drawing room. They came toward her.

“Did Topsy go into town to stay with you last night, Di?” the mother asked with her welcoming kiss. “Pat just me she wasn't at the house.”

“No; I know she wasn't,” Diana surprisingly. But Adele had no time to be surprised, for her older daughter went on with a little deliberate effort: “I know where she was, Mom. She's coming here now, any minute. She wants me to sort of break it to you. She's married.”

“And what do you know about this?” Sidney said cheerfully. But he was watching his mother keenly. Adele looked steadily at her son. She swallowed once or twice, but she did not speak. “She beat us to it, Di,” Sidney went on, with a grin for his sister.

“She certainly did!” Diana patted her mother's hand. “Don't you care, Mom, they love each other,” she said.

“Oh, please—” Adele whispered, for a full moment they were all silent. “Who—who told you?” she said then.

“Topsy telephoned. They were married yesterday afternoon,” Diana replied, glad to end the silence. “I wanted me to get here first and sort—well, break the ice!”

“BREAK the ice,” Adele repeated automatically. Her baby Topsy running away with a little jockey, a stableman, ruining her life, making it impossible for any really fine man to want to marry her—but no, it was thinkable! “Your father will have it nullified,” she said with white lips, “and—”

“Mrs. Arthur Livingston Stephen Akins to see Mrs. Philip Jaynes Cazavan announced a joyous young voice, a following it, Topsy rushed in. She flung herself first into Sidney's arms, twirling from him to Diana, and ended by a revolving, dancing embrace of her mother that left her laughing, and her mother indignantly flushed, and both of the breathless.

“Topsy—” Adele began in an awed voice. But she could say no more. Sidney seated himself on the arm of the divan, put an arm bracingly about her shoulders, and said, “Now, now, no Miss Adele!” in a half-coaxing, half-warning voice, and Diana, now in a deck chair with Topsy on a hassock at her knee, had opened a quite different type of conversation with her: “Topsy, if ever anyone *didn't* look like an old married woman, you're it!”

Topsy needed no encouragement to rush into the story. She had promised Mom not to announce an engagement, but she hadn't promised not to get married, had she? A gale of giddy laughter here.

“Art's apt to be called any day, Mom, and he felt horrible about not even being engaged, and I was crying Tuesday afternoon, and his father said we oughtn't to see each other any more, so we just flew up to Reno yesterday and were married, and today we telephoned it into the papers, so it'll be in tomorrow—”

“Topsy,” Adele said, faintly, “what your father will say I can only imagine, but as far as I am concerned you are dead—you are exactly as if you were dead—”

“Luncheon is served, Mrs. Cazavan,” said Grace, at the door.

“Mother, cut out the drama,” Sidney said. “Come on and let's have lunch.”

It was much later in the afternoon that Adele remembered that she had promised old Mrs. Mitchell that she would investigate the Kinney case—“In all this war work we can't let our regular responsibilities go,” Mrs. Mitchell had said. “I understand the husband's been drafted

that as well as I do. His plan was to have me see the Seattle people, shift that job to Brandt and Tucker, and go in with them.”

“As a partner. You a partner of little Charlie Tucker!”

“No; as manager of their shipping room.”

“A clerk!” Adele gasped.

“Head of a department at three thousand a year.”

“What utter nonsense!” Adele exclaimed, losing patience with the whole thing. “Why, we pay our servants more than that!”

“Did,” Philip said, stressing the word.

“If things are as bad as you say, Phil,” his wife began, after a pause during which she had looked at him steadily, with a faintly knitted brow, “there are ways in which we can cut down, and we will! Diana will have to give up that air-warden work of hers, and stay at home to help me. Wong and Grace can both go, after the Christmas excitement, and Topsy'll stop her riding lessons. I'll be glad of that, anyway. Violet and I'll do the cooking and Topsy can very well help; it won't hurt her socially.”

“Now about Tony,” Adele added, wrinkling her brow thoughtfully, “that's a problem. For do what we will, we can't handle a garden and grounds this size. He cleans the cars and brings in the wood. I'll tell you, Phil,” she broke off to say hopefully, “you go up to Seattle

about this! She would get the leaf rake and clear up under the oak trees. Hard exercise would be good for her. And at noon Topsy would come in full of school gossip, Diana would come down from town with a forty-eight-hour respite from lookout duties, and—who could say?—Sidney might have a few hours' leave. It would be silly to act as if anything disagreeable had happened, because it hadn't. Everything was exactly as before, except—

Except for possibilities and worries and fears, and in those she simply would not indulge.

And as if to reward her for her heroism, here was her sailor boy home for lunch, instantly stirring up an atmosphere of excitement and pleasure everywhere. Wong and Tony beamed at him; Violet and Grace went smiling about their work; Sidney was home!

ADELE telephoned the school to ask Topsy to be sure to come home for lunch. Topsy wasn't there; on her way home probably, Topsy's roommate Patricia Curran suggested.

“Didn't she sleep at home last night, Mrs. Cazavan?” asked Patricia.

“I don't—no, I'm sure she didn't. Unless she slipped out to an early class,” Adele said. She turned from the telephone to see that Diana had arrived, and that she and Sidney were talking together with rather grave faces at the end

nothing, and the woman is expecting another baby—anyway, a neighbor has an application for some baby clothes, and I wish you'd look into it and

first Adele, heartsick and dazed, felt she could not possibly make a charcoal this afternoon. But she had a pride in obeying orders from her or officer, and Jones' Gully was more than ten minutes' walk from home. It was merely a matter of adding the hill at the rear of the house, and crossing the bridge that in a sense divided the desert from the Garden Hill was the most aristocratic neighborhood in the town; Jones' the poorest.

However, Adele knew fairly well the little rambling lanes in which the packing plants were tangled, and out too much trouble she found the eye house.

Children, dogs and goats were holding high carnival in the yard; Adele led her way to the kitchen door, and d Kitty Kinney busy over her ironboard. A small child toddled about floor, and a neighbor, seated, and a baby, but still panting from recent employment, looked on.

The woman of the house answered Adele's questions quickly and brightly; that she was not asking any charity evident from her first word:

"I've seen my new washing machine? It's a blessing itself that Tom paid it before he went?"

Your husband has been drafted? But three little children and another thing—?" Adele left the sentence unfinished.

Indeed, he wasn't drafted then!" Kitty wiped her electric iron on a child's skirt. "He was in defense work, I there wasn't a week he didn't make a hundred of eighty dollars," she said. "But he's a master mechanic and he's a good shot, and he wasn't satisfied with being out of it. He enlisted."

"But now—now," Adele said, in her title, deprecatory, how-can-I-help-you voice, "you'll not have very much money. Aren't there three children?"

"There are," said Kitty heartily, "and other little duck in the oven, as my old father used to say. But—Mrs. Vecchio and me were just saying, you can't expect to live in wartime the way you do her times. I've moved into my mother's place here, and I've two or three children I'm boarding. Their mothers work for defense."

YOU'RE boarding children?" Adele asked faintly.

"The Murray boys and the little Mulrigh girl. This is hers." The microscopic dress was finished now and hung up to dry. "And they'll all be piling in for bread and jelly," said Kitty, "so I'll stop for tea and take a rest."

"But you had your own home?"

"Oh, I had a nice place. I had two bathrooms, and Tom had given me my stove and my machine here." There was no regret in her voice. "But it's little to do until it's all over," she said. "We know how it'll end, but we don't know how soon, and we've got to see it through. It was only Tom's going—it was only Tom's going—" Her voice thickened, and she went quickly into the pantry.

"No, I don't need baby clothes," she said, relaxed and resting, when the children had stormed in and stormed away again. "There's only one thing I'd like to have, and that, you can't give me. I wish—" And the young, thin, weary face wore a very sweet look as Kitty Kinney turned to Adele Cazavant. "I wish—sure we all do here in the Gulch," she said, "that we could give our children

what yours have. We're all Americans, we know that. But when I went to the All American Exhibition you had last summer, and saw the Washington letter, and the samplers, and the Indian things, and the quilt Mrs. Anderson's mother made when she was crossing the plains in 'forty-nine, and the gray uniforms and the blue—those things made me wish that our men had had a chance to fight for America before—show her they knew what it meant—all that she's trying to give them. I don't mean washing machines and radios and movies, but them, too. I wished—and Tom wished—that he'd been at Yorktown—or his grandfather had, when Washington rode up—"

She stopped, dashing tears away from her smiling eyes.

"I say it so badly," she apologized. Adele Cazavant, rising, for the afternoon was almost gone, looked at her steadily. She had to clear her throat before she spoke: "You don't say it badly, Mrs. Kinney. But whether you do or not, it's a good thing to say."

TEN days later, on a grim, cold, rainy Christmas Eve, Philip Cazavant, carrying his suitcase, descended at the station to find his wife and the old blue car awaiting him.

"Did you get the order?" she asked, after their greeting kiss.

"Oh, yes; there was nothing to it. I hope Charlie Tucker will be pleased. I know darn' well he will," he finished.

"But no kids?" he asked with his next breath, looking at the empty seats of the old car.

"No, no children," Adele answered cheerfully. "Di's on duty. Sid was here yesterday for an hour or two but he had to go back, and Topsy left me only an hour ago. We're dining with them tomorrow."

"At—at—?" He left it unfinished, his look trying to read his wife's face. "I didn't know how you felt about that Topsy business," he began again cautiously. "I—it makes me feel very badly. Seventeen, you know. Only a child. And I was afraid you—my first thought naturally was for how you'd feel—"

He stopped with an inquiring look. Adele, driving steadily through the rainy dusk, flashed him a quick smile.

"Why, Phil," she said, "she's mature for her age. She's always loved horses and the out-of-doors and that wild gypsy sort of life, and she really loves—Arthur. It isn't what I'd choose for her, but after all, if she'd married some impeccable youth in the real-estate business and settled down in a city flat with all her wedding presents, I'd miss her just as much. As it is, she flashes in on me every day—"

"Dell!" the man interrupted, in a sort of shout of relief, "if you feel that way, dear, I'm perfectly satisfied! The draft will get Arthur; we'll have her home again! We can't live their lives for them, after all."

"No; we can't live their lives for them." She had stopped before a broad, roomy old shingled brown house that stood beneath dripping trees. "Mrs. Pine wants to see you, Phil," she said. "D'you mind coming in a minute? No; bring your bag, we may have dinner here."

"Listen, Dell, I'm all muddled and dirty—" But as she did not appear to hear him, he followed her around a deep, dripping porch, and into a large room that had perhaps once been the dining room for a large family. It was a sitting room now; he recognized in a sort of dream the big chair beside a smoldering open fire, the painting of three children that hung above.

Adele did not speak or turn; she went to a door and opened it upon a comfortable bedroom with a glimpse of bath be-

yond. She put her hat and coat on one of the beds and reached her hand for her husband's hand, leading him back through the big room.

"Look in here, Phil, a nice little kitchen with a breakfast nook; our own front door and our own scrap of back yard. Heat and hot water and gardener thrown in. This is all we have left, Phil. Sit down here—that's it. This is home."

"What are you talking about?" he said.

"About a man and woman whose children have grown up, Phil. About a nation at war. Last week," Adele told him, her face all smiles, but her eyes wet, "last week I saw Chet Miller, and rented the Garden Hill house for two years at two hundred and fifty. They keep Wong and Grace; Violet has gone to her brother. And we're here for the duration at forty-five a month. Ah, now, stop it!"

For he had bent his body forward and covered his face with his hands.

"Your home that you loved!" he said in a whisper.

"My home nothing!" she retorted. "My home is where you are. Our home is here, with your old first cook taking care of you!"

With a young movement that made her seem a girl again she was on her knees beside him, her arms about him.

"Look here," she said, "we're not young any longer. Our children are grown; they've solved their own problems! We've given them Christmas dinners and New Year's parties for twenty-five years—now let them give us some! Phil, do you realize what a relief it's going to be, just to have these snug little quarters, not to be expected to make an effort any more!"

"Relief!" he echoed dazedly. "Dell, you mean the big house is off our shoulders, and the pay roll—"

"And the gardener and the telephones and the furnace and the cars!" she supplemented it. "And, Phil, I feel so free. No housekeeping responsibilities! Tomorrow we're supposed to be lunching with Topsy and Arthur's family at the Riding Academy."

"Well, all right!" he said stoutly, his smile matching her own.

"TOPSY'S happy," her mother said, "and they adore her. You'll not mind. It's very funny, but you'll not mind. Then later we're to go into town, and Mary and Diana are cooking us a turkey, in the studio."

"On that two-burner stove?"

"I don't know how they propose to do it. I don't for one instant suppose there'll be cranberry sauce or dressing," Adele said. "But that Englishman Di met on the steamer years ago has turned up again, and I believe he's to help, and there's a chance Sid may be there."

"Sid?" The father's eyes brightened. "Well," he said with a rueful smile, "it isn't quite the old homestead with the snow fluttering down and the Yule log burning, is it? But it seems to me it won't be such a bad Christmas."

"Christmas is always Christmas," she said steadily. "You go have your bath now, and change, and get comfortable, and I'll finish up dinner. The children are all following roads we didn't plan for them, Phil, but at least they're doing things, they're living and feeling and glad to be alive, and that's all we ever wanted for them, isn't it?"

He caught her as she passed him and locked his arms about her, and they smiled at each other through a dazzle of tears. "That's all we ever wanted, dear," the man said.

"And it still seems to me—seems to me a good investment," said Adele Cazavant.

THE END

## Slap-Happy Driving is Out!

Now that we're limited to one spare tire, and buy gas by coupon, and treat the old car like a rich aunt, we've changed our driving habits.

We slow down before we have to slam on the brakes. We try to start smoothly, too—to save rubber and gas. We don't rub good rubber off against the curb when parking. We're tire conscious.

And millions of us want Weed Chains this winter for different reasons such as to save tires, gas, towing bills, hospital bills, painful injuries, lost working time, and damage to our car.

We know that winter doubles driving accidents and this is no time for accidents. There's too much wartime work for every one of us to do. Besides, there's a shortage of doctors and nurses.

So, we all want Weeds. But so does the Army, too. The Weed Chain factory is making tire chains for every type of army vehicle, and if we have early snowstorms, the available supply of Weed Chains may soon be exhausted.

Therefore, see the Weed Chain dealer right away if you are going to drive this winter. For the best buy in tire chains, ask for Weed American Bar-Reinforced whose special features result in more than double mileage. If he has no Weed Americans, ask for Weed Regular, the standard of value for 39 years.

If you have serviceable used Weed Chains, let your service station examine and recondition them against the day when you may need them very much.

## Torment in Japan

Continued from page 13

Presbyterian missionary from New York City who had been in Japan twenty-eight years, volunteered to broadcast, "if the police will permit it." Walser apparently had failed to recognize that the East Asia War Relief Committee was nothing but a group of masquerading police and Foreign Office propagandists.

Walser was assured that the police had no objection, provided he followed instructions. He then addressed a statement to Americans in which he said that Japan and America were "too highly civilized" to be at war. He said peace should be negotiated immediately, implying that we should forget Pearl Harbor and give Japan the world domination she seeks. He obeyed the order to say he was being well treated.

Walser was among the 140 passengers of the Swedish evacuation liner Gripsholm, who were taken to Ellis Island and held for investigation by the Federal Bureau of Investigation immediately upon arrival in New York.

The newspapermen present, however, stated that they appreciated the opportunity to communicate with friends and relatives but added that it would be impossible for them to broadcast without permission from their home offices.

An embarrassing silence fell over the luncheon table. The faces of the Japanese flushed with a puzzled anger but they said nothing. Their program had not gone according to plan. We dabbled nervously with our dessert.

Finally the Japanese spokesman rose to his feet. He directed a menacing glare at each of us individually. Slowly, however, an actor's smile returned to his face. For the third time in as many hours, he recited word for word his speech on Japanese-American friendship.

"We know," he added, "that all of you are concerned about the Americans who must remain behind after the first evacuation ship leaves Japan. This relief society also is interested in obtaining better treatment for them. Unfortunately we are handicapped by lack of funds, but we know you will be anxious to do what you can to help us bring relief to your fellow countrymen."

### An Assignment Declined

He then told us his scheme. This relief society, he said, had arranged with all newspapers under Japanese control in the Far East to buy articles which we newspapermen would write for them. The money raised would be used by the relief society to improve the treatment of the Americans remaining in Japan. Of course, the articles would have to be pro-Japanese, but the money paid for them would help Americans.

I replied for the correspondents after we had conferred among ourselves. Our answer was this:

"We, perhaps more than anyone else, realize the need for improving the treatment of Americans held in Japan. Therefore we are very anxious to do whatever we can to aid these Americans who will remain behind when we are evacuated.

"Unfortunately our writing services are exclusively engaged by our respective American companies. Therefore we cannot write for Japanese newspapers, but we would be glad to donate all our money toward the care of Americans not being repatriated with us. If given time and opportunity, we are certain we can raise as much money among the American community of Japan as we can by writing for the Japanese newspapers."

The Japanese chairman crushed out his cigarette and jumped to his feet. His eyes flashed angrily at me. He started to raise one of his clenched fists in my direction but dropped it when the head of the police, standing off in a corner, shouted an order at him.

After a few seconds of silence, the stage smile returned to his face. Again he recited the speech on Japanese-American friendship.

"And now," he concluded, "I want to tell you of the high light of today's program. I know all of you would like to take a good hot tub bath."

He was right. There was nothing we wanted more than a good tub bath. For six months, the fifty of us in the Tokyo concentration camp had been offered one bath a week in a single tub of water which had been used before us by thirty policemen.

"At considerable expense," the chair-

means—the firing squad or the executioner's block. Think of what that would mean to your wife and children."

I was left alone to think it over. In two months, there had been sixteen foreign suicides. The newspapers had announced additional "natural deaths" among imprisoned enemy nationals—one of them in an insane asylum. The threat was something to think about.

But after an hour, I informed the chairman when he returned that I had decided I would not write. He did not say a word but left the room on the dead run. In a few minutes, he was back with the head of the foreign section of the Home Office—a shaven-headed, strong-arm type of Japanese in an artificial khaki uniform.

"You will not leave this room until you have written," he shouted. "You will not be allowed to sleep and you will get no food."

"How far is it? They made a mistake and gave us an 'A' card!"

COLLIER'S

ED GRAHAM

man continued, "we have arranged a private room and bath here in the hotel for each of you. You will please go to those rooms now."

He then detailed two policemen to escort each of us to our private rooms. Once in them, we heard no more of a bath. In the room, there was a typewriter and a stack of paper.

The chairman of the meeting came into my room with the remark that he wanted to "talk things over for your own good."

"There is no use being smart," the spokesman said. "Japan already has defeated America. You are at our mercy. Soon our troops will be in Washington. I would advise you to write."

I recalled for him the admission Kikuchi had made about the good treatment being received by Japanese in the United States.

"We don't care about that," he said. "Naturally you Americans will treat our people well because you know you have lost the war and are afraid to treat us otherwise."

He then leaned across the table and began shaking his fist.

"Your refusal to write," he shouted, "has become a political issue! You are trying to obstruct Japan's plans for a New Order in East Asia. We will have to turn you over to the military police for court-martial. You know what that

means—the firing squad or the executioner's block. Think of what that would mean to your wife and children."

Calling for the room girl, he ordered her to remove the bottle of water and drinking glass from my room.

"And," he added with a smile, "you will get nothing to drink, either."

The chairman then drew from his pocket a handful of small slips of paper. He handed one of them to me. It said, "Sino-Japanese Relations." My name had been written on it in pencil.

"I don't see why you have brought us here and treated us this way," I told him. "Why don't you write anything you like to and just sign our names to it? Why torment us this way?"

"But that would not be honest," he said seriously.

The Home Office official, who obviously could not understand half of what we were saying, suddenly lost patience and went into a rage.

### Threatened with Death

He started walking around the room, swinging his fists wildly and yelling repeatedly, "You'll never leave Japan! You'll never leave Japan! I am going to kill you! I am going to kill you!"

Suddenly he grabbed me by the necktie and jerked my head back so sharply that I thought my neck would break. Still clinging to my tie, he threw me against the wall on the other side of the room. When I started to get up, he and the

spokesman slapped my face repeatedly. Then they grabbed me and threw me into the chair facing the typewriter.

"Are you going to write?" the Office man shouted.

I did not reply. I felt his clammy fingers close around my throat. As he struggled, I could not prevent him from cutting off my breathing. Six months of Japanese starvation fare had weakened me far more than I had realized.

Everything went blank. The next I knew, I was being slapped violently apparently to bring me back to consciousness.

"You slapped the typewriter key as you were passing out," I heard the chairman saying. "I have saved you by telling this man that this indicated willingness to write. Now write! If you prefer that we go ahead with what we were doing to you a minute ago."

I could not see any good coming to anyone from continued resistance. It occurred to me that definite good might come if I could survive this day and return to America to relate what had happened to us.

I said I would write. My plan was to make my article so violently pro-Japanese that anyone outside Japan knew me would readily realize that I had not written it under ordinary circumstances. This plan I carried out, using many Japanese clichés as I could recall: "sincerity," "the august virtue of His Imperial Majesty the Emperor," "co-operation with Japan," etc.

### The Subterfuge Succeeded

When the spokesman translated my article into Japanese, the chairman beamed.

"I am glad we do not have to kill you," he said to me. To him, the article sounded like jingoistic Premier Gen. Tojo haranguing the army.

Meanwhile, similar scenes were being enacted in the other rooms where Americans were being held.

Joseph Dynan, of the Associated Press, had gone from his room to the hotel lobby when he was left alone to face over the threat of execution. In the crowded hotel lobby, the Home Office official stopped him and, without warning, struck him several severe blows on the face, knocking out Dynan's brains.

He was then roughly hustled to his room. There he was given a writing topic, How Well I Have Been Treated by the Japanese in Wartime.

The Reverend Walser also was publicly humiliated in the lobby by the police who cursed him violently before a large crowd of Japanese. He was hustled back to his room and forced to write an article entitled, Japan, the Land of the Gods. In it, he was forced to say that Japan would supervise the religious Orientals in the future.

Leo Chamberlain, manager for National City Bank in Japan, was compelled to write an article recommending "close economic co-operation between Japan and the United States after the war."

When we were finally permitted to leave our "private rooms with bath," the hotel clock said 5:30 P. M. We had arrived at the hotel at 9 A. M. We were an exhausted group as we gathered in the lobby.

We were driven back to our concentration camp for a dinner of half-rotten whale meat and boiled alfalfa a few minutes later.

# Open for business

Somewhere today between Tokyo and Tulagi ...or Naples and Narvik...bomb doors of hefty Vega Venturas are opening for the business of hitting the firm of Adolf-Beniro-Hirohito where it hurts...*plenty*.

Just where...and just how...communiques will tell—in stories of advance Jap air bases demolished, of vital Nazi shipping sunk.

For these are jobs Venturas were designed to do...the kind of Axis-smashing jobs their veteran brothers, the Lockheed Hudsons, have long been doing. And these Venturas... bigger, doubly-armed...are more than keeping up the family tradition. They're improving it! Lockheed Aircraft Corporation, Vega Aircraft Corporation, Burbank, California.

# The All-Navy All-America

By Grantland Rice

THERE have been seventy-three years of American football since Princeton and Rutgers gave the game its start in 1869. Thousands of teams, many hundred thousands of players and countless millions of spectators have helped to make it America's greatest game. But it remained for Commander Tom Hamilton and his assistants in the Naval Cadet Preflight and Naval Cadet Training schools to give a bunch of football players the finest competitive training ever seen.

Most of the Naval Cadet teams were drawn from professional ranks or from featured stars on college teams but many of them were young cadets with little experience. The big handicap was that football was only a minor part of a rough-and-tumble ten-hour training day.

In addition to football, they had to face the grind of boxing, wrestling, swimming above and under water, cross-country running with heavy packs, obstacle climbing and every detail that would have them mentally and physically fit for their great work as naval fliers.

The football players from these Naval Cadet schools had to carry an extra burden. Spared in no manner from their daily routine, they were called upon to play ten-game schedules against the pick of college teams—such teams as Ohio State, Michigan, Boston College, Wisconsin, L.S.U., Fordham, Missouri, Pennsylvania, Minnesota, Iowa, Notre Dame and Indiana being among their opponents. Facing by all odds the hardest schedule in the country, leading Middle Western teams still added Naval Preflight games to a hard season's play, knowing these Naval Cadets at their best were wrecking forces.

It was agreed that no Naval Preflight team could use more than five officers. The remainder of the squad were drawn from cadets who might be available for three, four or five games as they graduated and moved along to active war service. There were occasions when such coaches as Bernie Bierman at Iowa Navy, Jimmy Crowley at North Carolina Navy, and Ray Wolf at Georgia Navy would lose three or four men between games.

## Weary Gridiron Warriors

There is no question that the pick of Preflight teams could have mopped up all college teams and beaten the best of the pros, which is all the strength any one would care to meet. They had the advantage in material, but they were handicapped by the almost body-wrecking physical program and the shift in men. As a rule, they were weary and battered, worn down, and far from any football sharpness at the end of a day's work. But in spite of this, they had enough left to beat such teams as Michigan, Minnesota, Missouri, Auburn, Duke, Illinois, Harvard, Iowa, Pennsylvania, Indiana and other strong outfits.

There were times when they had nothing left in the way of football, such as the Georgia Preflight and Iowa Preflight games against L.S.U. and Notre Dame—teams they could have wrecked under normal conditions. These were lapses that came from sheer physical and mental weariness, plus sudden loss of key men. When you consider the handicaps

they faced, the showing of the Preflight and Navy teams was nothing short of phenomenal. Concentration, after all, a major factor in any sport, and the Navy teams had their entire concentration on the much bigger job somewhere ahead.

These men were not in any sense football specialists. They used football as a morale builder for their mates, and was all extra work. There were no concessions to a fine ball carrier, a stunner, a passer or kicker, a famous blocker. The playing officers were platoon or squadron leaders, who lived and suffered with their cadets, who shared with their mates on an equal basis all the minor headaches and heartbreaks a war can bring.

## All-Army Teams' Fine Records

The selection of men for the All-America Navy ranking was difficult because of the wealth of good material. There can be no All-Army team, since this group finished its play back in September, after battling the best of professional teams on even terms under the skillful coaching of Colonel Neyland of Tennessee and Lieutenant Colonel Wallace Wade of Duke. Both All-Army teams, with limited practice, turned in excellent jobs against such teams as the Bears, Giants, Green Bay Packers and other leading professional opponents. Both Colonel Neyland and Lieutenant Colonel Wade, under rush conditions, fought to a finish. But these games were only early skirmishes, compared to the Navy's contribution to condition and morale.

In selecting this All-Navy training team, I would like to make acknowledgment to all the head coaches and Commander Hamilton's aides.

On the opposite page are the All-America All-Navy selections plus the All-America All-Navy Preflight Cadet team.

Each man named here has starred in college or professional ranks. Curly Lambeau, the Green Bay Packers' coach, rates Svendsen as one of the best centers of his time. Kovach from N. C. Navy Preflight wasn't far behind, a sixty-minute hustler.

The line strength of this squad from end to end was a striking feature, with Buddy Jungmichel, Steve Hudacek, Bill Davis and Joe Ruetz, flanked by such fine ends as big Jim Poole, late of the New York Giants, and Ed Frutig from Michigan.

Another feature was the wealth of backfield material that included Bruce Smith, George McAfee, Frank Albright, Dick Fisher, Frank Filchock, George Franck, Vic Bottari, Nello Falaschi and others, who combined hard, fast running, brilliant kicking and passing, plus terrific blocking.

Any defense called upon to stop Bruce Smith and George McAfee would have a rugged engagement to meet. Bernie Bierman has rated Smith as one of the greatest backs he ever saw coached, and no extended memory required to recall McAfee's dazzling play with Chicago's Bears a year ago.

These are men who came from professional and college ranks to fight Germany and Japan, not to play football.

all which to them was only an extra  
 but—added work piled on long, hard  
 day of war training. If the pick of this  
 group had nothing but football to fol-  
 low where would have been the one team  
 that could have been equal in might and  
 speed to the Chicago Bears. You can  
 stand the scoring force of a back-  
 field that has Frankie Albert, late of  
 Stanford, at quarter, with Bruce Smith,  
 George McAfee and Dick Fisher; and  
 near like Filchock and George Franck  
 in reserve, as well as Nello Falaschi and  
 one Eshmont.

More than a hundred men from the  
 Army and Marine groups came from pro-  
 fessional ranks; others from the colleges.  
 The Army drew an equal quota that isn't  
 listed here, Standlee and Kimbrough  
 being them. The Army list ran to over  
 a hundred football stars, a small part of the  
 assignment of football talent. But  
 the teams played no schedule to  
 block in the Navy's all-season play.

Most of the members of the first team  
 were well-known to the football world.  
 George Svendsen was a star center at  
 Minnesota and later with the Green Bay  
 Packers. Curly Lambeau gives him a  
 rating. That also goes for such en-  
 vied as Jim Poole of the New York  
 Giants, McAfee of Duke and the Chi-  
 cago Bears, Bruce Smith of Minnesota,  
 Ed Frutig and Frankie Albert. But who  
 is the name of Buddy Jungmichel  
 of San Diego and Texas, rated as one of  
 the best guards of the year?

In the brief space of time they were  
 together, there were few unknowns who  
 could crowd out college and professional  
 players, but it might surprise you to know  
 how many could have made the grade  
 in only a few weeks more in the mat-  
 ter of training and picking up a few  
 fundamentals.

How would this team make out against  
 the college All-America? It would  
 be a contest worth traveling a long way  
 to see. ★★★

A fine pass-catcher, Jim Poole,  
 ex-Giant and "Ole Miss" star,  
 won All-America ranking at end  
 of the season with the Georgia Preflight team

Ginger Rogers presents a football to Ed Frutig (left) of Michigan, and

## IT MAY NOT BE SO EASY AGAIN TO OWN THESE FAMOUS BOOKS

Here's Your Chance to Have Dr. Eliot's Five-Foot Shelf of Books (The Harvard Classics)—**At an Unusual Bargain**—Act at Once!

**Y**OU have long wished to own these superb books that bring to you the greatest of world literature . . . the supreme creative writings of all time.

Here, now, is your opportunity. Today this glorious library can be yours at a cost per volume one-third that of current popular fiction. Think of it! You can now have these famous masterpieces which will make a university of your home.

### DR. ELIOT'S DEAREST HOPE

Dr. Charles W. Eliot, for forty years President of Harvard University, made it a vital part of his life's work to assemble this superlative library. In these books will be found the very essentials of a liberal education. It was Dr. Eliot's greatest wish to make these famous writings available to the largest possible number of people. At the price at which they are now offered his ambition has

been fully realized. Now The Harvard Classics are within the reach of every ambitious man and woman in America.

### A GREAT BOOK BARGAIN!

Brentano's, one of the largest firms of retail booksellers in the world, recently stated that FOR ONLY THE PARTIAL CONTENTS OF THE HARVARD CLASSICS IN ORDINARY CLOTH-BOUND EDITIONS, THE COST WOULD BE \$402.00! Yet you can have this marvelous set, beautifully printed, handsomely and uniformly bound, for a small fraction of that cost!

The beautiful library Edition contains every word, line, paragraph and page absolutely complete—together with the Reading Guide and the unique Index with 76,000 entries that is the key to the treasures of The Harvard Classics.

### WE URGE YOU TO ACT AT ONCE

Difficulty in obtaining paper, cloth, ink and other materials may necessitate our withdrawing this extraordinary bargain offer without further notice. Remember the cost per volume is but  $\frac{1}{3}$  the price of current popular fiction.

### THIS VALUABLE BOOK FREE

The fascinating book, "Fifteen Minutes a Day," containing eighty pages, furnishes you with complete information about this marvelous set. It describes Dr. Eliot's own plan of reading and is filled with a wealth of helpful, practical information. It also contains dramatic biographies of men whose immortal writings appear in The Harvard Classics. This book is beautifully illustrated. It will be sent you free, postpaid and without obligation. Simply fill out the coupon with your name and address and mail at once.

Do not miss this golden chance to own The Harvard Classics. We do not know how long we can maintain these low present prices. Manufacturing costs are rising rapidly—almost daily. Mail the coupon NOW!

### THIS COUPON ENTITLES YOU TO FREE BOOKLET

P. F. COLLIER & SON CORPORATION  
250 Park Avenue  
New York, N. Y.

By mail, absolutely free and without obligation, please send me the guide-book to the most famous books in the world, describing Dr. Eliot's Five-Foot Shelf of Books, and containing the plan of reading recommended by Dr. Eliot of Harvard. Also please advise how I may secure the books by small monthly payments.

*The Harvard Classics*

# City Under the Sea

by Harold Lamb

ILLUSTRATED BY HARDIE GRAMATKY

The Germans had turned their searchlight on the driftwood. Yarak heard the crack of a shot. Water sprayed beside him

UNCLE YARAK sat on a sandbank overlooking a river that flowed into the Black Sea. Trouble lay heavily upon his Cossack spirit and he did not know what to do about

He had to think of something to do. A plan—that was it. But how could he think of a plan without lighting his pipe? To strike a match in that clear, starlit night might be to draw a shot from a German patrol along the opposite bank. A drink of brandy would be helpful in making a plan, but brandy had not refreshed his throat in the ten days he had spent wandering to this jumping-off place.

"Ekh ma," he sighed. "There's nothing to help."

A shadow appeared on the surface of the water, and he heard a humming sound above the rush of the current over the shoals. Abruptly he sat up, the wiry steppe grass cutting through his shirt sleeves. Something was coming up from the depths of the narrow river.

"The city—" he muttered.

Never before now had the old Cossack laid eyes on the long line of the sea, or the ships that plied the waters hereof. Yet he knew the legend of the city. In bygone days, on an island somewhere in this same Black Sea, good people had lived in a city that was attacked by pagan Turks. The people of the city prayed to the Lord for deliverance from their peril. And when the Turks swarmed over the island, it settled and vanished beneath the sea with all its people. Even now, on holy days, the bells of that city could be heard ringing beneath the waters.

Yarak watched the shadow in mid-channel hopefully for a moment, and then spat. "Tfu! There are no bells."

Luck, undoubtedly, had deserted him for these last ten days. All because he had spoken to a strange woman. The next time he would cross himself and spit three times before speaking to a strange woman. And he peered morosely at the woman curled up asleep in the sand beside him.

Her tawny hair stretched over her arm, her smart chamois jacket was wrapped tight about her small body. She breathed evenly, as if unconscious of hunger and danger.

"Shepheardsismailiahaleptaganrog," Yarak repeated softly to himself. That was where she said she had come from. It didn't make sense. She couldn't speak intelligently—not a bit of Ukrainian, the Cossack speech, and only enough Russian to ask for things like water and watermelons and the sea. She had been able to make Uncle Yarak understand that she wanted to go down to the sea.

Be-ty she called herself, when the sergeant of the guerrilla patrol had turned her over to Yarak, explaining that she was dumb, being a foreign woman. She had lost her way, getting around the Kharkov lines, and she said her car had broken down. The sergeant, who had other matters to attend to, had made Yarak promise to take her where she wanted to go.

Well, he had done that. He had brought her to the sea, because she wanted to go to the sea. It had not been easy, because German forces happened to occupy that section of the coast through which the Cossack had had to

make his way at night, scavenging food where he could, with the foreign woman following obediently behind.

And when, at last, he had shown her the dark line of the sea above the sand hillocks, she had sat down suddenly, not smiling any more. She had wiped at her eyes. Something had gone wrong. Be-ty would not follow him any more. Probably she was sick, and possibly she might be dying. Yarak did not want that to happen. The dumb woman was young, and lovely when she smiled.

But what was he going to do with her here in this sandy waste, without food, with only German patrols watching the empty river?

YARAK chewed his cold pipe, peering into the haze of starlight. He heard a splash upstream that might have been a fish. Up there something moved, looking like a pair of tree trunks, drifting. It did not, however, swing out with the current when it approached the sand bar. Yarak's eyes, accustomed to darkness, were keen.

"Ghar," he whispered at the blond woman. Then, remembering that ordinary speech meant nothing to her, he laid his fingers against her throat, waking her quietly.

"Whatstheshow?" she whispered, her eyes opening. With his hand on her mouth, he pressed her head back into the sand. Then he started down to the water's edge.

Bending his six-foot-three of height, to keep himself below the skyline, he made his way out to some rocks in a clump of rushes, without a sound. For a moment he studied the drifting logs

which had navigated the point upstream. Two and perhaps three men lay stretched on the raft, and the starlight above picked out a rifle barrel.

"U-u-haa!" he called softly, close to the water, watching the rifle. The logs hesitated and turned in, with a faint splashing. "Eh, rivermen." Yarak grinned at the clumsy way they handled their raft. "Eh, say."

"You say," a voice grumbled.

The men on the logs were investigating the river. They wanted to know where the German posts were. Yarak explained that a field hospital had been set up three versts away at Chovno village, and that the Germans patrolled the vicinity on foot. "Where are you heading?" he asked, hopefully.

"None of your business, Cossack."

The men on the raft would only say that they had holed up along the river. They were trying to observe what the Germans were doing. Earlier that night they had found a foreigner.

Yarak pricked up his ears. "What kind of a foreigner?"

"How do we know what kind? A foreigner."

"I thought you were *burlaki*—rivermen."

"Sure we're from the river. The Amur, brother."

"Where's that?"

"District of Siberia."

Yarak swore. He did find out where the stray Siberians had their quarters—in a ravine behind the third point, upstream. There they had left the foreigner.

When they had floated on, Yarak

## Mexico Pitches In

Continued from page 35

## Picture of a Railroad

Believe it or not, this is a railroad going full speed ahead—for Victory.

Inside that brightly lighted "factory"—the Erie locomotive repair shop at Hornell, N. Y.—tomorrow's transportation is being made ready tonight.

The Erie and other American railroads own and operate 416 such "war factories" plus over 1100 smaller shops, which were in "full production" long before Pearl Harbor.

Railroad workers were then busy improving the whole railroad "plant"—terminals, yards, tracks, and equipment. And, for that purpose, an average of \$1,402,000,000 a year was spent.

Now these men are on the job night and day keeping *existing* equipment rolling. For it takes all of America's 44,300 locomotives, 45,200 passenger cars, and 2,000,000 freight cars to move our war materials, consumer goods, service men and other *must* travelers.

That the increasing demands of wartime transportation have thus been met without confusion or delay is a tribute to these railroad workers. They are doing their job well, with practically no new equipment. What's more, they'll still be on the job when peace comes—to help make this world a better place to live in.

# ERIE RAILROAD

forces, and a clause in their contracts requires volunteers to agree not to marry while they are in the army (they used to sign up for three years, now it's for the duration), and not to set up any permanent extramarital relationships.

It is no military secret that the Mexican army is both small and badly equipped. Its size has now been increased from fifty thousand to seventy thousand. With a coast line of some 5,000 miles to guard, that means spreading the men out rather thin. Even if the United States were prepared to assist in the defense of Mexico by sending troops across the border, the Mexicans would never agree to such a step. This has been made very clear both by the military authorities and by the people themselves.

At present the army is made up entirely of volunteers. Military conscription was decreed some two years ago but has not been put into effect except in the state of Jalisco, where boys of 18 have been called up. Mexico cannot afford the armed force of two million men which could be raised. The country's trained reserves number 65,000 armed peasants and militia. In the Federal District, there are about 20,000 army-trained militarized workers; in Michoacán, the peasants have formed fifty-seven battalions of civilian militia, and in the northern states, men of military age are forming more battalions. They have to train with broomsticks, and a cry has gone up all over the country: "Give us arms! We know how to use them!"

### A Lack of Munitions

That is where the big hitch comes. There aren't enough arms. The factory which manufactures pistols, Mauser-type rifles, and machine guns is already overtaxed trying to produce enough weapons for the regular army. Above everything else, Mexico needs planes for coast patrol and big guns for use against submarines and possible enemy ships. The small navy certainly can't do that work. Even with Lend-Lease facilities, Mexico is not going to be able to order necessary modern equipment. Working with a national budget of one hundred million dollars, the president refuses to plunge the country into ruin by contracting a debt that couldn't be paid off for several generations.

There are three hundred pilots in the Mexican air force (mostly trained in the United States), one hundred cadets in the Aviation School and three hundred commercial pilots who wish to join the air force. They want one thousand planes. According to General Fierro, some of these planes could be built in Mexico with money donated by the various states, and with the assistance of American industry, which would sell Mexico planes and motors to be used as models. The general figures that heavy bombers are not within Mexican means; what are needed are light bombers for reconnaissance.

General Gustavo Salinas has taken over a small factory where he builds patrol planes of his own design. The model, which has been thoroughly tested and has met all requirements, is made of wood and is fitted with two air-cooled Franklin motors. It costs between seven and eight thousand dollars. Due to the limited facilities of the factory, the parts are farmed out to small carpenters. Even with that system, an output of twenty planes a month could be averaged. It

isn't an impressive total but it does show what can be done in Mexico with very little.

What it boils down to is that some way must be found of equipping the Mexican forces without bringing financial ruin to the country. That, more or less, puts up to the United States. If American weapons couldn't be spared, it might be possible to provide the necessary capital to set up arms plants in Mexico, sending technicians at first to teach the local men how to operate them. Most of the materials are available, labor is cheap and the workmen learn quickly. It is worth an effort, since Mexico does lack human material for a good army. The soldiers could be counted upon for courage and endurance. Anyone who saw them in action during the revolution can testify to those qualities.

In the meantime, the best is being done to put the country in a position to defend itself with the facilities on hand. Use is being made of every man with military experience, even including the ex-presidents and one defeated presidential candidate: Cárdenas, Rodríguez Calles and Almazán. There have been rumors that Almazán had been put in charge of an important zone in the southeast, but so far there has been no way of verifying these reports. No announcement has been made of the position Calles will occupy. The return of Mexico's former strong man from exile caused little excitement, and the stories in the newspapers were devoted mostly to amusement over the fact that the man who led the religious persecutions was celebrating his saint's day and that he was dyeing his hair to conceal the passage of the years.

Abelardo Rodríguez, who has been put in command of the Gulf of Mexico zone, began his career in 1912, as a second lieutenant, fighting in a battalion by Obregón, which had been sent out to put down a revolt against Madero. A year later, he was a captain serving the same battalion which formed part of Carranza's guard. Later, he distinguished himself in the campaigns against Villa and rose to the rank of colonel. By 1921, he was a general and became governor of Lower California.

The fact that he served ably and gained his experience with Obregón—one of the most brilliant commanders Mexico ever produced—would indicate that his training fitted him for a big command. Aside from this, his record shows him to be a shrewd and efficient business man.

### The Spot for Invasion

From the American point of view, of course, vital to have Mexican defense well organized in the Gulf zone because of the submarine menace, but as far as the United States is concerned, the Pacific Coast is the real Achilles heel of the American continent. It is there that the enemy would be most likely to try to effect a landing to set up bases uncomfortably close to our territory.

It wouldn't be easy to invade Lower California as there are few good harbors and the coast line is precipitous, but it would be possible. At that, it would serve the Japs right if they were to land on the peninsula; it is barren, dreary and thinly populated. Even the parts that aren't mountainous or deserted are all and uncultivated. There are no rivers worth mentioning—which means a scarcity of water—and most of the food has to be brought from the United States.

Stes. A careful check is kept on all imports and their distribution to make sure that no enemy supply depots can be set up there.

There is just one road running from Tijuana in the north to La Paz in the south. It is narrow and rutted as far as Ensenada. After that, it grows worse and there are sections where it is nothing more than a dirt track. It takes eight days to cover this road in a car. In this case, poverty has turned out to be an asset, since those are scarcely ideal conditions for an invasion.

The Pacific has been divided into seven zones, with a general heading each zone and Macías Valenzuela in supreme command. Macías Valenzuela, who until just recently was secretary of defense, is about fifty years old. He began his military career with the Fourth Battalion Sonora, which was organized in 1912 by the then Lieutenant Colonel Obregón, to fight the Orozco revolt against theadero government. By 1913, Macías Valenzuela was a captain, and in the following years he took part in the battles that epoch in Sonora and the north-west, steadily rising in rank. Just before being named secretary of defense, he was chief of operations in the state of Chihuahua with the rank of general of division.

#### West-Coast Defense

The defense of the Pacific coast was organized by General Lázaro Cárdenas, who has just been named secretary of defense. The people, referring to the agrarian reforms he carried out while president, used to make jokes about him when he was in command of the Pacific zone. The two favorites are: "The west coast is safe now; we have sent the biggest destroyer in the world there." And, "Let the Japs land. It won't matter. Cárdenas will immediately expropriate them."

Now that the defense of Lower California has been organized, the commander's headquarters have been moved from Ensenada to Mazatlán. Offices have been set up in the hotel annex, a brick-walled building with rooms facing out onto a big whitewashed patio. The atmosphere is very informal, as the small desks of the top-ranking officers have been placed in the colonnade around the patio.

When I visited Mazatlán a short time ago, Cárdenas was still in charge there, with a naval officer as chief of staff, Comodoro Gomez Maqueo—who bears an amazing resemblance to Supreme Court Justice Murphy, both in appearance and manner. The assistant chief of staff was Colonel (now General) Alamillo, who has since been named military attaché at the Mexican embassy in Washington. Alamillo is alert, intelligent and marked out by those in the know for a great future. He graduated from the French *Ecole Supérieure de Guerre* and was military attaché in Paris at the time of the fall of France. He told me that what he saw then convinced him that one of the principal reasons for the French defeat was the lack of complete trust between England and France.

"That is the one thing that the United States and Mexico must avoid," he said. "We must have absolute co-operation."

Much has been accomplished already in this line. American ships have been given permission to use Mexican waters and harbors, American planes may land on Mexican fields, American troops may pass through Mexico in case of necessity. There is now talk of arranging for an exchange of officers for training in the different tactics and for knowledge of the territory and conditions in both countries.

According to a new decree, all Mexican officers must learn English. When I was in Mazatlán, the classes were already organized. Most of the men were doing pretty well, as Mexicans have a facility for languages, but I met one poor lieutenant who, though struggling manfully, was waging a losing battle.

"Your spelling makes no sense," he said. "I have had five lessons and I still cannot learn to count. My teacher gets furious because I always start 'oh-nay.' That's the way o-n-e is pronounced, isn't it?"

One great service being rendered by the army in force along the coastal regions is promoting civilian interest in the war. The attitude of the people in places like Ensenada and Mazatlán is entirely different from that of the inhabitants of the central regions, who are apathetic, to say the least.

In Ensenada, for instance, where there is a population of six thousand, one thousand men of all ages have volunteered to serve in the civilian defense corps.

After working hours, groups can be seen in the public squares learning to march under the instruction of an army officer and trying hard to stick out their chests instead of their stomachs. A great number of young men have signed up for flying lessons and, while I was there, money was being raised to buy a training plane.

Everybody in those regions talks about the war and the role that Mexico will be expected to play. "Everybody" includes the soldiers. When General Rico assured me that his men really understood why Mexico had declared a state of war and why they would be fighting if they should ever go into the field against Axis troops, I was frankly skeptical.

I was remembering the revolutionary days when a soldier, if asked "For whom are you fighting?" more often than not replied quite simply, "For Captain So-and-so." But now things are different. By making the requirements for entering the army more stringent and by teaching the soldiers the three R's, illiteracy among the troops has been reduced to ten per cent. They can read the newspapers and get an idea of what is going on in the world.

#### They Know Why They're Fighting

Aside from that, the officers give their men weekly talks on the world situation and international affairs. At other times, they are invited to listen to debates between officers, which they later continue spiritedly among themselves.

Going about on my own and talking to some thirty privates, I discovered that the general had not misinformed me. All of them knew what the war was about, what the Axis stood for, and for what the democracies were fighting. They expressed indignation over the sinking of the Mexican ships and said, "We are ready to fight for freedom and liberty."

One whom I spoke to while he was trying to buy some fish off one of the boats that had come in that morning with its catch, showed the admirable realism which characterizes his race.

"For a soldier," he said, "war is the best condition. Our job is to fight, and besides we get better pay."

I asked him if he thought there would ever be a Japanese invasion of the peninsula.

"Oh, no," he answered. "The Japs would attack us only if the United States were licked, and we know that could never happen."

THE END

## Is it *Your* Fault This Tire is **GONE**?

If you want to walk . . . that's up to you . . . but, don't blame bad luck or Uncle Sam if through your own carelessness you suddenly find yourself on the rim.

YOU can **DOUBLE** your Tire Mileage  
"Here's How" SAYS...

Very few motorists realize that most castings will run from 50,000 to 100,000 miles . . . depending on the treatment given them. Follow these few simple rules and you'll double your normal tire mileage—

**A.** Slow down. Drive "35" or under.

**B.** Be careful not to bump curbs or hit road holes at high speed.

**C.** Have your tires inspected frequently for small cuts, holes and bruises. Any small cut or hole gets big . . . rapidly. If repaired at once . . . properly . . . you'll add 25 to 50% to your tire mileage.

President and Founder of the  
Bowes "Seal Fast" Corporation,  
Pioneer in Safe Tire Repairs

*This Sign* WILL LEAD YOU  
TO EXPERT TIRE REPAIRMEN

You'll find factory-trained tire repair experts in service stations displaying the Bowes Sign. They have equipment for properly inspecting tires, inside and out . . . and Bowes equipment and materials for properly repairing damaged places. Your tires are mighty valuable . . . don't entrust them to just anybody . . . look for the Bowes Expert Tire Saving Stations.

BOWES "SEAL FAST" CORPORATION • INDIANAPOLIS, IND.

# MISS CASEY JONES

"I've done housework in my time," says Miss Edna Keepers, above, "and that's all this really is, except it's on a much larger scale." She's shown here using steam and a chemical solution to clean the moving parts of a locomotive preparatory to an overhaul job in the Southern Pacific shops at Eugene, Ore.

Miss Alta Lee, below, likes her job of sorting used spikes at the S. P. scrap yard at Sacramento. Straight spikes are stockpiled for immediate re-use, and crooked ones are straightened and put back on the job. This is part of an extensive salvage program.

PHOTOGRAPH FROM SOUTHERN PACIFIC COMPANY

**T**HEM dames in airplane plants, bending them little tubes, fiddling with them tiny wires, playing with them puny riveters and doing that dainty welding—phooey on them! Let 'em come out to the roundhouse and manhandle a two-hundred-ton freight hog and find out what work is!"

That's the sort of talk you get from thousands of railettes who are running steam hammers, wrestling locomotives, helping blacksmiths, operating turntables and doing fifty other tough jobs to keep freight and passenger trains rolling to victory. They think the girls in airplane plants are all right, you understand, but just a bit ladylike.

On some roads, notably in the West, on the Southern Pacific, crews of girls have taken over train inspection and servicing at division points. Since the war started, this one road has hired more than a thousand women, in addition to those it already employed. In most cases, they're wives or sisters of railroad men, and often a girl has stepped right into the job vacated by father, husband or brother.

Railroads for years have employed women as clerks, telegraph operators and station agents. Now the girls are taking over tougher jobs. They aren't firing locomotives yet, but they may be if the war lasts long enough. . . . J. M.

...s Lily Hill, who learned blacksmithing from her father when she was a girl is Henry Kohl's helper. She says it's fun to swing an eight-pound sledge. Kohl says she knows her job

This attractive railroader is Mrs. Grace Black. She just filled the tank of a Pullman car with water and is closing the valve

...of the important jobs which women have taken over on the Southern Pacific is that of fire-  
...er. Mrs. Vivian Gatherer, above, is demonstrating how it's done in an S. P. roundhouse

Packing journal boxes is pretty messy if you're not expert at handling oily waste. Mrs. Pauline Schaffer, above, shows the proper technique

...Elizabeth Barnes, below, handling the controls of an 1,800-pound steam hammer. Her partner is Blacksmith Mike Puga, who signals her how hard and fast to hit a white-hot piece of steel

Cutting scrap with an acetylene torch is hot and difficult work but Miss Joyce Ennis, below, seems to know what it's all about

Kidneys Must  
Clean Out Acids

Excess acids, poisons and wastes in your blood are removed chiefly by your kidneys. Getting up Nights, Burning Passages, Backache, Swollen Ankles, Nervousness, Rheumatic Pains, Dizziness, Circles Under Eyes, and feeling worn out, often are caused by non-organic and non-systemic Kidney and Bladder troubles. Usually in such cases, the very first dose of Cystex goes right to work helping the Kidneys flush out excess acids and wastes. And this cleansing, purifying Kidney action, in just a day or so, may easily make you feel younger, stronger and better than in years. An iron clad guarantee insures an immediate refund of the full cost unless you are completely satisfied. You have everything to gain and nothing to lose under the money back guarantee so get Cystex from your druggist today for only 35¢.

Pindar looked around. The few stars that had been in sight were blotted out. Alone in the blackness, he kept moving automatically, rising and falling on the deep sea swells, streaking a path of phosphorescence behind him in the warm water. Gradually he was tiring. His arms were beginning to feel heavy, his legs had lost their snap and vigor. Tingling cramps swept across his back and shoulders. Hopelessness overpowered him. What was the use? Exhausted as he was, he'd never be able to swim back to land against this current.

How easy it would be to stop now, sink down, down, into those dark blue depths. All the struggle, all the heart-aches, all the striving against life would be over. And then he gritted his teeth with a grim determination. The spark of life burned hot in him, and hope was a flame that urged him on. With but the fierce power of his will, he drove his aching arms up and back, kept his head above that warm, briny water that seemed to be sucking him down.

It seemed ages later when, low down on the horizon, he fancied a faint gray streak smeared a smudge against the curtain of the night. That streak lightened, started to turn pink. Daylight would soon break. But John Pindar never saw the sunrise that morning, never saw the round hot rim push its edge up over the horizon.

DIMLY and half unreal, a sound rose above the regular slush and hiss of the waves. It was the hollow thump of water striking solid. He turned his head. There, not over a hundred feet away, something rose up and then sank into a valley between the waves. Perhaps it was but born of his own imagination. Perhaps—but then he saw it plainly. Wet and dripping, a big gray mass emerged from the gloom of daybreak, emerged to the splash of running water pouring into the sea. John Pindar never remembered dragging himself toward it, never remembered his hands feeling the wet wood as with the last desperate ounce of his strength, like a wounded seal crawling onto a half awash rock, he feebly hauled himself out of the sea.

Hours later, a sound hammered at his consciousness. He opened his eyes. He was sprawled out on the deck of a vessel. The sun was halfway up to the zenith. A loose block hanging from a rope, bumped against the rail just above him. He propped himself up on an elbow, looked around. He was on what was left of a two-masted schooner. The foremast was gone, cut off as clean as though a cleaver had done the job twenty feet above the deck.

Her bowsprit was broken off short at the stemhead. A bundle of sodden canvas draped over her forward. The fore-castlehead was a litter of splintered wood and a snarl of steel cables, above a yawning hole. The mainsail swayed in bagging folds, the peak of the gaff hanging down along the mast banging monotonously. The peak halyard was adrift. The mainmast had a big chunk torn from it just above the deck. The cabin top was a mass of jagged plank ends. From overside, the broken foremast, held by its shrouds and stays, bumped heavily against the hull.

John Pindar wiped the back of his hand across his eyes, stood up looking around him. He took a few tentative steps. All one side felt stiff and sore. From his knee to his shoulder, his body was marked where he had lain on the

rough deck. From beneath him came hollow rumblings and gurglings. He realized that this must be the vessel he'd heard about. A week ago and a hundred miles to the eastward, she'd met a raider during the night. The crew had deserted her, had been picked up by a steamer next morning.

The raider had put a couple of shells into her, then, certain that she would sink, had steamed away. But the schooner—the Mary Jones—had not sunk. He looked down through the hatch, the cover of which had been torn off and was gone. Her hold was packed with seasoned lumber. His gaze swept all the far horizons. East and west, north and south, there was no sight of land.

He had no idea how far he had been carried out. As he looked at the stump of the foremast, at the loose rigging and spars that swayed and groaned at every roll, at the splintered decks, suddenly an idea was born in him. He'd wanted a ship. He had one now. But single-handed and alone, could he bring her into port? The salvage, aye, it would be no small sum. The salvage on that load of lumber—he put that from his mind. If he planned to save her, he'd better get at it while the weather was good, for he had heavy work to do.

Just aft of him, the doghouse where the cook had once held forth was lashed to eye-bolts in the deck. John went in. On a shelf behind the stove in the rack, there was a row of screw-top tins. As he opened one after another, his eyes lighted. Enough provisions were here for a man to make out with: rice and beans, sea biscuits and flour, dried fruit, sugar, salt and matches. A barrel in the corner proved to be almost full of water. That was a welcome find as were a few tools he discovered when later he waded through the flooded cabin and felt a chest on the floor in the corner.

He dragged the box to the companion-way stairs, hitched the end of the main sheet through a handle and hauled it up on the ragged beams of the cabin top. The saw, the planes, the chisels had already begun to rust. But they were serviceable. He reached over, turned the wheel. By its tug, he knew the steering gear was undamaged. Now to get rid of that trailing mast held by its steel shrouds

alongside. It would smash against the hull like a battering ram and hole it again if a storm should arise.

That day John Pindar began cutting loose the mast. When the sun went down in a riot of color and was quenched by the sea, he had the satisfaction of seeing that jagged-ended spar drift slowly astern.

He slept that night on a pile of old canvas and when morning came, he was awake before daylight broke over the dark waters. A steady southwester sprang up at sunrise, scarce a ten-mile breeze that barely rippled the sea's face and made but little pocket handkerchiefs crest the blue of the waves. He was being set farther and farther away from land.

His next job would be to clear away the hurrah's nest of tangled shroud and stay, sail and rope up forward. There covered a gaping hole where rail and deck and part of the planking had been torn away. Before the day was over, his hands were cut and bleeding from the sharp ends of the plowshare steel wire. When night fell, he seemed to have made little impression on the wreckage. Next morning with hammer and chisel, pick bar and ax, he again hacked and cut and pulled. The throat tackle on the mainmast furnished the purchase by which he dragged the foresail out of his way. The staysail followed, then the jib was hauled dripping out of the water and spread on the deck.

NIGHT followed day; a week passed. A week in which the wind gradually worked the Mary Jones to the north and east farther and farther offshore. Finally he uncovered the vessel's bow. Close below the stub end of the bowsprit, he could now get to the place where the planking was torn away in a jagged hole. Working with pieces of decking, he framed the hole, got a soft patch of canvas over it. Then he labored at the handle on the suction pump that was set on the deck just forward of the mainmast. A big stream of water gurgled out as the diaphragm rose and fell. He knew there was many a gallon in that hold. Perhaps she was leaking in other places besides the hole he'd closed on her bow. He would soon find out.

COLLIER'S

GERALD GREEN

Perhaps this job was too much for one man. He had food and water aboard. Sooner or later, he'd be sighted. The regular southeaster that prevailed in the latitudes would make up and drift him back into the steamer lane. His hands were stiff and sore. The salt water had inflamed them. His calloused palms were cracked till he could scarcely clutch his fists. When his day's work was done, he would fall asleep like a dead man and barely stir till morning broke.

One day, after two hours' work at the pump, his eyes lit up. He fancied the water in the hold was lowering. That night he was certain of it. He'd gained a few inches. Naked and sun-varnished, he was tanned the color of old mahogany. Driven on by a fierce urge, he did not take the time to prepare proper meals. He became lean and hard; the knotted knots of muscles on his shoulders and back rippled with every movement of his powerful body.

After each spell at the pumps, the ship rose a few inches more out of the water. She'd come up till the lower edge of the patch on her bows was scarce immersed a foot. The timber below no longer rolled and bumped around in the hold. He had hitched several of the steel poles together, run one from the mainmast head over the stump of the foremast and down to the stem. Another ran from the main to the foot of the foremast. That would keep the mainmast from going over backward.

One by one, he bent on the torn sails to stay and spar, a crazy-looking rig staysail and reefed foresail sheeted close-footed to the rail, since the foremast was broken. In the small triangle between the broken foremast and the mainmast, he set a jib on the wire stay. If he'd had a dead run back to Abaco he might have saved himself a lot of work. The mainsail alone would have been efficient off the wind. But he knew he'd been set to the northward by the westerly and he'd need headsails to work up to windward. The regular southeaster would soon set in.

Awakening one morning, he felt a gentle breeze blowing. It was out of the right quarter for him at last. With a sickle shifted alternately from peak to peak of the halyards, he hoisted the deep-reefed mainsail. The Mary Jones was no longer a thing of splintered wood and ragged canvas, a derelict floating aimlessly on the ocean, but a buoyant vessel capable of directed movement. With her makeshift canvas drawing, she headed off to the southwestward.

For the first time since he had come aboard, John Pindar had a square meal. Down in the cabin aft, uncovered by the water that had lowered to the suck of the pump, he opened a locker. Here was the captain's private store of canned goods. With the wheel lashed to hold the vessel on her course, Pindar started a fire in the galley stove and boiled a handful of rice, dumped it into the big pot on top of a couple of chunks of corned beef, adding enough water to keep it from burning. A can of pork and beans followed, another of corn. He thickened it with broken ship's biscuits, sprinkled on salt and pepper and could scarce wait till the whole was heated. With his back against the wheelbox and a big bowl of his elaborate lobsouse before him, he sighed contentedly as the Mary Jones jogged along toward the setting sun.

Night fell and John Pindar dozed in cat naps beside the wheel, steering by the stars. The soft patch he had put on the bow was holding. There was only a small leak in her now. By working but an hour or so twice a day, he could keep

her free of water. The warm night passed.

When morning broke, he looked around him. Low down on the horizon astern, a faint smudge of smoke showed. That was the first sign of a steamer he had sighted since he had come aboard. The Mary Jones was sailing back into the sea lanes. He had but a vague idea how long a time had gone by since that evening when his dinghy had smashed and he had been thrown into the water. What mattered it now? The sea was calm. The steady southeaster blew a gentle fair wind as the schooner forged along breasting the waves. The little flap of water striking her bow, the small rumble of it sliding along her bilge, the faint rustle of the wind on the sails, were as music to his ears.

He drowsed half asleep, keeping her on her course automatically. Then he jerked wide awake as he became aware

and he told them so in no uncertain terms. The steamer moved ahead, crossed in front of his bows, swung in a circle, came up alongside again. A heaving line sailed through the air.

"Take in slack!" someone bellowed. John Pindar grabbed the line, flipped a few quick coils in it, slung it into the sea and again told them to be on their way. They were reluctant to leave, however, and kept pace with him for several miles before they speeded up and drew ahead. He knew they'd report him. Even now their wireless was probably crackling out the message.

THE steamer dwindled into the distance off to the southard. He saw her change course and make the turn to round Abaco. Her superstructure, then her funnels eased down beneath the sea. The gray plume of her smoke dissipated and John Pindar was again alone. He knew

of an alien sound, an ominous clumping that seemed to be growing in intensity. He turned, looked astern. The steamer whose smoke he had seen on the horizon was coming up on him, coming fast, and had laid her course to pass close to. Inside of ten minutes, the rust-streaked tramp lay a hundred yards off to starboard. Evidently her captain had noticed Pindar's jury rig and the splintered foredeck and had seen the name on the stern. In all likelihood he had heard of the Mary Jones. The crew lined the rail. The officers stood on the wing of the bridge deck, gazing curiously at the sun-bronzed man, his sole covering a piece of frayed canvas held around his waist with a belt. One yelled through a megaphone, "We're coming alongside! Get ready to take a line!"

John Pindar shook his head vigorously, motioned them off. Either they did not understand him or did not want to. If they towed him in, they'd claim the greater share of whatever a prize court awarded. He did not need help

his position now. The tramp had come from Europe, was heading up for the south end of Abaco and the Northeast Providence Channel bound for the Straits of Florida. He was not far from shore. By midafternoon, there were other signs that he was closing in on the land. A flock of sea pigeons went past him, winging their way low and fast over the water. A couple of sooty terns flew close overhead making toward the westward. And then a little shadow appeared, a shadow that darkened and slowly rose on the sky line.

As he sailed along at a four-knot clip, the familiar contour of his home island began to etch itself against the pale blue of the sky. He saw other things. Off to the southward, a sail, a little triangle of canvas showed above the horizon. It grew larger till he could make out a three-masted schooner that changed course and headed directly for him. Just astern was another vessel, a two-master that followed in its wake. As they approached, he recognized them, a couple

of ships engaged in hauling lumber from a sawmill on the western side of Abaco. The operator at the wireless station there must have picked up the message the steamer sent, and these schooners had immediately set out to intercept him.

He was not long in doubt about their intentions. With their booms broad off and sailing fast, they headed at him, swung up into the wind one on either side. The falls creaked as each lowered a boat. Their sculling oars flashed in the sunlight. The small boats drew up alongside the Mary Jones. A man stood in the bow of the nearest one, leaped, scrambled up on the rail. As he jumped down, John Pindar wasted no words on him. He grasped him around the waist, heaved him up and overboard, ran across the deck and treated another fellow who had come from the opposite side the same way.

Then he jerked an iron belaying pin from its rack, stood on the wheelbox, brandished the weapon and threatened to use it on the next man who boarded him. The bobbing dinghies dropped astern. The crews fished the two men out of the water and the boats went back to their respective vessels. The sun disappeared into a thick bank of clouds over the land. The southeaster began to go fluky. The wind took on a body. The mainmast on the Mary Jones trembled at each succeeding puff, the rigging creaked ominously. She was straining at her sheets, coming up fast on the fringe of cays off the coast of Abaco.

Just astern, port and starboard, the two schooners kept pace with him. Occasionally a yell would echo across the water. John Pindar soon realized what they were up to. When night fell, and there was no chance of their being seen from shore, they'd board him in force. He wouldn't stand a chance of keeping them off. This vessel was his by rights. He'd found her deserted; he'd brought her in this far. If they took her away from him, he might argue the matter out before a prize court months later. The case might drag on for a year. It would be his word then against dozens of others. They'd all swear they found him helpless, that he'd asked for assistance. They'd claim the prize money. It was little that he'd receive then. She probably was insured and if he brought her in himself, he could settle with the insurance company in short order. He must elude his pursuers somehow.

THE edge of the reef was close to, the grumble of the surf plainly heard. In the twilight, John Pindar passed a rock just awash off to starboard. He noticed by the level of the swirl around it that the tide was coming in fast. This was almost the peak of the flood. Just ahead of him the island made up into a steep rounded hill with the little tower of the beacon on its crest. When that bore due west, the deep water of Ragged Channel would be abeam. His pursuers would think he was heading around the end of Abaco. They'd never suspect he'd try to take this vessel through the reef.

The twilight deepened. The light on the hill winked into being. The wind was coming in gusts now, each a bit harder than the preceding one. If John Pindar knew how deep this craft was in the water, there might be a chance for him. He had a way of finding out. He rolled the wheel up. Slowly the bow turned and the Mary Jones headed into the wind with flapping sails.

Evidently the crews on the two vessels near by thought that he was stopping for a parley, for they swung and hove to. Slowly the Mary Jones drifted along. In the fading light, a dark green patch showed in the blue of the sea. She was

easing over a shoal. John Pindar dove overboard. He swam down below the hull, felt his way to the keel, grasped it with one hand, groped with the other. He did not have far to reach. His fingers touched the slimy rocks hardly a foot below. Bobbing to the surface, he swung himself over the rail, ran back to the wheel, got her on her course again.

He was certain now of what he wanted to know. That rocky shelf he had just crossed was a foot or so deeper than the shoalest bar in Ragged Channel. With the incoming tide helping him along, he might make it. No easy job, that, to take a vessel through the dog-leg turns with the sharp rocks close abeam on either side. Few men would attempt it in daylight save with a fair wind, fewer in the night under any circumstances. The gray clouds overhead turned to black shapeless masses and night shut in. The passage of Ragged Channel lay scarce a mile ahead. It wouldn't be long now before they closed in on him. But how could he keep them off till he got there?

A SLOW smile crossed his face. They were too certain they had him trapped. He slipped a loop of line over a spoke to hold the wheel, went down the companionway stairs into the cabin. A lantern hung on a hook to the wall. He'd examined it before. There was hardly a spoonful of kerosene in it. But that was enough. Up on deck again, he hurried to the galley. The matches were in a glass jar. With work-stiffened fingers, he fumbled with the lid, got one out, lit the lantern.

The schooner was off her course, dangerously close to the reef before he had the wheel again. The lantern burned dimly on the deck in front of him. To the eastward, he could see the lights of the two other schooners although the vessels themselves were lost in the gloom. He knew they were even now preparing to board him. The wind had hauled east and was blowing harder. It would take them but a few minutes to run down on him. He'd have to work fast.

He dragged a section of the broken foreboom across the deck. With a piece of line, he hitched a length of old anchor chain to one end. To the other, he lashed the lantern. Raising the weighted end

of the spar, he lifted it over the rail, gently slid it down. He had scarcely gotten it overside when he saw the lights on the schooners change direction and head toward him.

He glanced back. The chain had hit bottom. The lantern held six feet above the sea by the floating spar was anchored, swaying back and forth. Ragged Channel was less than a half mile ahead. Would he make it? Astern, the lights were nearing the bobbing lantern. A howl, the sound of many voices yelling came wind-borne down to him. They'd discovered his trick but not before he had gained a little time. They no longer were up to windward of him, but dead astern.

A few minutes later, he glanced back again, fancied a dim shape was taking form in his wake. Then he was certain of it.

The Mary Jones was sailing hard, her canvas bulging with the weight of the wind. The mainmast head was swinging in a five-foot arc, taking up on the slack rigging at every roll. It wouldn't stand the strain much longer. From the place where the chunk had been torn, long cracks were running upward. The jib popped. Then with a noise like a shot, the canvas went streaming from the bolt ropes. With its going, the wheel tugged hard as the schooner tried to head into the wind. Up to windward, the loom of a ship increased and the three-masted

schooner, the white of her sails plain visible, swung, headed toward him.

John Pindar gritted his teeth. The light on Conch Cay was almost abeam. Another few hundred yards and he could turn and drive through Ragged Channel but the big schooner was angling down toward him. Quickly he rolled the wheel up and headed directly at her as though he intended to ram. He heard a starry yell from her decks and she sheered.

John Pindar rolled the wheel down hard, slacked off his main sheet. The light on the hill was dead in line. Barely hearing the lurid curses and bawling cries from astern, he listened for another sound. It came, the sickening crunch of coral under the keel. His ship hummed over her back, hesitated. He held his breath. Her bow went down, her stern arched. The ominous gurgle of water pouring into her hull up forward grew in intensity. He'd washed off the canvas panel on her bow.

But with the wind shoving her against the mainsail broad off, she gathered speed and down the deep-water channel that marked on either side by gleaming lines of breakers. Just as the Mary Jones rounded the point that made out from the pond before the village of Conch Cay, a heavy gust struck her. With a loud crack, the crash of splintered wood, the ripping screech of torn canvas, the mainmast pitched over the side. Coasting on her momentum, moving slower and slower, she carried her way across the pond and grounded on a sandy beach just before the little group of houses under the clashing coco palm.

JOHN PINDAR glanced overside. The white tip of the mainmast was inching back along the hull. The tide had turned and would be running out like a race through Ragged Channel now. He'd made it to safety with little time to spare. Ashore the sight of the bobbing lights, as they converged toward the place where the schooner lay aground, caused his grim, lean face to wrinkle into a grin. He hoped the crowd on the vessels offshore would come in with their small boats. He had plenty of help to handle them now.

THE END

ALAN FOSTER

## City Under the Sea

Continued from page 51

started upstream along the bank. He thought: If these Siberian soldiers had a foreign man, and he, Yarak, had a foreign woman on his hands, he could lead the man to the woman. The man would know what to do for her. Then the blond woman would get over her sickness, and what was more to the point, Yarak would be relieved of his responsibility. . . . At the edge of the upstream ravine, he went slowly, calling "U-u-haa!" No answer came.

At once Yarak stopped, pulling out the Turkish knife that he had acquired in his wandering. Carefully he listened to the faint-humming that was made up of the murmur of the river, the buzz and chirping of insects. He caught a *swish* of the air, and ducked. Something rattled against the slope above him, and he heard the sharp thud of feet.

The Cossack rolled over on his back, kicking up and slashing with the knife. His booted foot jammed against the hurtling body, but his knife blade cut only air.

Rolling to his feet, Yarak prepared to strike again. Something harder than a fist smashed against his cheekbone.

Flashes of light spurted before his eyes, which watered, blinding him. "Dog's tail!" he yelped, startled.

Nothing more hit him. Instead, after a moment's silence a voice spoke curtly: "You're Russian?"

"No—Cossack!"

By now Yarak could make out his assailant—a shorter, slender man holding a cudgel. This foreigner spoke Russian quick enough, but with an accent. He kept his distance from Yarak's long arm.

"Who are you and where are you from, brother?" Yarak asked, quieting down.

"Did you see the sun set, Cossack?"

"Yes."

"Well, that's where I'm from. Part of my name is Jan."

Evidently this foreigner did not want to say much about himself. So Yarak explained how he was in trouble with a woman. "She's a foreigner like you. Maybe she's dying. How can I tell?" And he added craftily, "She's pretty as a sunflower—a regular girl!"

The stranger listened without any emotion. "Sounds fishy. What's she carrying?"

"Carrying? A handbag. And a handkerchief."

"What color's her hair?"

"Like ripe wheat."

"All right. Hand over that butcher's knife."

JAN, the foreigner, would not move until Yarak laid down the curved knife. Picking it up, he reached under a bush and pulled something out. Yarak caught the *clink* of glass. "Vudka?" he cried.

"Cognac." Jan put a bottle in each pocket of his tunic without offering the Cossack a swallow. "Good French cognac, fresh from Chovno. Take off!" He picked up something else, resembling a sledge hammer. "And if you're taking me anywhere except to that *dushenka* you describe, Cossack, you'll feed the birds."

Yarak felt both thirsty and angry. "Het! I'm not lying, Jan. I'm Yarak—in the last war *essaul* of the Terek Division. The Savage Division."

For the first time the stranger laughed. "The Savage Division of the last war would be the school children of this one."

Morosely, Yarak stepped out. He recognized what Jan was carrying in his hand. A German stick grenade, undoubtedly looted with the good liquor from the stores at Chovno. Jan had a hard soul—he had a devil in him.

To his great relief he found Betty sitting alone in the waste of sand, waiting patiently.

At sight of her Jan stopped instantly. "Marya!" he breathed. He said something Yarak did not understand, while the girl only stared up, puzzled.

Certainly these foreigners had a strange way of greeting each other, with Jan trembling as if he were stepping on a grave, and the girl as silent as a statue. Presently they began to talk, but not in Russian.

"What is she?" Yarak asked curiously.

Jan kept staring at her hair, until she brushed it back with her hands uneasily. "A nurse," said he. "An English nurse, named Betty. But she can speak some German." He had ceased to think about Yarak. "She came from Sharm, heard's, in Cairo, through Ismailia, Halep to Taganrog, last winter—or she says."

"What kind of sickness has she?"  
 "No kind. You've walked her for a  
 week, with only black bread and barley  
 soup, down to this wilderness."  
 "Is the sea where she wanted to go?"  
 "Not much it isn't. There's more than  
 one sea, Cossack. She wanted to go  
 toward the Kavkaz, to the Caspian."  
 The muscles twitched in Jan's face, as  
 he was frightened. The girl watched  
 him quietly. When she spoke and  
 touched his arm, he pulled away.  
 Be-ty smiled and drew a cup from her  
 bag. And Jan uncorked one of the  
 bottles, to pour into the cup. The sharp  
 smell of strong cognac struck Yarak's  
 nostrils, and he moved over. Jan pushed  
 the cup away. "Not for you, *stiepnik*. The  
 girl needs it."  
 He called her lady, now, and not *du-  
 ka*. "But there are two bottles."  
 Yarak's throat felt dry.  
 And plainly Jan thirsted for the good  
 drink as much as Yarak.

The girl seemed to know that, because  
 she sipped at the cognac she held  
 in the white cup to Jan. He took it,  
 and sipped. "Captain Jan Slowycky," he  
 whispered, "escaped from Czersk prison.  
 I'll show you my forehead to you, lady."

LIVING up hope of the bottles, Yarak  
 wandered off toward the river. This  
 he reflected, who was no older than  
 Yarak, had a black devil in him. It hap-  
 pened that way with men who had been  
 in prison. Jan's mind was sick, and  
 Yarak did not know what he could do  
 but that—  
 Suddenly he stopped and spat. The  
 shadow beyond the sand bar had changed.  
 A shadow along the surface was ris-  
 ing and coming up.  
 Something like a house took shape,  
 and a cannon on top of it. Then out of  
 the house the figures of men climbed.  
 "Ekh!" Yarak muttered, the back of  
 his neck feeling cold. Mirrored above  
 the gleam of the water, the monster of  
 the unknown, vasty deep drifted closer  
 to the steep bank opposite, and stopped.  
 The men on it lowered what seemed  
 to be a mattress to the water, and four  
 of them climbed into it, rowing into the  
 middle of the land across from him.

Fascinated, the Cossack watched, at  
 the end of his sand bar. If these specters  
 were bells, they must be denizens of the  
 underworld. Instead of bells,  
 Yarak heard Jan's voice. Singing.  
 As he scrambled back, he heard the  
 words: "When the bread is hot from the  
 oven, dear girl . . . you will burn your  
 fingers. Wait!"

Within the screen of grass, Jan was  
 emptying the cup. "When the kiss is  
 on your lips, dear girl . . . you must  
 never wait. Hurry!"  
 Beside him Be-ty sat silent.

"Shut up and listen, Jan," the Cos-  
 sack exclaimed. "In the river a city is  
 coming up, with men climbing out."  
 "In a pig's eye!"  
 Jan laughed and poured himself more  
 cognac from a bottle that Yarak judged  
 to be more than half empty already.

"Ghosts on the water," Jan said. "Cos-  
 sack, I used to sit like this on the stone  
 steps, while Marya made tea. At her  
 house, you know—or you don't know.  
 She used to drink tea! She had hair like  
 gold, and she looked into my eyes—not  
 afraid. I'd kiss her hand. Like two kids."  
 "Stop licking the drink. It's the girl's."  
 "Not this girl's. She's alive, isn't she?"  
 Jan filled his cup carefully. "When I  
 was out of Czersk, I got down to the Tat-  
 ars to look for her at the old place. The  
 Armenian people told me about Marya. She'd  
 had typhus, and before she was well, she  
 had been sent with the family out of their  
 house, north to the swamps. For the  
 water sports, the Nazis said. You know,

cutting timber in the bogs, poling rafts.  
 I didn't find her. It was like chasing a  
 ghost over the swamps—"

The girl Be-ty had been watching his  
 face in the starlight, and she took the  
 cup away from him. Jan stopped talk-  
 ing.

"There's a gun on the river now, Jan,"  
 Yarak insisted.

He took Jan's arm, leading him down  
 to the sand bar. For a long time Jan  
 stared at the shape on the water. "Un-  
 dersea boat," he said. Leaning close to  
 the water, he listened. "It's not Russian  
 they're speaking over there."

"Four men rowed ashore. Without a  
 boat." Yarak pointed to the far bank,  
 hidden in the murk.

"They're Germans, all right. Probably  
 going to communicate with Chovno."

The thing out of the sea was an enemy  
 warship, Jan insisted.

"Impossible," Yarak grunted. He  
 knew that ships sailed on top of the  
 water; they did not emerge from the  
 depths like a sturgeon coming up to feed.

Jan peered at him curiously. "You be-  
 lieve in a city of dead people coming  
 up out of the water, but you balk at a  
 submarine."

"Oh, crickey!"

Quietly the girl Be-ty had come up be-  
 hind them. And she knew more than Jan  
 about the black shape moored in the  
 river. She said it would have a search-  
 light and machine gun on the little house  
 that she called a conning tower, and a  
 small boat made of rubber, blown up so  
 it would float. In this berth at the river  
 mouth it could lie hidden for the night,  
 and it would be off by daybreak. It  
 showed no lights, to prevent observa-  
 tion from the air.

"Tfu!" Yarak shook his head. A *ma-  
 chine* such as that to swim around in the  
 water like a fish. It could not be.

Jan, squatting down close to the water,  
 did not move. He was like a man bound  
 tight with wire cords. "There are only  
 four of the water sporters on deck," he  
 whispered, "and, I think, two on shore  
 over there."

THEN Yarak heard a sound that sent  
 him crawling back hastily through  
 the grass. Heavy feet were moving in the  
 dry growth about the camp site, and his  
 sharp ears caught the *clink* of a glass  
 bottle. As he suspected, he found the  
 Siberian guerrillas there, nosing about.  
 They had found the cognac and the girl's  
 bag.

"Hi, *kunaks*," Yarak hailed softly,  
 "those are the foreign lady's bottles.  
 Look here—there's a German *machine*  
 lying like a fish in the shallows of the  
 river."

Invitingly he pointed down at the  
 bank. A short, stocky figure stepped up  
 to him. "We aren't blind, Uncle. Sure  
 it's there. Only we haven't any *kriga*—  
 any net traps big enough to catch that  
 fish."

Those Siberians had the bottles, and  
 Yarak counted eight men with four  
 long, old-fashioned rifles among them.  
 He did not argue with the stocky man,  
 the section leader called Kem by the  
 others. Then Jan appeared with the girl,  
 and Jan picked up the stick bomb from  
 the ground. He spoke with the ring of  
 command in his voice:

"Army men, can you find your way  
 through to your lines?"

"Yes," said Kem, "when we're ready  
 to go."

"Well, it's time you took off, with this  
 lady. She's a nurse and she'll end up by  
 getting killed here. See that she's put on  
 a train to the Kavkaz, to Tiflis. There'll  
 be other English people in Tiflis. You  
 won't want to stick around here."

"Why not?" demanded Kem. "And

### How to earn EXTRA CHECKS in spare time!

NO MATTER how busy you  
 are with your regular duties,  
 you may increase your income  
 in spare time. Whatever your  
 age or occupation may be, you  
 may earn extra money for new  
 clothes, for doctor's bills, for  
 sports, for War Stamps and for  
 1,001 other things.

Try our profitable plan for increasing your income as a  
 Community Subscription Representative for COLLIER'S  
 and the other popular Crowell-Collier Magazines. It's easy to  
 get started because your earnings begin on your first order.

With mounting war taxes and the increased cost of living, you may  
 need extra money more than ever. Give our profitable plan a real  
 trial and see for yourself how easy it is to get started as a Community  
 Subscription Representative in  
 spare time. Many of your friends  
 are already subscribing—their re-  
 newals will bring you the same  
 big commissions as new subscrip-  
 tions.

There is an opening in your com-  
 munity—right in your own circle  
 of friends. For full details of this  
 money-making offer, just mail the  
 coupon or send a penny postal now!

what makes you think you can give the orders?"

"It will be too hot around here for you, after an hour. I'm through giving orders. I'm going over to the other bank to give them this cocktail."

Jan's voice was flat, as he showed Kem the stick bomb. The Siberians crowded around, muttering. No use throwing one bomb. The Germans had sentries on shore, and a party coming back from Chovno. And their searchlight could show up all the bank there.

Kem hesitated, and put down the cognac. "We have some dynamite, from Chovno, but we couldn't find any detonators. We're keeping it for the roads."

"Well, you can't worry a submarine by exploding dynamite in the open air—if you could explode it."

"I know that." The Siberian seemed angered. "Didn't I graduate at the Ural Kuznetsk chemico-metallurgical combination?" He laughed. "For cultural upliftment."

"May the dogs bite your cultural upliftment!" Yarak pushed up to them, snorting. It had taken a long time to convince him; but if the soldiers also believed the leviathan from the deep to be a warship, it must be so. Although it seemed to him something of a miracle that such a ship could be. "You didn't learn much on the Amur. You've got a raft, haven't you, Kem? Then hand over the dynamite and I'll take it down alongside that machine."

"The forehead to you, Yarak! So you'll cripple the submarine by yourself."

"Tfu! I was doing things like that when you were still wet behind the ears." Yarak felt provoked. First the officer Jan had slighted the Savage Division of the real war, and now this man from the Amur made a jest of him. Yarak felt hot under his skull. "I've taken a log down a river at night with Tatars watching. And they don't need searchlights to see at night."

**H** E EXPLAINED how it was done. Not by splashing around like the men from the Amur, but by drifting with the current. Not by lying on the logs but by swimming behind them.

"Only one thing is needed," he added. "A diversion. If you Siberian fly killers can get up on the bank over there, throw in a stone for the boat boys to look at."

"What did you say?" Kem asked.

"A diversion. To make them look the other way."

For a moment the officer and Kem stared at the gaunt Cossack. They seemed to find much to think about in what he said. Jan shifted the bomb in his hand, and Kem breathed hard through his teeth. "Uncle," he said, "will you try your luck like that?"

"Stop talking, and fetch the dynamite."

They were starting up the river, when Jan put out his hand. The girl was waiting there, not knowing what they meant to do. Yarak saw the officer go up to her and talk, strained. It was as if Jan had been pulled toward her.

"She wants to come with us," he explained quickly. "She says she wants to share our luck."

His voice was glad, and he took the girl's hand, bending over to kiss it. Betty moved unexpectedly. She brushed back the tangle of her hair and she smiled at Jan, putting her arms around him. Tight she held to him, whispering.

When he lifted his head, Jan's face was not hard as before. He looked like a boy, troubled and determined. His fingers held to the girl's hand.

Yarak thought that Jan was no longer afraid of a ghost. This girl had some-

how driven the black devil out of him. Well, that was how it happened, with a girl.

The Pole held his body straight in the torn tunic. Taking the lead, he walked fast, motioning Kem to keep up with him. Yarak could hear them talking, low-voiced, up at the guerrillas' hide-out.

And there they lost no time rooting heavy boxes out of the brush. Lugging the boxes down to the shore, they worked over them, while Yarak inspected the log raft. Not satisfied, he searched out a dead branch and pulled up rushes by the roots. Kem came over to watch him curiously, while the others laid a half dozen dynamite boxes close together on the two logs of the raft.

Over these boxes, Yarak wedged the branch, and stuck rushes in between the logs. He noticed that the wooden boxes bore numbers and marking.

The others were wading across the river from shoal to shoal, Jan carrying

expected. From the water it loomed up, high. He caught a faint humming and a clank of metal as men moved about the house.

The current, he calculated, was taking his float near the outer side of the monster, and he did not dare, now, to change its course. Lowering himself down, he waited for the splash of a stone, or some diversion from the bank. Surely, he thought, the *kunaks* up on the bank, twenty paces away, could spot him by now.

**B**UT no diversion came. Yarak could make out the rubber boat tied to the shore ahead of him, and hear men moving there. No other sound broke the quiet of the river. And he was bearing down steadily upon the giant from under the sea.

"The brothers of a dog!" he thought bitterly, trying to swing the logs closer to the submarine.

Suddenly a flashlight blinked at the

the face of the bank. Nothing showed there except brush.

From aft the conning tower, a machine gun rattled and spat at the bank, following the finger of light. The German Yarak thought, were quick as devils shoot. And by now his dynamite would be drifting harmlessly out to sea—

He caught the splash of paddles coming out from the bank before he saw, the glow under the light beam, the rubber boat drawing near the submarine. Four men were hunched over in strange craft, racing toward the iron ladder under the conning tower. Yarak wondered if the officers had returned from shore. Then he stared, fascinated.

The men in the boat were not Germans. When they grasped the ladder, two of them went up with knives in their hands. The machine gun stopped, and the sailor with the rifle jumped for the ladder. At the same instant Kem jumped for the rifleman, and the two of them splashed into the water.

The two guerrillas following K swang heavy packs over their heads. Their packs dropped down the hatch. Another sailed in after them.

At the rail of the conning tower, a German officer stepped into the light, holding a revolver. Beneath him Jan held the ladder with one hand. The other hand swung the stick bomb up. It dropped after the bundles into the stream. And Jan let go his hold, to disappear back into the water.

"Ekh ma!" Yarak breathed. The machine gun cut loose again. And with the water shook around Yarak, and a blast shot up from the conning tower.

**T**HE submarine swayed, and vibrated around it, coming out of the hatch and the seams of the deck. The searchlight dimmed out, and smoke spread over the water.

Yarak found himself clawing toward the shoal across from him, shaking his head, to clear it. Looking back, he caught the splash of paddles, where the rubber boat was again in motion toward the high bank. Some of the board party, then, had got away.

The smoke closed down on him, and the reek of oil made him cough. Shivering with the chill of the river, the Cossack climbed out on the shoal. At once his bare legs laboring through the grass, he made for his camp site.

There lay the two cognac bottles where they had been left. Yarak shook the one that felt half empty. He took a long swallow, to drive the chill out of his body. "Eh," he muttered, "I was a diversion."

Immediately he felt warmed inside, but not outside, so he took another long swallow. "Eh, the firing from the bank was the diversion for the boat."

He felt comfortable, now that he understood everything. The dog brothers, he thought—they bit hard. They showed him the boxes and took the dynamite with them.

Upstream, when he sat down to put on his clothes, he saw the guerrillas making back across the ford. He counted nine, with the Polish officer and the wandering girl among them. He heard Kem telling the survivors to get their rolls together and start east to the next post. "Brothers, soldiers," Yarak called after them, "it was done like Cossacks."

Overhead the finger of a searchlight probed the sky to the west; a patrol fired down the far bank. Yarak felt a glow of contentment, and, crawling back into the rocks, he wrapped himself in his coat. Putting the remaining bottle in a convenient pocket of the coat, he dozed happily.

THE END

the girl. Some of the Siberians seemed to be carrying packs.

"Wait for as long as it takes to milk a cow," Kem explained. "Then shove off." He calculated a moment. "That gives us time to get around to the bank."

"Don't forget to make the diversion," Yarak warned. Then he thought of something. "How will the dynamite go off?"

He did not know much about the explosive qualities of dynamite, but Kem understood such chemicals. "Don't worry, Uncle. It will go off, at the submarine." He hesitated, watching Yarak. "Only you'd better get away from the raft before then. Understand? Well, that's all you need to know."

And he ran after the file, now lost in the gloom of the opposite bank.

**S**TRIPPED from his shaven forehead to his toes, Yarak shoved his driftwood raft out into midcurrent. When he felt the tug of the current, he spat three times and crossed himself, to ward off bad luck. After a while he let himself into the water, holding on to the end of a log, guiding it.

With his head screened by the branch, he watched the outline of the high bank, and peered ahead for the little house on top of the boat. He only moved his legs to guide his floating bomb.

When he lifted his head he sighted the leviathan of the deep closer than he had

water. Then a glow of light dazzled Yarak. The Germans had turned their searchlight on the driftwood, now only a stone's throw away.

Yarak kept his head still, swearing silently. He heard the crack of a single shot. Water sprayed beside him. A second shot from the conning tower ripped through one of the boxes. Yarak wondered again what made dynamite explode. And, hastily, he released the logs, letting himself sink into the water. Then he turned to swim against the current.

The glow faded from the water around him, and he came up to breathe.

Twenty feet away, the searchlight held on the logs, now almost at the submarine's bow. Its glow showed a man in a jersey out on the runway aiming a rifle at the suspicious floating mass. An officer climbed out of the tower, and shouted as if angry. The rifleman held his fire, while the others clustered around him, peering at the boxes which they could see plainly now.

Then the quiet of the river was shattered. Four shots flashed from the bank above the submarine, and Yarak recognized the roar of the heavy Russian Trokhlini rifles. Another volley cracked down, bullets whining off the steel decks, and some of the crew tumbling down where they stood.

The survivors jumped away from the light, and again the officer shouted. The searchlight swung around and up, across

## All or Nothing

...were not really with him—as though  
...ere speaking to shadows.  
...knew she'd go sooner or later—I  
...ot know why she stayed. But I don't  
...rstand her—I thought I did. I never  
...anything to her—never. And before  
...if I had I'd have been down on my  
...s swearing I'd never do it again!"  
...igid tried to make things as they  
...been with Rory, but she could not.  
...Friday of that week she did succeed  
...tting him to the club for dinner. But  
...night she was never to forget.  
...rough the meal he was the old Rory,  
...ng her, gay, but while she was eating  
...ert he excused himself. He did not  
...e back. After twenty minutes she  
...to look for him. She did not want  
...t alone for fear Phil would come by  
...try to talk to her.

RORY was in the men's bar. He called  
...to her, waving a glass. "Be right with  
...Brigid," and she went back to the  
...e and signed the check. She took a  
...azine to a dark corner of the lounge  
...waited. Half an hour. An hour.  
...grew nervous and an odd appre-  
...sion filled her.  
...he went back to the doorway of the  
...and looked in. Rory was leaning  
...talking to the bartender.  
...D'you have devils, Joe?"  
...nother man was trying to draw him  
...y. "Come on, Rory. We all have  
...n, man."

A tight lump came to her throat.  
...me flooded her.  
...He's drunk," she thought.  
...he did not know what to do. For a  
...t moment she wished desperately  
...Helen were there. Helen, who al-  
...s knew what to do.  
...cheerful voice said beside her,  
...illo, there, Circe."  
...he turned and saw Gordon Baird  
...ling down at her. "Hello—"  
...his eyes searched hers. "Is anything  
...ng?" he asked quietly. His cool eyes  
...s suddenly a haven and a relief.  
...Rory—my father's in there," she said  
...and quickly. "I—he—"  
...his eyes went past her and under-  
...od her need at once.

"Wait a minute." He walked into the  
...and up to Rory. She could not hear  
...at he said, but Rory clapped him on  
...shoulder. Gordon signaled to the  
...tender for a drink. Brigid was wor-  
...—he seemed to have settled down  
...r Rory. She went back to the lounge.  
...n a few moments the two men came  
...together. Rory walked steadily  
...ough, but when he looked at her his  
...s were queer. "Honey, I'm sorry—  
...got you were waiting for me—we're  
...ng home now—Baird's coming with  
...D'you know this fellow, Brigid?  
...s a great boy—we'll have a drink,  
...ird—my wife's away—we can do what  
...damn' please." He laughed, and in-  
...ctively Brigid drew back.

They went out through the lounge and  
...wn the wide front steps across the  
...vel drive to the parking space. Gor-  
...n smoothly said, "I'd like to try your  
...t. My tires are gone and I'm afraid  
...h out of luck for the duration." With-  
...t a word, Rory handed over the keys.  
...As Gordon was unlocking the door,  
...il came running from the direction of  
...ennis courts.

"Brigid—hey!"  
...Then he saw Rory stumble as he  
...mbled into the rear seat of the car.  
...hat's the matter? Is he tight?"  
...Gordon said, "Shut up, Phil."  
...Phil looked at Brigid's stricken face.

"Well, ye gods, don't look like that. My  
...old man gets tight every Saturday."

Brigid climbed in beside Gordon with-  
...out a word.

When they got to the house, Rory got  
...out first. "I tell you what I'm going to  
...do, Baird—I'm going to ride. You wait  
...for us—Brigid, we're going riding. Tell  
...Morse to saddle up."

"It's late to ride," Gordon said. "How  
...about that drink you promised me?"

"All the fixings are there—or you can  
...ask the maid. We're going to ride,  
...Brigid. We're going to drive out the  
...devils." He laughed, that harsh laugh-  
...ter. He was soberer now, but there was  
...a light in his eyes that frightened her.

"No, please, Rory."

"You can do what you like. I'm going  
...to ride."

Morse had come out and stood in the  
...stable door. Rory put a hand on his  
...shoulder.

"Saddle Mona for me, Morse, I'm go-  
...ing out."

"Mr. Carr, you can't ride Mona to-  
...night. You rode her too hard yesterday.  
...She's been limping on that right foreleg  
...all day."

"Her leg be damned! She puts it on.  
...You know she does. She's just trying to  
...get out of exercise."

Rory pushed past the man and went  
...into the stable.

"Don't, Rory, don't!" Brigid cried. She  
...ran after him, Gordon and Morse close  
...behind.

But they were too late. There was a  
...loud whinny in the barn and Mona  
...plunged out, Rory astride her bare back,  
...riding her with just the lead rein Morse  
...had been using. The two men grabbed  
...for the reins, but Rory struck their arms  
...away with a whip he had snatched from  
...the wall and kept on across the stable  
...yard and through the gates to the pas-  
...ture. In a moment Morse was back in  
...the stable, leading out the roan.

"I'll get him, Miss Brigid. Don't you  
...worry. Mona can't take him far with  
...that leg."

THE tears were streaming down Brig-  
...id's cheeks though she did not know  
...it. There was nothing she could do but  
...lean against the pasture fence, watch-  
...ing Rory on the mare, laughing back to  
...Morse. She was conscious that Gordon  
...had put his arm across her shoulders  
...and the warmth of his hand steadied  
...her somewhat.

She said, needing somehow to tell him,  
..."Rory's not like this—he isn't like this  
...at all—he's so swell—"

"I know, Brigid."

Then to her surprise, Rory wheeled as  
...he came up to the road end of the pas-  
...ture, and turned the mare back. At once  
...she saw what he meant to do. He was  
...going to put her over the jump on which  
...Morse had that day been training Lucky  
...Boy. But the bar was set too high for  
...Mona. She'd never make it.

Again Brigid cried, "Rory! Don't do  
...it!" And Morse shouted.

Rory was coming straight at the fence.  
...He was urging on the mare; Brigid could  
...see he was talking to her. She was all  
...right on her leg now. Rory was still  
...laughing.

They were at the jump. Brigid held  
...her breath, praying. The great muscles  
...of the horse rippled, gathering under  
...her glistening hide for the spring. Rory  
...touched her lightly with the whip and  
...she left the ground.

They arched in the air against the twi-  
...light sky for one flashing second. Up,

## ...and YOU TALK OF "SACRIFICES"!

Maybe you've heard some of them...

The people who complain because  
they can't always get their brand of  
coffee—or because the right cut of meat  
is scarce...

The man who "sacrifices" an extra  
week's vacation to buy a War Bond or  
two, and the woman who "gives up" a  
new hat to put the money into a War  
Bond.

Next time you hear such talk, an-  
swer like this...

"Sacrifice? Is there *anything*  
you can do to match the bravery of our  
fighting men? Is there any 'sacrifice'  
you can make to equal that of a man  
who gives his *life*?"

"You don't 'sacrifice' anything when  
you buy a War Bond. You get back \$4

for every \$3 you invest. You get abso-  
lute *safety*—with the pledge of the  
world's strongest nation behind you.  
You get *security* for the future. You  
*can't* lose!"

To win this war we Americans **MUST**  
buy War Bonds. We **MUST** give our  
boys the ships, tanks, guns and planes  
they need to win. Not just with our  
"spare" money, but with every dime  
and dollar we can scrape together.

Let's *forget* the interest, the safety,  
and the security. **LET'S WIN THIS WAR!**

Every dollar you put into War Bonds  
is *life insurance* for our boys. **THAT'S**  
what counts! In the lives of these boys  
is the salvation of our country.

So don't let anybody talk to you  
about "sacrifices!"

### FACTS ABOUT WAR BONDS

1. War Bonds cost \$18.75 for which you receive \$25 in 10 years—or \$4 for every \$3.
2. War Bonds are the world's *safest* investment—guaranteed by the United States Government.
3. War Bonds can be made out in 1 name or 2, as co-owners.
4. War Bonds *cannot* go down in value. If they are lost, the Government will issue new ones.
5. War Bonds can be cashed in, in case of necessity, after 60 days.
6. War Bonds begin to pay interest after 1½ years.

## Keep on Buying War Bonds

## NOW MORE NECESSARY THAN EVER BEFORE

### THE NATIONAL ENCYCLOPEDIA *The Book of the Hour in a World Aflame*

*Now at its low price everyone can afford to own this modern authoritative Encyclopedia!*

Never before has it been so necessary to be armed with knowledge! In these tumultuous times the only chance of world salvation, the only assurance of future security can come through understanding, through knowledge! Yet much of what you learned no more than a decade ago is *obsolete!* The need for knowledge that will serve people today in this war-torn world shouts from the housetops. But where can you find the answer?

#### HERE IS THE ANSWER

Thousands upon thousands of men and women have discovered that there is a key to the solution of the confusion and disturbing mysteries of this frightening world! They have found it in the great National Encyclopedia, which places at your finger tips a library of living, vital facts . . . literally gives you the answers to the maze of questions aroused in your mind by current events.

Here is a work so brilliantly edited that it matches step for step our fast-moving

world, so comprehensive and thorough that it surveys the entire range of human knowledge, so useful that it is found in business offices, radio stations, newspaper offices and in the principal public university and school libraries throughout the country.

It is so universally accepted that its thousands of owners represent a complete cross-section of the American public.

#### SYMBOL OF OUR AGE

The National Encyclopedia is the ideal work for the American family, for every home with children of school age, and for every man and woman who can ill afford to be satisfied with anything other than the best in reference material.

Send for large, beautiful free booklet, containing a fascinating current-events Quiz—fifty questions on pertinent subjects which are engaging everyone's attention today, with complete answers from The National Encyclopedia. These will be intensely interesting, instructive and entertaining for the entire family. This superb booklet also contains colored plates, half tones and other valuable information. It will be sent you absolutely free and without obligation.

up. . . Her forelegs cleared. But Rory was sitting too loosely. Too far back.

They were over. The heels of the mare just cleared.

"Lord, that was beautiful," Gordon said and Brigid heard Rory shout with pleasure. Her breath came out slowly—and was caught again. The mare stumbled on the bad foreleg. She righted herself. And stumbled again, knuckling under.

Rory was off, crumpling in the aster-starred grass.

When they came up to him, Morse was already on the ground beside him. The mare was trying to struggle to her feet. There was blood around Rory's mouth and his face was paper white.

"He's dead," Brigid whispered, falling to her knees.

"No, he ain't. Just busted something," Morse said quickly.

Gordon said, "Don't move him. Help the mare. Brigid, go call the doctor. No, don't lift his head."

Rory's eyes opened. "What did I—do to Mona?" he asked with difficulty. Then he shut his eyes.

And Morse said, "He's gone off again."

"I haven't," Rory said in a hoarse whisper. "I'm thinking—Brigid—call your mother—tell her—I wouldn't have the nerve—to pull a deathbed on her—I'm not dying. But—damn it—it hurts."

BRIGID came slowly down the stairs. It was late now, crickets singing somewhere. . . . The clock on the landing was whining in its gears, its hands poised before the hour, like hands palm to palm in prayer. The doctor had come. And Helen.

She had come, pale, her hair wildly blown (the first time Brigid had ever seen it out of place) running up the stairs.

"He's all right, Doctor?"

"Oh, he's right enough, Helen, child. Just a broken rib and he's done that before. But he keeps asking for you."

Helen didn't see Brigid in the shadows of the hall. Brigid heard her low cry as she went into Rory's room. "Rory—Rory—you poor idiot—"

Rory said, "I didn't know whether you'd come—"

"You knew I would. Oh, Rory, why do you have to do everything the hard way?"

"I didn't mean to—Helen. I've been crazy ever since you went—I've been trying to get away from myself. I couldn't—I wanted to hide from what I've known all along— What have I done to you?"

"Nothing, nothing. Don't talk, Rory. Does it hurt much? Oh, my poor boy."

"Yes, it hurts. But I'm not a boy, Helen—I hope to heaven I'm not— Forgive me, can you?" His voice sounded as though he were crying.

"It's better if neither of us does any forgiving."

Strangely, she seemed to be laughing, and Rory was, too. There was hurt and bewilderment in Brigid's heart.

"Forgive me," he had said. But her mother had been the one who had hurt him. And still he asked for her. He hadn't wanted Brigid at all.

She stopped on the stairs. She could see through the arch into the library, and Gordon was there, smoking a cigarette. He glanced up and saw her. He crushed out the cigarette and came into the hall.

"I didn't know you'd stayed." She came to meet him. "You needn't have."

He smiled at her. "I wanted to. I wanted to see you again before I went."

She said, unexpectedly, "I'm glad. I didn't thank you."

"I didn't wait to be thanked. I wanted

to see that you were all right," he said. "All right?"

He put a hand on her shoulder. "You're a funny kid. You take everything the hard way."

That was almost exactly what her mother had said to Rory.

He was still smiling at her. "You know, you're a lot like your father."

"But tonight my father—"

"I know what he's like. I think he's really quite a guy."

She was grateful for that.

"And I think you may be swell—when you grow up."

There was a look in his eyes she had seen in eyes before. She knew what meant and knew, too, with a flash of insight, that he did not intend her to know. With simplicity she put her hand out and lifted her face, and he bent and kissed her. She had not expected it to be that kind of kiss it was. Her fingers tightened on his arms.

But he disengaged them. He said on "Good night, Brigid," and was gone.

She remained standing there, increasingly amazed at the unlooked-for emotion of the kiss which she had offered.

"Brigid." Her mother was at the stairhead. "Rory wants to see you."

When she went in he was lying back against the pillow, his face the color of the linen, and a bruise purpling along his cheekbone. But he grinned at her the familiar way.

"Well, Brigid, I caused you a lot of trouble tonight. You, and that you fellow."

"I guess you did," she grinned back at him. He was close to her again.

He took her hand, his fingers hanging around it. "Brigid—don't live one hour of your life before you learn how not to be a damned fool. Let that boy of yours tell you he's sorry." He looked up at her. "You've got to start some place—the sooner the better. We're selfish, you and I, Brigid—we've got to hold on, we've got to be always right. But it doesn't work out. We think we're on the side of the angels, but we're not. We're the devils in ourselves. Remember that. And cut that boy—"

"I will, Rory," she promised—and was amazed at the lightness the promise gave her.

AFTER a moment she went out. Her mother was still in the hall. "We let Rory sleep, Brigid. Let's get ourselves some iced tea and sit on the porch."

She smiled, and her smile was the answer to what Brigid wanted to say: never hated you—I missed you so—wasn't any good with just Rory and me.

"Who was that boy downstairs, Brigid?"

"His name is Gordon Baird."

And when she said his name, something happened. Gordon. The way used to be Phil. But different. She thought, "I needn't forgive Phil now."

Because she knew now. She was in love with him any more. He had wounded her because she loved him. Only because she couldn't bear to hate him. Tonight—he hadn't understood that she was hurt about Rory—

"So I needn't."

But she did. There was something which she wanted to go on, but she had first to be reconciled with Phil. Rory wanted her to do that. She had to be kind to Phil first. It was too easy to be kind. It was too easy to be right.

Someone—like Gordon Baird—would have to know she could be kind, before he would come back.

"But I can never tell him."

Her heart said, "He'll know."

THE END

# Deep Winter

Continued from page 19

first crop as a demonstration that he was able to provide for her. He was that way. But when she thought of how close they were, and how many good days they were missing, and of how much she could do for him, she had an instant when she wanted to cry.

She looked at him and he saw something of what she felt, for he drew a long breath. "We'd better get out of here before I—"

"Why shouldn't you?"

FOR a moment they stood staring at each other. Presently he dropped his eyes. "I think," he said, "we ought to start back." Once more on the sleigh seat he paused to fill and light his pipe and he brought the scene to safer ground. "Dirty weather coming. I wish the people on the flats had better shelter."

Going back down the road, her own thoughts still confused, she realized how natural it was for him to worry about the homesteaders; he had a streak of responsibility in him that people felt, and because of that he had come to be somewhat of a leader on the flat, without his asking. They followed the waggling ruts of their previous trip as far as the Lowe shanty and turned into the yard.

Mrs. Lowe opened the door for them, a heavy, shapeless woman—unkempt and complaining. She made an ineffectual swipe at her hair and invited them in, using half of the same breath to condemn the weather. "Nobody can do anything. It ain't any use even to try. We've all got chills."

The four children, from three to nine, were underfoot in the single room of the shanty and the place was a complete confusion. A stove and table crowded one side, a bed occupied most of the other—and Lowe lay covered with quilts on the bed, smoking his pipe. A doorway without a door led into a tent which formed the second room. Mrs. Lowe's eyes saw at once that both Letty and Kertcher were unfavorably impressed with Lowe's idleness and she sprang to her husband's defense: "He ain't been well all fall. He never got over a sprain to his back durin' the summer."

"You ought to put a door against that tent," said Kertcher. "You're burnin' wood to heat the whole outside world."

"I'll get to it," said Lowe and seemed contented enough with his pipe.

Letty's quick glance meanwhile noted the cupboard and saw nothing much in the line of food. She turned to the door with Tom Kertcher, speaking casually to Mrs. Lowe:

"There's always a few neighbors in at Mrs. Rand's during the evenings. Come over."

"If I can get my chores done we may come," said Lowe.

Kertcher spoke with an irritated disgust when they drove away: "Too lazy to get up and walk half a mile to get his kids warm."

COMING into the hotel that evening, Kertcher found the usual round-about group gathered—the Brewertons, Mrs. Rand and her daughter Tara, old Solomon who had recently built the store, the Swensons and Judith Prescott—the teacher who boarded with them. The Jacksons had come in from the school-house section, riding with Curtis Kilrain and Elizabeth Marsh. Andy Pierce had made the trip from his Oxhead ranch, and Charley Graves was just in with mail from Virgil, five hours late on the trip, bringing the sheriff with him. The Lowes

came in with their children shortly after Kertcher arrived.

The sheriff, going his rounds of duty with an eye for new friends as well, was an excellent storyteller, and the sharpness of the weather put everybody in excellent spirits. The men more or less grouped together while the ladies went into the kitchen to help Mrs. Rand, who presently came out with a tray of sandwiches and a pot of coffee. Kertcher noticed that Letty made a point of serving the Lowe youngsters; and he noticed too, how Ben Lowe's eyes came over to observe that. When Letty offered Lowe a sandwich, he refused it. "Just ate—not hungry," he said. The man was lying, of course, yet Kertcher saw something in Lowe then he had not seen before, which

plain intimation that it was he who conferred the favor.

Kertcher expected Lowe by eight in the morning, but it was beyond nine when the man showed up in the barn. "Long walk," he explained, "and I had some chores to do first." He was prepared to spend another half-hour in conversation, but Kertcher gave him an adz and set him to the chore of dubbing the end of a six-by-six timber; all this was indoor work, in preparation for spring-time when the barn frame would be lifted into place. Promptly at noon, Lowe dropped the adz and followed Kertcher into the house, sitting by while Kertcher turned out a bachelor's meal. There was no end to the man's self-esteem or his assurance. He had a firm

feel. When he got as far as Mrs. Rand's he observed Ben Lowe coming from the back of the hotel. "Ben," he said, "watch out. Storm coming."

"Been through a lot of them," said Lowe and moved homeward.

Kertcher noticed both Harriet Rand and Letty at the back door, and left his sled to join them. There was a pile of wood scattered around the doorway, recently chopped. Mrs. Rand said uncertainly: "Is that as much as a man should chop in a day?"

Kertcher said, "You hired him to do this? How much did you pay him?"

"Four dollars," said Mrs. Rand. "Was that about right? He needed the work."

Kertcher studied the pile of wood, holding himself strictly under control. "Harriet," he said, very quietly, "better to feed him outright than be bilked like this."

"He has pride," said Letty. "He wouldn't stand charity."

"He'll stand that before he'll stand starving," said Kertcher. He thought of his original purpose in coming here, warned the two women of the storm and turned back to his sled. He caught up with Lowe at the latter's front door.

"Ben," he said, "you figure that a day's work you did for Mrs. Rand?"

Lowe gave him an affronted glance. "She didn't have to hire me."

"Well," said Kertcher, "that's pure gall. You sting a woman hard up as you are and then you stand there and say it was her fault. What's the matter with your mind?"

MRS. LOWE flung open the door and stood behind her husband. "You stop talking like that to my husband, Tom Kertcher!"

Lowe reached around with an arm and pushed his wife into the house. He reared up and tossed his shoulders back. "If that's the way you people think about a few stinkin' dollars—" he yelled, and clawed his pocket, brought out the four silver pieces and flung them into the snow. He shouted, "I don't need the dirty stuff!" and wheeled into the house.

Tom Kertcher went down the road, half ashamed of himself. He thought, "Darned fool really believes he's a big man stoopin' to small chores." He looked back, and at the moment saw Mrs. Lowe on her hands and knees in the snow, digging for the money Lowe had thrown away.

Mrs. Lowe found three of the four dollars and went back into the house. "Ben, you shouldn't of done that," she said. "We won't find the other dollar until spring."

He had put himself on the bed; he lighted his pipe and slapped out the spilled tobacco burning against his clothes. "She didn't have to hire me."

"We need the money," said Mrs. Lowe in her complaining voice. She lighted a lamp and set about dinner. The young ones played around the cramped quarters, behind the stove and under the bed.

"Pete," said Lowe to the nine-year-old, "go bring some wood into the tent."

"Never mind," said Mrs. Lowe, "I'll do it myself later. Come on to supper."

He got up, moved two paces and sat down to the table, the youngsters crowding around him, Mrs. Lowe standing. The meal was bacon, beans and coffee; even the youngest one had his share of the coffee. Lowe ate what he wanted, and drank his coffee and lay back on the

ALFRED

by FOSTER HUMFREVILLE

"Oh, just look at Alfred's horoscope! It says a person born on the fifth of June is fearless, determined, unyielding and masterful!"

COLLIER'S

was pride. Meanwhile, the talk went on, weather and crops and roads and politics and babies. During the tag end of the evening the sheriff drew Kertcher aside.

"I can't cover all this county," he said. "Should be a deputy down here. It's only worth thirty a month, but among you homesteaders that's helpful money. I thought of you, naturally."

"I don't need it."

"Then I give you the disposal of the job," said the sheriff. "You pick the man."

"I'll get you somebody," Kertcher said.

"Done," said the sheriff, and moved toward the ladies, having some sort of a word for each of them. The Lowes, late arrived, were first to go; and as they moved toward the door Kertcher caught an expression from Letty. She came by him, murmuring, "Give him some kind of work, Tom."

Being a hard-laboring man, Kertcher had no stomach for the suggestion. Nevertheless he walked toward the doorway, stopping Lowe. "Ben," he said, "I could use some help tomorrow. I've got some timbers to fit in the barn."

Lowe studied it. "I got a lot of chores of my own," he said. "But maybe I can do it for you."

He walked into the night, leaving the

opinion on any subject; and one by one he brought these subjects up, settled them and went on to another. At one, they returned to work; at four o'clock Kertcher said, "That'll be all, Ben," and found three dollars in his pocket.

His temper was sorely strained by the manner in which Lowe accepted the money. "I've made better wages, Kertcher—but if that's all you feel you can give I won't argue."

"Fine," said Kertcher, and watched Lowe depart. The man, he thought, had no knowledge of his own failure.

THE following morning was biting cold, and the air had an extreme thinness but the woolly clouds remained low, obscuring that monument of outlawry half a mile across the river—Brazil Mullan's long cabin and barn. Kertcher thought, "Storm around the corner," and spent half a day bringing water up from the river, two buckets at a time. He cooked himself a noon meal and began to think of his neighbors, most of whom were city people with no knowledge of real bad weather; and around three o'clock he hitched and started for Ingrid. He dropped a warning at Swenson's and touched as far as the Jackson place. There was a dull streak in the north and the air, damp as it was, had an electric

bed, smoking. "Libby, help your ma with the dishes."

"Libby, go to bed," said Mrs. Lowe. "I can't be wipin' your nose all winter."

Lowe watched Libby go through the blank doorway into the tent. He said, "I'll put up a door tomorrow. Maybe bank a wall of snow all around the tent. That'll be warm—way the Eskimos live."

"Don't hurry about it," said Mrs. Lowe. "Spring's only four months away."

She finished the dishes, chased the children to bed and undressed by the stove. She fed the stove a last time, turned the damper not quite shut and blew out the light. The weight of her body, when she settled into bed, lifted Lowe's side a full six inches. He got up and took off his shoes and pants and shirt; he sat crouched on the bed's edge, smoking his pipe in the dark. "I always had a fine pen hand. I could put Solomon's books in fine shape. Or I could run for sheriff. I could beat that fellow. I'm the only man with an education around here."

She reached out with a rough but affectionate arm and pulled him flat. "Get under the covers, you fool."

He ate his cornmeal and drank his coffee at breakfast. He went outside and circled the house. He yelled, "Pete, bring in some wood for your mother," and he came back to the kitchen. Mrs. Lowe said, "Keep out of my way this mornin'. I got to wash."

He stood still in the front room, watching her. "Emma," he said, "you think that's what people think about me?"

"I know all your old tunes, Lowe. Don't start no new ones and upset me."

He got his rifle and sat on the bed and oiled it; he put four cartridges into his pocket and struggled into his big coat. Mrs. Lowe gave him a sharp look. "What you got on your mind now?"

"I hear there's antelope down by the river."

"Ah," she scoffed, "you couldn't hit a barn."

"But," he said, "I can provide for my family. They can't say I can't."

He went out the door and slammed it behind him.

KERTCHER stood in the yard and studied the morning sky and saw the sheet of blackness in the north; the wind, also from the north, would be bringing that blackness on. The air was perfectly still, and as thin as he could ever remember it being. Turning into the barn, he hitched the sled and threw in such rope as he could find and drove it to the front yard. He got all his blankets off the bed, he put on an extra shirt and an extra pair of socks; he took a bottle of whisky from the cupboard and he slid a compass in his pocket and started for Ingrid.

All of the homestead shanties were flimsy enough, but some of them were so loosely thrown together that a seventy-mile wind would tear them apart unless they were guyed to the ground; and that meant a family wiped out within half an hour of exposure. He turned immediately east. He stopped at Pilkington's, Rath's and McCory's, saying the same thing each time: "Real blizzard coming. Pile wood up against the side of your house for an anchor. Get some water inside in case your chimney catches fire. If you burn out you're helpless. Don't try to go anywhere once it hits. You couldn't walk a straight line and you couldn't see. Warn your nearest neighbor."

He circled Charley Morlett's place, a mile east of the school, and went on to Parch Cobbin's, with the black wall of weather bearing down fast.

"Get your place tied down," he called

to Cobbin, and headed for Ben Lowe's.

Half a mile from Cobbin's, he felt a warning breath of wind; and then the silence broke and he heard the distant rumbling and sighing and shrilling of the blizzard. He had the horses pointed straight upon the small vague shape of the Lowe shanty; in the semidarkness closing around him he took out his compass and got his bearings on the Lowe place. Half a minute later he looked up to see something lift and sail like a giant section of paper through the sky. That would be the Lowes' tent.

The horses veered from the wind and in one great transition from half-light to smothered dark, the Lowe shanty faded from sight. He was then less than a quarter mile from his target and by instinct he pulled the team constantly to the north but even so, when he looked at his compass he found he had drifted.

He said to himself, "Bad night," and listened to the words rip away from his mouth. "If I miss the place—" He caught it as a shadow on his right and swung the sled hard by the door. He yelled at the door and saw Mrs. Lowe open it. He said, "Get in!"

She was a shapeless, frightened woman with her hair blowing over her face, her children crowded close around her. "Lowe's gone! I got to stay and keep a light burnin'!"

He jumped from the sled and seized the children one by one. He pulled at the reluctant woman, one eye constantly on the restless horses. "Your house won't be here in half an hour!"

She fought with him and she began to cry. "I told him not to go! He'll die!" When he drove away he had to hold her from jumping out. She was a big, loose woman and hard to hold; so that he finally had to beat her will down with strong language: "Don't be a fool! You want the kids to die?"

He pulled the team into the drive of the blizzard and held them into it, searching for Ingrid's lights. He tried his compass again and saw the vague swinging of the needle. He heard Mrs. Lowe cry something at him and afterward she climbed back into the wagon box with the children. Forward he thought he saw a wisp of a gleam to the left, and the sled runners grated over some kind of metal. He turned left, caught the light a second time and used it for a beacon, drawing up before Mrs. Rand's hotel. Lowe's wife climbed out with her children and hurried inside. Kertcher swung the team between the hotel and the store

and beat his way back to the hotel.

Half the settlement had collected here and Mrs. Lowe was crying out her story, her big face homely with despair: "Lowe's gone—"

Kertcher said, "When did he leave—which way did he go?"

"Nine o'clock. He said there was antelope by the river."

Andy Pierce and Charley Graves, both cowmen who knew the country well, gave Kertcher grave side glances.

"He'd follow the road," surmised Kertcher, "because it is easier walkin'. He might have smelled trouble and ducked into my house."

Andy Pierce used that as reassurance for Mrs. Lowe. "Sure he did."

But Kertcher doubted it. He drew Pierce and Graves aside. "The fool's lost. I've got to go look."

"Don't be a sucker," said Pierce. "It'll

Charley. When he opened the door a great wind and a great crying rushed in. The two men bent against it, closed the door and beat their way to the sled and team parked between the two buildings. The wind's terrible force keeled both men on the seat when they swung out of that shelter and turned south. Charley Graves yelled, "Now, ain't this silly?" For a moment Kertcher saw Mrs. Rand's hotel lights dancing in the flutter of snow; twenty feet onward he looked back and saw only blackness. Charley Graves shouted: "Keep the wind centered on your tail bone—that's north kickin' at you."

The storm was a hard, steady push on Kertcher's shoulders. When he turned his head, wind drove breath into his nostrils, making him open his mouth to catch air, and the drive of snow stung his cheeks like small buckshot. It was, he guessed, two o'clock in the afternoon with the blizzard's darkness pressing down and the tumult of the blizzard making its wild, polar confusion all around him. He tried to sight Lee Gantry shanty, slightly short of the schoolhouse turn-off, and found nothing; and then, looking upon the smothered blankness in front of him he felt the complete futility of seeking one man in a blind area of perhaps fifty square miles.

Charley Graves cried, "That big off mare of yours has got a longer reach than the other mare! Pulls you to the left!" Kertcher felt a sharper bite on his left cheek and headed the team rightward. The sled's runners scraped metal and bumped against wood. "Fence!" whooped Graves. "Still on the road!"

KERTCHER bent over to take the pressure from his shoulders. He had a scarf wound around his face, but the wind got beneath it and crashed into his ears. Working with the wind in this manner he felt as though team and sled were coasting down a steady hill and the feeling tricked his judgment of distance. The horses were going at a boosted walk, better than three miles an hour, at which rate he should reach his shanty in about an hour and a half. He pulled out his watch and handed it to Charley. "We left Brewerton's at ten minutes of two. What time now?"

Graves put his nose against the watch. He held it a long while. "Looks like a quarter after. Don't seem that long. You're swingin' left again!"

Kertcher pulled right. Snow began to build up a drift in the fore part of the wagon box, chilling his feet. He stamped his feet and he thought of Ben Lowe, visualizing the man's heavy, self-satisfied face; and irritation built a heat in him. The sled runners sent back a different sound and the horses fiddled as they walked. "What's that?" yelled Charley Graves.

Kertcher stopped the team, and Charley Graves cautiously left the sled. There was a steady crying roar over Kertcher's head, a vast dismal yell coming out of upper emptiness. He boxed his hands together and felt coldness move through his clothes and through his bones, like oncoming sleep. Charley Graves came back. "Somethin' on the snow, like canvas! Petered out in my direction!"

Kertcher handed over the reins and went off his side of the sled. He dug his feet into something half solid and he got down and crawled; he struck a rope and he sat still a moment, trying to figure it and then remembered Lowe's tent that had blown away. He turned back at a slightly different angle, still crawling and reached a rolled-up section of the tent; something gave beneath him and something moved. He dug into the roll found a loose edge and put his head be-

blow your scalp off in another two hours."

"I can get as far as my place," said Kertcher. "Might find him on the road. He'll walk until he's all done in and he'll drop."

"Thin chance. How you goin' to get home?" Pierce asked.

"Wind at my back. Five miles exactly. Straight south and use a compass."

"That's two men dead instead of one. I'm telling you."

Charley Graves said, "Half an hour out in that stuff and you'll lose the ability to calculate distance. On top of that your horses may refuse to face the weather."

MRS. LOWE saw them standing together. She searched them with her eyes and seemed to see an answer, for suddenly she spoke at them in a dull, small voice: "I know what you think of him. But he's my man, isn't he?"

Nobody said a word. Kertcher looked at her and suddenly he smiled at her and turned toward the door. Pierce and Graves followed him and Letty Brewerton said, "Wait," and came up to him. There was a kind of hardness on her face, made by fear. She wanted to hold him back, she wanted to tell him of her fear. But all she said was: "Are you warm enough, Tom?"

"Yes," he said, and smiled again.

Charley Graves said, "Longer we wait the thicker it gets."

"Who's we?" asked Kertcher, and then noticed that Charley had borrowed Pierce's huge buffalo coat.

"Two fools are better than one," said

with it. A hand came up and struck him across the face and a voice said: "Who's that?" That was Lowe's voice. Then we said: "Pull down that edge—you're in 'cold air in."

Kertcher stood up and jerked the covering away, bringing Lowe to his feet, in the black. Kertcher pushed the sled onward toward the sled. He yelled at Charley Graves: "Here's Lowe! Drive a few feet!"

He heard Charley Graves' cussed-out admonishment as the latter drove the sled on; he turned back, intending to save the tent, but as he dropped to his knees the wind lifted the canvas and it saw it lift into the air, like a giant, and vanish. He crawled back to the sled and took the reins. The wind had been thoroughly into him and he was chilled through and began to shake; when he swung the sled around into the full beat of the blizzard he felt a kind of strained rigidity in his muscles. He knew then all three of them were in danger.

Lowe crouched in the wagon bed behind Kertcher's back. Lowe yelled: "A mighty foolish thing for you to do! It's warm in that tent! I could of stayed there all week!"

Kertcher restrained his answer; he heard Charley Graves yell back at Lowe: "How the hell did you find the tent?" "It just sailed through the air at me! I grabbed it and rolled into it!"

"The Lord sure protects some people!" howled Charley.

"No use my gettin' cold!" said Lowe. "I'm goin' to roll up in the blankets!"

The blast was hard to take, but Kertcher had to keep it directly against him to be sure he was traveling north. When he felt the force of it drop off from one side of his face he knew he was veering and pulled the reluctant team around. In this blackness it was impossible to find the compass.

"See anything?" yelled Charley Graves. "My eyes are full of ice!"

"No!"

The snow whipped against him, knife-like as it struck his exposed face skin; and sleet formed on his eyebrows. He jumped on the wagon bed to bring feeling back to his dead feet. There never was a moment when he didn't have to wrestle the horses back into the wind; they were taking a beating and they didn't like it. He got to thinking of how small a target Ingrid was—just a spot a hundred feet wide in a hundred-mile

distance—and he felt the runners scrape across metal again.

"Road fence!" said Charley Graves. "We're on the track!"

He wasn't sure. The constant flicker of mealy snow threw his vision off; it gave him a feeling of unbalance, and the constant rush and roar of the wind disturbed his judgment. He had, he realized, lost his sense of direction completely. That was probably why so many men died when they got caught in a thing like this. He thought he saw the shadow of a shanty on his left and he pulled over and found it only an illusion. He straightened again, but he felt the growing weakness of the horses. If they stalled on him there was only one thing left—tip over the wagon box and crawl beneath it with the blankets and hope to live out the storm. It wasn't much of a chance.

THE horses stopped and refused to go straight on, as much as he urged them. He hauled them half around, and got them started, but Charley Graves called, "Wait!" and slipped from the sled, disappearing. When he came back he yelled, "That was the big survey post! We've overshot Ingrid! Turn left! Half a mile to go! Feelin' a little cool?"

"Sleepy!" Charley Graves hit him a heavy blow on the back. "Wrong place to sleep!"

The horses were half-heartedly pulling; wind carried them sidewise steadily, so that Kertcher was pointing them back at every short distance. He closed his eyes to visualize the movement of the sled across that half-mile; far off he heard a sound, and then he felt a great wallop on his back, and opened his eyes to hear Charley Graves speaking: "I think there's a light off to the right."

He looked and saw no light; the constant lacing of the snow made a thousand vague points that looked like distant flashes. But he pulled to the right, and stood up to slash the rein ends down on the horses; they stopped on him and then he realized the wind no longer blew against him. It was a howling behind him and a roar ahead of him but here in this spot was a strange calm. "Must be losing my head," he thought. He gave the reins to Charley Graves, left the sled and walked straight into the black side of a building. He stood against it and he yelled; he pounded his fist against the building. A door came open and he saw Brewerton in the light—Brewerton and

Pierce and other people suddenly behind these two. It occurred to him then that the team had cut a complete circle around Ingrid and had drifted between the hotel and Solomon's store.

Graves and Ben Lowe came up. Brewerton said, "I'll take the team. You get in the house."

"Wait," said Graves. He bent and caught a handful of snow. He shoved it against Kertcher's face. "Feel that?"

"Yes?"

"Then we can go in," said Charley. Ben Lowe had gone ahead of them, lugging something in his arms. When Kertcher got into Mrs. Rand's kitchen he found the settlement group gathered there and he saw Ben Lowe standing before his wife with a quarter of beef. Lowe said, "Here's some meat, Mamma."

There wasn't a word in the room. Lowe's wife looked at him, long and straight and affectionate and it seemed to Kertcher she was a younger woman than he had guessed her to be. She said, softly, "Put that down, Lowe," and when he put it down she threw out her heavy arms and hugged him. "You're a fool," she said. "Such a terrible big fool. You caused so much trouble."

Lowe said, "I'm all right." He gave Kertcher and Graves a self-assured grin. "I'm warmer than those fellows. Think I can stand weather better than they can. Foolish of them to come after me. I was comfortable and in no trouble at all."

Charley Graves had been studying the quarter of beef. "Where'd you get that?"

"Shot it," said Lowe, and grinned at Charley Graves' shocked face. "But that's all right, too. I got to thinkin'. Here's people hungry and there's Brazil Mullan across the river—a thief and a rustler eatin' well off beef that ain't his. So I went over and shot one of his cows. He heard the shot and came out with a couple of men, but I drove them back just when the storm broke." He had an audience. And he felt big about it; he was the same old Lowe again and he spoke to Kertcher with his egotism beginning to show: "I don't know why people should be afraid of that crowd. I'd take my chances against 'em any day." Having said it he took his wife's arm and moved on into the big room.

He felt a relieved and exasperated group behind him. Charley Graves shook his head, repeating a former observation: "The Lord sure protects some people."

"Well," said Kertcher, "he believes he's as tough as Mullan—and I sort of think he means it. He's no good for some things but for some things he might do well—particularly the kind of a thing in which he feels big, and has to live up to it." He grinned at Charley Graves, at Andy Pierce. "There's your deputy sheriff. The thirty a month will keep him from starvin' and I believe he'll do all right."

LETTY was near him, watching him; and now he looked at her and forgot there was anybody else in the kitchen. But the others understood about this and somebody started for the big room so that presently Letty and Kertcher stood alone. He had some trouble getting his pipe out of his pocket because of the stiffness of his hands. He packed and lighted it and the smoke burned his wind-blistered skin. Letty stepped nearer him, looking up with her sweet, grave expression. He saw the warmth in her eyes and he felt the warmth of her voice: "A little bit cold outside, Tom?"

"Somewhat chilly."

That was the end of it, neither of them being of the talkative kind. He pulled his pipe down, cast a quick glance at the doorway, and bent and kissed her.

# WARTIME COOKERY

## Fish... for Protein... A-1 Sauce for Flavor

MEAT RATIONING doesn't include fish. Try this easy recipe, and nobody'll mind *two* Fridays in a week. It's quick, too! Takes only 10 minutes of your war-busy time:

### A-1 PAN-FRIED FISH

2 lbs. fresh or frosted fish fillets	1½ tsp. salt, pepper
3 tbsp. A-1 Sauce	1 cup yellow cornmeal and white flour, half and half
	4 tbsp. cooking fat or oil

Rub outside of fillets with salt, pepper and A-1 Sauce, then roll in the flour mixture. Heat fat in skillet until it begins to smoke, place fillets in hot fat and brown about two minutes on each side. Then cover and cook over very low flame for five minutes. Time may vary with thickness of fillets. Serve with lemon wedges, or sliced pickles.

Most everyday dishes...like hamburgers, hash, meat loaf, beans, cheese and egg favorites...become *SOMETHING SPECIAL* when A-1's dashing flavor is added in the cooking or at the table.

## Danger: Time Bomb

SENATOR WALTER F. GEORGE (D.-Ga.), chairman of the Senate Finance Committee, says that he can see no reason why Congress should not put some pay-as-you-go income tax payment plan into operation before next March 15th.

That impresses us as a masterpiece of restrained statement. A statement closer to the facts in the case would go as follows: If Congress does not put some pay-as-you-go income tax payment plan into operation before next March 15th, there is likely to be a nationwide explosion which will punch at the foundations of our entire federal income tax structure. The present income tax collection system has become a time bomb of blockbuster proportions, and it is set to go off next March 15th.

The main reason for this situation is that the new tax laws raise to about 50,000,000 the number of persons who will have to pay federal income taxes next year, and that 33,000,000 of these have never paid federal income taxes before. Many of these people, having only the vaguest notions of what their taxes are going to be, will be unprepared when the tax collector sends out his love call. In consequence, many of them will be unable to pay even the first quarterly installment due on March 15th.

It will do little good for the Treasury Department to make soothing sounds about how lenient

it intends to be with persons caught unaware. When you haven't got it, you haven't got it. That many people won't have it is obvious from the stiffness of the new rates and the widespread American habit of never troubling trouble till trouble troubles you. The effects can be anything from numerous simple tax defaults to organized taxpayers' strikes. This, in the middle of a most serious war.

The only hope for snatching order out of the oncoming tax chaos lies in the Ruml plan or some variant thereof. This plan, advanced by Beardsley Ruml, chairman of the New York Federal Reserve Bank and treasurer of the R. H. Macy department store, calls for putting federal income tax collections on a businesslike basis at one swoop.

Next year, we would all pay taxes on next year's income, not on this year's. This year's would be sponged off the record, except in the few so-called windfall cases. There is no other workable scheme for squaring the new tax rates with the American wage and income earners' ability to pay. Anybody who says we can successfully temporize with or dodge this issue is being blind or demagogic or both.

The thing to do is to adopt a pay-as-you-go plan without delay—as long before next March 15th as possible. If we had the arranging of the incoming Congress' calendar, we'd put this reform at the top.

## But Can We Lose?

RECENT developments in all theaters of war persuade us that the country has now had enough of the "We can lose the war" line of argument.

Have a look at labor and management all over the country and the way they are slugging it out together at the job of keeping the Armed Forces supplied—Kaiser's shipyards breaking records about as fast as they make them; the great mobile and airplane and locomotive companies slapping out weapons of such power and quantity so fast as to have given Hitler a standing ovation that began showing up in his speeches about last August; farmers, railroad men, truck drivers and factory workers slaving and saving and buying bonds.

Certainly we can lose the war, if we lose our character as Americans, our centuries-old quality of determination and courage and refusal to admit that anything is impossible, our insistence on running our own country to suit ourselves.

But we are going to lose none of those things. Which is to say that we cannot lose this war.

## Don't Ration Common Sense

WE'RE all dividing up the scarce commodities—gasoline, rubber, coffee, meat, etc.—under rationing systems, and the list of rationed items is sure to grow, as a part of the war effort.

There is one commodity which we wish our bureaucrats would quit rationing so severely among themselves. That commodity is common sense.

For example, it grows very tedious to hear from these people that if you make a statement on any government form, you'll get a \$5,000 fine or some fantastic jail sentence both.

Everybody knows that 999 out of 1,000 people would refuse, with Bronx cheers, to soak a fellow citizen in this fashion for a slip of the tongue or a little miscalculation of needed auto mileage or house space that has to be heated. Everybody knows that practically no judge would have the gall to impose such a sentence. Assorted attempts to enforce the late federal dry laws by cruel and unusual punishments are fresh in most memories. For those who came in late, we'll state that those attempts fell flat, with repeated dull thuds.

Why not, then, a change in the bureaucratic tone of voice when that voice discusses rationing? We mean a change to common-sense explanation of the need for rationing, and to candid, genuine requests to an intelligent, adult American public to co-operate. We mean an end to attempts to bully Americans with threats that cannot be carried out.

Administer these things through officials who have some sense, and the great bulk of us will go along sensibly. Try to administer them through doctrinaires, windy Willies and born bulldozers and we'll react like bucking broncos, as Americans always have done—praise the Lord!—whenever their leaders have insulted their intelligence.

# Don't waste PEPSODENT

It takes only a little to make your smile brighter

Nearly one-fourth of all the Pepsodent we make goes to men in uniform . . . they want it . . . they deserve it.

At the same time, we are trying to supply the biggest number of civilian customers in Pepsodent history.

But, wartime restrictions limit the amount of Pepsodent we can make.

So . . . we urge you: Don't waste Pepsodent. Use it sparingly. Help save enough for others . . . and there will be enough for you.

## Lucky for all

. . . dental science knows no more effective, safe ingredients than those which make up Pepsodent's patented formula. That's why Pepsodent is so good, so effective, so safe that only a little is needed to make teeth brighter, make smiles more sparkling.

**1. MOISTEN** your brush before applying paste. If you apply Pepsodent before wetting brush, it may wash down the drain. Finish brushing before rinsing brush.

**2. MEASURE** out only as much paste as you need. About three-quarters of an inch is enough. Always squeeze and roll tube evenly from the bottom. Replace cap.

**3. POUR** Pepsodent Powder into your cupped hand — enough powder to cover a 5¢ piece is plenty. *Do not* sprinkle it on the brush — this is wasteful.

**4. SHOW** children how to dab — *not rub* — moist brush in powder to pick it up. Always measure out the right amount of Pepsodent Powder for small children.

**5. HANG** tooth brushes up to dry after use. Bristles will stay firmer and last longer this way. Soggy, worn, wilted tooth brushes are inefficient, wasteful.

**6. YOUR DRUGGIST** is trying his best to serve everyone. Don't blame him if his Pepsodent stock is low and he has to disappoint you. Try again in a few days.

## ANY WEEK

SINCE our guys landed in Africa we've had a lot of letters setting forth what the writers thereof would do if they were Hitler, Goebbels, Goering or any of those bull Nazis. The consensus is that they'd be taking it on the lam for England, yelling, "Move over, Rudy Hess, you old fox!" Several of our readers want to write articles on the subject. One of them, Mr. Ernest Trubody of Cleveland, Ohio, writes to remind us that he has evidence that Herr Hess took off for England after failing to impress Hitler with a dream he had, just before he became Britain's prize refugee. Mr. Trubody doesn't go into details. He merely says his facts show that Rudy went to Adolf and said, in effect, "Boss, these English are suckers for a sob story. Let's go!" But Hitler refused, saying that the racket was going good and that he didn't trust Hermann Goering. Anyway Mr. Trubody, backed up by Aunt Felicia's Dream Book and Everyman's Horoscope, wishes to write a piece. We have turned the idea over to our betters. From a Canadian sergeant major in Toronto we learn that Herr Hess is earning his "best of board and keep" by writing letters to lesser-known but very potent Nazi stooges telling them what they're missing and what's in store for them if they don't do a Hess. How the sergeant major knows this is of course the sergeant major's secret. Several letters assure us that the writers know nothing except that if they were Nazi politicians they'd light out for North Africa and have a nice talk with General Eisenhower. And so would we. Our mail is full of such stuff. From another soldier we learn that the Army can feed the opposition into surrender. It's his opinion that if we just throw the chow lines open to all who want to be on our side, we'll win the war before spring. Indeed, it's apt to become a little embarrassing. "Even the British will be enlisting in the American Army," says he.

WE'RE getting a little nervous. Every day for a couple of weeks we've been getting a post card from Tullahoma, Tennessee. On them there is a single sentence: "Some day maybe you will be wiser—if you live." The whistling you hear is ours.

Don't say I didn't tell you!"}

AUL VON HINDENBURG was a professional soldier with little taste for politics—and little love for the upstart paperhanger whom he had to accept as Chancellor.

After the last war, the shrewd old Prussian put his finger on one prime reason for Germany's defeat, with these words: "America's brilliant, if pitiless, war industry had entered the service of patriotism and had not failed . . . They understood war."

Now history is repeating itself for Hindenburg's successor! America's war industry again is pouring out planes, tanks and guns—meeting production goals that seemed fantastic at first.

Back of this fast-growing military power is *electric power*—far *more* power than Hitler and all his henchmen have—turning the machines that turn out everything from bullets to battleships.

Behind the great bulk of this power are the electric companies under experienced business management—doing their job right around the clock and the calendar—delivering electric power in increasing, incredible quantities!

And back of it all, of course, is the American way of life at work—where free men are encouraged to invent, invest, produce, and

*everybody* benefits—a way of life the little rabble-rousing, rug-biting dictator will never understand—until, perhaps, in some shadowy hereafter, he hears his old commander mutter:

"I told you so."

## KEEP UP WITH THE WORLD

**By Freling Foster**

One of the closest "friendships" in the marine world exists between the pearl oyster and the pearl fish, *Carapus affinis*, a small, eel-like fish occurring on the Pacific Coast of tropical America. Like an inseparable companion, this fish virtually spends its entire life curled up within the shell of the oyster, leaving it only for short intervals in search of food.

Only two expeditions in history have traveled the Northwest Passage, or between the Atlantic and Pacific oceans along the northern coast of America. The first was a westward voyage made from King William Land to Herschel Island by Roald Amundsen and six companions between 1903 and 1906. The second was an eastward voyage made from Vancouver to Sydney, Nova Scotia, by eight Canadians between June, 1940, and October, 1942.

*Combat*, an underground newspaper published in the Vichy section of France, recently became so widely read and powerful that government officials are now trying to counteract its influence with a paper of their own, which uses the same name, type and page size in order to delude the readers.

The Nazis, realizing that a ban on the sale of liquor in the vicinity of our Army posts would cause much bitterness and disunity among the soldiers, now broadcast on short-wave to America fantastic tales about widespread drunkenness in our military camps, thus trying, through such propaganda, to get mothers to demand prohibition for the men in the service.

The original copies of our Constitution and our Declaration of Independence have been removed from Washington to a secret vault where they are safe from bombs, fire, water, gas and enemy looters. Furthermore, their hiding place is known only to the Librarian of Congress and the Archivist of the United States.

The caffeine content of the bean taken from one coffee tree in a season may vary as much as 30 per cent.—By Georgia McKeon, Berkeley, California.

The new nickels will contain 56 per cent copper, 35 per cent silver and nine per cent manganese, while the present coins are 75 per cent copper and 25 per cent nickel. Incidentally, there probably will be the usual crop of unfounded rumors which follow the minting of new five-cent pieces—that they will not work some coin-operated devices.

Some freshly laid eggs are fresh. When frightened shortly before she is ready to lay, a hen is likely to retain the egg for several days. Consequently, after having been kept at her body temperature for such a period, the egg is actually stale when it is laid.—By Agnes Arbour, Fresno, California.

The occupational survey recently made by the Selective Service System for the third draft registration revealed that a large percentage of men do not work at the trade or profession in which they were trained and are skilled. Among those employed at other work were 8,200 out of 18,905 toolmakers, 22,600 out of 42,531 engineers, 58,105 out of 108,901 machinists, and 77,400 out of 128,245 electricians.

Giant flywheels in some stabilizing gyroscopes in large ocean liners require nearly three hours to reach their maximum speed of fifty revolutions a second, while the wheels in some turbines in hydroelectric plants will run on momentum, unless the brakes are applied for more than twelve hours.—S. B. Straus, New York, New York.

Five dollars will be paid for each interesting or unusual fact accepted for this column. Contributions must be accompanied by satisfactory proof. # MIGHTY LUNGS

## *for Roaring Airpower*

WHEN A MUSTANG "KICKS" a Nazi troop train . . . when a Corsair dives on a Jap cruiser . . . when a Flying Fortress or a Liberator takes off on a 2,000-mile trip . . . and when a Thunderbolt strikes a Heinkel five miles up...their roaring engines must have lungs . . . lungs to supply the "breath of life" to do each job.

Providing this fighting lung-power are the mighty lungs of "The Invisible Crew" of Bendix equipment—"STROMBERG" Injection Aircraft Carburetors. For they breathe five tons of air an hour into every engine and mix it with fuel under pressure in exactly the right proportions.

Fully automatic, "STROMBERG" Injection Aircraft Carburetors make instant adjustments for the blinding speeds, screaming dives and climbs and "tight"

twists and turns that are bringing victories to our fighters. Precisely metering air and fuel, they are helping our bombers predetermine fuel consumption to fractions of a gallon and range farther with heavier loads. Supercharged, they're taking our planes higher into thin air for conquests in the sub-stratosphere.

The Bendix engineering mind has mastered complex problems of aerial carburetion to give our fliers an edge in flight and battle. And this is just one vital member of "The Invisible Crew." Others fly, roll and sail into combat with our Invincible Crews on every front. Tens of thousands of Bendix craftsmen are devoting their skill and hearts to precision production on a mass scale to help win the war and the peace to come.

### BENDIX PRODUCTS DIVISION

Back America's invincible crew . . . our fighters on every front. Buy War Bonds and Stamps regularly.

From Coast to Coast, 25 Bendix Plants Are Speeding Members of "The Invisible Crew" to World Battle Fronts

COPYRIGHT 1943 BENDIX AVIATION CORPORATION

### THE MIGHTY LUNGS OF "THE INVISIBLE CREW"

The "STROMBERG" Injection Aircraft Carburetor is new in principle. Air flowing into the carburetor at triple tornado speeds is carefully metered to actuate a regulator, which controls fuel discharge under pressure. It provides exact, automatic proportioning of air and fuel for varying speeds, loads and maneuvers. Its mixture control device automatically compensates for all altitude density changes. "STROMBERG" Injection Aircraft Carburetors are standard equipment on most American aircraft.

## More power to you, Soldier!

**Y**OU have the physical power it takes and the brain power and the fighting heart. Your country will see that you have the gun power and the engine power needed to win battles in this age. We at Sealed Power are mighty proud of you—and proud, also, of our assignment to furnish piston rings, pistons and cylinder sleeves for the tanks, trucks and jeeps on which your life may depend. Our engineers and craftsmen are working to insure the utmost dependability of your engines in every climate under battle conditions.

And more power to you folks on the home front who must get to and from vital war jobs! It is more important than ever for you to get every possible mile out of the gasoline and oil you are allowed and to protect the life of your engine for the duration. If you are not getting maximum mileage from your gas and oil, have a set of Sealed Power Piston Rings installed. Available in packaged sets individually engineered for each particular make and type of engine. Ask for them by name. Sealed Power Corporation, Muskegon, Mich., and Windsor, Ont.

## WING TALK

**O**NE of the many results of the smashing victory scored by Admiral William F. Hale's warships over the Japs off Guadalcanal on November 13th should be an improvement in the morale of the Navy's surface-ship sailors.

Until that brilliantly fought battle, they had no adequate answer for the men of the Fleet air arm who liked to talk of the successes of the Navy's carrier task forces and the Jap ships sunk by dive bombers and torpedo planes. The airmen had an irritating way of rubbing in the fact that surface warships did not get into action in the crucial Battle of Midway.

They used to tell one story over the mess tables and club bars which got under the skin of many a battleship and cruiser officer. It concerned a Navy flier who was shot down in the sea west of Midway.

The flier, so went the tale, managed to get his rubber raft inflated and was paddling eastward, when over the crest of a swell came another rubber boat bearing a shot-down Nipponese pilot. Whipping out his revolver, the Jap opened fire on the American. The latter, caught by surprise, went over the side, and the son of the Rising Sun started to board the larger and more strongly built American life raft. By this time, however, the Yank had gotten his own re-

volver out, and coming to the surface coolly shot the Jap. He then reboarded his rubber raft and later was rescued.

At this point, the Navy airman telling the story would pause and then add, naming nastily:

"So you see, it is not true to say there was no surface action in the Battle of Midway."

**A**MERICAN chemists have given our war effort a notable contribution which will pay dividends in industry when the Axis is defeated and no life is resumed. They have developed "magic crystal" which prevents corrosion of metal equipment from corrosion during the long hauls to the fighting fronts overseas.

Formerly, whenever airplane motors, guns, tanks or other equipment with painted metal were shipped, they had to be packed in heavy grease to prevent rust from making them unusable. This prevented their being put into service immediately upon arrival at the front where often they were badly needed.

For example, officials say it took about 100 man-hours to clean a greasy airplane motor before it is ready for use. Moreover, there have been casualties when munitions lay idle for weeks because there was no solvent on hand to clean them.

(Continued on page 65)

# SKYWAY TO THE BATTLE FRONTS!

**International Diesel Power  
serves Pan American across Africa**

...NTY AND ON TIME!" With breath-taking speed Pan American Airways built the now-famous South Atlantic and African aerial life line for the Air Transport Command. Young, and plenty tough, the operation is a transportation miracle of the war.

...just 61 days, on Presidential order, Pan American got this new trans-hemisphere transport service in action, with planes winging across a vast expanse of ocean, dense jungles, scorching deserts. On board the Clippers speeding out from the American terminals are ever-mounting loads of war-vital supplies and materials . . . for the fighting fronts in Europe, in Russia and India, in China and the South Pacific.

...the forging of the vital chain of aerial bases to complete the routes across nearly 18,000 miles of land and sea will stand forever as one of the most in-

spiring chapters in aviation history.

It involved organizing a technical army of more than a thousand men, assembling a veritable mountain of materials, then transporting and spreading them over a route encircling half the globe. It meant anchoring marine and land bases in trackless territories. It meant coping with health hazards, braving submarine and aerial attack, and operating the ferrying services that pressed close on the heels of construction.

With the expert authority of the Air Transport Command and the unstinted cooperation of American manufacturers, the job was swiftly done. The way lay clear to great events. . . . *Here, as all the world knows, was a route destined to play hob with Axis strategy!*

**Says an Executive of Pan American:** "One might call the International Power Units the 'hearts' of our stations in Africa. We depend on the power from these plants for the lighting of buildings, shops and airports; the operation of pumps for the water supply systems; refrigeration of meats and other food supplies; electric ranges for cooking; ventilating fans; air conditioning units; laundry machinery; shop tools and equipment; the heating of water and other miscellaneous uses."

**I**NTERNATIONAL HARVESTER is proud of the part played by powerful International Diesel Units on the Pan American route to the Middle East and the Orient.

On many another life line in the global war, International Crawler Tractors and Power Units, and thousands of International Trucks, speed the way to battle. Like all International Harvester Products, known the world over, today they are devoted to war—dedicated to Victory.

## THE *golden age*

BY  
*Thomas h. raddall*

ILLUSTRATED BY WENDELL KLING

It was her second war, and it brought  
her greater wisdom in the ways of men

AS THE train drew near Port Ballard, Marian was conscious of a delightful prickling all over, and was amused at herself. It was absurd to think that she was fifty-six and her husband nearly fifty. She felt like a bride. And it was all so like the first war, when they were young; the months of separation, the letters that arrived jerkily, in little envelopes, hastily scrawled in out-of-the-way postal ports, and at heavenly intervals the telegram cautiously worded for the censor's benefit with a curt and demanding—"This (or that) hotel, Plymouth (or London or Derry or Aberdeen) on or after fifteenth love John."

She had met him in Montreal in '16, a brand-new sublieutenant on his way overseas to join some sort of motorboat patrol about the British coast. He was tall and dark and lively and, in her eyes, handsome as all the gods in one. Marian was not so tall nor so slim, a matter which gave her some regret—you weren't supposed to have a bust in those days. But she was just as full of life, and they were made for each other and knew it. There was a week of dancing and tennis and swimming, always together, and at the end of it they were married and went overseas, John in a transport with a number of ratings in his charge, Marian in a lumbering old Allan liner.

They had taken a flat in London, the content but slightly delirious London of 1916, and there she had awaited those telegrams which drew her, palpitating and shining-eyed, half the ports of the Kingdom. And in London in 1918 young Robin was born, true child of love and war, in which all things are fair.

The war passed over them lightly. In two years of hazard John Hericot suffered not a scratch, not even a ducking in the cold English seas. And his luck carried over into the peace years. In a world where most men

Marian rushed past the porter. John saw her at the same time. They threw their arms about each other. Marian's eyes filled with tears. From the car windows, the sailors stared

"You—you didn't tell your husband," young Mrs. Raeburn asked. "How I—how very brave you are!" "No," John said slowly. "Courage is something that you have only when you're young."

the platform were smiling and he returned them with their dunnage. But suddenly a frost fell on them all; the life went out of their faces and left nothing but blank masks. A tall officer was walking toward them. He returned their salutes mechanically and as soon as he was three paces off they scrambled into the train, muttering. The officer was John.

The porter stood on the platform holding Marian's hand baggage. She rushed past him. John saw her at the same time. They threw their arms about each other and Marian's eyes filled with warm tears. From the car windows the sailors stared.

She drew herself out of his embrace and they stood apart a little, hands clasped, conscious that people were staring at them and not caring. Marian was secretly relieved to find that he was the John she knew. There was not uncomfortably changed about him. The war and weather had given his large features a brick color, that was all. He was not lean by any means; he had put on a little flesh if anything, the slight padding which had been the jest of their snuggly Montreal circle was, if anything, more pronounced; his uniform seemed to strain at the buttons. He had a plethoric look. There were folds under his chin which with wifely solicitude she had seen down to strain. His mouth tasted his breath smelled strongly of whisky.

She said lightly, "Oh-ho! And the war is not over the yardarm!"

He looked away, muttering something about all the rules being changed for war.

HE HAD a taxi waiting and he drove to one of the town's three hotels, a small wooden structure stuck to the hill to look like gray stone and with a front cut in false embrasures that gave an effect of height if not of solidity.

"The rooms aren't much but the food is good and there's a charming little garden at the rear," John explained. Marian took off her hat and went into the bathroom to freshen up. When she emerged John was pouring himself a whisky from a bottle on the little table by the window. She watched the stuff mount in the glass one, two, three fingers—three of John's big fingers.

"Isn't that rather a stiff one for the time of morning, dear?"

He looked up, surprised. "Eh? Well, I've got a stiffish day ahead of me. Most of my crew are off to spend the twenty-eight-day leave; my Number One's got another half-stripe and yesterday to take command of a corvette up the St. Lawrence, and the navigator and the engineer are taking command somewhere." And irritably, "Any excuse to get clear of the ship. I'm left to the show with three men and a boy while the shore crowd tears the ship to pieces."

He poured a little water from a carafe into the whisky, tipped up the glass and drank thirstily.

"I should have thought you'd refitted Halifax," Marian said.

"Halifax is a busy place. Little boats like mine must refit where they can. This is really a nice little town. There's a good movie show and a government liquor store and a very decent golf course a few miles out."

Marian flung out the question which had burned on her lips all the way from Montreal: "How long have you—when did you get?"

seemed to be out of work he found an opening in the insurance business in Montreal and, what is more, made money at it. As time went by they acquired a pleasant home in the plush surroundings of Westmount, and in a state of well-furnished ease they had slid placidly into middle age and sent young Robin to McGill to study for the law. Then, as if designed to upset their lives, had come the new war, setting the calendar back twenty years at a sloop, with John off to take a refresher course as an officer of the naval reserve and young Robin throwing up his studies to enter the navy himself.

It was rather a shock for Marian to find herself at once the wife and mother of warriors. It was asking a lot of a woman to play this dual role at forty-six. Of course, the mother role was easy enough. Rob was a sublieutenant in a mine sweeper on the East Coast; he spent short leaves with her in Montreal and, once or twice, when his ship was in Halifax she had flown down to spend a few days with him. She liked being seen with him, being introduced to worshipful young women as his mother. Rob was

handsome, the image of John at that age and in that uniform, and the sight of him sometimes gave her a queer pang, as if he really were John, as if time had stood still for John while she grew old.

In fifteen months she had not seen her husband. He was commanding a corvette in the Western Approaches and in all that time had been no nearer home than Iceland. But now, miraculously, he was back in Nova Scotia; he had brought his rusty and battered little corvette to Canada for a refit, and he had sent her one of those mysterious telegrams that were so like the old times, that somehow conveyed his need of her.

SHE was going to him eagerly enough but with a dismaying sensation of going into battle with obsolete equipment. Other naval wives of her age and acquaintance had told her with ill-concealed sighs how young their husbands looked after a few months back in the service; how lean and hard and brown they were, how full of restless energy; and she had seen in their eyes and noted in their voices the plaintiveness of women who find that nothing, not even the

magic of war, can bring back their own youth.

John was to meet her at the railway station in Port Ballard. It was a mixed train and the journey was slow. The line followed the coast and at every small inlet there were boxes of fish to be loaded and various sorts of freight to be put off. But these glimpses of the sea fascinated her, separated as they were by miles of dark forest where there was nothing to watch but the telegraph posts crawling past and the monotonous wires going up and down. She thought of the sea as John's and Robin's. This was where they played so much with death and thought so little of it. It looked very blue and peaceful and it was astounding to reflect that just outside the rocky headlands shimmering in the sunshine were lurking German submarines.

The station at Port Ballard was a small red-painted wooden chalet like all the others along the line. The platform swarmed with the usual small-town crowd at traintime, but Marian noticed a number of naval ratings about to get on the train. They were a merry crew. Some had been drinking, and people on

The job should take a month at least." "Marvelous!" She threw her arms about his neck impulsively. He put the glasses down carefully behind her and embraced her. He kissed that generous mouth of hers with a wholly pleasing vigor. "It's like old times," she whispered. She was glad she had kept her figure. "Old times," John said, and kissed her again.

FORTNIGHT went by on wings that if not golden were at least becomingly gilded. They played golf nearly every afternoon and spent their evenings at the movies or in one or other of the hospitable homes open to them in the town. It was a delightful place with an unshaded Main Street running beside the tidal river where the corvette lay and there were fine walks in the woods above the town or along the shore. After two days of her company John shed his comely, harassed air like a skin. He laughed a good deal and was full of ideas for her diversion. In spite of the flesh he had put on at sea he still made a fine figure in a uniform; people were attracted by his hearty air, and women turned to look at him.

Marian found herself buying a finger brassiere and painting her legs. She had always been rather vain about her legs, her one "good" point in the popular wartime fashion. She bought the shorter dresses and some quite voluous underwear and had her hair done in the new off-the-face style which made her look taller. A few years before she would have thought all this her bad taste and even now she had a small suspicion that she was making herself ridiculous. She had always held in scorn for women in the late summer or autumn of life who clung to the summer trappings of spring. But now she saw that what other women thought you did not matter in the least. You made yourself young for John.

And she succeeded. He became attentive to her person as he had not been in years. He deferred to her wishes in everything. She even persuaded him to drink less. She was very adroit about that, and when one day he confessed that he was upset his digestion and he would be better off without it, she concealed her triumph with a jolly laugh and said he was getting much too angelic. He must drink a whisky-and-soda now and then or he would become impossible to live with. She mixed him one on the spot to prove that she meant what she said.

There were whole days when she scarcely thought of Robin at all and sometimes, lying awake at night with John breathing against her shoulder, she had a sense of guilt. But again she relished, thinking how utterly marvelous was that at forty-six she could command the attentions of a lover and the veneration of a son. Surely this was the golden age for a woman! And to think that but for the war she would never have known it! It amused her to reflect that in the final analysis all the schemes that fire-eating madman in Germany had been designed to prevent Marian and her little friend from becoming a frump.

She had a favorite nook in the hotel garden, a green bench hidden in the scrubby where she could take a cushion or two and laze in the sun or read or knit a little on the sweater she had started for Robin.

She was sitting there one morning when she heard John's step on the gravel path. She looked up, surprised. He had invariably spent the morning at the repair company's dock, aboard the cor-

vette, checking up on the progress of repairs and wrestling with the documents and "signals" which officialdom required.

She had an instinct that something was wrong and when he appeared around the end of the syringa bushes she was sure of it. His face was dark with unhappiness and some other emotion she could not understand. She dropped the knitting and sprang up, her white heel grinding the cherished wool into the grass. She ran to him crying, "What is it?" and seeing the telegram in his hand, "Something awful's happened. What is it? Is it—Robin?" All the beautiful flicker of youth which had come to her so unexpectedly went from her at once. She felt old and ill. And while her knees trembled and her wide eyes watched every tremor of his lips he blurted out, "I'm to rush the refit. I'm to sail in three days!"

Marian's relief was so immense that she sank on the grass, cackling in a queer

"Quite a bear, I'm told," said the voice. "Oh?"

"Timmy McDaid was with him overseas the past year. Told me the man had a temper like a sick Alsatian. Lots of guts and all that, but nobody liked him—the men hated him. There was some sort of scandal about him kicking a signalman—hushed up, of course—but sailors have memories like elephants for anything like that. Hericot was hauled up on the carpet for it, I believe, and got a tremendous wiggling. Of course, the man drinks like a fish."

Marian's ears burned. She played with her soup for a minute and then left the dining room casually as if she had forgotten something. She went straight to the nook in the garden. She could not bring herself to face John, until he was himself. She wondered how many others knew the story. Did Robin know? Perish the thought!

The afternoon was an eternity. She

ship. She dressed slowly and thought with a pang that soon he would be going from her, perhaps for another fifteen months, perhaps forever—but she refused to let her mind dwell on that.

As she approached the dining-room door the desk clerk brought her a telegram.

THE steam whistle at the repair slip was sounding a shrill one o'clock over the town when John returned to the hotel. He was wearing his second-best uniform, the one he wore at sea. It was faded and sea-stained and the stripes of his rank were so badly worn that the yellow cord showed through the gilt. He had left the other at the tailor's on the corner to be cleaned and pressed.

He carried a brief case, and his pockets were stuffed with papers and documents. His eyes were bloodshot and his voice was deep and unnatural but he came up the hotel steps briskly. Marian was standing by the west window when he came into the bedroom. She had done her hair in the old low fashion and was wearing a prewar dress.

He said at once, "Hello, what you wearing that old thing for?"

Marian said gravely, "There's something I want to tell you, John."

He flushed and looked down like a guilty schoolboy, saying desperately, "I know. But—don't say it now, Marian. Let's go down to lunch. I want you to meet my new officers—they're all staying here and some have their wives with them."

The young group had just come from cocktails in the Raeburns' room and were chattering merrily when John and Marian entered the dining room. The chatter perished at once and one or two of the young men began to get up respectfully and instinctively. John waved a hand and they sank into their seats. There were introductions. The young women acknowledged John's polite how-d'ye-do's with polite nods and murmurs. They looked rather hard at Marian. Doubtless they wondered how much of their careless conversations she had overheard, but she had an indignant notion that they were pitying her.

She made her eyes as cool as John's and slipped a hand in his arm as he turned toward the corner table. She forced herself to eat and to keep up a sprightly flow of talk through a meal that seemed interminable. After coffee the young officers lit cigarettes and waited for John to rise and go, as if he and they were already a single company in the little wardroom of the corvette.

MARIAN took pity on the young women. There was so little time left to them to enjoy together with their men in the sunshine. She arose, saying lightly to John, "And now you must have a cigarette with me in the garden before you bury yourself in that brief case."

On the bench in the seclusion of the syringa, far from earshot of the sun-baked hotel, Marian said quietly, "John, I'm afraid..."

"Don't say it!" he begged. "I'm so sorry about yesterday. I made a perfect swine of myself. You've been a brick, Marian, please hear me first. I've got to tell you." He lit a cigarette with a shaking hand and puffed at it furiously. "I don't know quite how to tell you. I suppose I'd better begin at the beginning. It was all right at first. It was fine to get back to sea with a command of my own. There were a lot of fellows anxious to get into those first corvettes and I was among the chosen few. I tell you I was as proud of that little tin hooker as if she'd been a battleship. I wanted to

(Continued on page 52)

"You may blow the horn now, Travers"

high voice, "Oh, my darling, is that all?" He muttered, "You don't understand. I'd counted on a month at least."

She laughed and wept hysterically; she was scarcely aware when he turned on his heel and strode off toward the street.

When she entered their bedroom an hour later to get ready for lunch she found John lying across the bed. A half-empty whisky bottle stood on the floor at the bedside. It was a warm July day and the room was hot and breathless and getting hotter by the minute. Soon the sun would pour against the southwest wall of the hotel and the room would be an oven. Before that happened each day they usually fled in a taxi to the little country club for some lazy holes of golf on the fresh greens beside the sea. There would be no golf today.

BEADS of perspiration formed on John's large face and oozed slowly down his cheeks. The counterpane under his head was dark with it. Marian's eyes sought the silver-mounted photograph of Robin on the dressing table. How fresh and clean and wholesome he looked! She thanked heaven that he was in another ship and far away.

She went down to lunch alone and found the small dining room nearly filled with young naval officers and their wives. There was much laughter and banter back and forth, and Marian caught the name of the corvette and realized suddenly that these must be her husband's new officers, sent down from Halifax to take the ship to sea. She wondered what these keen-looking young men would think if they could see John now. In a moment she heard her husband's name.

had a healthy digestion and she missed having had her lunch. When the little bell rang its warning for dinner she went up to the bedroom resolutely. John was still on the bed; he was asleep.

She went down to dinner and ate an omelette whose every mouthful seemed to choke her. The officers and their wives were very gay, but there was a strained note in the voices of the young women and Marian pitied them from the bottom of her heart. She had been through all that in the last war. She wondered if their husbands would ever realize how much the light laughter cost these charming girls. For a man at sea in these times there was monotony and discomfort—and fear—but a prospect of adventure always. For the women left ashore there was only the monotony and the fear.

She saw them withdraw to the hotel veranda. From its worn easy chairs they could look down on the shady street where, in the first dusk, the sailors from the corvette were strolling and flirting with Port Ballard's housemaids. At ten o'clock the bell rang a few slow strokes in the fire-station tower and the solitary town policeman began his curfew round, sending giggling boys and girls home and casting a solemn eye upon the dim figures spooning under the elms.

Marian went up to the room. She turned on the electric fan and undressed in the dark. John was still asleep.

She crept into the bed and lay quietly, thinking over the years she had passed with John. Toward morning she broke down and wept—and slept.

When she wakened he was in the bathroom, shaving. She pretended to be asleep until he had gone down to the

# THE HUNTERS

By Mary Hastings Bradley

## The Story Thus Far:

JILTED by a girl whom he idolizes—Claire Alloway, who marries the wealthy John Winston, in England—Michael Garrick, in Africa, becomes a hard drinker. Then, a thoroughly unhappy man, he marries and settles down on a coffee plantation.

Disgusted with Michael's frequent sprees, his wife—"Tommy"—sees much of a young neighbor: Robert ("Bob") McNare; and when Bob leaves for England, to take over a baronetcy, they are in love. But when Bob finally returns, he makes no attempt to hide the fact that he is infatuated with a beautiful blond widow who has come out on the same boat with him—Mrs. John Winston!

Michael has never changed. Despite himself, he still cares for Claire Winston—who, when they are introduced, acts—as he does—as though they have never before seen each other. . . . At Bob's suggestion, the four—the Garricks, Bob and Claire—go on a long hunt, a safari, in the Congo lion country. And Michael soon learns that Claire still loves him, is delighted to flirt with him, but that, apparently eager to acquire a title, she is not willing to let Sir Robert McNare go! . . .

Michael is a veteran hunter. In the days that follow, he does everything better than Bob; and Bob, watching him—and Claire—closely, soon realizes that undercurrents are running that he does not understand. He is jealous and mistrustful. When Claire urges him to return to England and go into politics (she paying the bills), he is disturbed. Can it be, he wonders, that she merely wants to be the wife of a baronet? . . .

The camp is deep in the lion sector. But, try as they may, they are unable to bag one of the big beasts. Then comes the morning when, returning from their *boma* (a sort of thorn-walled structure through which lions cannot penetrate), Tommy and Claire and Bob get the chance for which they have been waiting—an enormous lion charges them, the one Claire had wounded at the *boma*.

As the animal speeds toward them, all three prepare to fire. Nearer and nearer comes the big brute—then, almost on them, leaps in the air. Claire and Bob fire, almost simultaneously. The lion, hit, rears, is hurled backward, falls to the ground, lies there roaring. The trio watch the brute. The roaring stops. The lion lies motionless.

## VI

LOOK out!" Bob's voice was sharp. Claire had started forward. "Stay where you are! You never know."

They waited while he went forward, his gun aimed. The vanished natives reappeared, clustering behind him, their eyes bulging, their white teeth beginning to flash in grins. Bob bent over the lion, then beckoned them to come.

"He's dead all right. Gosh, he's big!"

He was exultant; they were all exultant and a little awed, still shaken by the terror of that charge, by the feeling of danger narrowly escaped. They stood about the lion. He looked tremendous, stretched out there, but not as tremendous as he had looked when charging. Bob knelt and explored the tawny body.

"You got him—straight through the chest," he told Claire. "Mine was a shoulder shot—to bring him down." He looked the dead beast over carefully; he parted the mane and after an inspection he declared, "He's twice yours. He's the one you shot from the *boma*. Look—your shot went through his crest. You shot too high."

"I'm glad I did," said Claire gaily. "I wouldn't have missed this for anything."

Her color was coming back. She said, "A charging lion," in a delighted voice.

"That's why the topis had the wind up," said Bob. "I was wondering—"

"A lot of antelope will thank you," said Tommy.

She said it to remind herself to be glad, because the lion looked so noble, too noble to be killed.

"He'll make a marvelous rug," said Claire. "That's really a good mane, isn't it, Robert?"

"Topping. Not black, of course—you don't get black manes here in the Congo. But you couldn't have a better golden mane."

"It looks like gold." Claire reached to touch it but Bob said "Ticks!" warningly, and she drew back her hand. The bristles of the mane were alive with tiny ticks, like beads of amber. Wryly Bob was examining his arm. "We'll have the deuce of a time with those chaps, skinning him," he said. He beamed at Claire Winston. "Now for a picture."

"My camera's in camp. But that doesn't matter, does it?"

"Not a bit. We'll fetch him in."

They found a tree, finally, large enough to provide a strong pole, and with the lion slung on that, the porters singing, elated with hope of matabeesh, they made their way to camp.

There the excitement renewed itself; they told Michael the story, Bob voluble with gladness, his constraint of the day before forgotten, and the porters told the other porters the story, acting it out, imitating the snarls, the charge, the roars. The camp was a confusion of talk and laughter and good feeling.

To have brought down a charging lion was a triumph, Michael declared. He was pleased, he said, that Africa was do-

ing Claire so well with thrills—yest a buffalo, today a lion. He told "You had luck to have an actual ch They're not so frequent. Except books."

They were at table now, breakfast hungrily on coffee, bacon, toast marmalade, and Bob kept glancing to the lion which was stretched out patch of shadow beneath a thorn surrounded by jabbering natives. he looked suddenly about to Tom and told her hearteningly, "Now get you one. Tonight!"

"Good!" Tommy smiled back, face lighting. A lion was the least of cares, but to go after lion meant l with Bob.

"Tonight—?" said Mrs. Wi

lo, and seemed about to say more, but under the table Michael's foot moved swiftly and she was silent. "Let yourselves plenty of sleep tonight," Michael counseled. "I'll see to the killing."

"No, you won't," said Bob. "I'll take care of that before I turn in." Michael would only delegate the job and no name was to be trusted with that skin. "But we'll have to take some pictures."

"I'll go prettify."

Mrs. Winston went off to her tent. The boys appeared for orders and it was decided not to have tiffin except for Bwana. As the three hunters wished to stretch through the middle of the day. "Ad nothing much for me," said Michael. "Feel a bit seedy."

He smiled at the quick look the others gave him and strolled off.

Tommy looked contritely after him. "That wasn't very decent of us," she said. "To be suspicious."

"No, it wasn't," said Bob. "He's kept his word. Definitely."

"Yes, he has." Bob hesitated. He blurted out, "You know, if he can do

this now, why, things may be all right—"

Tommy's heart contracted. Bob wanting things to be all right with her and Michael! "They may," she said in a small painful voice, and began to look blindly into a jumbled chop box. Bob said uncertainly, "I'd better get my camera, too," and went to his tent.

MICHAEL sauntered about aimlessly. Bob came from his tent, went to the group about the lion. Tommy disappeared. Mrs. Winston emerged from her tent. Michael strolled up to her, offering a cigarette.

She shook her head. She had tilted back the brim of her wide felt hat so that it framed her face. Her eyes were like blue stars, their lashes subtly darkened.

"Very — photogenic," said Michael softly.

In an even lower voice he went on, "Let them plan to go out. Let them think you are going. At the last moment—get a headache."

"A headache—?" repeated Mrs. Winston, in the same lowered tone but with a questioning inflection.

"Yes. At the last moment. Say you can't sit up another night."

She glanced up. His dark eyes on her were charged with significance, with secret urgency; a quick, intent look passed between them. She murmured, "You think they'll go—?"

"A sporting chance. No harm in trying."

"But won't they expect you—?"

"To take Tommy out? No, I'll have a touch of fever—I'll start it soon not to be too—coincidental. But just a touch. Nothing to keep them back."

Swiftly she considered, her eyebrows arching in doubt. She questioned, "They'll think it quite right—?"

"If we make them think so."

Then he said lightly, "But don't let me lead you astray. If this is the first misstep—"

"Don't be a donkey!"

Claire tossed that out, from off the top of her preoccupation. Michael gave a thin, unseen smile. "Then why hesitate?"

She stood, turning over the thought; she held up her camera to him—tableau for the waiting group about the lion—

and murmured, "But the boys—the porters—?"

"They sleep like logs," said Michael. "The night will be our own."

A little smile nibbled at the tense compression of her lips; a look of soft, foretasted pleasure glimmered in her. Yet her guarded voice was curt: "Only one night, Michael!"

"Only one."

"Don't be too sure of one!"

With that she started toward the group where McNare was waiting and Michael walked beside her. "Save your headache till the end of dinner," he said, under his breath, and then in a clear, carrying tone, "Photogenic is the word, isn't it?"

Claire laughed; her laughter had an excited ring. She went to Bob McNare and gave him her camera. "Michael says I'm photogenic," she said gaily, the "Michael" slipping swiftly out, then as swiftly she went on, "You don't mind my calling you 'Michael,' do you, Mr. Garlick? You all say Michael and Bob and Tommy and I feel too frightfully formal, here in camp—"

"I shall look forward to it," said Michael.

He stifled an impulse to grin at Bob's expression. With a "Good luck!" he left them to their picture-taking. He went to the mess tent, caught up his gun from a chair there, shook his head at the boy who started to follow him, and went down the path toward the river where he and Claire had gone two nights before.

He felt restless, unsettled. The brief excitement of the colloquy with Claire had gone, and the thing that he was planning appeared profoundly distasteful and unnecessary. Surely there must be some other way.

IN THE glade by the river he sat down—here was where he and Claire had stood in each other's arms, here was where the agony of his humiliation had transfixed him—and stared out across the river, empty now of hippo, empty of everything but sunlight and a dark, drifting log from which an eye peeped out at him. That eye looked incredibly knowing and obscene.

"Oh, you would, would you?" Michael muttered. He raised his rifle, then lowered it. A shot at the croc would bring his companions. He leaned forward, gripping his knees, his gaze on the dark growth across the river, bottle green beneath the bright blue of the morning sky. A drift of yellow butterflies flew upward, like slow sparks.

"Don't be a donkey, Michael!"

That bubble of recollection came to the top of his mind, and he smiled bleakly. He had not needed those words, but it had seemed important to provoke them. Another bubble came. "Only one night, Michael!" Afraid he'd be a nuisance, a hanger-on. His smile now was as thin as a used knife blade. Very sensible of her. His sardonic mind approved her practicality. . . . But she wanted that one night. She wanted to feel him adoring her. . . . "If I should die without possessing you—!" Had his tongue ever said that?

Suppose he put his gun to his head here and now? But that would not help Tommy. Something should be done for Tommy.

There must be some way besides that  
(Continued on page 40)

Michael offered her a cigarette. Claire shook her head. She had tilted back the brim of her hat so that it framed her face. Her eyes were like stars. "Very photogenic," said Michael

# HE MAKES THEM OVER

BY DOROTHY KILGALLEN

PHOTOGRAPH FOR COLLIER'S BY GEORGE DE ZAYAS

The saga of Don Loper, director, dancer, composer—a Broadway Pygmalion with a passion for making women perfect, at least outwardly

VERONICA LAKE was quietly in "21," nibbling a day lamb chop and submit the whistle-equivalent glances of her mirrors, when a dark, wide-shoed young man with a comical face walked up to her table, lifted the nation's famous coiffure by its wheat-gold and held it aloft like a frightened erwoman's.

"Girl," he said sternly, "you're to wear your hair the way you do. Look marvelous with it up."

Whereupon, he dropped the glances and left—he being Don Loper who could no more forego telling a \$2,000-a-week Lake what was with her universally swooned trade-mark than you could resist your old grandmother that her house was on fire.

Loper is the victim of an uncurable urge to make women more attractive. Aside from his various professions—dancer, designer, composer, director and producer—he is fond of taking on small jobs (such as slapping gilding on an already pulchritudinous and big jobs (like converting an awkward chick into a bird of paradise). He has improved more women than nine can sleep a night. Compared to him, Pygmalion was a guy who went to bat only once.

Not many days after the Lake incident Don took what he calls the choochoo to Hollywood, to become Ginger Rogers' first dancing partner since Fred Astaire. This is an agreement for which most actors would throw their eyeteeth, right arms and all other traditional exchanges. But imagine Don as sitting in his little apartment on the train, atremble with excitement at the prospect of matching with the agile Academy Award winner you're off the beam. And if you don't change the color of Ginger's hair, he'll stop at dancing and won't touch her entire wardrobe into the convenient ash can, you just aren't to the kid.

It might be well to give Hollywood a hint of what to expect. Ginger knows she and Don are old friends from the days when she was a leggy flapper on Broadway musicals, and she is aware that he adores her personally, admires her as an actress and sincerely believes she is one of the worst-dressed women in the world.

"She's the little navy blue and white piqué, very serviceable type," he says, making it sound like one word. "In fact, she *could* look divine."

Ginger once rather patiently explained to him that her public regarded her as the original white-collar girl and, to please these admission-paying nudes, she felt obliged—quite literally—to wear white collars; but the alibi failed to impress Uncle Don.

"Go away, girl," Don Loper said. "You wear them because you like yourself."

It is barely possible that Hollywood—including the stellar Miss Rogers—may pay a bit of attention to the Lake edicts, because at least it is a sure thing that he is not sounding off to get himself noticed. He has built quite a solid reputation for talent in several directions without letting peep a syllable—a

(Continued on page 54)

Despite the soda fountain, Ginger Rogers looks anything but "the little navy blue and white piqué, very serviceable type." Don Loper, Ginger's dancing partner in *Lady in the Dark*, casts an approving eye on her outfit.

# THE OUTSIDER

A SHORT SHORT STORY COMPLETE ON THIS PAGE

DEBORAH took her letter, still unopened, and walked slowly through the lych gate. The path past the Norman side of the church, climbed a slight rise, and ended suddenly in an open field. You could see the roofs of the village below, the spire of the church, and a mile away among the trees, those red chimneys of Wareham Hall, her home. She had come out here to read the letter alone and now she struggled with a feeling of dread. It's not easy to read a letter from a mother-in-law you've never seen, especially when it's too late to do anything about it.

Deborah opened the letter with icy fingers and read it slowly and carefully. When she came to the last line she gave a little gasp. "Oh—!" she said in dismay. "Johnny!"

WHEN she first saw him, that summer day two months ago, she had been walking up the nave of the church with a bunch of roses for the altar. He was standing under a marble tablet to the memory of William Aldridge, killed at the Battle of Blenheim, and she was struck by the rapt expression on his face. She also noticed that this young American officer was very nice looking. She was on the point of offering to show him the tomb of the crusader, one of the finest in Surrey, when the door of the vestry opened and Miss Mickleham, a sharp-featured female in charge of the floral decorations for the altar, saw him approach. "Doubtless you wish to see the church tower," said Miss Mickleham in a cold, icy voice. "This way, please."

"No, I don't want to see the church tower," replied the American tourist, smiling of 1942, "I came here to look at the tombs of my ancestors."

Miss Mickleham answered him with a scornful smile: "You mean you find it amusing to identify yourself with the names on those tablets."

"In other words, you are playing a game, pretending these are your ancestors, usurping a part of England that doesn't belong to you, because you have the same name."

The American gave a startled flush but kept his temper. Miss Mickleham turned angrily on her heel, and the vestry door closed behind her with a faint slam. Feeling a little sick, Deborah walked toward him.

"Oh," she said in distress, "I'm so sorry that happened! You mustn't mind Miss Mickleham, though. She's like that."

"It's obvious," he said with a dry laugh, "that the old girl doesn't like Americans. Resents them, I suppose."

"Yes, but there are a lot of us who don't," she said quickly. And then, on an impulse because she was so angry with Miss Mickleham and because at that range he was even better looking, she had asked him to tea.

At first sight of Wareham Hall he stopped short. "Gee whizz!" he murmured with emotion. "You know," he

said as they walked on, "I've heard about Wareham all my life. But I had no idea it was as lovely as this. It's swell, isn't it!"

He said it with a touch of pride. "Yes, it's a nice village," she said, "but you mustn't expect too much of Wareham Hall—it's not what it used to be."

There were no butlers or footmen any more—only old Nana who had found an egg somewhere and made muffins for tea. Deborah's mother and father were sitting in the library, for the drawing room was wrapped in dust sheets. She introduced him briefly as "Lieutenant Aldridge."

"Aldridge—?" said her mother. "Why, that's an old name in Wareham. There are loads of them around here still."

"I know," he said, "we came from here." Once more the tone of pride at belonging here.

Deborah told what had happened in the church. Her mother was indignant. "How simply dreadful of that woman! I wonder if I ought to tell the vicar?"

"Most unfortunate!" added her father. "Oh, I don't mind," said the lieutenant, with a smile. "I was a bit startled, that was all."

"We shall have to introduce you to your distant cousins," added her father. "They will be delighted to see you."

Deborah sank back in her chair with a feeling of relief. They were accepting him—making him feel at home. And that, she suddenly realized, had become very important indeed.

He said politely that he would love to come back on his next leave—but that was all he could say. American officers were birds of passage.

It was a week later when he returned. She'd been in the garden, pulling up carrots. Looking up suddenly she saw him, leaning against the wall as though he'd been there a long time.

"Hello!" he said. "How are you?"

"I suppose," she said in confusion, "you came back to have another look at the tombs of your ancestors."

"No," he replied. "I'm not interested in dead relations any more. I came to see the living."

She said she would introduce him to old Mr. Aldridge who lived in the Dower House. After the visit he said that Mr. Aldridge—who was very eccentric—was exactly like his Uncle Ned, and it must run in the family.

They were standing on a footbridge over the Ware. Below the bridge lay the village, bathed in afternoon sunshine. There were five white cottages with thatched roofs, a Georgian public house, and a few little shops with bay windows. His eyes were fixed on the scene, but she could feel his awareness of her as part of it.

"Deborah—!" he began hesitantly. "I was hunting for my ancestors, but I found something else I wasn't looking for—"

He stopped, and she helped him mischievously.

"You found a place where you belonged. An English village you could call your own. Something to help your homesickness."

"All that," he replied in a low voice, "and Deborah, too . . ."

DEBORAH read the last paragraph of the letter again.

"Johnny is a darling, as you say," wrote his loving mother, "but the poor boy is terribly vague. I've told him for

years our family came from Sussex, and your village, dear child, seems to be in Surrey. I hope he won't be too upset when you tell him that Wareham isn't where he belongs—"

The thin, reedy whistle of the afternoon train—Johnny's train—brought Deborah swiftly to her feet. She tore the letter to pieces and scattered them on the grass.

"But it is," she said. "Wareham is just where he belongs—now."

She'd been in the garden, pulling up carrots. Looking up suddenly she saw him by the wall. "Hello!" he said. "How are you?"

Gen. Arnold, who likes people, halts his inspection of Briggs' aircraft turret plant long enough to talk things over with the girl operator of a drill press

Accompanied by Geo. T. Christopher, president of Packard, and Brig. Gen. Meyers, Gen. Arnold looks at work being done on the Rolls-Royce gear-case assembly line

# The Sky's the Limit

By Corey Ford and Alastair MacBain

From 1912 and a 43-mile-per-hour record in a Wright biplane to 1943 and the command of the Army Air Forces, the story of General Henry Harley Arnold is the story of military aviation in America. The whole U. S. is his air base and the sky's his limit.

HE MOVES at almost a trot through the mile-long bomber plant, zigzags between the glistening rows of fuselage frames, threads his way past milling machines and lathes, dodges beneath the skeleton of a half-finished wing, cocks his head and peers up at a radial motor dangling from a rack. He looks around and above and on either side, never missing a detail, and his lips curl at the corners in the famous grin.

It's practically a permanent grin he's got, serene, imperturbable, warm as a fur-lined flying suit; it earned him the nickname of "Hap" back at West Point thirty-five years ago, and today, when he's commanding general of the Army Air Forces and boss of America's destiny in the skies, the nickname and the grin are with him still. Encouraged, the plant superintendent points complacently to the long vista of bombers on the assembly line: "Satisfied, General Arnold?"

The grin doesn't waver. "Satisfied?" Hap says, over his shoulder. "Course not. I won't be satisfied till we've got enough planes and motors to win."

The erect, wide-backed, stocky figure hurries on; and his staff mops its collective forehead and straggles wearily in his wake.

He never seems to tire; he's turbo-supercharged, they swear; he'll go eighteen or twenty hours a day like this without stopping, wearing out men half his age. He doesn't rely on secondhand reports or opinions, but insists on finding out things for himself.

He has an insatiable curiosity about people as well; now and then, he'll halt abruptly in his inspection of a factory—to the considerable relief of the rest of the party, whose feet by this time are killing them—and engage in conversation with a girl working a riveting machine, or crouch on his haunches familiarly beside a young mechanic with a grease gun.

"Nice work. Keep it up," he'll say. "We're counting on you." He likes people, is genuinely interested in what they think.

A visiting British air marshal in the party murmurs to us, behind the back of his hand, "You know, that's the thing about the general that impresses one most. He's able to see the forest and the trees."

Arnold completes his inspection, strides to his waiting plane with the commanding general's insignia painted on the fuselage, and turns to bid goodbye to the perspiring superintendent. "Okay," he says cheerfully. "Now all we need is to double the output."

"But—" The superintendent rocks, and regains his balance. "That's impossible, General."

"Sure, it's impossible," Arnold grins,

as he climbs aboard his plane. "It doesn't mean it can't be done."

Lieutenant General Henry Arnold—Hap down to the last monkey in the ground crew, for he is probably no officer in the services today who doesn't have a more universal affection for his men—doesn't believe in the impossible. He defines the impossible as something that hasn't been done. That's why he's not dismayed by his current job of creating over the world's greatest air force in the world: planes this year, a hundred thousand pilots annually—an air force estimated total of 2,000,000 men. He isn't sure himself how many new planes will be needed before the war is over. There's no precedent for him; even 2,000,000 may not be enough. But he's sure of one thing: It can be done, no matter how big the job. It's impossible, but it's going to be done.

## A Man-sized Workout

He takes his accustomed place in the front left-hand seat of the conversion plane as the expert first sergeant, Major Peterson, touches the controls of the big Douglas takes off on the runway. We flop into our seats opposite him, in consideration of his rapid-fire swing. We flop our seats opposite him, in consideration of his rapid-fire swing. We flop our seats opposite him, in consideration of his rapid-fire swing. We flop our seats opposite him, in consideration of his rapid-fire swing.

We were up at five-thirty this morning and still he was ready long before we were. He's inspected half a dozen airfields and training centers so far today, and he isn't even bored. You wonder when he'll relax.

You glance across the aisle at him—restless, alert, checking the scroll of calling notes over his shoulder to see if he's missed any. (Ten days later he'll recall every last one he said and ask if the job has been done.) He goes over a sheaf of papers, down through the window at the finished staging field, glancing back to make sure that everyone else in the cabin is comfortable. His face is flushed against the light, is so ruddy and, as always, glowing. There's a white vertical scar on his forehead he catches us looking at it. "Did you tell you how I got that?"

When the general starts a story with "Did I ever tell you . . ." it's to gather round. He's one of the best storytellers.

"It was 'way back in 1912," he says, "just after I graduated from the Brothers' flying school at Dayton. General Arnold is one of the first forty-two aviators in this country, with the longest record of continuous flying of any pilot in the Army." (It was just a days, an airplane was just a chain of sprocket box kite, with three sticks, and wooden paddles for a propeller. Well, I was flying from Salem, Massachusetts, down to Bridgeport, and a crash landing in the water. I

"At ease!" was the order during this informal chat between Gen. Arnold and Army Air Forces students at the Packard Rolls-Royce Engine School

According to the best reports of his staff, Lieut. Gen. H. H. ("Hap") Arnold is turbo-supercharged for work. He'll go eighteen or twenty hours a day, wearing out men half his age. Yet the famous grin, with sparks in it, never wavers

PHOTOGRAPH BY ALBERT FENN-PIX

Inspection from the wing of a C-87 cargo transport. Left to right: Britain's Air Marshal Evill, Gen. Arnold, Maj. Gen. Yount, Geo. Newman of Consolidated

First stop on Gen. Arnold's tour of camps last Sept. was Atlantic City, where the Air Forces saved construction time by taking over hotels. Col. Glassburn, right

was, all tangled up in the wires and bleeding like a stuck pig, and just then I saw a couple of GAR veterans sailing past me. I yelled at them, and they hauled in close to the wreck, looked at me for a minute, and then squared away into the wind again. 'Anybody's fool enough to get himself into one of them things,' I heard one of them mutter, 'he can get himself out again.' "

The country's come a long way since then, you reflect. The general has finally won his lifelong fight for the recognition of air power; won it with the devastating abruptness of an explosion. Overnight, a penitent Congress started spewing money in his direction like a busted slot machine.

You can remember not so long ago when certain myopic lawgivers on the Hill voted down automatically every request the general made for an increased air force. You remember, as recently as the fall of France, that one well-known representative arose in Congress to denounce his modest plea for a thousand planes.

#### Has a Fighting Grin

"Ridiculous!" said this statesman. "Whom are we going to fight?" Now, forgetful of the past, they are clamoring for more and more planes, passing billion-dollar appropriations without blinking, giving him everything he asks for. "Everything," he says, with a grin, "but time."

It's a fighting grin, you realize, as you study him across the aisle. There are sparks in it; his aides will tell you that you haven't lived till you've been bawled out by the Old Man. It's more than a term of affection; it's a tribute. They know his achievements, know the spectacular string of firsts that he has hung up in the course of a record-breaking flying career.

His story is virtually the history of military aviation in this country. He won the first Mackay Trophy ever given, in 1912, by flying a Wright biplane

around a thirty-mile course at the breaking speed of 43 miles an hour. same year, he established an alt record of 6,540 feet. Later in crowded year, he carried the first mail ever flown in the United States sensational five-mile hop from New Boulevard Airdrome in Long Island the way to Hempstead.

He was likewise the first to use guns and wireless on planes; he pioneered air reconnaissance; inaugurated the first forest air patrol; was the first aerial engineer. In 1934, he won the Mackay Trophy a second time—a record in itself—by leading a flight of ten tin bombers from Washington, D. C. to Alaska, proving his friend General Mitchell's oft-asserted contention that the United States was within bombing range of Alaska. We were in Fairbanks that summer when he landed and we remember a singularly proper statement.

"We've got to develop air defense here in Alaska," we heard him declare eight years ago. "Some day this story will be of the greatest importance to our Pacific strategy."

#### He is an Ardent Sportsman

We remember a fishing trip to a luscious grayling stream in the upper Yukon, that same summer in Alaska, when five rods were bent double simultaneously, and the general's yells drove even the screeching of the reels. He fishes as enthusiastically as he does anything else; you wonder whether it is the secret of his energy. Maybe he relaxes in the variety of his entertainments. He's an avid sportsman. A group of old-timers in Tennessee, for example, don't consider a fox hunt is right unless the general is there to sit on the porch with them and argue which hour is running first.

In southern California, there is a rancher who won't tell anyone else where the quail are feeding—saving them for Hap. He makes friends everywhere. Death Valley Scotty is an intimate of his. He still gets letters from sourdough Alaska addressed "Hap Arnold, Washington, D. C."

His interests are unending. He is a facile writer, author of the popular Bruce series of boys' aviation books as well as coauthor with General Ira Eaker of Winged Warfare and Army Facts, authoritative volumes on modern military power. With his youngest son, he has built model airplanes. Once he almost invented a child's game in which toy bombers were catapulted by elastic onto a map of Germany; he dabbled briefly in raising; and while he was at March Field in California, he had a short and similarly unprofitable venture with an owl.

The plane circles to land at another newly commissioned staging field, and he glances out of the window at the landing strip, marked by old automobile tires painted a bright orange. He frowns.

"Have them get some other kind of marker," he tells his aide quickly, "turn those tires in for salvage."

He finishes his inspection, the cars are waiting to take him back to the flying line. A dusty jeep is standing on one side, a lone corporal dozing at the wheel. The general's face lights.

"Come on!" He beckons to us impulsively. "I want to have a look at the enlisted men's area."

To the consternation of the assembled officers, he jumps in beside the corporal and we bump and rock down the unimproved company street in a cloud of dust.

# THIEVES WITH UNION CARDS

By Westbrook Pegler

How Jimmy Petrillo and his musicians got away with it, and why our antitrust laws, in fact, let a union take money for services not needed and sometimes not even performed

THE editor who asked me to do this story started out something like this: "The decision of the United States District Court in the Petrillo case suggests to me that we ought to have an article explaining just how it is that the Wagner Act—"

Now the fact is that the Wagner Act is not the governing law in the Petrillo case. The Wagner Act is the New Deal's, miscalled Labor's Magna Charta, which is supposed to guarantee to workers the right to bargain collectively with their employers through agents of their own choice, but which, in fact, compels countless American citizens to accept bargaining agents (or unions), whom they detest and fear and who rob and otherwise abuse them with the connivance—indeed the active assistance—of the national government of their country. By a dangerous paradox, it denies the very right which it guarantees. It has many bad faults, but it is not the law of the Petrillo case.

The Petrillo case is simply this: Jimmy Petrillo, of Chicago, is president of the American Federation of Musicians, commonly and hereinafter known as the Musicians' Union. It is a huge union with many good musicians among its members and thousands of part-time or Saturday-night performers. It is a bad union and is at its worst in New York where incidentally it planted picket lines in front of a theater to compel the management to employ pit musicians (for whom there was absolutely no need) because, in the course of the play, a photograph record was used to furnish a few minutes of off-stage music. The pickets took their stations only a short time before Mrs. Franklin D. Roosevelt approached the theater with her political protégé, Joseph Lash, the inveterate scoundrel, with tickets for the play.

## The Picket-Line Question

Mrs. Roosevelt, without examining the merits of the controversy, refused to cross the picket line, thus publicly endorsing the union's contention that the management was unfair to organized musicians, although the theater was unionized from (as they say) the front of the house to the alley. The house staff, the stage crew and the actors were all union members, and there was not even a pretense of a controversy on any subject between the management and any employee. No musicians were employed, therefore, no musician could be at odds with the management in the relation of employee and employer.

Thus, Mrs. Roosevelt took a position mainly unfair to the organized laborers who were employed by the show because, had the picket line closed the attraction, they would have been thrown out of work in an occupation which is pretty rotten at best. The employer can be left

out of our consideration entirely. Obviously, he has no rights if it is held, as a matter of principle, that a picket line will be respected and the union upheld, regardless of the merits of the case.

A few months ago, Jimmy Petrillo decided that, after a certain date, no member of his union would be allowed to make recordings to be played over the radio or in public places. His object was to compel the employment of idle brothers.

Of course, he could not succeed in that, for he knew as well as everyone else that the little hamburger dancing spots around the Army camps and in the humbler neighborhoods of factory cities could not afford to substitute live musicians for juke-box records.

He knew equally well that many radio stations could not afford to hire live musicians. Already, most of these stations were employing, at union wages absurdly beyond the worth of the work, individuals known as pancake turners, whose only duty is to put the record on the machine and click the lever.

This decree of Jimmy Petrillo stirred great excitement in Washington. Elmer Davis, of the Office of War Information, uttered a cry of alarm for the morale of the Armed Forces and the toiling civilians of the war industries. James L. Fly, the chairman of the Federal Communications Commission, which governs the radio industry, came to the incidental defense of the employers, meaning the owners of the radio stations.

"Any time when significant public-service programs are shut down from the air," he said, "we have a breakdown in the very services for which such stations are licensed to serve to the public."

He added that, as everyone including Jimmy Petrillo knew, the many smaller stations with little local talent available, would be up against it. Jimmy's decree meant that these stations would have to import from other cities and support in idleness numbers of Jimmy's subjects as stand-by performers, their wages to be the price of permission to continue the use of recordings. For, Mr. Fly said, the smaller stations devoted sixty per cent of their time to recorded music.

Soon thereafter, Thurman Arnold—poor old Thurman, in charge of the Anti-trust Division of the Department of Justice, who is always being thrown for a loss by the United States Supreme Court in union cases—decided to challenge Jimmy. He carefully prepared and brought into the United States District Court in Chicago, which is Jimmy's home town, an appeal for an injunction under the Sherman Law. This is the law which forbids combinations and conspiracies in restraint of interstate commerce.

As originally interpreted by the courts, the Sherman Law was used to handcuff

LAWRENCE A. MONAHAN

# ONE MAN'S DOGS

By Vereen Bell

Businesslike and arrogant is Fred, the handsome pointer, who is undisputed boss of the kennels and permits no canine foolishness, either at home or at work. "Bring 'em in and lay 'em down," is his motto

No good bird-dog man will ever admit that his isn't the world's best dog, nor will he ever give up the search for a better one. It's a paradox that pays off, once in a while.

PHOTOGRAPHS BY THE AUTHOR

THERE'S a pointer lying on top of the doghouse watching as if he's king of the kennel. He's the best dog of the lot, but he is good. And he is the boss. Perhaps his story will illustrate something of what it's like to be a bird-dog man.

On a cold day, a couple of years ago, we stopped at a little country store and sounded the horn. A countryman in boots came out and he was the one who was to show us the hunting land.

"You got any dogs?" he asked. "I got two we can take."

We had brought our own dogs but I told him to bring his along, too.

As we rode to the hunting place we began to get acquainted. Our new friend had a certain hardness about him that is not typical of our Southern country people.

He asked my name again and then said, "You're kin to Judge Bell, the state judge used to be solicitor of this circuit?"

"He's my father."

He was silent for a while and finally he said, "I prosecuted me one time."

I asked, "What were you charged with?"

"Murder."

As you will guess, this caused the conversation to drag. In fact, it almost rolled over and died. Although I am a writer, whose job it is to unearth as much of a man's story as possible, I must say that this was the first time when I was willing to change the subject. In the day he indicated that he regarded my father highly—but that was later.

It was the bird dogs who remedied things. For let me say that every bird-dog man thinks his dog is the best in the world. So I thought his dogs would be ill-bred potterers, and he probably thought mine were half-wild idiots that didn't know a quail from a jack rabbit. We were both wrong.

After we had been hunting a while, he was more willing to tell me that I had a couple of pretty nice dogs than to give me the true praise from another bird-dog man is a rare thing. But top dog for the day was his two-year-old pointer Fred, which he put down after my dogs had hunted a couple of hours. This was a fleet-footed rambler, and he covered those flatwoods. He found several coveys, handled them properly and pointed them stylishly.

"There's a dog," I admitted finally, "that I would like to have." "That's mine."

After that, things went along fine. We ate sandwiches by the bank of the river and talked about the war. He had been in the Rainbow Division in the other war. But mostly we talked about bird dogs, and when he started home that night, he mentioned that he was willing to sell his pointer. So Fred became my dog.

Like many dogs raised and hunted exclusively by one man, Fred did not quickly get used to changing owners. Fred's training was of an old-fashioned severity—judging by the birdshot to be found now here and there under his hide—but for months, his heart still belonged to the other man. Hunting for me was only fair; just when he was about to get his mind on his business, he would suddenly stop and look back at me and then wander on heartedly.

Before long, his health began to fail. He lost weight and became anemic. I won't say all this was caused by grief. I only say that Fred got sick, and three very good veterinarians in turn failed to find a specific disease. For months, we worked on him, feeding him liver and meat and eggs and milk, and injecting vitamins, and finally we got him well, in spite of himself.

With health came belligerence. Fred is boss of the kennel.

Lavish lickings and enthusiastic wriggles make Butch—who's going to be man's best friend if it kills both of you—a hazard in a car. A short leash keeps her where she belongs.

an make a mistake, and the ever-loving Butch is no exception. Here her  
ints out that flushing and retrieving box turtles get a lady nowhere

added corn cob quickly teaches youngsters that things, including birds,  
picked up with loving care. This sly dodge is called force-breaking

kennel. He eats his food leisurely—"He likes to just mench along on it," says colored Henry—returning several times during the hour to take a few bites. When he is not eating, he doesn't need to stand guard over the remaining food. Although there are two or three larger dogs in the kennel, not one of them will touch Fred's food.

Furthermore, he now hunts the way he did that day I first saw him. Apparently he is satisfied with me as a master, or at least he has become too polite to show his feelings.

Snow was a similar case. Snow was a "drop," half pointer, half setter. Setters and pointers should never be crossed, for the result is usually a defective and mongrelish animal, and even the occasional excellent drop does not justify the cross. However, Snow did not look as bad as most; in fact, I didn't know he was a drop until later; I simply took him to be a setter of not simon-pure ancestry; and he was a good hunting animal.

Snow was raised and trained—and, like Fred, trained by harsh methods, judging by his tendency to overcaution in pinning his game—by a snuff-dipping backwoodsman friend of mine. I first saw Snow at work in the blackjack-oak woods of his owner, who had told me he had a dog to sell. Snow made a prodigiously long cast and pointed, and when we fired, two birds fell. I fired at another but apparently missed. Snow retrieved the two birds, and we went on. Presently Snow returned from somewhere with another bird in his mouth. The bird I thought I had missed had fallen at a distance, and Snow had found it and brought it in. That is retrieving of the highest quality.

Snow was a peculiar dog. Whereas, most bird dogs—especially setters—show a marked affection for human beings, Snow quite obviously cared for nobody. I had noticed his indifference to the farmer before I acquired him. Snow would stand still and allow you to stroke him, and would even wag his tail politely, but he really preferred to be left alone. What he wanted was to lie sleepily in the shade all summer and hunt all winter, with as little human contact as possible.

Although a one-man dog heretofore, from the first, Snow hunted quite industriously in my company. Only in one way did he ever show that he knew he had changed men. He never retrieved again. I hunted him for two years but not once in that time would he ever bring a dead bird to me.

#### The Affectionate Butch

Butch is as different from Snow as a dog could be. Butch is a small pointer, not yet two years old, and her idea of heaven is to be in my lap licking my face. She is intolerably affectionate. In fact, she's a nuisance in a car, because she absolutely will not stay anywhere but in my lap, wriggling and nuzzling and licking at my face. Push her away and she comes back immediately. Slap her—if you can force yourself to do it—and she cringes for five or six seconds and then she's at it again. The only way she can be transported inside a car without making you a menace to traffic is short-leashed on the back seat.

Unlike Snow, Butch's happiest moment is when she is bringing me a bird.

The big day at last: the products of months of teaching hit a point while the owner, suffocating with pride in his handiwork, reaches for the camera. Other hunters will later examine the picture with great politeness

In her play about the yard, having no bird to retrieve, she brings me sticks, old bones, or anything she happens to run across. Afield, she occasionally runs across a box turtle, and no matter if she is a quarter of a mile away, she stops hunting and brings the turtle proudly to me. This trait might become annoying if it weren't for the fact that the turtles aren't often encountered in the winter-time.

I might add that these turtles seem to have an odor similar to quail, because many perfectly good bird dogs point them. Jake Bishop, the veteran trainer, once had a dog that would pick up any stray box turtle and continue hunting with the turtle in its mouth; and if it happened upon another turtle, it would put the first one down, pick up the second and go ahead with its bird hunting.

Last spring, I sent Butch to John Gates, one of the better professional dog men, for training. About a week later I got a letter from him saying that he thought Butch could be a winner in the major field-trial circuit. Now a good steady shooting dog is one thing, and an open-field trial winner is quite something else.

"I want you to come up and see Butch go," John Gates wrote. "Her range is widening each day and she hunts every minute she's down."

#### Appearances Are Deceiving

Arriving at the village where John Gates lives, I suffered the ecstatic osculations of Butch, and we started to our hunting land.

"I'm going to hunt some territory I haven't used before," John said. "I'm taking along a farmer who'll show us the land lines."

The farmer was a six-footer, about sixty years old, with big hands and feet.

"Mr. Gates," he said, "I'd like to take them two puppies of mine and see what you think of them."

Since he was being good enough to give up his day to go with us, we could hardly refuse, although we had misgivings. He went back to his corncrib and let out two ten-months-old lemon-and-white pointers. One of them, the male, was a surprisingly fine-looking dog; however, the bitch was undersized, too sharp of face, and pretty scrawny all the way round.

"I'm gonna have to git shed of these durn dogs. They've took to killing chickens, and my wife ain't gonna put up with it any longer," the farmer said.

However, we weren't interested in the puppies—we were interested in Butch. We put her down and she started hunting, while the puppies chased each other and barked at the horses and made nuisances of themselves generally. But it was at once apparent that something was wrong with Butch. She didn't have her customary sparkle; she seemed stiff and sore. We stopped and examined her, but could find nothing wrong with her pads.

Later, the veterinary diagnosed the trouble as a temporary ovary condition. ("Oval trouble," Henry called it.) We thought it might be helpful for her to stay down and work out some of the soreness.

Gates and I were disappointed, and it looked like a day wasted, except that our farmer turned out to be as entertaining a talker as you'll find anywhere. His job was to point out land lines, and he not only did this, but told us bits of country history to go with it.

"Used to be birds aplenty in this country," he said. "I used to git me a quart of whiskey and hitch up my buggy, and

# Five Who Vanished

By George F. Worts

ILLUSTRATED BY GILBERT DARLING

## *The Story Thus Far:*

EARLY one morning a girl—her face partly hidden by a handkerchief—enters Jason Amboy's apartment in San Francisco, knocks Jason out, trusses him securely, takes some letters (from Jason's brother, Wayne, in Hawaii) and steals away.

A few seconds later, Jason's manservant—a man named Flack—releases him, then goes on the trail of the girl. While Flack is away, Jason is informed—by phone, from Honolulu—that his brother, who has been working for the powerful Grazzard family in Hawaii—cannot be found and has probably been murdered.

Jason decides, at once, to go to Hawaii. Before he leaves, he receives a number of telephone reports from Flack, who says that the girl is Luana Topping, of Kokala, Kauai Island, Hawaii. In the man's final report (telephoned, like the others) he mystifies Jason by telling him that, should they ever meet again, he, Flack, will be known as Rodney K. Kitchener, and that he will be disguised!

Jason boards a boat for Honolulu. To his amazement, Luana Topping is among his fellow voyagers; he meets her, has several friendly chats with her; but she gives no indication that she has ever seen him before. Luana is a member of a very important party—old Mrs. Hiram Grazzard, domineering head of the great Grazzard clan; her son, Lorrin Grazzard, who is Luana's fiancé; her plantation manager, Channing Mace, who is accompanied by his wife, and one or two others. . . .

As the ship leaves San Francisco, Jason goes to his stateroom. There he finds a man—a stowaway—who, seemingly terror-stricken, says that he is Arthur N. Garson, a former assistant district attorney of Los Angeles, and that he is in great peril. Jason inquires the nature of the peril. The man says that two killers—members of a gang against whom he, and he alone, has damning evidence—are on board; he insists that he will be murdered if Jason does not permit him to share his stateroom.

Jason (who knows Arthur N. Garson) is aware that the man is an impostor. Nevertheless, he decides to co-operate with the fellow, for the time being at least. Then follows another surprise: Flack (disguised and using the name of Rodney K. Kitchener) appears on the scene. He warns Jason to beware of the Grazzards, who, he believes, know more about Wayne's disappearance than they might care to admit. . . . In the course of a talk with Mrs. Grazzard (to whom Jason is related) the old lady asks Jason to visit her, be her house guest.

Jason is glad to get the invitation. "Thank you, Mrs. Grazzard," he says, "You are very kind."

## III

JASON unlocked his stateroom door and went in. His stowaway was lying on the bed nearest the side of the ship. He was in vest and shirt sleeves and he was propped up on pillows. He had a magazine on his knees and on this there was a long narrow slip of yellow paper on which he was writing with a fountain pen. He looked up at Jason with a vague smile. He screwed the cap on the fountain pen and clipped the pen in his vest pocket. He folded the slip of yellow paper the long way down the middle and, folding it again, tucked it into the pocket with the pen. Jason noticed a stain of green ink on his forefinger.

The stowaway seemed in much better spirits. "Well, everything is under control," he said briskly. "I got things fixed with our room steward. It took some doing, but he finally saw the light. He brought me some dinner, got me toilet supplies at the post exchange, and he's

Miss Topping picked up her life preserver. "I'm not afraid of anything," she said. "And now I'm going to bed. Good night, Mr. Amboy"

also lending me a pair of his pajamas." "I've been curious," Jason said, "about these two men who are on your trail. Who are they?"

The stowaway slowly sat up, and his light blue eyes remained steadily on Jason's as he swung his feet to the floor. "Why?" he asked in a soft voice. "Has anybody been asking questions?"

"No."

The stowaway stared at him a moment longer and said, "Their real names are Benny Jagman and Tony Canuto, but they seldom use them. Jagman is a big blond guy, partly bald, and Tony is a dark wiry little fellow. He looks Mex or Italian. They're about the same age—about forty. You aren't thinking of doing anything about them, are you?"

"No."

The stowaway relaxed. He grinned. "It's a pretty touchy subject, you know . . . Do you object if I turn in early? A rabbit chased by whippets gets pretty tired."

"I run this place," Jason said, "along the old English manor-house lines—guests do whatever they please."

**H**E HESITATED. He was very curious about this young man who resembled his brother so closely. He suspected that the stowaway was somehow connected with this whole mystery which concerned the Grazzards, but he was certain that the young man had no intention of harming him. If his roommate did not talk tomorrow of his own accord, Jason would, he decided, insist on an explanation.

Jason went out and strolled about the ship. Soldiers and civilian passengers were sitting about on the floor in corridors and passageways. Some of them were reading. Others were playing cards. In one foyer he came upon a ring of soldiers on their knees shooting craps.

Jason was looking for Miss Topping. He found her sitting alone on the forward stairway between A and B decks. She was glancing through a magazine. He sat down on the step beside her.

She put the magazine down and said amiably, "Oh, hello, Mr. Amboy."

"This is an amazing coincidence," Jason said. "I was just thinking about you and here you are."

"Isn't that odd?" said Luana. "I was just thinking about you too—how helpful and efficient you are."

"I," Jason said, "was thinking how marvelous you would look in a cerise satin dinner dress. I've a photograph in my mind in full color of you wearing it. I was thinking how effective it would be against that beautiful dark complexion of yours."

The girl with green eyes smiled at him. "There is something uncanny about the way coincidences are popping all around us," she said, "because it happens that I have a cerise satin dinner dress. The Grazzards will be dressing for dinner tomorrow night, war or no war. Shall I wear it?"

"Will you?"

"I'd love to—just to please you."

"That's awfully considerate of you," Jason said.

"But not at all, Mr. Amboy! You've been thoughtful and kind—and so efficient—and I'd love to do something to repay you. What else can I do?"

"Tell me why it wouldn't be a good idea for me to go to Kokala."

She looked at him and laughed. "Because you might be bored?"

He shook his head. "No."

"Because you might grow tired of coming up to me and saying, 'May I be of any assistance?'"

"No," Jason said.

"Perhaps," she said gravely, "if you'd

tell me why you're going to Kokala, I might think of a reason why you shouldn't."

Jason placed his hand over his heart. "The lure of the tropics!" he breathed. "The whisper of the trade wind in the palms—the orchid moon, the long blue combers rolling in on the silver beach at Poipu while the perfume of night-blooming jasmine scents the languorous air."

"It's lovely," Luana said, "but it sounds lonely."

"There's a woman standing beside me under the palm tree, helping me look at the orchid moon. The jasmine, you see, is in her hair."

Luana was nodding. "Is that the reason?"

"There are others. You see, I'm trying to collect reasons."

"Do you," she asked calmly, "make a hobby of collecting reasons?"

"We belong to a very similar school of thought," Jason replied. "I hoped you might help with my collection."

"But I'd love to!" Luana cried. "It's a new game, isn't it?"

"It's a new version of the truth game," Jason answered. "For example, might you have a reason why a person should have stolen into my apartment at four forty-five this morning and taken a packet of letters written to me by my brother Wayne?"

Luana was gazing at him gravely. "Was the burglar a man or a woman?"

"A woman."

"But that makes it too easy, Mr. Amboy! She was a collector, too. Stamps!"

Her dark green eyes were clear and without guile.

"That's a wonderful reason," Jason said.

"Am I really being helpful?" Luana asked. "I do so want to be helpful."

"You're being very helpful," Jason said. "You'd make a wonderful wife—you're always so amiable."

"That's awfully curious," she said. "It wasn't more than two hours ago I was thinking what an ideal husband you'd make—you're so efficient. You really have an engineering mind, haven't you?"

"You have something else I would love my wife to have," Jason answered. "Acute perceptions. I have a manservant who insists that I have a caliper mind . . . but I need another reason."

**M**ISS TOPPING laughed and said, "Something that you can measure with that caliper mind? Very well. Ask me anything!"

Jason smiled. "Can you give me a reason why my brother while working as a clerk in the Kokala plantation store should have vanished into thin air on the night of December third?"

Luana was watching him dreamily. "The same brother?"

"The same brother."

"Let me think a moment. This is harder than the other one. There aren't enough clues. Was he in love?"

"I don't know."

"Was he in trouble?"

"I don't know that, either."

"He just vanished into thin air?"

"Yes."

Luana was gazing at him, speculating. Suddenly her eyes cleared and glowed. "I know!" she cried. "You gave me the clue! Thin air, you said. He took a rocket ship!"

"When you play this game," Jason said sternly, "it isn't fair to be fantastic. Let's come back to earth. Let's be absolutely literal. Did you know my brother Wayne was working in the Kokala store?"

"If I did, Mr. Amboy, it's slipped my

She could not balance another hat in her hands so John Farwl cocked his hat lightly on her head. "Merry Christmas," he said

Love, as always, laughed at logic and the girl stopped running away

IT WAS her aunt who mentioned him first that "I can't imagine why I let myself be talked into inviting five."

"You'd invite twenty if the apartment would that many."

Aunt Lavinia cast a critical, birdlike glance at the table. A stream of sunlight came through the windows, slanting warmly across the silver and the crystal bowl of circus-red poinsettias.

It was Florida sunshine. It was an especially warm Florida Christmas.

"Fliers!" Aunt Lavinia said, "and five of them."

"Fliers aren't so bad."

"That's right," Aunt Lavinia said, "you knew whatever became of him, Holly?"

Holly said, "He was transferred."

Aunt Lavinia stood perfectly still for a moment. "For heaven's sake," she said, "I've forgotten the cards. And they'll be here any minute—the promised to send them promptly at twelve."

"Never mind, darling," Holly said. "I'll do it in a jiffy."

"They're on the desk. There, under the list."

HOLLY sat down at the spinet desk, curling her fingers around the rungs of the high-backed chair. She found the place cards and she wrote the names swiftly: Bob Graawin, H. E. D. Smith, Jim Moore . . .

She heard the doorbell peal and saw the last name on the list at exactly the same minute: Maj. John Farwl.

It was wrong. It must be wrong.

And if by the wildest chance it was right, it could not be the John Farwl who . . . That was five months ago; anything could have happened in five months. Please, she thought, please don't let it be the same.

Voices sounded in the hall, gay male voices. She got herself together, but her heart was jarring so she wasn't sure of herself.

Yes, the place cards. She wrote the last name carefully. Then she got up and went into the dining room, and put the cards around.

"Holly," Aunt Lavinia called. "Do please come here and help me with all these hats."

There was good, loud, embarrassed laughter. That, and Holly went into the living room on it, and tried not to see anybody particularly.

She was introduced around. She did not catch names: she was not trying to catch the names. She accepted the four hats, smiling, and by the time she got to the fifth it was obvious that she could not balance another in her hands. So John Farwl cocked his hat on her head.

"Merry Christmas," he said.

Holly's heart stopped rattling around. It just came to an abrupt halt. She found herself becoming polite under cover of the conversation.

"Imagine! How—however did you get here?"

He moved his shoulders. "It wasn't an accident," John Farwl said. "I pulled all the wires there were except Santa's beard. I might even have tried that."

She said, "You're looking well."

"I'm feeling well."

She could tell nothing from his face; she had never been able to tell anything from his face.

She said stiffly, "I'm sure we'll love having you."

That reminded him of the package under his arm. He moved away from her quite civilly, across the room to her aunt. He presented it with a little bow.

Holly was never very clear about dinner. She knew that she pretended to eat; she knew that she made conversation.

John Farwl was seated next her aunt at the table. He did not address one single word in Holly's direction.

She would not have known if he had. She was remembering. Remembering.

SHE lay on the beach, on the deserted desolate shore of beach above the town, with the warm sun against her back, and the breathless stinging hot wind on her face, when she first saw him come walking up the beach.

His hat was tucked under his arm. His corn-yellow hair caught the wind, and the (Continued on page

These British infantrymen, above, have captured a German strong point after hard bayonet fighting

## Complete, Absolute Victory!"

By Chester Morrison

CHICAGO SUN CORRESPONDENT  
RADIO FROM CAIRO

These were the words with which General Montgomery greeted correspondents after he had crushed, once and for all, the vaunted Afrika Korps. Here's how he did it—an elementary, brutal slugging match that taught the tacticians no new lessons but proved again the value of old ones

NOBODY was satisfied. The battle that had begun at the end of the last week in August ended, suddenly and unspectacularly, in the beginning of the second week of September.

The correspondents who had covered the war in North Africa since its beginning wrote their papers that it was less like a victory won than like a battle that had never been fought. They were disappointed, and among the people of Egypt there was only the customary feeling of tenuous momentary security, the customary cynical belittling of this "temporary" lull and waiting to see which side was really coming out on top before betting on the future.

Yet a cocky little Irishman who had taken over the British Eighth Army two weeks before the battle made an astonishing announcement—made it, incidentally, through Wendell Willkie, who dressed it up in terms that seemed at the time to be extravagant. He announced that the Axis armies in North Africa had been thoroughly beaten, that the threat to Egypt had been removed for all time.

A month later—at the end of October—Montgomery swung again, this time with power so tremendous that the German and Italian armies reeled and broke, reorganized clumsily and fled in what seemed like panic. They fled out of Egypt into Cyrenaica, fled back through their own mine fields, fled westward on the one main highway along the Mediterranean coast, fled along desert tracks hub-deep in sand.

And Montgomery stayed on their heels. Montgomery, in his tent or in his dugout, riding in his tank or his jeep in the field, talking of "my plan" with other generals putting his plan into effect. Now, without question, the enemy was beaten. Montgomery had succeeded where a succession of other British generals had failed.

There came a day early in November when the little gray man stood like a pugnacious sparrow on a white rock ledge at the edge of the Mediterranean. He stepped daintily down toward a group of correspondents he had summoned to hear his proclamation.

"Shall we stand here?" he asked, stepping off into the soft sand of the beach.

"This seems all right," his aide replied.

The general considered. "No," he said finally, turn-

Gen. Ritter von Thoma, commander of Rommel's Afrika Korps, salutes his captor, Gen. Montgomery, left

ing again toward the white ledge which formed a sort of terrace for the cave he was then using as headquarters. "Surf makes too much noise."

The correspondents followed him, scrambling for places, crowding to sit on a rock, producing pencils and notebooks, and resting their notebooks on their knees, pencils ready.

The general stood in the center of his terrace. He was wearing a gray home-knit sweater with a silk scarf knotted about his throat, khaki pants, unscuffed brown calf desert boots and the jaunty black beret of the tank corps. The beret seemed somehow too large for his small gray head. There were no ribbons on his chest. None of these articles of clothing was strictly uniform, but uniform regulations were seldom closely observed in the field.

Always cocky, he was cockier than ever that morning. His small, sharp blue eyes flicked over the correspondents and his close-clipped gray mustache twitched. Suddenly—such was the magnetism of the little man himself—one noticed another figure standing beside and a little behind him. It was Coningham—chief of the R.A.F. in the western desert—ordinarily a commanding figure; tall, heavy and solid, with a hawk nose of the kind which belongs to a man commanding the R.A.F. in the field. Coningham wore the proper uniform with ribbons.

The correspondents waited.

### The Smile of Victory

"It was a fine battle," Montgomery began. Here was that past tense again—the same way Willkie had spoken two months earlier—as though the battle was already over. "It was a fine battle," he repeated, and now he no longer could suppress the smile that had been making his mustache twitch. "Complete, absolute victory," he snapped. "Boches finished. Finished!"

Montgomery has that habit of repeating his own phrases, and when he speaks, his letter "r" comes out softly.

"On Tuesday night (this was Thursday) I drove in two hard wedges, with three armored divisions, some of which are now operating in enemy territory. Those of the enemy that can get away are in full retreat. Full retreat. Those that cannot get away are facing our troops and they'll be put in the bag."

Here was a winner talking. "Hello, Mom," he was saying, "It was a tough fight, but I won."

"How do you like my new hat?" he demanded unexpectedly, and waited for the laugh. Montgomery has more hats than most generals in the British forces, but none of the correspondents had ever seen him wearing a tank beret.

He resumed his air of sternness and went on:

"I had not hoped for such complete victory," he began, then amended himself. "Yes, of course I hoped, but I had not expected it would come so quickly. The enemy is completely smashed. Completely smashed."

And it turned out that the enemy was smashed. Not completely smashed, not yet, but Montgomery has the knack of reading the future. "He's like the conductor of a great orchestra," one of his most respectful minor subordinates told me once. "He's always at least one bar of the score ahead of the players."

While Montgomery fought on the ground, Coningham fought in the air. The R.A.F. and its adjunct, the U.S.A.A.F., fought by day and by night, with fighters and bombers, and they achieved a triumph such as has never been achieved by any allied air force in any other theater of war. It wiped out—in Coning-

ham's own words, it annihilated—the Luftwaffe on the ground and in the air.

Banked today along the sides of airfields which were German in October are piles of junk—junked German and Italian planes, wrecked before they could leave the ground.

So the little Irishman seems to have succeeded where others had fallen short of complete success. The enemy fled to El Alamein, fled to Tel el Eisa—the Hill of Jesus. He gave battle for two days at Tel Aqqaquir—Bad Man's Hill—then turned and ran, ran past Fort Capuzzo and Tobruk, past Mersa Matruh and Ain el Gazala, fled into Jebel Akdar—Green Hills—toward Tripolitania, where Americans and another army of British were closing in on Tunis and Morocco. Egypt had been saved once more.

It was simply done, a simple thing to do, given the weapons with which to do it. And for the first time since the battle for North Africa began in 1940, Montgomery had the means to apply the perfect setup of good big man against good little man.

In the battle of August and September—the battle so disappointing for the spectators—Montgomery had won a passive defensive victory. He massed his tanks, his antitank guns and his field guns in fixed positions south and east of the long sand hump called Ruweisat ridge, which runs east and west for twenty miles south from the coast. He planted his armor there, with orders to his commanders that the tanks were not to move, were not to accept battle whatever the temptation, but were to remain where they were fixed and destroy any enemy armor which came within range.

The enemy came, his panzer divisions nosing eastward past Ruweisat, and swinging north toward the coast. It was an old maneuver. It succeeded the summer before when the Germans swung south around the Free French at Bir Hachém and cut northeast to within sixty miles of Alexandria, where they stopped.

But in September the maneuver failed. The oncoming panzers met the massed fire of Montgomery's positions, met it and fell back, and the battle was over. Mr. Willkie, who had it on the highest authority, called it a victory comparable to Nelson's Abukir Bay.

Then there were two months of inaction, and nobody was satisfied, least of all Montgomery. The enemy sat on the Alamein line, sixty miles from Alexandria. He always had attacked before, he probably would attack again. Any day now he'd attack, and nobody was doing anything.

But one idle day I took a long ride in a truck, and at the end of the ride was a

wide, flat desert plain covered with tents and, among the tents, thousands of men.

Elsewhere—I never knew all the places—other fresh forces were gathering. New tanks, new guns, new trucks with their fresh paint unscratched, new stores of food and clothing and ammunition and huge dumps of fuel brought to Egypt and laid down where they would be handy.

And in General Headquarters for the Middle East, the Eighth Army general staff was digesting Montgomery's plan. It wasn't altogether the same staff he had found when he arrived in August to take command. The changes had been swift and numerous, and sometimes ruthless.

His gathering power funneled now into the desert; power so tremendous it was breathtaking. Tanks numbering well in the hundreds, guns in hundreds, field guns, howitzers, self-propelled American antitank guns, new American General Sherman tanks with high-velocity 75-mm. cannon which can kill a tank at ranges previously impossible. Montgomery was ready.

He had planted hundreds of guns on a line running twenty miles from the sea at El Alamein southward toward Hemeimat. He put the Free French at the southern end, disposed the rest of his forces to balance the enemy distributions, and concentrated fire power in the northern sector of the front he had chosen.

At twenty minutes to ten on the night of October 23d it happened.

As though he really were the conductor of a great orchestra, Montgomery's baton dropped, and all his guns—his hundreds of guns—roared in unison. It was a barrage such as no one hereabouts had ever heard before.

It was a terrible barrage. Days later I saw dead men without a mark on their bodies, killed by the terrible concussion of shells that had burst near them.

### Tricked by the Wind

But a barrage is not intended to kill men. It is intended to keep men under cover. In that purpose, the barrage of October 23d was successful. But the element of complete surprise had been lost through a freak over which even Montgomery had no authority.

The enemy, it was learned later from prisoners, knew the attack was coming, but nobody knew just when or where. Then the wind, which had been blowing steadily from the west for days, shifted, and enemy outposts heard it coming. They heard on the wind the sound of tanks moving up along parallel tracks through the desert, and they knew.

Not all the German tanks fought to the end. As shown by the dramatic picture below, many surrendered to British infantry

EUROPEAN

General Montgomery, wearing beret, stands with Air Vice-Marshal A. C. ...

But the knowledge was useful only to the extent that it relieved the tension of uncertain waiting. Nothing could be done to stop it. The enemy had made plans for meeting the attack. What didn't expect was the terrible fury of the opening barrage.

That barrage, nevertheless, was textbook tactics. The enemy knew the route by which the attack must come through his mine fields. He knew that while the barrage lasted, the British engineers were cutting gaps through the mine fields; knew that armor would follow; and after the armor would come the infantry. Prepared for all these things, and on the first night of Montgomery's tactics, the infantry and armor were only partially successful. Not all of his infantry and none of his armor achieved their assigned objectives.

But Montgomery was a good big man now, and Rommel a good little man. Montgomery had the power to strike and keep striking. He had power to push and crush and override and to take punishment and still keep pounding.

It was almost elementary. It was most brutal. It was a slugging match and the enemy couldn't take it.

The Free French, who had had no success against considerable opposition in the southern sector, now poured in against their objectives against no opposition at all. German armor and German infantry began their retreat, leaving the Italians in the south to fall into the bag held open by Montgomery's containing force. Prisoner camps began to fill with men who sat dejectedly under the sun, stripped of their possessions and professions, stripped of their hopes if they ever had any.

British supply trucks splash through a stream on the outskirts of M...

EUROPEAN

So rapid was the British advance that scores of German fighters and bombers were smashed before they could get into the air. The picture above shows some of the Nazi planes destroyed on the ground at Daba. Below, safely behind barbed wire, are a few of the thousands of German and Italian prisoners

Light bombers of the S.A.A.F., escorted by R.A.F. long-range fighters, attacked a Nazi supply train, below, south of Sidi Barrani. Most of the cars were left shattered and burning on the railroad tracks

"Last night," General Montgomery told correspondents that November morning, "I captured a commander of the Afrika Korps, General von Thoma." As a matter of fact, that capture was made by a young armored-car captain.

Montgomery told of spending most of the night fighting over the war on a table-top with his opposite number. He spoke highly of Thoma's ability as a soldier. What he didn't tell them was the circumstances of their first meeting.

It was on the threshold of Montgomery's comfortable motor-caravan truck that he first met the limping captive, still unkempt and smeared with clotted sand. Montgomery led him immediately into the austere truck he used as a map room.

The advance was swift at first, past acres of enemy munitions dumps and enemy trucks packed for flight and left where they stood when the pursuing forces enveloped them, past wrecked trucks, theirs and ours, past the bodies of unburied dead lying in grotesque poses, their faces black in death.

At El Daba it began to rain—just a night's hard rain, at first. It was enough to bring out ravaging hordes of mosquitoes, enough to slow down the pursuit just a little. As the pace slackened, as the movement of vehicles on the one main highway was interrupted for half an hour, for an hour, the long, long line of the huge Eighth Army stretched into an almost endless queue of trucks and guns and tanks and supply wagons.

#### An Orderly Retreat

As the pace slackened, the enemy paused and took a breath. He took time out to burn his supply dumps, to sow the sides of the roadway with mines, to blow up difficult passes along the highway, to post rearguard detachments which stayed put for a day, holding up the movement of our soft-skinned vehicles until our tanks came to blast our machine-gun nests, or until the enemy rearguard could withdraw after dark to make a new stand a little farther along.

The rain grew heavier and almost continuous. The enemy was withdrawing in a skillful, orderly manner. What had seemed like a rout a few days before had become a hard chase.

Now there was no question of strategy. It was all tactics. It was a race for Mersa Matruh, for Derna—where the steep winding roads of both entry and exit were blown up—for Bengasi, for El Agheila, for Tripoli. Behind its advance elements, the unwieldy Eighth Army hunched along like a nightmare caterpillar. The Navy ferried in fuel for planes and trucks, food for the men, spare parts for machines. Bases were built where they'd always been built—at Matruh, Capuzzo, Tobruk—and the rain turned the tracks to mud. Airfields turned to mud, and for days only a few planes got into the air—a few of ours, almost none of theirs. Now the good little man was boxing, and the big man was slow on his feet. But the end was inevitable.

So what had been learned? That superior force is a good thing to have. That it must be properly employed to extract its full advantage. That air superiority is essential for victory. That bad weather can bog down the best of armies. That a retreat needn't necessarily be a rout. Nothing tacticians didn't know before.

Montgomery demonstrated it again in this battle, and it's still true—when a good big man meets a good little man, the big man always wins.

THE END

## Thieves with Union Cards

Continued from page 21

unions in legitimate fights against unfair employers. A union which was entirely in the right would persuade another union, say the Teamsters, to refuse to deliver raw materials to or cart away finished products from the plant of the unfair company. In addition, it would ask union men everywhere to boycott the company's product.

This, plainly, was a combination and conspiracy in restraint of interstate commerce, but to enjoin such conduct or punish it as a crime apparently had not been the original intent of Congress. Or, if it had been the original intent, then a more enlightened Congress had seen the injustice of the Sherman Law. Therefore, further laws were passed, modifying the Sherman Law with the stated purpose of correcting this condition. Unions now had the right to interfere with interstate commerce, provided a legitimate labor dispute existed and provided the union acted in the interests of its own members and did not conspire with one employer to ruin another.

Thus empowered, certain unions themselves became the oppressors in many cases, and early in his administration of the Antitrust Division, Thurman went after several of them in criminal proceedings under the Sherman Law. The first case to reach the Supreme Court was the one known as the Carpenters' case.

In this one, Arnold proved that the Carpenters' Union and the Machinists' Union, both members of the American Federation of Labor, agreed in writing to a certain division of the work of dismantling a plant in the Anheuser-Busch Brewing Company in St. Louis and that the Carpenters, repudiating their solemn treaty, demanded for their own members certain jobs, which, by agreement, had been handed over to the Machinists. Arnold argued, and, of course, with absolute truth, that the Carpenters were preventing the company from carrying out its contract with the Machinists. And he showed that the Carpenters had lied to their members and to the public in declaring the company to be unfair to organized labor. The company was caught in the middle and was powerless.

### Justice Frankfurter's Opinion

Thurman had good reason to think he had saddled a winner but the Supreme Court, in an opinion delivered by Justice Felix Frankfurter, set him down. The opinion was a combination of ideological wind and fog and probably would defy the efforts of most laymen to understand it. But, in general effect, it held that Congress had meant to permit such unprovoked injuries to non-combatant companies, to excuse unions from the fulfillment of their obligations, and that deliberate and injurious lying about innocent parties was permissible as familiar union practice. Of course, it is familiar union practice, but this was the first time the doctrine had been presented to the American people that Congress had intended to endorse it.

However, Thurman thought the Petrillo case was different, although considerable editorial opinion predicted that he would lose because the decision and the doctrine of the Carpenters' case covered exactly the same ground.

Meanwhile, Jimmy hired Joseph Padway, the general counsel of the American Federation of Labor and of seven international unions in the Federation and special counsel to numerous others, and

they went to work. Jimmy insisted that he was within his rights.

Padway knows the laws pertaining to unions. He ought to. Congress consults his wishes and defers to them, notwithstanding the fact that he was special counsel to George Scalise, the Brooklyn-Chicago underworld racketeer of the Capone-Nitto mob and counsel for the union of movie and theatrical employees during the heyday of the malodorous crew of extortioners headed by Willie Bioff and George Browne.

But Padway had the law on his side and when Arnold went into court before Federal Judge John P. Barnes, in Chicago, late last September, the judge shut him off before he could finish what he

had to say, with the obvious judgment that, under the Supreme Court decision in the Carpenters' case, Petrillo was within his rights.

Although Judge Barnes did not say so, because the Carpenters' decision was sufficient guidance and justification for his decision, the dictum of the Supreme Court in another reversal of Thurman Arnold was involved. That was the one called the Teamsters' case.

In that one it was proved that the Teamsters' Union of New York waylaid trucks entering the city with goods in interstate commerce and, like common brigands, compelled the owners to pay tribute. The rate was \$9.42 for each large truck and \$8.41 for each small truck

entering the city. In some cases the guest drivers actually did take the wheel and drive to the destinations in the city. In others their services were refused and they were paid anyway. And, as the Supreme Court said, "in several cases the jury could have found that the defendants . . . refused to work for money when asked to do so."

The law under which Arnold prosecuted the union is known as the Anti-Racketeering Act, which contains a proviso inserted by the American Federation of Labor stipulating that money obtained as wages from a bona fide employer to a bona fide employee must be regarded as money obtained by tortious means. Of course such wages would be illegal tribute. But the Supreme Court in a shocking opinion delivered by Justice James Byrnes, held that a highwayman becomes an employee if he but obtains his services, even though he refuses the end to perform the services for money. So a robber who holds a union card may stick you up and beat you and be innocent of racketeering if he tells his members to say "I want a job driving your car 100 yards."

### Stick-ups Approved

Here is what Justice Byrnes said in that case: "The doubtful case arises when the defendants agree to tender their services in good faith to an employer and work if he accepts their offer but agree further that the protection of their union interests requires that he should pay an amount equivalent to the prevailing wage even if he rejects their proffered services. We think that such an agreement is covered by the exception." In other words, he thinks such conduct is approved by Congress.

Of the 72 original defendants in the Petrillo case, incidentally, 27 had police or criminal records and there was one case in which a regular driver who, for his own safety and that of the public, refused to let a drunken guest driver take the wheel and was beaten up.

Well, this opinion ratifies the so-called stand-by principle which was the basis of Jimmy Petrillo's action. The stand-by principle gives a union the right to tort money from an employer for services not performed even though there is no need for such services.

So, you see, the Wagner Act is not law immediately concerned in the famous Petrillo case. The laws which govern are the Clayton and Norris-Guardia acts which modified the Sherman Antitrust Law.

Under these two opinions the public and the employer, indeed, even the workers on the wrong end of a raid by a union have no rights and no chance.

What about Petrillo, himself? Well, Petrillo isn't so bad. He is an amusing little roughneck who gets about \$80,000 a year in salary, expenses and perquisites and is, to my almost certain knowledge and to my strong conviction, not a crook. He is several cuts above many of the union bosses of the A. F. of L. and the Congress of Industrial Organizations and he says he is a good dictator.

It is not for him to say whether he is a good or a bad dictator, but that he is a dictator, nobody can deny. For the constitution of the American Federation of Musicians leads off with a proviso that the president, meaning Jimmy, may spend any part of it at will and substitute therefor any desire of his own.

THE END

ILLUSTRATED BY C. C. BEALL

A natural-born fighter was Miss Jinny. She would have made some man a fine wife

ALL along Vanity Cove the little boats bobbed up and down on the incoming tide, and the dawn mist thinned and dried off under the climbing sun. As far as Miss Jinny Hicks could see, she was still the only human creature awake anywhere around. This, however, was a matter of such frequent occurrence that she did not give it a thought. Instead, she tested the ropes of her homemade scaffolding, mounted up, and began to paint over the big sign-board.

"Hicks' Landing," it had read. "Gas and Live Bait."

The letters still showed faintly under the coat of white paint she had given them the day before. Now she took the tip of her tongue between her teeth, dipped the brush in the black pot, and with a lean, high-veined hand, remarkably steady for her fifty-seven years, she blocked in the new words:

"Hot Dogs. Fried Clams. If Becalmed Don't Be Hungry."

The blocking-in finished, Miss Jinny dropped the brush, rubbed her arm hard, and threw her legs, still neat and slender in their dungarees, over the board so that she sat facing the water.

"No call to finish it up all at once," she told herself. "Take my time, may's well, and finish it up tomorrow."

She pushed the short, curly gray hair back from her face, which was brown and fine-wrinkled as an old sailor's, and looked out toward the open sea. Suddenly her blue eyes narrowed from their open vagueness to sharp attention. She had noticed a long iridescent streak of oil, far out on the water. "Funny," she thought, "that couldn't have been made by any of the campers along the shore. Hasn't been a motorboat, neither, since the lobster man last night, going out late. The tide was running in, a streak of oil couldn't have been there long, like that, a ribbon of green and purple on the blue water."

Then her farsighted eyes saw the periscope moving rapidly out toward the entrance of the cove.

"Well," she thought, "a sub. Come in from Portsmouth Harbor, most like."

SHE dropped to the float, took the paint pot and swung up the slanting gangway to the two-room shack which was her place of business and her home.

It was now seven o'clock, and Miss Jinny was hungry. She liked to wait until she was good and ready for her breakfast and then not stint herself. Oatmeal, fried eggs, apple pie for vitamins.

As she ate, she read her Bible, for which she had an enduringly fresh and surprised sort of fondness. "Never find the end to the common sense in it," she used to say fondly.

Two men driving a truck back to Boston from the shipyard came in for breakfast. After they had eaten they stood out in the little screened veranda on the side of the building for some minutes, looking across the water at the huge gray stone pile of Shane's Castle on the hill across the way.

"Boy," said one of them, "what a joint! Who lives there?"

"That's Shane's Castle," Miss Jinny told them. "You know, Bluebelle Whisky Shane's. He's dead and the old lady's sick. Didn't come up this year. Renting to some feller from New York."

"Gee," said the other, "they must pay plenty for that."

"Got twelve bathrooms," replied Miss Jinny. "Seen 'em one fall. Lady caretaker showed me. Twelve, tubs and all. Different colors."

"Well, for the lovva Mike!" the driver replied.

"That's right," Miss Jinny reiterated. "And you

Miss Jinny eyed the excited small creature. "You didn't ought to talk like that," she said

know what old Shane used to call it? He used to call it, 'We got a cottage at Vanity Cove.' That's what he'd say."

"Some cottage," said the driver.

They got on the truck and Miss Jinny waved them away.

Around noon Manuella arrived. Manuella was a pretty Portuguese thirteen-year-old who came in to wash dishes and help keep store until the supper rush died away.

Manuella's eyes were big.

"I was washing dishes for my Auntie Leonora that's cooking for Sawyers in Shane's Castle, last night," she said. "And you know what they say, up there my auntie and all? They say like the Sawyers are agents. You know, spies. I betcha they are, too, Miss Jinny."

Miss Jinny eyed the excited small creature before her for a moment. Then she said amiably, "Set down, Manuella. Don't you know you didn't ought to talk like that?"

The big dark eyes dropped, but the girl stuck to her guns. "Miss Jinny," she said stubbornly, "it's so. Last night they was setting off fire drums, red ones and green ones, signaling out to sea."

Miss Jinny sighed.

"Manuella," she said, "Mis' Sawyer was in here yesterday. They was having a party last night for her husband's birthday, she told me. They had an exhibition dancer come up from New York. They had them lights to light up her act out on the canvas under the trees. Mis' Sawyer said her husband was worried about they'd show up from the water, but she was aiming to set them in behind the wall that marks off the sunk-in garden."

"But she never."

"WAS you out on the lawn? You pick up the burnt-out drums after? Well, then how'd you know?"

Manuella squirmed. "They all said so, Miss Jinny, honest."

Miss Jinny smiled, a firm, easy smile.

"Manuella," she said, "before you was born, back in the last war, when the Shanes lived up there, people decided they was German spies. When Shane put in a cement tennis court they said it was a gun base covering Portsmouth Harbor. They said the Bluebelle distilleries was developing a secret gas for the Kaiser. Well, last year of the war Shane's boy got the Croy de Gare and there was his picture in the paper with this old Frenchman General Joff kissing him in the face; and then it come out that Old Man Shane was doin' secret work at the distillery all right, only it was for the U. S. A."

"Well, that's all, Manuella. Get the point?"

"Okay," said Manuella.

That was Saturday. Manuella got Sundays off, Sunday being the slack day this year. On Monday she came in with eyes like fifty-cent pieces.

"Miss Jinny," she said. "When did you see that German submarine? They think you was making it up, but I say if you said you seen it, you seen it."

"What you talking about, Manuella?"

"The submarine you was telling everybody about. You never told me about no submarine." Manuella's voice was aggrieved.

"Child," said Miss Jinny, "you talk more nonsense every day you live. It must be your age. Submarine?"

This time Manuella sat down. She held Miss Jinny in deep love and awe, but now she was sure of her ground.

"Miss Jinny, this ain't no my-auntie-said. I hear them, so you can't fool me."

"Hear who, Manuella?"

Manuella fetched a long, patient sigh.

"Yesterday at Shane's they was giv-

ing a cocktail party. The betweenmaid's sick and my auntie got me to come up and help. They was talking 'bout you."

"Oh, get out, Manuella."

"Well, they was. Mrs. Sawyer, she said wasn't it funny how the very most unimaginarying folks got notions in war-times. Just like you talked to me yesterday, she was talking. Only she said she come in here and you was going on about you seen U-boats right in Vanity Cove and you bet they was after your gasoline. That's what she said."

"Well, I never!" exclaimed Miss Jinny.

And then she remembered something. An oily streak on the water, a periscope moving toward the open sea. She had taken it for granted that it was from the

looking at him with warm family pride. Maybe he was just her Cousin Abbie's boy, but he felt like real close kin.

"Real glad you happened by," she said cordially. "How you been?"

"I been fine," the young man replied. But his manner was hesitant.

Something on his mind, thought Miss Jinny shrewdly, but she only said:

"Come in and set down. I just baked a huckleberry pie."

HOWLAND was a thick-set blond young man, with close-cropped curly hair that was like her own; and he had her same sailor's eyes. She sat and watched him with a comfortable sense of family solidarity. He did have something

"You mean Sawyer was really botherin' you?"

"What? Oh, begin at the begin Howland."

"Well," said the young man, "yesterday afternoon, Sawyer comes by the station and stops in to have a look at a new breeches buoy. You know seagoin' city fellers. Well, so he begins to talk, questions, how we been mout, does the war make much difference to our work and so on. Just like I knew something we'd tell it to. However, he was polite."

"Then he says it's the busy fellers us that don't get so much of the war teria. Why, the lady that runs the station—Miss Hicks—he says she seemed like a sensible woman (he know we're related and all the feller begin to kick me on the sly). 'Well, a spiel she gives me today,' he says, he expresses it more refined; all a people try to get gas from her with no identification cards and there's boats out in Vanity Cove trying to get gas from her, and she's going to tell Coast Guard and the F.B.I. and all that."

"Well, now, listen, Cousin Jinny. V the fellers mostly think is you stringin' this guy. Only the more I thought about it, the more I thought somethin's fishy and I'm going to tell you."

"Besides, do you know what that is?"

"No," said Miss Jinny. "Quick, Feller, here comes a car. What is he?"

Howland brought his head down to level with hers.

"He's the Laird Cregar type. That's all. I got to get going."

SO MISS JINNY was not at all surprised when she looked out at eleven o'clock that evening and saw the Sawyers' smallest car stopping by her pump.

She went out, smiling.

"Good evening," she said. "You're one summer feller that's no headach on the government. Don't know when you've been by for a drop of gas."

"Good evening, Miss Hicks. No like to walk. I'll be young and handsome again by the end of the summer."

"Fishin' good? Well, here's your three gallons. Don't spend it all in one place as they say."

Mr. Sawyer leaned out over the door. He nodded Miss Jinny closer with a pat of his head. He was not really the Laird Cregar type, she reflected. Flabbier.

"Got your pump filled up too, didn't you?" he said.

"Nope, tomorrow," replied Miss Jinny, and bit her tongue, too late.

Mr. Sawyer cleared his throat. His next words came glibly, but with a certain lack of conviction. The act, she would have said, had been rehearsed.

"With gas so hard to get, I should think a handsome woman like you could make some extra money," he said. "Take a nice vacation."

Miss Jinny snorted with surprise. "Where to, Alcatraz or Atlanta?" she inquired sharply.

"Why, Miss Hicks," said Mr. Sawyer, "can't you take a joke?"

He started the motor. Suddenly Miss Jinny felt that she was catching on. She made her voice shake. She tried to look incompetent.

"I'll report you!" she exclaimed.

"Why, I can't believe it, a nice man like you and in Shane's Castle and everything."

A comfortable laugh sounded from the dark of the car.

"Oh, I wouldn't do that, Miss Hicks. As you say, a nice man and in my position. And there's been considerable amusement lately at the way you've been

Navy Yard; she had forgotten it. Well, of all things.

She decided that a small untruth would do no harm.

"Don't that beat all, Manuella," she said. "I was kiddin' with her, and I thought she seen the joke all along. Well, city folks are hard to understand, lots of times."

THAT night Miss Jinny went out on her float and stood with her hands on her lean old hips for a long time looking at Shane's Castle.

"There's something mighty funny in that story," she thought. "I got to go slow and figure it out."

"Seems hard to think of any real people like the Sawyers having queer doings, though. Oh, probably there's nothing to it."

That was Monday. On Tuesday a young man in Coast Guard uniform came walking up the road.

"Hey, there, Cousin Jinny!"

She straightened up from her work. She had been whitewashing the rocks that surrounded her dahlia beds.

"Nice to see ya, Howland," she said.

"My, how they grow up," she thought,

on his mind, not a doubt of it. Maybe he wanted to borrow some money. Wanted to get Cora a ring, p'raps. They'd been going together six months now. Well, he could have it. Nice girl, that Cora.

She did not hurry him and finally he pushed away his plate and cleared his throat. "Cousin Jinny," he said, "what sort of a line you been stringin' out to that feller Sawyer up to the Castle?"

"What you talking about, Howland?"

She was not easy and superior as she had been with Manuella. On the contrary she was alert and disturbed.

"You can tell me, Cousin Jinny. No matter how screwy it sounds, I'll believe you."

"Listen to me, Howland Hicks Freeman, I tell you that I do not know what you're talking about."

The young man stared at her and his jaw sagged. "Well, I'll be darned," he said.

Miss Jinny Hicks stood up straight and began to walk up and down the screened porch.

"Listen," she said. "Talk fast. There'll be more customers here any minute. I got no idea what you're goin' to say, but whatever it is, I ain't surprised."

...rying on about plots and U-boats and on. Considerable amusement."

"That's it," she thought, almost elated the clarity of the picture. "That's it. We wanted to fix it so's no one would be-ve me, just like I guessed."

"Mr. Sawyer," she quavered, "what you talking about?"

"Oh, considerable."

The words floated back to her lightly the car moved out of the drive.

Miss Jinny went indoors and sat down one of the little restaurant tables. Her nees felt queer in the back and her omach was light and empty.

Suppose it was so, suppose Sawyer as trying to manage to get gasoline for -boats, could he put her on the spot as isy as this?

How did you tell the F.B.I. about a ing? Guess you wrote to Washing-on. And what did you say? She'd have say, "A neighbor asked when I got ay tanks full up. He asked if I wanted o make some money. I thought he was uggesting something illegal about gas, ut then he laffed and said he was kid-ing. I seen a sub a few mornings back. hought at first it was from the Navy ard, but now I ain't so sure."

Yeah, that would certainly bring out e Marines. Like heck it would!

"I can just hear myself and them, too."

"What's happening now?"

"Nothing. He said he was kidding and drove right off."

"How do you get help before you need," thought Miss Jinny, "if after you eed it it's going to be too late?"

She opened her Bible and closed it gain. There was a lot of vague general omfort in it about not being failed or orsaken, but that wasn't what she anted at the moment.

"I feel like there ought to be some-ning practical in it," she thought. "Some-ning specific. Bet there is, if I can just manage to remember it."

The memory did not come and after few minutes Miss Jinny stood up.

"Well," she said, "faith without works s dead. I got to do something."

And then she thought of Howland.

"Thing is, I got to think of a way to et a hold of him and tell him," she ough. "I can't go over there—that ouldn't work. And it's a six-party line, verybody listenin' in. And the way nings are now, if I need help quick and all up the station and get someone else esides Howland, they'll waste a lot of ime before they get going, arguing out bout am I screwy or am I kidding or is t straight."

"But I'll figure it out. What I need ow is a good sleep."

THE next morning she went down to the float early, although the signboard was now finished. The water was clear. It was a still day at the full tide, in the primming lull before the turn.

A figure in white flannels, small across he sweep of water, but still clear to her arsighted eyes, came down the lawn at shane's Castle, and stopped by the sea vall. There was a quick flash of light.

"Got binoculars," she reflected. "Sun hining on 'em."

As she looked she saw an arm raised, waving. He had seen her, too.

She raised her own arm.

"Hast thou found me, O mine enemy?"

she said aloud. But her voice was unper-turbed, almost friendly. Now, in the morning light, Miss Jinny felt extremely nappy. Though she never suspected it of herself she was a natural fighter. She strolled up the gangway again, ready for breakfast.

The dishes washed, she took up the telephone and called the Coast Guard station.

"Hello, that's you, Lieutenant, ain't it? This is Miss Hicks. Can I talk to Howland a minute? Don't call him if he's busy. 'Tain't important."

She waited, smiling.

"That you, Howland? This is Cousin Jinny. I went to the movin' pitchers last night."

"Oh, you never."

"That's right, Howland. I seen Laird Cregar. He was good, like you said."

"He was, hey?"

SHE was pleased that his voice did not change.

"That wasn't what I called up for, though, Howland. Cora was by yesterday, about two in the afternoon."

He knew that wasn't so, or she'd have told him so yesterday.

"She was, hey?"

"That's right. And she wants to call

on all them big windows on the water side. Well, Mr. Sawyer was doing some-thing to his radio, and he lays his pipe on the sort of flower box right under the shade. Wow, it flared up that paper shade. It caught on the drapes before he got them pulled down. I was over to see my auntie and we all come running and throwing water, just for the heck, but I guess he got it out all right by himself, quick."

"That was a signal," thought Miss Jinny. "And of all the ham actors! What does he do everything the hard way for?"

The evening was quiet and long. Miss Jinny sat by her radio until midnight and then she went out on her back porch and waited in the dark and quietness. From time to time she looked in through the window at the clock.

At twenty minutes past one there was a crunching step on the gravel and a tap

in use any more, but we must make the best of things. They will fill up and row off. That's all. By that time I shall be home in bed. Matter of fact I went to bed early—I haven't been out all evening."

"What are you going to do to me?"

"Nothing."

"I'll call for help soon's you leave me."

"Sure. Sure. But you'll be a long time getting action, because of the way you've been acting lately. The boys in the boat will have time, I figure."

"Why don't you disconnect the phone? Why don't you tie me up?"

"And really have something to explain? What for?"

He took the fire drum in his hand and started down the porch.

"Too bad you didn't have the nerve to co-operate," he said. "A permanent arrangement between us would have been very profitable all around."

"I've been thinking," said Miss Jinny. Mr. Sawyer turned and paused.

"Mr. Sawyer, if there was some way I could always be tied up or something, so's I'd have a good story if anybody was to come in unexpected—well, there's ways you can fool the records, you know, about gas."

"Well!" said Mr. Sawyer.

HE SAT down on a chair and smiled. "Now we can talk," he said. "I'd like a drink of water, please, Miss Hicks."

"Water," thought Miss Jinny. "That's it. All day long I been thinking there was something in the Bible real helpful, not just generally comforting, but help-ful. That's it."

"He asked water, and she gave him milk, she brought forth butter in a lordly dish."

"I knew I'd get it."

"I was just going to have some pie and coffee, myself," she said, "for my late supper. Could you eat a mite, you suppose?"

"Coffee? Sounds fine."

Miss Jinny regarded him with a sort of detached sympathy.

The coffee was hot on the back of the stove, the pie crumbling and delicious. She bore them in and set them down.

"I'll just go out in the kitchen and get the cheese," she said.

She went right to the shelf by the window where she kept her tools, picked up a hammer, returned to the front room and hit Mr. Sawyer on the head.

"I always thought Jael was dreadful messy, using a hammer and a nail both on Sisera," she reflected cheerfully. "Some women do everything the hard way."

She struck a match and set off the green flare. She called the Coast Guard station. Howland answered, as she had been sure he would.

"Listen," she said. "Let on like this is Captain Phipps and he seen 'em from the ocean. Close the mouth of Vanity Cove. The U-boat won't be submerged. I guess. Send some people here quick by land. That's all."

"Okay, Captain Phipps. Okay, we're snappin' right into it."

Miss Jinny hung up and sighed happily.

"Ain't had so much fun since I was a kid," she thought. "Yep, there's all kinds of notions in the Bible."

She regarded the recumbent form of Mr. Sawyer thoughtfully and took down from the bookshelf another volume, the First Aid Handbook.

"Let me see," she murmured. "There's three kinds of head injuries—concussions, simple and depressed fractures. I wonder which kind I done?"

Mr. Sawyer stirred and groaned.

THE END

"But, darling, couldn't you pretend to be a surface craft for a minute?"

COLLIER'S

GARDNER REA

you up tonight when she gets through to the store. Stocktakin', she may have to work late. She don't want the boys up there to know she called up though. Says you stick round the phone and get to be the one to answer if you can. I told her she's foolish, but I said I'd tell you any-ways."

"Well, thanks, Cousin Jin. You know how she is. Shy."

"You bet. Makes her nervis, folks to laff at her. That way myself."

"Well, thanks again, Cousin Jinny. You tell her I'll stick round."

"That's okay, Howland. Drop by when you get a chanst."

"I'll do that. Well, so long."

"So long, Howland."

She heard the two telephones up the line click down. Poor Cora, would she get a laffing-about behind her back! Well, that's war for you. We all got to put up with things. . . .

In the afternoon, Manuella said suddenly, "Say, I forgot to tell you the excitement."

"What's excitin' today, Manuella?"

"Why, about the fire they most had up to the castle, last night."

Miss Jinny was before the stove. She closed the oven door.

"Fire, hey?"

"Sure. They got paper blackout shades

at the door. A low voice said, "Miss Hicks."

It was Sawyer, and he had come on foot. "Well, he ain't forgot me," Miss Jinny thought, and smiled. She rounded the screened porch and opened the door.

"Evening," she said. "What brings you by so late?"

"Business," said Mr. Sawyer, and stepped inside. He drew his hand from his coat pocket. There was an Army revolver in it. He regarded it silently, as if in surprise. He dropped it back into his pocket.

"About that little proposition from last night," he said. "I wonder if you have changed your mind."

"I'm scared of guns," said Miss Jinny flatly.

"Most ladies are," said Mr. Sawyer.

HE SAT down and wiped his face.

"What are you here for?" asked Miss Jinny. "What do you want?"

Mr. Sawyer sighed heavily.

"I have a stick of green fire here," he said. "I am going to set it off up here on the end of your porch. When it has burned out I shall pick up the stick and go home. After about ten minutes a dory will dock down below and four men will bring a tank up to the roadside. It's too bad that your pump down below isn't

# Hollywood Gets Its Teeth Kicked In

BY KYLE CRICHTON

Because Hollywood was both short-sighted and oversensitive, its actors and technicians are marching off to war instead of making the films essential to the war effort. Result: America faces the loss of its most valuable single morale weapon—the movies

EVERY sin Hollywood ever committed is coming home to roost. The result is that the movies are taking a terrific shellacking, and nobody dares lift a voice in protest.

What Hollywood is saying secretly and can't say publicly is: The Armed Forces are taking away all our actors, all our technical men. Things are serious now: in six months they will be desperate. But if anybody in Hollywood got up and said that unless a great change in public policy is made the movies might be out of business in six months, an exultant chorus would sweep across the country: "So what?"

This doesn't mean that people hate the movies; it means that they have a mental image of Hollywood parties, Hollywood swimming pools, Hollywood castles, Hollywood income-tax returns, Hollywood scandals. The idea that all this might be lost makes America laugh right out loud. Hollywood knows it and can't say a word. One peep from that sector, and the repercussions would be tumultuous.

"Go on, you dirty slackers!" the cry would come, followed by hoots, threats and vegetables.

Well, somebody had better start speaking up soon. The movies are threatened, and there is no use kidding about it or hiding it any longer.

I'm speaking on my own because I don't want to

get anybody in Hollywood involved and I don't want anyone taking the blame for my views.

Do I care if Hollywood is seriously crippled? Yes.

Do you care if the movies go out of business? Yes.

Do either of us care if every big shot in Hollywood goes broke? No!

But I care and you care and America cares if anything keeps Hollywood from making the best pictures of its life in these war days.

There's a thing called morale. The word has been overworked and perhaps I shouldn't use it here. Let's just put it like this: We don't have movies any more, or the ones we have are inferior. Then what?

There are two ways of looking at that: (a) It would be a relief. (b) You're exaggerating.

It wouldn't be a relief because, generally and nationally speaking, we'd go nuts without the movies. When President Roosevelt wants to relax, he has a movie run at the White House. Stalin bombarded Willkie with questions about Hollywood. Churchill laughs himself back to health with Hollywood films. When we want to relax, we have a picture run for us down at the corner theater—90,000,000 of us a week planking our dough down on the ledge and getting relief from work and war and worry.

Well, that's beating an old horse; everybody admits we can't get along without the movies. And I say flatly that if the present trend keeps up, we'll either have movies so horrible that their morale value will be gone or we'll have no movies at all.

Don't be too sure that's wild talk. Hollywood itself wouldn't agree with it, but Hollywood never knows anything until it's over. Look what's happening to the strange place.

Twentieth Century-Fox has lost Tyrone Power, Henry Fonda, Victor Mature, George Montgomery and Cesar Romero. That takes every leading man they have but Don Ameche.

M-G-M has lost James Stewart, Clark Gable, Rob-

William Holden  
Army Signal Corps

crt Montgomery, Lew Ayres, Gene Raym, Richard Ney, Mickey Rooney and Robert Ta probably be gone by the time these words are Spencer Tracy is breaking his neck trying to the service.

Practically every promising young leading the industry is now in the service—Robert St, ert Preston, Ronald Reagan, Richard Gre, Hall, Louis Hayward, Douglas Fairbanks, Jr., Holden, Jeffrey Lynn, Sterling Hayden, Ti, Wayne Morris, Ray Middleton, Burgess Merc, vid Niven, Laurence Olivier, George O'Brien, Sterling, Van Heflin, Melvyn Douglas.

Are there others still available for films? I bid your time, my friends. They'll either be away while you're reading these words or the summoning up their courage to face the reign that is now sweeping over all actors.

They tell the story of the Hollywood ag whispered to a producer: "I got a great prospect you—a young guy with a double hernia."

Very funny—and there actually are a few like that, but even these aren't going to be happy actor is going to be happy much longer unless a long gray beard and a noticeable limp. As called in the draft because of dependents or are even now, reluctant to appear at camps or fits for soldiers and sailors. In far too many cases have been met with: "How's about getting into you punk?"

When Bob Hope returned from his tour in camps in Alaska, it required all the persuasion of friends and finally an unofficial order from Vinton to keep him from enlisting. Although he has small children and is in 3-A in the draft, he was by a bitter cry during one show in Alaska: "You're even funnier in a uniform, buddy!"

## The Threat of Public Scorn

Every actor in Hollywood has received a letter asking when he's going to join up. Our artists are fighting in Africa, in the Pacific Southwest. In passing months, the fury of the struggle will be of fighting men, of brave victory. All other problems will seem trivial and It will take a strong man to face public clamor. The producer who comforts himself with the thought that he can get by with lesser names or older may find that there are no names of any sort available.

If the war lasts only another six months, being written here will seem the sorriest kind of sense. But if it lasts another two years or longer we afford to neglect our strongest morale weapon isn't only our own problem. Without America the theaters of England couldn't keep open and Canada and Australia are in the same position. It takes a world of convincing to prove to them that Hope with a rifle is as important for the purpose of the war as Bob Hope in a new comedy.

Five million Russians have lost their lives in war. Russia has lost half its industrial capacity, its best farm lands. Anybody is crazy who thin

I haven't mentioned the loss of technicians, although it has been a great blow to the industry, and the effect is already felt in the quality of the product. Hollywood has 186 sound cameras, which is eighty per cent of all such cameras in the world. The Army right now is in need of 300 sound cameras. Camera-men have gone by the dozens; technicians by the hundreds. According to the estimate of a man whose judgment I respect, by June of this year, Hollywood will be producing 75 per cent fewer pictures, and the quality will be little better than in the early days of sound films. This man is calculating entirely on the basis of the loss of technicians, not bothering at all about the actors.

#### Movies Sell America to the World

In any case, the result will be catastrophic. Anybody who has traveled in Latin America knows the influence of the American movies. Army camps in this country can't get films enough or halls enough to provide for the soldiers. When our forces went into North Africa, Hollywood films went right along, not only to entertain the fighting men but to offset *Axis and Vichy-French ideas among the natives*. As we reconquer territory, our films will do the work of selling America to the world. Before you start smiling at memories of silly films you have seen, remember that much of our store of good will as a nation comes from those very flickering images.

It is no longer a question of what the actor wants or what the producer wants; it is a national problem. In England, the authorities have permitted the loan of film stars in the Armed Forces for making pictures. Some have been propaganda films; others have been commercial films; but all are films that tell Britain's story and keep up British courage and hope.

In our case, it has reached a point where it may be necessary to *order* our actors back to Hollywood. They will refuse to come now, if it means they will be subjected to criticism from people who feel they are avoiding their military duty.

Because of that feeling, Washington must take the lead. The time has come for Washington to proclaim the movies an essential industry, exactly as necessary as steel and coal and ships and farms. That is not merely a flowery statement. It is the plain truth that must be recognized.

Let actors be brought back from the services before it is too late. I'm not offering a plan for the best way of doing it. They can be returned to civilian life or they can remain military men who have been delegated to special detail, with the proviso that their usual salaries will be turned over to the Red Cross or the USO. Tyrone Power gets \$150,000 a picture; Clark Gable is paid even more. Their contributions, added to all the others similarly detailed to the films, will raise more for charity than all the football games and charity balls ever devised.

As for the producers, if income taxes do not remove any benefit they might get from having James Stewart or Ronald Reagan working for Army pay, the government can easily see that every cent of profit is squeezed out of the transaction.

The movies are one of our lines of defense. It is as stupid to throw away a Mickey Rooney or a Henry Fonda as it would be to draft an airplane designer to make him a grease monkey.

The job is to make the best pictures in the world and to keep on making them. Putting the problem in its simplest form, Clark Gable shouldn't be *allowed* to be a soldier. War is too serious for us to be playing sentimental games. He has a duty and Hollywood has a duty and they should be made to stick to it. ★★★

ly he left. He did not turn back. He did not wave.

"Good luck," she called after him. Her voice got lost in the wind.

Holly decided to go home; there was nothing more to want.

Because her aunt was away for the afternoon at the Red Cross canteen, she fumbled around for her key as she got to the elevator. She had difficulty finding it and she wasn't seeing very clearly; and she had difficulty fitting the key in the lock.

A hand came down over her hand on the knob. It was John Farwl blocking her way.

After a minute she got her breath somehow. "How did you get here?"

"Simple. I followed you."

"You had no right."

"I had every right."

"You're beastly . . . beastly!"

"Look," he said, "when I find something that makes the stars come down on me I don't let it go that easily."

"I hate you!" Holly cried. "I hate you!"

By that time they were in the living room. Holly flung her towel and the bottle of sun-tan oil and the round beach bag down on a chair seat.

"Go away," she commanded. "Go away."

He made a discovery. "You're afraid."

"Yes."

"But, my gosh—you're afraid of me."

"Yes," she said, "I'm afraid because you make me want things and I can just rely live if I don't want anything. Anything at all." She spread her hands. "It's been that way all my life. There's always a wall; there was a wall at school. There's a wall growing in your eyes now."

He looked incredulous. "You're crazy."

"Go away," she begged. "Please . . ." dry sob caught at the word. "Go away!"

HE STOOD there. He was trying to figure something out. His face was badly serious.

"I hadn't intended telling you this,"

he said, "but I'm going into the Ferrying command tomorrow. I'll probably never see you again. I wanted to take you to dinner. I wanted you to go with me to the program tonight."

She said, "No."

John Farwl did not argue. He made a statement. "I'll be back for you in about half an hour," he said, "with a car."

He arrived well before the half hour was up. He had changed into a fresh uniform. His eyes approved her, grinning for all the world like a small boy bent upon a holiday.

John Farwl had a shiny blue roadster which he said was a friend's; he took her to a quiet place where there was music. But people did not dance. She was relieved to see that people did not dance.

The program went on the air at seven; he had said they'd better get there a little early. The base auditorium was crowded with girls and air cadets; it was loud with voices. Guiding her with a pressure on her arm through the crush, John Farwl found her a chair. Chairs were arranged only around the walls. She sank down, sitting stiffly straight, her hands in her lap. The stage was just above her, warming with actors and engineers and men looking weary.

John Farwl sat on the steps. "I can tell better if it's any good by watching our face."

His play was only part of the program. The words and the music and the hyness of the cadets sending messages home stirred her especially; she did not

lose her awareness of John Farwl; but he lost his sharpness; the night was not quite real for her.

At the end of the program the roar of approval from the audience must fairly have shaken the roof. "John," she said. It was the first time she had used his name. "John! It was wonderful."

The band struck up another tune, and she could not catch his answer. But she saw his lips move. She saw that he was pleased.

"Dance?" a voice said.

SHE was startled. Blood rushed to her face and she glanced appealingly at John Farwl. He offered no help. "I'm sorry, I don't—dance," she was saying, over and over. "Thank you, but I can't."

Then swiftly, without reason, without warning, the fabric of the evening collapsed, like fine ancient cloth exposed to air. She had to escape.

Holly got to the door, out of the fog of cigarette smoke, into the warmth of the night, and there was mist before her eyes and the music followed her heart-

lessly. Holly would have stumbled; but John Farwl caught her.

"Shall I take you home?"

She could not speak.

He said, "There's no disgrace in being afraid. Everybody's afraid."

He waited. He stood patiently, his face partly in shadow. He said, "The only disgrace is running away."

"I don't care. I don't care. I can't stand that music, those eyes, those eyes. . . ."

They did not speak again. He was politeness itself; but a withdrawn politeness. He drove the shortest route. Holly huddled in the corner, crying, wildly angry with herself but unable to stop crying.

He idled the motor in front of the apartment house. "Do you want me to go up?"

"No," she said. "Thank you."

"Good night," John Farwl said.

Numbness overcame her. She heard the roadster gather speed away from the curb. She felt the motion of the elevator upward.

Her aunt regarded her oddly. "I thought you might bring him up," Aunt Lavinia said.

"He was in a hurry."

"Was he nice?"

"Very nice," Holly said.

She did not sleep that night. She lay in the dark alone, and what he had said was true; and what she was was also true. . . .

All that was five months ago; that was an eternity ago. Holly Bentley came to herself with a little start; and she discovered that they had finished dinner and were all in the living room again, having coffee in small fragile china cups. It was Christmas Day.

The boy called Bob managed the cup awkwardly, his face beet red. Holly smiled encouragement. John Farwl held his cup politely, but he had not even sipped.

Her eyes fled to the clock.

"Aunt Lavinia, it's quarter after two!" Holly exclaimed. "You all had better get going if you don't want to go tripping down the aisle in the middle of the second act."

"Yes, indeed," Aunt Lavinia said. "I'm told it's a naughty show. I wouldn't want to miss any of it."

There was a general rattle of coffee cups, and a general search for hats.

"See?" Aunt Lavinia said. "Holly thinks of everything. I don't know what I should do without her. I'm so sorry you're not coming with us, Holly."

"You are quite astonishingly beautiful."

Pinkness bloomed in her cheeks. "Oh, no," Holly said. "I am young. I am—perhaps I am appealing sometimes." She looked at him. "But I am not beautiful."

A little of the tightness went out of his face. He felt around for a cigarette, offering her one. Holly shook her head. He lit the cigarette; she watched with a numb fascination.

"Sit down," John Farwl said, "I want to talk to you."

"I really must help Martha—"

She did not sit down.

He said, "I had forgotten how you looked. Oddly. Yet whenever I smelled the sea or saw the sun on the rocks I thought of you. I met girls in London and Sydney and Bombay and New York and all I heard was your voice and all I ever saw was your eyes. It was wacky. It was as if—he uncrossed his legs, leaning slightly forward—"as if . . ."

"We had exchanged hearts," Holly said.

He grinned. "Very nicely put."

He was not in a hurry. He let the seconds drip slowly away. He crossed the room, and he kissed her.

Desperately Holly held herself rigid; then she felt herself going, going, completely gone. It was like being caught in a current in the sea, but with this, you did not want to come back.

"Merry Christmas," John Farwl said softly.

She said, "I never believed that about your grandfather. I don't even believe you have a grandfather."

"I had one," he said, "truly. Holly, you're the nearest I'll ever get to a Christmas tree. Marry me."

SHE was talking against his coat. "You mustn't ask me," she whispered. "You mustn't. I'd be miserable and you'd be miserable—"

"Why?"

"Because I'd be wondering if you wouldn't rather be dancing, wouldn't rather be racing down a hill—"

"Holly," he said, "marry me."

She felt the waiting in him. She felt the waiting in herself, and it was not fear: it was logic. Logic saying, not for you. Not for you. Love is not for you. But why not for her? The logic stopped there.

"John?"

"Yes."

"I've been waiting to tell you," Holly said. His buttons against her were cool and hard and very solid. "I'm better. Did you notice? I'm much better! I swim and hope now and the doctor says in time. . . . I think it's because I don't feel alone any more."

"You'll dance," he said. "And soon." He laughed deep in his throat. "Don't avoid the issue."

"I'm not avoiding the issue!" Holly said.

"All right," he said. "It's that way in a plane, too. When you're alone, just sitting up there in the clouds, you're scared as hell. But when there's somebody else, even yourself, watching you, you put on a show." He added, saying the opposite of what he meant, "You're not so remarkable, angel-puss."

Maybe it was not logic. Maybe there was something beyond logic. Something between them.

"Must—must I decide today?"

His arm tightened. "Yes, today. I have only today."

"Oh, but we couldn't," Holly said. "We couldn't, John. Everything's closed."

"I have a license," he said. "My gosh," he said, "did you think Englishmen were the only fast thinkers?"

THE END

# THE THREE DROLL DUKES

BY DAN PARKER

PHOTOGRAPHS FOR COLLIER'S BY ALBERT FENN-PIX

With the possible departure, as political casualties, of the double-talking bumbler who control boxing in New York, the fight racket may add up to something more than scrambled syntax and weird decisions

IF NEW YORK'S new governor, Thomas E. Dewey, does what everyone expects and slaps down the three delightful gamins of the State Athletic Commission, the sporting world may witness the singular spectacle of nation-wide control of pugilism by the National Boxing Association. By ousting the triumvirate which, though possessing power only in its own state, has attempted to rule boxing everywhere, Governor Dewey will bring to a close an era of hilarious confusion and will replace delightful chaos with dull order. Eventually there may even be only one champion in each division. As a result, boxing will probably make more sense, but it will never again be as funny. There'll never be another trio like the Three Droll Dukes.

Since the New York State Athletic Commission, more commonly referred to as the Boxing Commission, came into being with the passage of the Walker Law in 1921, it has taken the world for its oyster, refusing to be circumscribed by either state boundaries or its own rules. Refusing to join with the other states in membership in the National Boxing Association, it frustrated all efforts to establish a supreme authority for the sport. Instead, by delegating to itself powers it received from no other source, the New York commission created and abolished champions and boxing divisions at will, declared all state commissions which disagreed with it to be null and void, and in general behaved like three comic-opera dictators on the loose.

Its last official act bearing on a world's championship was to declare that Lou Salica was still bantam-weight champion, even though Manuel Ortiz had beaten him in a 12-round bout, advertised as a title match, in Los Angeles. This move followed a brief spell of co-operation with the N.B.A., during which superfluous champions in each division had been abolished. New York's fistic Fuehrers reasoned that, since Ortiz and Salica had fought only twelve rounds, it couldn't have been a championship match, because the New York commission's rules say that all title bouts must be arranged for fifteen rounds.

Who are these characters that set themselves up as the final authority on boxing matters but may now be set down by a governor of opposite political faith? Reading from left to right, they are:

Honest, double-talking Brigadier General John J. Phelan, former lingerie manufacturer and dilettante military strategist, who doesn't know a left hook from a right eye. A well-meaning, square-shooting old-timer who wouldn't intentionally harm a flea.

Honest, blunt, plain-talking Bill Brown, health-farm proprietor and former boxing promoter. He knows his tin cars inside out, but is so loyal to General Phelan that he has strung along with him, right or wrong.

Mild-mannered, silent, Colonel D. Walker Wear, a Binghamton politician who likes to get passes to fights, sit up near ringside in Madison Square Garden, puff on a cigar, look wise and say nothing. Colonel Wear thinks an inside counter is something a ribbon salesman leans against during a lull in trade.

Brown's term expired on January 1, 1943, but General Phelan and Colonel Wear still have two years to go. Theoretically they can be removed only by proved incompetence or by the abolition of the commission, which would require action by the legislature. A governor, however, can usually find a way to induce resignations if he so desires.

If the New York commission weren't constantly confusing issues, reversing itself, falling out with other state commissions, creating superfluous champions, refusing to recognize authentic ones, issuing communiqués that can neither be parsed nor gainsaid, and breaking its own rules, the boxing world might be more orderly but it certainly wouldn't be half as gay. Unedited news releases from General Phelan's headquarters are collectors' items. Interviews with him are delightful adventures in the realm of scrambled syntax and suspended sentences that have neither subjects nor predicates.

## Their Mistakes Are Honest

The New York commission not only is the laughingstock of the nation but also commands its wholehearted respect. The explanation of this paradox lies in the fact that in an atmosphere reeking with graft and corruption, the New York commission, comical though it is, enjoys a spotless reputation for integrity. Its mistakes are all honest or, at worst, dictated by political exigencies over which it has no control.

A boxing writer once told General Phelan he didn't agree with the stand the commission had taken on a certain matter and intended to say so in print.

"I don't care what you say about us," retorted the general, "as long as we're not honest."

Of course, the general didn't mean to indict the in-

The No. 1 droll duke, General Phelan, is shown above absorbed in the intricate task of writing his initials on a pair of boxing gloves to be worn by a fighter. This part of the "weighing-in" ceremonies takes place on the same day as the fight.

tegrity of his own body. What he had intended to say until he dropped a clause in transit was that he didn't care what the writer said as long as he didn't charge that the commission was dishonest.

General Phelan is regarded with the same affection by the hard-boiled mugs of the boxing racket as an eccentric college professor is by the members of his class. Even pugs who are due to have their mushy room ears turned inside out in the ring that night will come to the weighing-in ceremonies over which the general presides, because in his bumbling, dead-serious way, he hands them more laughs than a cageful of cross-eyed monkeys.

Until the general came to the commission, as chairman of the licensing committee back in the days when Jack Dempsey was detouring a bout with Harry Williams, he thought that boxing was an adjunct of the lingerie business. Now the general knows that boxing is something done with gloves as well as with a hammer and nails.

What else he has found out about the plug-ugly profession is, like the general's conversation, not quite clear. Yet he has been known to strike James Figg and Jack Broughton poses in explaining the fine point of boxing to such tyros as Billy Conn and Joe Louis after weighing them for important matches.

It is worth a year of any man's life to watch the

general, with soft fists clenched, weaving his dukes one over the other like a woman unwinding a skein of yarn, while fighters who have spent hundreds of weary hours in gymnasiums becoming proficient at all branches of their profession, look on with dead pans, behind which a million imps are teasing them to burst out laughing in the good man's face. The general will feint, sidestep, duck, bob, weave, pirouette, prance, backtrack, counter, jab, hook, uppercut and sometimes step on his own feet and trip himself.

Fight managers, skilled at double talk, are wont to take advantage of the general's utter lack of guile on these occasions by feeding him a bit of jabberwocky.

As the general explains the rule about breaking from a clinch, one of these comical rogues will interrupt.

"Now, General," the knave will ask, in tones reeking with reverent awe as spurious as store bicuspid, "suppose he gets in a clinch and, on the way out, he should, all of a sudden for instance, as the fellow says, then what happens?"

"What's that?" asks the general sharply, but never suspiciously.

"I say," repeats the unconscionable scamp, "suppose he's standing there, and the other fellow should frammis it in the deviating circumstances, if you know what I mean, does that or doesn't it?"

"That's all taken care of in the rules," replies the general. "If you fellows read the rules, you wouldn't be asking me all those foolish questions."

The charge that Promoter Mike Jacobs twists the New York commissioners around his calloused fingers is termed by them a canard. It's probably only a coincidence that Mike always gets what he wants. The commissioners think that if it weren't for Michael, there wouldn't be any big-time boxing in America.

Outsiders may think that every time Czar Jacobs ties up a boxer to fight exclusively for him, he is driving one more nail in boxing's coffin lid. The way the New York commissioners see it, he is

thereby performing a service for the dear old game by insuring that one more fighter will be paid the amount due him, and that the bouts in which he engages will be reasonably free from larceny.

Whenever the New York commission votes to set down a boxer for life, Mike Jacobs lowers a sophisticated eyelid in a wink that means: "But they didn't say positively!"

The commission never says positively. Well, hardly ever. There's the case of "Bummy" Davis, that wonderful little character from Brownsville, as lovable an urchin as ever broke a nose.

Bummy was fighting Fritz Zivic in the Garden one night a couple of years ago, when he suddenly started hitting Zivic below the belt, claiming that Fritz had thumbed his eye. Pulled away by the referee, Billy Cavanaugh, and warned to desist, Davis pushed the referee aside and resumed his foul attack. There was nothing for the referee to do but disqualify Davis for foul tactics. As the official did so, Davis aimed a kick at him that could have disabled him for life.

#### The Bum's Rush for Bummy

By this time, policemen had piled into the ring and pinned Davis in a corner until he could be subdued. From his ringside seat, Commissioner D. Walker Wear, who had witnessed the disgraceful scene, exclaimed with what for him was considerable heat, "If that fellow Davis ever fights in this state again, it will be over my dead body."

The number of dead bodies Davis would have to climb over in order to fight again in New York State (aside from his extracurricular street-corner brawls in Brownsville) piled up in the next few days until they reached a height only recently equaled by the German cadavers in front of Stalingrad. The Boxing Commission vowed to die in a body if Davis ever darkened its rings again. A sports columnist or two also contributed his hollow shell.

Seven months later, Davis and Zivic

fought again in New York under the promotion of Mike Jacobs, for the "benefit," as the quaint phrase expresses it, of the Army Fund. The first step in the regeneration of Brownsville's problem child was his enlistment in the Army on the advice of "guess whom?" You said it: Promoter Jacobs! Next, columnists who had advocated that Bummy be barred for life melted with patriotism when they saw the little rascal in uniform and launched a press drive to have him reinstated.

Finally, the Boxing Commission, moved only by the loftiest patriotic motives and possibly by a desire to help Mike Jacobs sign up a return bout that was a "natural," hurdled its own pile of figurative corpses to sanction the match. Announcer Harry Balogh performed the final rite in the canonization of Bummy at the Yankee Stadium one night. The grinning street fighter from Brooklyn's toughest purlieu climbed into the ring in Army uniform, performed four of the smartest left faces General Phelan has ever been privileged to witness in or out of National Guard maneuvers, following up each with four salutes worthy of as many major generals, then stood by, amid a deafening volley of catcalls, for Balogh's accolade.

The redundant announcer waited with arm aloft—or "raised aloft" as he himself put it—until he had his audience in the palm of his other hand and then, he proclaimed, in what will probably go down as the classic *non sequitur* of all time: "And that, ladies and gentlemen, proves that Al Davis is a great soldier and a great American!"

The next week, Bummy was knocked out by Zivic in the same ring and a few days later the great soldier was tossed into the clink for being A.W.O.L. from camp.

The New York commission doesn't consider consistency a jewel. Anyone can be consistent. Only contortionists, swivel-hipped halfbacks and geni<sup>ii</sup> can reverse themselves gracefully. When

General Phelan explains, in a manner of speaking, a fine point in the New York State Boxing Law. Commissioner Bill Brown, below, looks on, loyal to the core but wondering what the general is talking about

## The Hunters

Continued from page 15

mad plan of his. Bob might listen to reason. If he gave it to Bob, straight and hard, instead of staging that devious scene—

After a little while he got up and went back to camp. Tommy and Claire were not in sight. Bob was under a patch of tarpaulin rigged to shade the lion, working away at the skin with his boy and some porters helping. Bob was saying "Poli, poli!" warningly at each tug on the skin.

Michael went over to them and stood looking down for some little time in silence.

Cutting into the head was a messy business and Bob's hands grew red.

"Gory," said Michael at last. "Why not let Ali—?"

"Not on this skin," said Bob. He sat back, handing his knife over for resharpening, and nabbed a tick starting up his arm. Then he looked up, his good humor conquering the aloofness that that unwary "Michael" of Mrs. Winston's had brought him. "It's a topping skin, isn't it?"

"Topping. . . . You had luck."

Bob nodded. "Rather. It might have been anything."

"She's a lucky lady," said Michael musingly. He added, "And a very pretty piece of goods."

BOB did not look up again. He took his knife back from the boy and set to cutting. Then he said, very quietly but with a harsh intonation, "That's no way to speak of her."

Michael lighted a cigarette from his stub. "It's the way of any man with eyes in his head."

"But not with a decent tongue."

"Good lord!" Michael laughed. "You sound as if she were a plaster saint! Do you mean to say you don't see—?"

"I mean to say this," Bob laid down his knife and got up, as if he wanted to say what he had to say upon his feet. He was a shorter man than Michael and he stood stiffly erect. The squatting blacks looked up at him and at Michael with round, eager eyes; they knew no English but they were quite undeceived by the levelness of the voice that the white man used.

"I mean to say this," Bob repeated. "You are being too—presumptuous—with that lady."

Michael stared in mock astonishment, then smiled. "You think she doesn't like it?"

He blew a ring of smoke. His histrionic sense applauded the gesture, approved his light, ironic voice: "The only thing she's worried about is that you'll see how much she likes it!"

"Don't be a blackguard. You've been drinking. Go sleep it off."

"Drinking, my eye! I'm telling you, as one man to another, that Mrs. Winston is a very pretty piece and doesn't mind my knowing it. And other men before me. She's not squeamish. No more am I. So why not—?"

"Stop it. Do you want a row in camp?"

"Why have a row?" Michael was unperturbed; he noted, with sardonic interest, the white ring about Bob's mouth and he thought, "I'm none too soon. He's taking it hard." He expostulated mildly, "I've done nothing to row about, you know."

"You've got a rotten mind. You know I won't knock you down because you're Tommy's husband, and your heart's a crock. But I can chuck you out of camp—"

"Oh, no, you can't! You need me here. Me and Tommy."

He paused on that, meeting Bob's hot eyes with bland irony, then went on, "And why the talk of chucking out? What have I done? I merely say the lady would go a good deal farther with me than she has gone—given the chance. You disagree. Your chivalry against my intuition—plus my experience. You must admit the experience."

"Yes, you're rotten with it."

"Better keep your voice down if you don't want these beggars to twig."

"I'm keeping my voice down. And I'm keeping my temper down, because you're what you are. And we're tied together here, as you've reminded me. But you look out you behave yourself."

"I always behave myself. It's never been said of me that I embarrassed an unwilling lady." Michael gave a short

Bob turned his back. He stared down at the lion, trying to command his expression before the blacks: he said, "No, not like that," to the boy who had begun hastily working on a paw, and reached for his knife and squatted down again.

MICHAEL turned away. Reason had not been a success, he thought dryly. His approach had been all wrong. Too abrupt, too antagonizing. Too twisted with that infernal mockery of his. He could not rid himself of it. He could not play the game any other way. He had thought that it would get under Bob's skin, that it would provoke the suspicion that must surely have been kindled by that "Still writing poetry?" and that inadvertent "Michael."

It had got under Bob's skin all right, but it had stirred his male protectiveness.

laugh. "It would take a whole lot more encouragement than you might guess to get me to play the bally Romeo again!"

He dropped his air of persiflage; he asked seriously, "You mean to say you don't see what she is?"

"I know what she is. She is the lady I intend to marry. If she will do me that honor."

MICHAEL thought, "I've forced his hand!" He felt a wry self-disgust at his unlucky tactics and a bitter impatience with this stubborn idealist but his face showed nothing but a glint of quizzical apology. "Sorry. I'd no idea. . . . Holy ground, eh? . . . Just the same, you'd better keep your eyes open."

"You'd better manage to say as little as possible to me these next few days. Until we can part company."

"Separate tables, if you like," said Michael indifferently.

"Not that. I want everything to seem as usual. I wouldn't have her know."

"I see. I still drink your whisky, eh?"

It was an old white-hunter expression, indicative of enforced companionship.

"And not too much of it," said Bob.

"That's a dirty crack. All because I have one opinion of a lady and you another."

"If she will do me that honor." He had not asked her then. There was still time—for what? "Think fast, Captain, think fast." That old war play—what was its name? What Price Glory. Of course. He'd seen it in—never mind that now. He'd have to think fast and work fast. He'd have to fall back on that mad idea of his and try to work that out. To what? There were several possible endings to that extremely complicated situation.

He went to his tent. Tommy lay dead asleep in her pajamas, cheek down upon her small camp pillow, her short brown curls, still wet from a bath, spread upward to leave coolness for her neck. She had a very childlike neck. She was a childlike creature, he thought, with the virtues so persistently ascribed to children and so infrequently possessed by them—candor, simplicity, good will. It must have been the deuce of a predicament for her to find herself in love with Bob.

Irresolute, he hesitated a moment, then took off his hat, sat down and pulled off his shoes, and stretched out on his cot. Suddenly a bone tiredness possessed him. A long time seemed to have elapsed since the early morning advent of the hunters with the lion.

Under his half-closed lids he stared out through the drawn-back tent flaps, the mess tent; one of the little black and white birds, the familiar of African camps, was walking cockily about the picking up crumbs beneath the chairs beside the chop boxes. Uncomplicated beggars, birds! Or were they?

Something was happening among the porters out in back; there was an incessant jabbering going on, an anguished sounding vociferousness very different from the morning jubilee over the lion. Now the cook was yelling at them. He like to tell the fellow to shut up but it was too much trouble to get up. And Tommy wasn't wakened. He could hear her even breathing.

Old Parrish had given them this double tent when he retired—a double tent gave you no privacy but he had brought it along because it was the best, they had and because a double tent might prove something to Claire Winston.

Was she going to have that headache or wasn't she? If she decided against then all this fantastic scheming going on in him was waste motion. "Don't be sure of one!" Had she meant, not to sure of the success of their plans or sure of her? A little of both, perhaps. pretty fool he'd feel, after working himself up to a dramatic finale, to have him rise from the table and go off to the boma.

NEVER mind that, his mind said; just make sure of what you will do, you have the chance. He thought about it. His imagination set up one scene after another, and his judgment stood back and scrutinized each effect. There were three, no, four, possible endings. "One, two, three, four—sometimes I wish there were more." A chap from Honolulu had sung that for the ship's concert, going out. "One, two, three, four—" He moved his head against the pillow, as if to shake off the silly, buzzing tune. He wanted to think clearly. He wanted to think each scene through to the last detail.

The porters out there were still wrangling away; they sounded sour about something. Woman palaver? Hadn't seen any bibis about camp. More like some row with the cook; the cook was shouting at them again. He was calling them shenzis, and that ought to have stopped. These were bush fellows as they might take it into their heads to be.

Michael sat up and swung his legs over the side of the cot. He began groping beneath it for his shoes and Tommy stirred, opening her eyes. She took the fact that he'd been lying down and said quickly, "You all right?"

"Felt a bit seedy. Nothing to make song about."

"Fever?" She sat up quickly, and moved away before her expert hand could reach his wrist.

"Just a touch," he said then.

She looked worriedly up at him. "Will you don't you lie down again? I'll fetch you some tea."

"Stay where you are." He clapped his hat on his head. "Get all the sleep you can—you'll need to keep your eyes open tonight. I'll take care of myself."

He sat down on the end of his cot, tie his shoelaces. "I'm going out to get hell to those porters. They've been making an infernal din. Then I'll have a spot of tea. Want any *chakula* sent in?"

"Thanks, no. I'd rather sleep. . . . He Bob turned in yet, d'you know?"

"Just now. Took all the morning to skin Claire's lion."

"It was a big skin," she said, defensively.

"Maybe you'll get a bigger."

"Oh, no. I don't want a bigger."

"That would be tactless," Michael looked back at her, a faint grin edging his lips. "The times call for tact, Thomasina. Tact and vigilance."

SHE gave a little embarrassed smile, the smile she had when she was afraid to would say too much. Michael went on. . . . He strolled unhurriedly toward the altercation that was going on about the porters' camp; he saw a knot of porters, the headman in their midst, everybody talking at once in the interminable, argumentative way of natives, and on the skirts he saw the cook and a couple of the boys, shouting futile commands and invectives, the cook brandishing an empty pail. As Michael approached, the cook became even more voluble, feeling backed up by white authority.

"Softly, softly," said Michael. "The Wazungu sleep. . . . Now what is this paver about?"

"He wanted water, the cook said, for the baths had taken all the water, and he wanted firewood and these shenzis would give no more wood and water, and that headman was no proper headman or he would make them do their work. They were wild people, eaters of monkeys; they were shenzis who did not understand that white people must have water, much water, and wood to heat it. They were—"

"His men were not shenzis, the headman said sullenly; they were good men, but they wanted meat. The Bwana had promised them meat and there was no meat. They could not work without meat."

"Yesterday they had a buffalo," said Michael.

"What is one buffalo? The Wazungu took their meat, and the servants of the Wazungu took much, and there was little left."

"So little you had the bellyache," scolded the cook. "And before the buffalo there was antelope—"

At the word antelope the men began to shout back; the trouble, Michael discovered, was that they had expected to see the antelope which had been used as bait. Bob had left that out for another time. "As if they feasted on meat every night!" said the cook scornfully.

"But you, Bwana, promised us meat every night," said the headman.

"The men are right," said Michael. "I will get them meat. . . . But the cook is right, too. They must do their work. I said them for food and water, and after I have eaten I will get them not one antelope but two."

He'd shoot two bucks, he thought, and have a fresh one staked down in place of the old bait. He rather liked the notion of altering Bob's arrangement. Useless, to sit up by a stinking antelope—better to trust to the scent of a fresh blood trail. Moreover, if he went to the trouble of getting new bait, that would be so much more reason for their going out. . . .

THE table was set out of doors, in the leveling light of five o'clock. The sun was still an hour from the horizon but the fierce heat was gone from it, so the dark whites about the table were hatless, freed of their day-long felts.

Mrs. Winston's wave, Tommy thought critically, was not as good as when she had started on this trip, and her hair was a little darker at the roots and the ends bleached by sun—that was what happened to long bobs in Africa. Sometimes she looked a trifle too old for a

long bob, but this was not one of those times; her sleep had been refreshing, and she looked very youthful in her soft, gray-green hunting clothes, the shirt open at the throat. She looked a lovely Rosalind in the Forest of Arden.

Green-wood smoke drifted to them from the dozens of small fires where the porters were toasting their meat; there was a hum of voices, gloatingly happy voices now, except when some greedy snatch provoked a yell of warning.

"They'll be gorged like pigs tonight," said Michael. "I had your last night's bait brought in and left you a new buck. You ought to thank me, for you'd have found that chap too high for good company."

Claire smiled faintly over her cup of tea. Bob gave a quick glance toward him but made no comment.

"And you'll have better luck with a fresh blood trail," Michael addressed

enough quinine—when you've got it in your blood—"

"Let's talk about the weather," said Michael, "instead of what I've got in my blood. The natives say we're lucky to have such clear nights. They say it will be clear tonight, but that a storm may blow up, any time soon. That's the way the rains start here."

"Too early for the rains," said Bob curtly.

"They come early here."

"I thought rains came in the afternoon," said Claire Winston. "At Entebbe, at a dinner, a man told me for hours about the rains at his station—said he could set his watch by them. Two-ten they started. It sounded like a train to Tunbridge Wells."

"He was showing off," said Michael. "Letting you know he had everything under control."

"They are like that, usually," said Bob.

his wife directly. "I got you a fine buck. Had the *wapagazis* drag him in, then out and in again. Maybe he'll lure two lions, so you can bag another," he finished, turning toward Claire.

"Maybe three," said Claire, with that faint smile again. She looked at Bob McNare. "Then you can have one. All this vicarious hunting must be frightfully dull for you."

"That charge this morning wasn't exactly dull," said Bob.

"Was that only this morning? It seems incredibly long ago. Heavens, how I slept!"

"That was awfully nice of you, Michael," Tommy told him. "I hope you didn't—"

She broke off, for Michael wouldn't like her to say, "I hope you didn't overdo," before Claire Winston, and she was surprised when he said casually, "Didn't do myself in? Well, I'm a bit seedy, but nothing the night won't cure."

Bob gave him another quick glance but said nothing. Claire said, in a somewhat uncertain voice, "Did you say—this morning—you were having fever?"

"Just a touch."

"Michael isn't really having fever."

Tommy sounded anxious to have that understood. "I mean, he isn't having a go of it, or anything like that. It's just that sometimes, when you don't take

"After they settle in. But the times vary, in different places."

"At Kivu it used to pour at twelve," said Michael. "Buckets of water, for about an hour. But you could have a storm any night. The Kivu rather fancies its thunderstorms."

"Let's not even talk about storms," said Tommy. "We aren't going to have one tonight." She glanced toward the swiftly dropping sun. "Don't you think we'd better have our coffee now, with our peaches? Boy, *lete kawa!*"

"I'll keep to tea," Mrs. Winston murmured. She took a spoonful of tinned peaches, then put her spoon down. "No, I think I will take coffee. Very strong."

Michael's eyes flickered.

THERE was a queer constraint about this meal, Tommy thought. She could not understand it; everything at breakfast had been so jolly. Now Bob seemed very stiff and Mrs. Winston vaguely preoccupied. Perhaps it was because they were tired and not excited about lion, any more. But it was to be her shoot, she thought childishly, and she was entitled to it. She glanced toward Bob who was finishing his peaches hurriedly, and he caught her glance and sent her back a perfunctory smile. He rose and said, "Well—shall we push along? Are you two ready?"

"All ready." Tommy jumped up, and tapped those bulging pockets of hers, "Torch, cartridges, hard chocolate," she enumerated.

"You and your chocolate!" said Bob with a flash of his old banter toward her. "Mind you don't make a noise chewing it."

Mrs. Winston did not rise. She sat with her elbows on the table, slim fingers pressed against her temples, and looked up at them with an air of rueful, hesitant appeal.

"Would you think it terribly unsporting of me if I didn't go out with you? I've got a beastly headache."

It was not so much an inquiry as a gently contrite statement; she met Bob's startled look with a prolongation of her smiling ruefulness. Bob was too clearly at a loss to speak; he stood, staring, rather blankly, and Tommy stared, too, her face all frank dismay.

"I tried to shake it off," said Mrs. Winston, "but it got worse. . . . And since it isn't to be my lion there isn't any real use in my going out, is there?"

"No. No, of course not," Tommy said mechanically, as the blue eyes moved to her, then she said, "Of course not," in an altogether different voice, seeing, suddenly, what Mrs. Winston implied. Involuntarily she glanced at Bob, her gray eyes unguardedly eager.

"Not if you feel seedy, of course," Bob was saying. "Though if there should be a second lion—"

"I wouldn't be up to it. I've been trying to make myself go through with it but—"

SHE continued to look up, expressively, her fingers still against her temples.

"I say, I am sorry," Bob told her. "But we can put it off, you know. We'll go tomorrow night."

"Oh, I wouldn't have that! I'd rather go than have Mrs. Garrick disappointed. . . . We may have to go again, anyway," she reminded him, "if you have no luck tonight."

"Yes, that's true—"

"I don't think you ought to miss one night."

"Not if there's any chance of rain," said Tommy.

She sounded overanxious, she knew, but she could not help that; all the tenacity in her had fastened on the hope of those hours alone with Bob. Nothing would come of them, nothing would be changed for her, but they would be together, and she would have been less than a woman if she had not hoped against all the reason in her.

"I'd take you out myself," Michael said to his wife, "but I'm not up to it. Not after that buck."

Bob looked uncertainly at her. "Would you be—" he began, then stopped.

"Of course she would," Michael answered for her. "And it isn't good sense to wait. So you two go along—I've no objection. Take a boy with you, if you like, for Mrs. Grundy," he added laughingly.

"No sniffy boy," said Tommy. Her voice was merry, though her cheeks were burning. "He doesn't want to go—he doesn't want to go," ticked through her, over and over.

"Well, I've no objection," said Michael again. He glanced at Bob. "Unless you have—?"

There was an edge of mockery in his tone, in his bright darting look. "Unless you're afraid to leave Mrs. Winston with me?" that mockery was saying. "Unless you're not as sure of her as you declared?"

(To be continued next week)

## Five Who Vanished

Continued from page 25

mind. You see, I haven't a terribly good memory. I'm afraid I'm being a disappointment to you. So far, I haven't given you one good reason, have I?"

"Well, the night's still young," Jason said pleasantly. "Or are you tired of this game?"

"Oh, no! I love games. Just keep on asking me reasons for things, and if I have them, they're yours."

"You're very kind," Jason said. "And if I go over my depth, don't hesitate to pull me back. I'm curious to know why there was such a sensation at dinner when I announced your engagement to my favorite aviator."

Luana Topping turned and faced him. She was serious. A light on the wall behind her glowed through her finespun hair. At that moment, she looked gentle and sweet.

"I'm glad," she said, "I can finally give you a reason for your collection. Did you know that you and I are related?"

"I might have suspected it," Jason said. "We do seem to think alike. Are we fifth or tenth cousins?"

"Closer than that," Luana said. "Didn't you know that my father, Bruce Topping, and your mother, who was a Trent, were cousins?"

"Then you and I," said Jason, "are second cousins. How cozy!"

"Yes. And we're also second cousins of Aunt Bertha's—that is, your father and my mother were her husband's—Uncle Hiram's—first cousins. But it's even more involved than that. We're also direct cousins of Aunt Bertha's, because she was a Grazzard before she married Uncle Hiram Grazzard."

"MY HEAD is reeling," Jason said. "It sounds like inbreeding to me. No wonder we're all going to pot."

"Lorin and I are third cousins, too, of course."

"It's time somebody broke it up," said Jason.

"With that expression you're wearing," Luana said, "you remind me of our great-great-great-uncle, Elisha Trent, who was a pirate."

Jason was smiling. "Yes, I remember. Uncle Elisha was killed by a mutinous crew in the Solomons. They hanged him from the yardarm of his brig, the Saucy Girl."

"Yes," Luana said. "Uncle Elisha was one of the boldest and bloodthirstiest pirates who ever sailed these waters." She picked up her life preserver and got up from the step. As he got up, her green eyes were innocent and friendly. "You know, there's something of Uncle Elisha in me, too. I'm not afraid of anything. And now I'm going to bed. Good night, Mr. Amboy."

"Good night, Miss Topping." He watched her walk away.

A bellboy came down the stairs and said, "Mr. Amboy?"

"Yes."

The bellboy gave him a sealed envelope. Jason opened it and read: "Meet me outside on B deck starboard side aft at once. Urgent. K."

The thick oblong windows which lined B deck had been closed. They were blacked out with layers of blue lacquer. The only light on the deck was a ghostly glow from dim blue lamps.

Flack was waiting under one of the blue bulbs.

"I called you here, Mr. Amboy," he said, "because, while you were at dinner, I searched the rest of the Grazzard party's cabins. And I found definite proof

that these people are vitally interested in your brother."

His hands had been thrust into his coat pockets. He withdrew his right hand. It contained what appeared to be a small oblong of white paper.

"Here, Mr. Amboy, unless I'm greatly mistaken, is a snapshot of your brother which I found in one of Mr. Channing Mace's suitcases."

"Hold it," Jason said. He struck a match and held it close to the snapshot. He stared closer. The tall lean man in the snapshot was unmistakably the man who was hiding in his stateroom.

"Isn't it your brother, sir—taken while he was in India?"

Jason moistened his lips. He turned the snapshot over. On the back was the green imprint of a rubber stamp carry-

ing the name of the Photofilm Shops, Ltd., of Rangoon, Burma.

"No, Flack," he said softly. "It isn't my brother, but it's very interesting. This is a man who claims to be Arthur N. Garson, the recent assistant district attorney of Los Angeles and who is now a stowaway in my cabin."

Flack gasped. "Are you joking, sir?"

"No, Flack. I found him hiding in my cabin just before dinner. He said two Los Angeles gunmen had followed him aboard to kill him and he begged me to help him. I knew this man was lying. It happens that I've met Arthur Garson. The only thing that stopped me from reporting him was that he resembles my brother so closely that I'm sure he's what we call in the islands a 'calabash cousin,' meaning a remote relation."

FLACK was staring at him with round and rather wild eyes. "Aren't you going to report him to the captain, sir?"

"No. I want to think it over. I'm going to have a talk with Mrs. Mace and find out what I can from her. She's a very friendly person and I think she wants to talk."

"But you aren't," Flack said in a horrified voice, "going to let this man remain in your stateroom, sir! They've planted him there to spy on you—at least that, if not to kill you as cold-bloodedly as they killed your brother! He's dangerous! Get rid of him!"

"No, Flack; I'm too curious about him. After I've seen Mrs. Mace, I'm going to give him a chance to talk."

"He won't talk, sir! Mr. Mace wouldn't have had this snapshot of him if they weren't in league. He can murder you,

Mr. Amboy, and push your body out of a porthole! At least, let me be there when you question him."

"All right," Jason said. "You can talk to him, too."

"Thank you, sir!" Flack said with relief. "And you agree with me finally, don't you, Mr. Amboy, that these people are a ruthless and dangerous lot, at work on some evil and sinister scheme?"

"They are certainly at work on something," Jason agreed; "and I'd love to see their main blueprints."

JASON wrote a note: "I'd love to talk to you. I'll be waiting hopefully at the post exchange.—The malihini."

He sealed it in an envelope, addressed it to Mrs. Channing Mace and gave it to a bellboy with a dollar, instructing him

your brother Wayne in Kokala, but don't know what it was. I know that Luana got into your apartment and stole some letters your brother had written you. And I know you don't trust me."

"I don't see why you should want me to," Jason said quietly.

"Because I hate the Grazzards!" she cried. "Yet you assume—and naturally—that my husband has instructed me to worm my way into your confidence. Very well, Mr. Amboy, as an earnest of my good faith, I'm going to tell you something that no one in the world knows but my lawyer in Honolulu—something that not even my husband knows. Read this."

She opened her purse and took out a letter and gave it to Jason. It was handwritten on the letterhead of Frazier & Peterson, the Honolulu law firm.

"You'll notice," the blond girl said, "he wouldn't even trust his stenographer."

Jason struck a match and read the letter.

"My dear Natalie:

"I was, needless to say, deeply shocked to learn that you want to divorce Channing, as I had thought that you had weathered the worst storms and were having smooth sailing at last. Of course, if you insist on going ahead with it, I will handle the matter for you, although my advice is that you give it more thought. You evidently wrote in the heat of great anger and I'd prefer to see you take a calmer attitude. At least, we must have a talk before I take formal action."

"Most sincerely yours,  
"John Daniel Frazier."

Jason glanced up. Mrs. Mace was watching his eyes. "You still don't understand, do you?"

"Frankly, I don't, Mrs. Mace."

Her blue eyes were hot. "Because I hate and loathe the Grazzards!" she said passionately. "They've destroyed me. They realize it, they don't care. Whether they do or not, what they don't realize is that I'd do anything to destroy them. And I'm going to help you do it!"

THE blond girl's face was crimson. Jason said gently, "What makes you think I want to destroy them?"

"Because I know that something terrific is happening! And I think it goes back to your father and mother. Did you realize that when Queen Bertha asked you at dinner about your father and mother, she knew they were dead?"

"Then why did she ask?"

"With the possible exception of her son and my husband, Mr. Amboy, she is the only person who knows how her mind works. What I know is that your father, after eleven faithful years of service as her mill superintendent at Kokala, was fired and put on the black list so that he couldn't get another decent job in the islands?"

"Why did she fire him?" Jason asked.

"Don't you know?"

"No. And my father didn't know. I was a bewildered man when he left the islands—"

"And it killed him!" the blond girl said softly. "And you've brooded over it!"

Jason shook his head. "No. I'm not bitter about it. It's too long ago."

She said with surprise, "But don't you feel at all revengeful?"

"No, Mrs. Mace. That's all in the past. I'd like to know what happened, of course, but it isn't vitally important."

"It takes the wind out of my sails," the blond girl said with a gasp. "I thought

## GOOD CHEER ON BOTH FRONTS!

*On the home front . . . on the war front . . . it's a precious*

*moment when you bite into a Milky Way candy bar!*

What enjoyment there is in its pure milk chocolate coating, the  
layer of smooth creamy caramel and the delightful center

of chocolate nougat richly flavored with real malted milk.

And what wholesome nourishment, too!

Back on the job you feel refreshed. Refreshed, and fortified

with the quick energy that is in each

delicious Milky Way.

it was that. No one receives a command to visit the royal household unless he's either potentially useful or dangerous. They're horribly upset about you."

Her eyes, as she gazed at him, narrowed. Then he was sure he saw tears in them, and she said in a soft wail, "You've got to stop being suspicious of me! You've got to trust me! I've given you my innermost confidence and—" She stopped. "Let me tell you how they destroyed me, Mr. Amboy. It may give you a little more faith in me. And it's such a fascinating story."

"But—" Jason protested.

"No, I want to. I really think it will clear up the last doubt in your mind. My husband was doing the job very adequately without Queen Bertha's help. But Queen Bertha doesn't like me. And whom she doesn't like, she destroys. So—"

"Why?" Jason stopped her.

Mrs. Mace shrugged. "I'm afraid I'm just useless. I'm not an islander. I'm not a Grazzard, or a Trent or an Amboy—or a Bishop or a Judd, or a Waterhouse, or a Robinson. I'm just a useless female from the glittering, glamorous city of would-bes and has-beens—Hollywood. I came to Honolulu at the age of eighteen, met Channing at a thumping big dinner party and fell thumpingly in love with him. And I'm one of those strange women—I only do that once in a lifetime."

SHE paused to light a cigarette at the match Jason held for her.

"I'm the Model-T type of woman," the blond girl went on. "Old-fashioned and awfully dependable and built for rough going. You can overwork us and abuse us and we'll deliver wonderful service, but once you run us off a cliff, we're not much good any more. Another man can come along and rebuild us and treat us with loving care, but we're never quite the same old chassis."

She smiled at Jason and he was glad that her eyes were dry.

"If I'd just fallen into the hands of someone like you," she said lightly, and laughed. "It sounds like a Bing Crosby number, doesn't it? Some men are ruined because their mothers drill it into them from birth that nobody on God's green earth is good enough for them. But when a marriage stops working, who cares why? I've lived through one epidemic after another of women—and one murder. But it was Kokala that killed me off."

"Murder?" Jason said.

"Oh, I don't mean the exciting nicely motivated kind you read about in mystery books. Channing merely killed a man with his fist. It happened in Honolulu five years ago. The man was a young doctor from Denver. He had rented a drive-it-yourself car and was with his wife at the Garden of the Moon. Channing and I were there dining and when we went out, here was this strange man trying to unlock the door of Channing's sedan—same make, same color, same everything as the one he was renting."

Mrs. Mace paused and smiled wanly. "Well, Channing was a little drunk. He accused the doctor of trying to steal his car, and he punched him in the jaw, and the doctor fell and hit his head on the curbstone and died. And it cost Channing something like thirty thousand to get himself off. At that time he was a plantation manager on Oahu, not far from Honolulu. He'd known the Grazzards for years, and he wanted to get away from the fleshpots of Honolulu."

"He was terribly penitent. He swore he was going to be a better husband—and we would go to Kauai and start life anew. It sounded wonderful to me—I've always been a sucker for anything sentimental and corny."

## BUTCH

by CPL. LARRY REYNOLDS

Mrs. Mace's deep blue eyes were rueful. "Queen Bertha attended most of the trial. She was the first one to shake his hand when he was acquitted. He was the kind of man she understands. He pokes a man in the jaw and kills him. That makes sense. So she offered him the job of manager of Kokala plantation. And we went to Kokala. And that was where Natalie Mace was destroyed."

"How?" Jason murmured.

"Oh, in the usual way. A few more women—a Jap and a half-breed girl, among others. But I was sort of used to that. It wasn't that. It was—I wasn't wanted. I wasn't needed. They all managed to let me know about it."

"Luana, too?"

"Oh, no! Luana's a grand person. And she isn't hookano—arrogant. We've been close friends until all this recent strangeness started. The queen did most of it—thousands of little things. Just chipping away at the old self-esteem. And Lorrin helped, in his boyish way. It's given me such an inferiority complex that I can't even go horseback riding without wondering what the horse thinks of me."

"Did you know my brother?" Jason asked.

"No. All I know is that he was working in the company store at Kokala, that there was some kind of unpleasantness, and that he went away."

Jason considered her candid blue eyes, then her mouth. It was a cynical mouth. Whether or not she realized it or would admit it, she was still in love with her husband, and she was in a dangerously emotional state. He wanted to trust her, because he needed her help, and he decided he would have to gamble—and hope that she wouldn't betray him.

"Do you know why they wanted those letters?"

"No, Mr. Amboy," Mrs. Mace replied.

"This morning," he said, "a friend in Honolulu phoned me and said my brother had vanished from Kokala on the night of December third, leaving nothing behind but his wrist watch which had dropped down between the head of his bed and the wall. The strap was broken at a buckle hole and on the back of the watch was a smear of blood."

NATALIE MACE was gazing at him with fascinated eyes. "They murdered him!" she whispered.

"That was the only clue," Jason said. "He vanished. Less than two days later, the five of you left Kokala for the mainland."

She was still staring with fascination at Jason's eyes. "This," she said softly, "explains many things. It even explains why Luana has been so strange lately."

"Do you think she's in this? Do you think she was involved in any way with my brother?"

"No. I doubt that very much. I don't think she knows what's going on. She's an outsider, too."

"She's in it and she isn't in it," Jason said.

Mrs. Mace was nodding. "And just to complicate matters—you've fallen for her, haven't you?"

"Frankly, I think I'm still on the fence," Jason answered.

"Frankly, I don't. I watched you at dinner looking at her. And I watched her looking at you. You've both fallen."

"It isn't very important," Jason said lightly. "It isn't going anywhere."

"No?" the blond girl drawled. "You don't know your Grazzards, Mr. Amboy. The fact that it exists is enough. The Grazzards have earmarked that girl. She has been given the royal approval and

she is no longer on display. All her Queen Bertha has played her the way smart fisherman using the lightest tackle plays a rainbow trout. She's finally gaffed her."

"That sounds a bit fantastic," Jason interrupted.

"It is fantastic. Luana's whole story is fantastic. Her father and mother were drowned, presumably in the Kaieiewa Passage, when she was two years old. They were a very romantic pair—very madly in love so I've been told—and they used to sail to all the islands in an outrigger canoe that he made of koa with his own hands. One day they sailed away for the Kona coast and they were never seen again. At that time, he was the Kokala plantation manager and he certainly knew your father."

"I DON'T remember any of it," Jason said.

"It happened after you'd gone to the mainland. Anyway, Queen Bertha took Luana in and brought her up. I suspect that the queen—some tribal reason—had it in the back of her head when Luana and Lorrin were hardly more than babies that they would marry when they grew up."

Jason was nodding. "I see."

"All her life Luana has been dominated and shaped by Queen Bertha. She trained the girl exactly as she herself was trained—a solid, conventional school—Punahou and the University of Hawaii—but mostly outdoor training that would make her healthy and reliant and strong. Lots of swimming, boating, fishing—fresh air and the sun. Partly because she was to become, in due course, Lorrin's wife, and partly to make it possible for her ever to jump ship. Do you understand?"

"No," said Jason.

"The queen saw to it," Mrs. Mace explained, "that Luana was not fitted for a career. All that training was intended to make her a *wahine-kai*. That means 'sea woman,' Mr. Amboy. And Luana is just that—a sea thing."

"Will she make a good queen?" Jason asked.

"I doubt it. She has too much contempt for money and all the little orthodox gods. She's a wild, free thing. Her kind doesn't tame. And Lorrin isn't using the right system. He's too heavy-handed, too headstrong, too violent. Now you—she regarded Jason critically—"you're big and strong, too, but you have a new light way about you. You might do. But you'll never have the chance."

"I know."

The girl sighed deeply. "I've talked myself into a migraine, but it's good to get this out of my system. It isn't good to keep hatred and resentment bottled up. Meet me on the port side at dawn tomorrow morning and we'll have another talk. I'm up early. If I can find a place on deck to sit, I'll be there with my knitting."

"But before you go—" He hesitated. "I'm thinking of putting my life in your hands."

"You ought to know by this time that it's safe in my hands. What is it?"

He took the snapshot of the stowaway out of his pocket. "Have you ever seen this man?"

The blond girl took the snapshot and studied it with a frown. "I don't believe so," she said slowly, "although he's familiar. He looks a tiny bit like you, you're darker. Who is he?" She glanced up at him. "What is this all about?"

"Did it strike you," he said, "that there was anything pointed, or at all suspicious, in the way Luana brought up discussion of stowaways at dinner tonight?"

*How American it is... to want something better!*

*Plastic*  
CAR OF THE FUTURE

WHETHER it's putting together limestone, coke and air to make amazing new plastic automobile bodies for post-war models or finding a way to design a new and better hairpin, in normal times this land of ours is always striving to "top" yesterday's best.

And this constant search for something better doesn't stop with the *makers* and the *sellers* of better things. It goes right on through to the *buyers* and *shoppers* of the land.

BEGINNING back in 1840, word went around that there was "something better" in ales. Since then, millions of Americans, ever willing to try, have sampled it critically. And when they found the "Purity," the "Body," the "Flavor," its famous 3-ring trade mark promised, the samplers promptly made it...

*America's largest selling Ale*

*To speed the day when we can have more "better things" buy war bonds and stamps*

P. Ballantine & Sons, Newark, N. J.

contrary to what the public thought. "Better take a look-see," Doug said to Jenk.

"Shouldn't you—under the circumstances?"

"Nix. They'll feel better if they think the old man's steering."

"You're scared!"

Doug crossed his eyes horrendously. "Order, Jenkins."

The copilot returned in about ten minutes. "Mrs. R. is reading," he reported. "Flies like a sailor. One down, I believe. Greenish. A WPB guy. Woman in a mink coat trying to peek out the curtains. I slapped her hands—metaphorically. Probably not a German spy. Probably just a dope. Your Commander Evans—is being regaled by our Abigail. He seems to like it. So does she."

"That's what I thought," Doug said.

There was nothing in the company regulations against flattering passengers. Mild compliment was recommended, as a matter of fact. Important people travel on airlines—and many important people like to feel that their significance is recognized. Abbey could not resist what would have been a normal impulse in any girl. "I read about it in the communiqué," she said. "Your name—everything!"

A reddening camouflaged the hero's freckles. "Five guys tried for that ship, sister. I happened to be the one that hit it." He fidgeted. "It's all right for you to—talk like this to me?"

"Why—of course! I'm—practically supposed to."

He considered that. "Well, I'll be darned!" Then he laughed. "It's very dangerous."

"Dangerous?"

"Yeah. Four months of sea duty. Ten days whizzing around to make punk speeches in microphones. No girls—except hundreds at a time."

"Oh."

"I don't have to go to work in Chicago till tomorrow, though—" he said rather wistfully. Then he shrugged. "Looks like the mink coat is sending an S O S."

ABBEY frowned and left the hero. The lady in mink was Number Two on the list of those who were *hors de combat* due to the bumps. She was followed by Three and Four. Abbey did not get a chance to talk to Commander Evans for a long while—almost too long. It was rough, and people kept summoning her. Aromatic spirits. Coffee. Ice water.

Beyond Cincinnati, in the twilight, the bumps continued. Abbey knew it would be one of those nights when she had to juggle the trays. She did, too. The WPB man had recovered enough to eat. A downdraft she hadn't expected caught the starboard wing with the force of a padded mallet and she practically threw a glass of milk in the air. It splattered all over the WPB man—and he was very nice about it. She looked back at Commander Evans; he was pretending not to have seen with such intensity that she knew he had. She sponged up the mess and made the customary offer to have the coat dry-cleaned. The WPB man said it was nothing. There were spots of milk on her uniform.

Shortly after that, she had the other standard casualty: a sluicing jerk threw her against a seat when she had a tray in her hands; she could feel her silk stocking take hold of something and run clear to its cotton top. It was the fifth pair that week—and stockings were almost impossible to get. She retreated to her little seat in the stern. The coats swung on their hangars. The dishes jittered. Her flight report forms skidded to the floor. Commander Evans, she believed

miserably, would think of her now, not as a dashing stewardess but as a sort of slovenly, incompetent housemaid.

Doug came back, by and by. His dark eyes glanced lightly but thoughtfully at each of the passengers. He squeezed her shoulder. "Tough, kid. There just ain't any smooth place upstairs tonight."

"It's all right."

"Dame in the mink coat wants you again, pal."

"Yes. She's wretched."

He squeezed her shoulder again—and she felt better. He had nice hands. Strong—but so artistically constructed that they looked gentle. "Stay with it."

He went forward—hesitating behind

mander—you don't mind if I congratulate you?"

The men found each other rather sheepishly shaking hands. Abbey came by, hurrying toward Flight Control to make out her report.

"Crew car going our way," Doug called.

"Got a date," she shouted back musically.

DOUG grinned at the Navy officer. "She's scared to ride in those company limousines. Me, too. Rather land blind."

This was a traditional theme among airline personnel. The commander was

large photograph of Commander Evans—autographed. Abbey spoke without looking up: "I think I'll eat here. The boys go on. I suppose there's no chance it'll clear—"

Doug tried to be cheerful. "Always a chance, keed. Tough luck. A date in Washington—and grounded in Cincinnati. Is it the hero?"

She turned slowly and followed the earnest line of his eyes to the autographed portrait. "Pat? Not Pat. I left for duty. I had a date with Al Rogers—he's talking to the War Department this week end about some special training films. Alice brought over—a week ago. Terribly nice. Getting a divorce—I can't imagine what."

"Oh." Doug hung to the doorknob certainly for a moment. "We'll be in dining room. Too bad."

Jenk watched his skipper not eat dinner. Jenk had sensitive features, direct, loyal eyes. He was a young man in the airline. The line liked him—so did Doug. Jenk said, when Doug came to mash his ice cream and congregate on his coffee, "It's none of my business, pal, but an airplane is a small place and a guy can't miss the main event. Have you tried knocking her on the head?"

Doug's grin was flashing but evanescent. "I have—in my language."

"Have you tried forgetting her? I live in a world of stewardesses—all beautiful—many eager to oblige a veteran lot with a broken heart—"

Doug yawned masterfully—but a yawn was never more synthetic. "Screw it, Jenk." By and by he said, "I am a steady kind of oaf. That's my trouble. If I'd been dizzy—if I'd waited until some sunny afternoon when there weren't any passengers aboard and they played games with the ship coming in—just for the devil of it—where would I be?"

"Fired."

"And maybe I'd have gone in service. Maybe I'd have been wearing stripes like Evans—and even a row of colored stuff. But not me. A trolley conductor never stayed closer to the rails. Abbey likes the do-something boys."

"She likes you, too."

"I'm her favorite uncle. Oh—I can see how she feels. Who couldn't? The going on. That puts zingo in every guy's veins. Natural enough. It also fills the ships with guys who walk around in the headlines. Some of 'em—by the law averages—are the romantic type. Some of 'em are even decent eggs. I bet Evans. I'd bet on that guy. There's a day when just being a pilot was fairly on the melodrama side. Now—you gotta be a pilot and have a cannon, too. Or by me. I'm a trolley conductor."

A BELLHOP stepped into the dining room. "Call for Captain Bail," he intoned.

Doug threw down his napkin. "Phew, Abbey," he said, looking at his watch. "Tell her to pack that evening dress carefully. She may need it, yet."

Ten minutes later they were hurrying through the night. Abbey was chatting excitedly again. Doug was being amiable. It was going to be his job to get the ship, such passengers as could be corralled, and Abbey, down to Washington before one Alvin Rogers, slightly married but on the loose, got tired waiting around the airport.

Doug made it.

Three weeks later, Flight 19 pointed north and west in a sky its skipper disliked. But it was smooth going and they were picking up about ten miles from tail wind at six thousand. Jenk had said anything in particular all the

"Nicely put, Sergeant"

PERRY BARLOW

the seat occupied by Commander Evans—but not stopping. He wanted to—but he didn't have the nerve.

They started down a long way from Chicago. Abbey could feel the change of level and the pressure-diminution on her ears. She looked at the spots on her uniform and the run in her stocking. The commander turned, then, and beckoned.

"Be in, soon?"

"Ten minutes."

"I don't suppose—that is—it's no doubt against the rules—?"

She knew what was coming, but she let him stammer a while. Then she explained that discretion, not prohibition, was the company policy for the social activities of stewardesses.

When the plane stood still and shining on the ground and the passengers were hurrying toward the lights, Doug came outdoors. Commander Evans had been hanging around. He walked up to the pilot. "Nice flying, skipper," he said. "You birds handle these things like baskets of eggs."

Doug felt a glow. "Thanks. I—well—when it comes to nice flying—Com-

nodding. Doug said, "She's a dandy girl." He added, "Get us another Jap," and walked away.

Two weeks later, going the other way, they were grounded in Cincinnati. The intimidating crew car whizzed them over the mist-hung, glistening streets to the hotel: Doug, Jenk, and Abbey. There was a chance that it might open up later so they could go on to Washington—but not a very good chance, according to the meteorologist.

The hotel had a single room ready for Abbey and a double for Doug and Jenk. "Pick you up for supper," Doug said to the girl. They would keep in touch with the airport. If the ceiling lifted, they'd be ready to leave on short notice.

When they knocked on her door, she called, "Come in!" so Doug turned the knob. Abbey was sitting in front of a dressing table, still in her uniform. She had disconsolately buried her head in her hands. On a luggage rack was her overnight bag—the one she always carried—but it did not contain the usual skirt and blouse. Its principal content—an evening dress—hung from a closet door. Inside the lid of the case was a

# THE KID IN UPPER 4

It is 3:42 a.m. on a troop train.

Men wrapped in blankets are breathing heavily.

Two in every lower berth. One in every upper.

This is no ordinary trip. It may be their last in the U.S.A. till the end of the war. Tomorrow they will be on the high seas.

One is wide awake . . . listening . . . staring into the blackness.

It is the kid in Upper 4.

☆ ☆ ☆  
Tonight, he knows, he is leaving behind a lot of little things—and big ones.

The taste of hamburgers and pop . . . the feel of driving a roadster over a six-lane highway . . . a dog named Shucks, or Spot, or Barnacle Bill.

The pretty girl who writes so often . . . that gray-haired man, so proud and awkward at the station . . . the mother who knit the socks he'll wear soon.

Tonight he's thinking them over.

There's a lump in his throat. And maybe—a tear fills his eye. *It doesn't matter, Kid. Nobody will see . . . it's too dark.*

☆ ☆ ☆  
A couple of thousand miles away, where he's going, they don't know him very well.

But people all over the world are waiting, praying for him to come.

*And he will come, this kid in Upper 4.*

With new hope, peace and freedom for a tired, bleeding world.

☆ ☆ ☆  
Next time you are on the train, remember the kid in Upper 4.

If you have to stand enroute—it is so he may have a seat.

If there is no berth for you—it is so that he may sleep.

If you have to wait for a seat in the diner—it is so he . . . and thousands like him . . . may have a meal they won't forget in the days to come.

For to treat him as our most honored guest is the least we can do to pay a mighty debt of gratitude.

## THE NEW HAVEN R.R.

SERVING THE GREAT INDUSTRIAL STATES OF MASSACHUSETTS, RHODE ISLAND AND CONNECTICUT ★

from Washington. Neither had Doug. Abbey came in looking especially starry-eyed. Especially young, too, Doug thought. Like a kid.

Doug scrutinized her and said, "I know. Well—who is he?"

Abbey was slightly crestfallen. "I must be awfully naïve!"

"You are. But go on."

"Larry Barnham."

"Wonderful. Good old Larry. What's he? Trapeze artist?"

"Don't you know who that is?"

"The name is familiar. But it doesn't click."

Jenk explained by lowering his voice to a somber register and saying, "London—calling America."

"A radio announcer!" Doug snorted.

"He's not," Abbey said hotly. "Not just an announcer. He's a reporter. And a writer. A darned good writer. He told me he'd just been talking to the President—"

"Modest."

"He's terribly modest. He said it wasn't anything to go through those bombings. He said he just felt ashamed we weren't helping the English. He's been in seven major retreats. He just came back from Egypt and Australia last week. And he's a perfectly marvelous-looking man. Red hair—dark eyes—you go and talk to him."

"You talk to him," Doug said. "If I want to hear what he has to say, I'll tune in some time."

JENK grinned at the gray sky. Even with her good record, he thought, Abbey was getting a little too celebrity-conscious. If the line caught on, she'd catch the devil. Cincinnati came through on his earphones and he shoved them in place to listen. Abbey went back into the cabin. Doug took over and Jenk wrote out the report. He showed it to the Captain who said, "Thought so."

Abbey busied herself with the passengers for a few minutes and then sat down beside the enthralled Mr. Barnham. For a time, there was no more work to be done. He took her on a brief, vivid world-tour of the global war; and he was in the middle of a very exciting episode that concerned the evacuation of Singapore, when Doug buzzed.

"Darn it," she said. "That means me."

The radio reporter shrugged. "Hurry back!"

"I will."

Doug said, "Feed 'em early, Abbey."

"Bumps coming?"

"Yeah. Then soup."

"Okay."

She fed them early and had most of the trays collected before they hit the rough spot in the weather. It didn't last long. Twenty minutes after the first sluicing thump, the plane was steady again. People stopped looking down at the lights and began to read. One or two, however, from time to time peered nervously out of the windows. Abbey had been listening to Mr. Barnham. She stopped him, finally, to look. The world outside was like solid cotton in the waning light.

Mr. Barnham also gave the view his attention. "Lord," he said.

Abbey shrugged. "It's nothing, really. We're probably staying in it to get a push."

"Easy to hit something, though," Mr. Barnham said.

"But not much to hit—and it all talks to us by radio."

"I hope!"

The next time she went to the front porch, however, she knew that they were not staying in the murk just for a ride. The panel lights glowed faintly. Neither the captain nor the first officer showed

any real sign of anxiety. But they sat rigidly and Doug's eyes gleamed more brightly than usual as he turned to look at her.

"Shut down, keed. Quick—and all around. How'd they do back there in the lumpy stretch?"

"Nobody was bothered."

"Good. We'll probably make Chi. Nothing a whole lot better within reach, anyhow. If anybody, such as that announcer, gets worried, call Papa and I'll lend my presence for morale. It's okay—except there's a devil of a lot of soup."

She said, "Sure."

She didn't feel like listening to more of Mr. Barnham's hair-raising stories, then. She methodically pulled together and snapped the curtains—a wartime procedure on all ships approaching and leaving airports. She sat in her own seat at the far end of the cabin. Once or twice she looked at her watch. The time

## NOT WANTED for the Duration

### VULTURE

Transient criminal who peddles rotgut and vice from shanty clip-joints near Army camps and war plants

came to be at Chi—and they were still flying. Other people looked at watches, too, and Mr. Barnham glanced back at her—nervously, she thought. They banked almost imperceptibly. But Abbey knew, as they briefly held the slight angle, that Doug was turning to push on to another field.

TIME passed. Mr. Barnham hunched down in his seat, pale and shaky. He got out a cigarette, remembered that the "No Smoking" sign was shining, and dropped the cigarette, unlighted. He tried to peek through the little drapes over his window. Mechanically, Abbey rose to tell him it was forbidden. All he could see, however, would be the white, cottony mist close against the glass, shining in the light from the cabin.

He told her so. "Pretty sour—huh?"

"Nothing to worry about. The captain's come in on the beam hundreds of times."

"They all have. And sometimes, they miss. Sometimes they come in on the side of the hill, or the side of a skyscraper, or a grain elevator." His voice was thin and high. The man sitting ahead of him twisted around anxiously.

Mr. Barnham was scared—badly scared. But Abbey smiled at him calmly and nodded brightly at the other passengers who were looking at her for reassurance. "Captain Bailey doesn't hit hills. Or buildings. He's no dope." She took a vacant seat—fastening the belt around her waist. Stewardesses were ordered to do that, before take-offs and landings. Another five minutes passed. Then the smoking sign went out and the plane zoomed. Her buzzer sounded.

THE two men in the cockpit were concentrated. Jenk was fiddling with the radio. Doug was flying. His voice was easy, however, and his big hands held the controls almost delicately. "They doing all right, Abbey?"

"Jittery."

"Maybe that announcer will give 'em a lecture on the war to keep 'em diverted. We're going back to Chi. It closed in here—but Chi's improving."

Abbey's voice was low: "Mr. Barnham isn't in shape to lecture on anything."

"Frightened?"

"Yes."

Doug considered that. Presently, in the dim glow, she could see him grin. "Are you?"

"I don't know."

"That's the right answer, gal. You are. Uneasy. I am myself. How bad are the rest?"

"Quiet. They saw the fog. They know we're late."

The captain nodded. "Yeah. Well—take care of 'em. The facts aren't too hot—that's for sure. Low ceiling. Want Jenk or me out there?"

"I'm okay."

She went back to the cabin. She felt as if she were stepping out on a stage: every face lifted and turned toward her. Nobody had started smoking again—thinking, perhaps, that the sign should still be on. She went from seat to seat. She knew that her eyes were steady, her smile was easy and that the color stayed in her face. It was her job. Acting—for the little theater of the cabin. She spoke to them: "You can smoke, if you wish . . . we'll be a little late . . . don't know just how long . . . pretty foggy down there . . . nothing to worry about. . ."

She passed chewing gum—and nearly every person took some. Then she offered coffee; nearly everyone put his gum in the receptacle and accepted coffee. Even Mr. Barnham—although he seemed uneasy than the others. One of the men began telling a joke in a loud voice. Others listened. It was a nice joke, and funny. Half a dozen people chuckled.

Abbey took her seat again. It was pretty wonderful, she thought. The man who had told the story was the sort that was timid in crowds—a thin, middle-aged little fellow with a pathetic blond mustache. But he was giving—because they were in a scary spot. Everyone, indeed, was commencing to behave beautifully. Except Mr. Barnham—who was showing his fright too plainly. A big fellow with a yellow diamond ring on his middle finger turned back toward the man with the pale mustache. "Did you hear the one about the kid who was busting up the toy department—and the child psychologist?"

They were laughing again.

Mr. Barnham beckoned. "Just what," he whispered sharply, "is wrong? Landing gear stuck?"

"No. Only what I said."

"I don't believe it."

"Would you like me to have the captain out here?"

He shook his head. "Sorry. Shaky. Been in too many tough spots, lately.

Nerves shot. Besides, it's going to be pretty poor fade-out, from the new standpoint, if a guy who's flown over a dozen battle lines is conked in a commercial plane in a Chicago street."

"You won't be." She walked away, somehow seemed worse that Mr. Barnham was concerned with his publicity than that he had been afraid for his safety.

For a small infinity, she just sat. The motors throbbed with a soft, far-off sound. The ship feathered through the night. The people talked and laughed. Finally, Doug came from the cabin. His eyes were unalarmed. There was a shadowy smile on his lips. He made a sweeping, easy appraisal of the faces—stopping for an instant to give Mr. Barnham an extra look. Then he lounge down the aisle, bending over at every second or third seat. He said little, reassuring things. The people seemed to have an almost childish confidence in him and they smiled approvingly at her when she followed the pilot forward.

Jenk saluted cheerfully. Doug eased his big body into position at the controls.

"Going on in, baby. Make sure they're buttoned up good, will ya? Just because."

"You bet."

"And make sure you are, hunh?" He looked at her.

Abbey squeezed his shoulder, then time. "Yes, Captain."

"Good gal! You've got 'em in sweet shape! Give you 'A-plus.'"

She was on the point of asking how tough it was going to be. She didn't need to. Jenk spoke audibly into the mike. "Right—!" he said. "Will do!" The he added softly, "Open the gates, Joe!"

THE "gates," in old-time airline parlance, are the pearly gates. When a pilot asked "Joe" to open them, it meant that the pilot thought there conceivably might be some customers for those portals. Abbey felt her flesh prickle slightly. She fixed her face before she pushed open the door. She went out and met the eyes. The sign came on. "No smoking. Fasten seat belts." She walked along to check. Then she took the rear single seat, where she could watch them as they fastened their own belts carefully—thinking of Doug.

The plane flew with seeming slowness, descending through the mist as if on long steps that had rounded edges—glide and a little bump—and another glide. The passengers were no longer talking. They sat stiffly. Fingers drummed. Hands were clenched. Abbey hoped nobody would squeak—or sweat—or anything. Nobody did.

In her mind's eye she could see Doug up forward in the dark, with that same grin of self-deprecation—in which there was also a curious self-confidence. There was a man. Her eyes flicked over to Mr. Barnham. He was braced, like a ramrod, and his cheek was pasty.

She knew when the flaps went down. They groped along the beam in the white impenetrability of fog. Feeling their way between a dot-dash and dash-dot. Jenk would be making crack. Doug would grin and go back to his warm, slight smile. She glanced at the emergency exit, the first-aid kit, and the fire extinguisher. She could imagine how panicky the people must feel, inside themselves—especially with the ship blacked out. Like being under water in a submarine, she thought—and knowing that the depth bombs might come. Somebody whistled—tunelessly, unconsciously.

The ship wobbled a little. Its nose lifted—dropped. The motors sped up.

and slowed again. There was no human motion in the plane after that. They sat like dolls. Abbey felt as if she were chewing on her heart. Then the wheels hit—moderately hard—and bounced. They hit again. Now, in this moment, she thought—the crash or the ground-loop—if it's coming. She was bent forward by the drag of the brakes. Then the plane stood almost still—the motors roared—and they were taxiing. Flight 19 was down. Routine landing: low ceiling—but not too low to sit down under.

Ten minutes later everybody had gone—toward the waiting room. They had acted a little ashamed, as if it had been unfair to be uneasy. Abbey saw that one of the men had left his brief case under his seat. She picked it up and ran toward the shining building in the hope of catching him. Washington brief cases were important, these days. She was successful; he was out on the curb, hailing a cab.

WHEN she started back, she passed the phone booth. Mr. Barnham, completely restored, was haranguing somebody: "Yeah—Jake! . . . Barnham! . . . I'm at the Chicago airport. . . . Look! . . . Make a new lead for the morning broadcast—will yah? My plane just landed in a hell of a fog—everything hay-wire—and I don't think I ever had a narrower escape. . . . Nope. . . . Oh, you know . . . the old malarkey about wherever Barnham goes there's excitement. . . . Something on the perils on the home front. . . . I'll cut in with an account of the landing. . . . Oke! . . ."

Abbey stood there disgustedly. Mr. Barnham saw her. He told "Jake" to hold on. He leaned from the booth. "How about dinner, baby?"

"No, thanks."

It was some time before she had her report ready for Flight Control. When

she turned it in, she asked where Doug was. They told her he had gone to the café. She found him, sitting alone at the counter. She slipped in beside him.

"Coffee," she said to the girl. She expected Doug to speak, but he didn't. He patted her back gently—but he didn't say a word. She waited for her coffee and sipped it. "Remember your flingding? When you offered to bring my list of proposals up to twelve?"

He nodded.

"Is the bid still open?" She swallowed. "I mean—I'm off glamor."

He shrugged. "Depends. You off flying, too?"

"Of course not!"

He grinned, then. "Good gal! But I am, Abbey. Grounded."

"What!"

"I put in for the Army," he said quietly. "I mean—active duty. I got it. Not flying. Operations. Can you imagine?" He shook his head. "Of course later—I might fly again. Who knows Abbey—you're looking at a Major—on that's booked as a plane passenger—tomorrow—for Miami Beach." He sat steadfastly, not showing his hunger for her—or his disappointment.

For a long minute, she imagined Flight 19 leaving Washington with its enthralling parade of fighting men, celebrities, stars, millionaires—and another girl aboard. She turned on her stool. "Miami Beach, Doug? Get two tickets, huh?"

THE END

"It's certainly flattering that you're willing to be A.W.O.L. just on account of me"

## The Golden Age

Continued from page 13

prove myself worthy of her, to make a name for her.

"I worked hard and I worked my crew hard. Navy was inclined to sniff at Reserve in those days—it seems an awful long time ago—and I wanted to show that we were just as good as pukka Navy people and a lot better than some of 'em. Chances—you have to take chances all the time in convoy work—I took needless chances, time and again, just to keep my crew on their toes. I volunteered my ship for all the dirty jobs. And I never cared a damn for weather. When we got into port I made sure that mine was the first ship ready for sea again—moved heaven and earth to do it. My crew loved it—I think they even loved me. They used to brag about me in the pubs ashore. Among the officers I got the name of being a thruster.

"In Derry one time on a binge a man called me Hell-bent Hericot and the name stuck. I was proud of it. I think I lived up to it. If there were any justice in modern warfare I should have been famous—I'd have sunk subs galore, beaten off air attacks by the score, pulled off wonderful rescue stunts that the Admiralty wouldn't be able to keep from the newspapers—you know the kind of thing. Heaven knows I tried hard enough. But there was something I'd forgotten. You have to have luck. And I hadn't got it—not the shadow of it. Other corvettes were constantly running into excitement. Not mine. Fellows I knew, who hadn't had a command more than six weeks or a couple of months at

most, stumbled on subs or shot down Heinkels right and left. Not me!

"I tell you it was like a curse—as if I were bewitched. Will you believe this? I've never seen a submarine except one or two of our own. In fifteen months not so much as a periscope feather! Aircraft? I've seen them as specks in the sky—and once I was dive-bombed, but the bomb missed by a length and a half and the Hun scuttled off."

"HOW can you call that bad luck?" Marian said a little wildly. "It's what I've prayed for—what every woman prays for."

"Bah! I've prayed too—for fifteen months I've prayed for something to happen—anything!—and nothing ever did. But danger—that's something else. There's always danger. Not the exciting kind, not the kind that gives you a chance to fight and prove yourself, but the cold kind that sits all about you, watching you, never showing itself day or night but always there, listening for you, stalking you, haunting you. Against that you have no weapons. You're naked. Not all at once but little by little you come to think of yourself as a floating target, nothing else. It's not fear, you understand. You must believe that. It's just a cold resignation that takes all the heat out of your blood and ties your insides in a knot. You wonder when the big bang will come. In five minutes' time? Tonight? Tomorrow morning? Next week? Next month? You sit there on top of fuel tanks and magazines with

half an inch of plating between you and the end of everything and you wonder

"When you get into the Approach you look at the dead men drifting pale all black in the oil and the raffle and you think, 'That's me—and Mortly and O'Higgins and Callen and the rest of—next week or next trip.' If only something would happen! If you could get crack at Jerry, a chance to raise mer hell with depth charges, a chance to squirt the pom-pom at his planes—anything to break the evil spell of it!"

"But nothing ever comes—only the ships creeping along in the fog at the dark, and now and again a bump the distance to prove that the danger is real. If you could sleep! But at six you're routed out at all hours for all sorts of things and you get into the habit of staying topside, in your clothes, dozing now and again on a settee in the chartroom. You get out of the knack of sleeping and when you get into a place where you can turn in properly, sleep won't come. You feel yourself going mad. Then you discover there's a way. If you drink enough you can sleep like a log. Then you discover something else. If you drink enough you can get on and bear the burden of your job—the awful twenty-four-hour-a-day responsibility that burdens you like the dead weight of the ship.

"I found out those things. But when you're at sea you can't drink—and then you've the craving for it along with your other worries. You get edgy. You begin to see faults in your officers and in

th you never noticed before. You keep to yourself. There's no chance of exercise in a corvette at sea, nothing but a fisherman's walk—two steps and overboard. There's nothing to break the monotony but food. So you eat too much. The endemic disease in corvettes is indigestion. When it gets bad you eat some more and that drives it away for a time. But your temper goes brittle and it breaks when you're not expecting it.

One day off Tobermory I kicked a signalman. We'd been in fog for days at night on end, herding a convoy from Iceland. But that was no excuse for the signalman. There'd been no ship for anybody. The fellow was standing in the bridge wing. He was supposed to be on watch—it was just a quiet day—and he was standing there by the point-five gun asleep on his feet, with his eyes wide open!

I tell you I passed my hand in front of his face and he didn't even blink. So I kicked him. I stood off and gave him the full swing of my sea boot. It fairly rocked him. And coming out of a dead sleep like that, with the expectation of a big bang always in the back of his mind, I suppose he thought we'd been bombed and done for. Anyhow he dived overboard in one wild spring and went down like a stone. We couldn't have picked him up anyhow, not with ships circling up in the fog on all sides of us. But there it was. The tale got out that I kicked a man overboard. There was an investigation and I was cleared. The rear admiral in charge of the POW told me he'd have done the same in my place.

Can you guess why I'm telling you all that? Can't you see why I kicked that poor devil, why I can't keep away from a bottle, why I can't face taking the ship to sea tomorrow?"

He stared at him with pitiful eyes, but his lips did not move. He cried out, "I've lost my nerve... that's why! I've gone! And when you lose that, you've lost everything! I've known it for weeks and months! Now you know it. Tomorrow or the next day or the next week every man on the ship will know it!"

Marian reached out and took his hand and held it tightly.

HE was in such a turmoil that when she spoke she was startled by the very richness of her voice: "There must be some way out, my dear. Something you can do. Can't you go before a medical board and tell them the truth?"

"I couldn't ask for that." His voice was almost scornful.

"Why? They can't expect a man your age to stand the strain like the younger commanders. Oh, my dear, you've done your share... more! You're entitled to..."

"No!"

"But why?"

"It... it just isn't done." At any other time she would have been angry. Men and their eternal things that can't be done! But there was no anger, no feeling in her at all now except the one great pain at her heart. There was only one way out. He must pull himself together. Had she been strong and beautiful she might make some sort of emotional appeal to his youth, but she was too spent herself. There was another appeal, a strong one, but she shrank from it, shuddering in her soul. She forced the words to her lips. "Then, John, you must pull yourself together and face it—for Robin's sake." "Robin?"

"He likes the sea and the life. He's got making the Navy a career after the war."

"I talked like that, twenty-odd years ago. He'll get over it."

"He'll never get over it if you let him down, John. Think of the things men will say. You know how merciless they are, especially the young men, when it comes to a matter of courage. It's bound to reach Robin's ears—and the ears of his superiors. You know what a fetish the navy makes over an officer's antecedents. The name's not yours to do with as you like. It's Robin's, too. Would you have him ashamed of his own name? Oh, John, he's so very young and eager—you couldn't do that to him. You couldn't! Please sit on the bench and listen to me. Robin says..."

Robin... Robin... Robin...

HE SAID goodbye to her in the early morning. It was still quite dark. The air through the windows was cool with a feel of dew in it and there was a twitter of sparrows in the garden. Along the corridor Marian could hear the others stirring. Most of the officers had sent their things down to the corvette last night. One or two had slept aboard.

She heard Lieutenant Raeburn's feet go past toward the stairs, and in a few moments there was a faint but unmistakable sound of sobbing in young Mrs. Raeburn's room.

Marian steadied her eyes for John. There was little to say now. All that could be said she had said in the garden yesterday. When he kissed her for the last time there was a glitter of moisture in his eyes but his big chin was up and she saw him take a last look at the photograph on the table.

"You'll be all right now, my dear," she whispered.

"Yes, I'll be all right."

The door closed slowly behind him. She wanted to weep but no tears would come. She lay on the bed in her night-dress staring wide-eyed toward the ceiling and after a time, just as daylight crept into the room, she heard the corvette's farewell to the women, to the town, to the shores of home, a series of strident whoops from the siren as it passed out of the river to sea. An insane sound, beginning on a low note and ending in a scream, echoed in the harbor hills.

There was a timid knock on the door. It opened and young Mrs. Raeburn came in clad in pajamas. "Mrs. Hericot, do you mind? It's silly to feel like this, I suppose, but I can't help it. I've come to you because you're older and you know what it's like and—and I just want you to talk to me and let me cry."

"Lie down, my dear," Marian said. Young Mrs. Raeburn threw herself on the bed and her movement jerked the pillow aside. She found something harsh against her face and put up her hand. It was a crumpled ball of paper, a telegram.

Marian said in a strained voice, "Read it!"

Mrs. Raeburn sat up and opened it, wondering. She gasped, and her eyes went to the photograph.

"Your son! How awful! How long have you known?"

"Two days. His ship struck a mine and sank with all hands."

"And you had to part with your husband this morning—oh, Mrs. Hericot!"

"My husband doesn't know, thank God!"

"You—you didn't tell him? How brave—how very brave you are!"

"No," Marian said slowly. "Courage is something you have only when you're young. It's a part of good health and good looks and the feeling that no evil can ever touch you. My dear, I'm forty-six."

# He Makes Them Over

Continued from page 16

Metro-Goldwyn-Mayer officials recognized a few months ago, when they offered him \$50,000 a year to take the place of Adrian as the studio's head fashion designer.

Don declined this politely, because he does not want to be just a designer, no matter how attractive the rates, and after shaking off various other proffered jobs pertaining to the cinema, he was snapped up by Paramount to dance with Ginger in *Lady in the Dark*.

Loper is thirty-six, lithe, quick and definitely not the handsome-hero type. He has a dancer's body and a clown's face, and he uses pantomime with the loving skill of a great comedian. More than anything, he looks like a brunet Danny Kaye. He talks with an accent that is a combination of good British, burlesque Brooklynese, and just kidding. He kisses a girl's hand with the easy elegance of an eighteenth-century duke, but he is also apt to toss her a well-meaning insult of the variety that Moss Hart and George S. Kaufman write for Monty Woolley.

"This will positively kill youse, Bud," is his preface to the stark biographical fact that he comes from Toledo, Ohio. His father was a successful department-store owner in that city, his mother a celebrated English beauty who saw to it that, at the age of nine, Don was sent off to England to attend Feigan and Essex. At twelve, he returned to become a ballet dancer; he spent two years with the Chicago Civic Ballet and capped this phase of his career by marrying, at the age of fifteen, one Vye Hughes, a luscious, 107-pound blonde from Charleston, West Virginia.

## Grounds for Divorce

There followed brief experiments with the Broadway stage, studies in Paris, and a try at life on Long Island. And after seven years of matrimony, Don and Vye divorced with the utmost friendliness.

"She was a lovely girl, but she spent the whole day in riding breeches," he told a friend later. "She didn't like clothes." That was enough to end it all for him.

Loper gets more kick out of designing dresses for a beautiful girl than most people get drinking champagne, cutting a rug or making money. Last season, while he was drawing an unheard-of salary for directing, producing and dancing with Maxine Barrat in the show at the Copacabana, he was spending the daylight hours doing gowns for Marlene Dietrich and assorted chorus girls. The only difference was that Marlene paid an astronomical sum for the privilege of being Loper's momentary Galatea; the chorines got the same service for nothing.

The one woman who has never questioned his advice or resisted his ministrations to the slightest degree is his dancing partner, the taut, high-cheeked, infinitely glossy Maxine. They have been dancing together professionally since the day five years ago when they met at a London tea dance and he invited her out for a fox trot.

"You dance very well," he complimented.

Maxine, who had been making her living with her feet for several seasons, gave him a not too terribly grateful look and said, "So do you."

In less than a fortnight (after he had upswept her hair into a style that was four years ahead of its time, chosen for

her a dazzling collection of gowns, supervised her nail polish, her gloves, her furs and her stockings) they started touring Europe as a team.

Sensation is not too strong a word for what they created, instantly. The blond girl with the figurine-perfect body and lacquered look and her dark, live partner did things that seemed easy and were hard; the mood of their performance was sophistication almost to the point of satire. Their dancing winked.

They waltzed and rumbaed and fox-trotted from London to Paris to Budapest to Biarritz, at \$1,500 to \$3,000 a week. They were in San Sebastian when the first shot was fired in the Spanish War; they were dancing on a glass floor and they heard the guns above the music and their own light footsteps.

Soon afterward, they came to America—to Broadway and the glamor niteries and such theatrical extravaganzas as *One For The Money* and *Jerome Kern's Very Warm For May*. For the past few seasons, they have whirled fleetly and with spectacular urbanity across the two-bit-sized dance floor of the Copacabana, where Don also produces, directs, and occasionally writes songs for the elaborate *divertissement* featuring the Samba Sirens, who are the current most-pleasant-to-gaze-at examples of the Loper touch.

When he was first assigned to the chore of building a floor show around the Samba Sirens, Don took his initial look at the seven belles, shook his head in despair, and moaned, "What am I going to do with you? I feel like the ring-master at a dog show."

In less than two months, he had transformed the bowwows into such devastating beauties that they were rushed off to the altar or Hollywood faster than he could train replacements.

What Loper does for the deserving chorines, he does for free; when he creates a little number for a lass with a

bagful of happy cabbage, his prices begin where most ordinary budgets end.

"I can't start thinking for less than \$350," he gaily admits.

Only women who amuse him or inspire him wear his clothes, and these include Katherine Cornell, Martha Raye, Margot Grahame, Lela Rogers (Ginger's mother) and Anne Shirley. If he by chance encounters any one of them looking below par (which is perfection) in cocktail lounge or theater lobby, bystanders within twenty yards are sure to be treated to the sound of Loper's voice lashing the air with "You do look awful, girl. Go home and dress yourself."

One of the most spectacular and soul-satisfying feats of duckling-into-swan ever achieved by Loper was performed upon a plain young girl whom he encountered one morning strolling the Atlantic City boardwalk, wearing black slacks, a very bad turban and pearl earrings. Loper couldn't resist stopping her.

"You really look dreadful, dear. Who are you?"

"Ruth Brady," the girl said, adding with pride, "I'm Miss Brooklyn."

Don reached out, pulled off the turban, scrutinized her oval face, and said, "Come with me."

At that moment began the reincarnation of Miss Brooklyn. Don ordered her never again to encase her hips in a pair of slacks, black or otherwise. He taught her what make-up to put on, and what to leave off and how to walk. He even showed her how to cut a piece of roast beef.

One evening when they were dining together, he looked at her sharply and demanded, "Where did you get that wrist watch you're wearing?"

"My mother," said Ruth.

"Well, take it off, put it in your purse and never wear it again," Pygmalion ordered.

Galatea obeyed.

Next day, a messenger arrived at house bearing a small package. It contained a gold clip watch, studded with rubies and diamonds, from the most expensive jeweler in town.

His passion for rearranging extends from women to apartments. When visits, the front door is scarcely long enough to admit him before he has the furniture completely switched around, and has told you for heaven's sake to take down that portrait of U. S. Joshua, it's awful. And why don't you spread around a little chintz in the living room? He will do a whole house over in five minutes, with or without your courage.

## London in New York

His own home is a four-story walk-up unfashionably situated on Lexington Avenue in the Sixties over a brasserie and a tailoring establishment, at the top of the stairs an ivy-covered door with a gold knocker admits you to a completely charming Regency apartment with three small drawing rooms and a replica of his home in London.

In this green-velvet and gold-satin house Don is a superb but stubborn host. He will not serve a cocktail or any other mixed drink, because he considers concoctions uncivilized. Guests who know this idiosyncrasy are sometimes impelled, by hardheadedness on their own parts, to evade this ruling, as late sections of the population did during the prohibition era.

One evening, Ted Straeter, the theater leader, who likes a cocktail before dinner, telephoned Loper an hour before the time appointed for feasting and said firmly, "Don, I hope you won't mind, but I'm bringing my own Martinis."

Reluctantly, Loper agreed to give him a glass from which to drink the brew, but accompanied this concession with a vivid lecture on *The Virtues of Plain Imbibing*. He himself indulged in only two alcoholic drinks—Scotch with ice, or Scotch without.

He sleeps almost no hours at all, no more than five. When he lunches with a girl, he always brings flowers—purple orchids or sprays of gardenias—to celebrate, he says, the fact that he got up in time for lunch. But this is sheer whimsy, because he's always up anyway. The telephone in his wall starts ringing at nine, and he's so curious he can't resist answering it.

He's the restless type. He smokes a lot and usually deposits the ashes in his hair; it's his favorite gesture. The *Rain Hood* in him makes him worry about chorus girls, feed them, clothe them, and lend them money; the same quality causes him to disdain the wealthy and famous and important, unless they manage to be amusing according to his lights. No one has awed him yet.

There is the rather famous occasion when Norma Shearer, after watching Loper dance for an hour and a half at the Saratoga night club, met him socially. A short conversation took place, following which the star cooed, "You're a really interesting young man. What do you dooo?"

Loper lifted his cigarette above his close-cropped hair, tapped the ashes on his scalp and purred: "I'm a tight-walker. What do you dooo?"

Yes, things ought to pick up all around while Don's in Hollywood—standing with Ginger Rogers' feet.

THE END

"Gregg, you said \$11,576—Ellsworth, \$9,085—Hanson, \$15,420—Smith, \$6,253 and my guess is \$14,321. . . . Now we'll count it and see who wins the dollar!"

COLLIER'S

WILLIAM SPAAR

# Wine ~ friendly as a New Year's call

**Wine is made for the  
moderate, relaxing occasions  
we all need nowadays**

OFTEN as you can these days, drop in on your friends, or ask neighbors over to your house. Share some talk and a bit of food with them. Ease up. It's one of the better ways, you'll find, to keep up good morale and good cheer. With many people, wine is a favorite when folks gather together this way. Because over good food and wine everyone

can relax in moderation, and enjoy himself. That's what wine is made for — to help bring out friendship.

And nothing is easier than to serve wine in your home. You set it out as simply as you would tea or coffee. For an interesting free booklet about wine and how to enjoy it, and about wine in cookery, write the Wine Advisory Board, 85 Second Street, San Francisco.

You'll find excellent California wines now at your dealer's. Sound and well developed, these wines are true to type, and inexpensive, too. Consult your dealer—he will be pleased to help you choose among the good wines of our own country.

Next time friends drop in, bring on this fragrant, full-bodied Port wine. It's good with fruitcake, sandwiches or cheese sticks — and equally good served this easy way are Sherry and Muscatel. With dinner or luncheon, of course, you'll prefer a lighter table wine like hearty red Burgundy or golden delicate-flavored Sauterne

# Miracle Come to Pass

By Roark Bradford

ILLUSTRATED BY WILLIAM MEADE PRINCE

Scandalous proceedings at Little Bee Bend, where, it would appear, the wine is potent

UNCLE HENRY was a man of many talents and much talk. First, of course, he "knacks" with livestock and was able to keep in working condition the eighty-odd mules dragged cultivators through the cotton fields of Bee Bend plantation. As senior deacon in the Ship of Zion church, naturally he had to lead in prayer and song and to testify in open meeting. He claimed he could preach a better sermon than Charlie, the one-legged blacksmith-preacher, if he put his mind to it.

"I ain't de Lawd," Uncle Henry confessed earnestly, "but I kin make things come to pass."

The old lotman was seated on the Widow Duck's front porch, pleasantly idling away the afternoon. It was hot, out across the broad fields, but the cotton was "shoulder high and loppin' in de middles," a situation that lasts only a few brief days between final plowing and first picking. The mules were in pasture with Riley, Uncle Henry's assistant, was attending to the milk cows. There was no work to be done and no responsibility to carry. The young people found excitement in trips over to "de dago's," or in romantic experiments along the bayou. The old folks just sat by and idled.

"Anybody kin make things come to pass," the Widow Duck belittled. "Efn dey got sense enough to manage 'em. But I bet you can't do no merricle."

Uncle Henry thought it over carefully. "Well, naw," he concluded. "I reckon I ain't holy enough to do a merricle."

"Aw, git out!" the Widow Duck said. "You holly you stinks. Me and you bofe is too old to do anything else but holly." She shook her head. "Er cou'se," she added, "I ain't always been so lolly. About de time I was takin' Big Jim Haley away from dat frail brown over on Duke's Bend, I was a down thaing! And I didn't keer who knowed hit."

"In my day," countered the lotman, "I used to me up a little hell, myse'f. Gamblin' wid spot cy and rollin' a few dices and pitchin' razors and gettin' dronk and shootin' my pistol in de middle er t and all like dat. Might' nigh ev'ywhars I we caused talk."

"Didn't you never git messed up wid no ladies?" the Widow Duck wondered.

"Well, in a way," Uncle Henry admitted.

"How you mean?"

"I had too much ladies," Uncle Henry explained. "My trouble wa'n't in gittin' 'em. My trouble was in gittin' shut of 'em. And hit ain't no fun when a gal got seven or eight or a dozen ladies cryin' and askin' you please to marry up wid 'em. Makes me sad right now ev'y time I thinks about all de ladies I ain't got me."

The Widow Duck snorted. "I bet efn I'd a' gotter you I'd 'a' got you."

"Hit's a question, soul," Uncle Henry conceded. "You never will know."

"Humph!" the Widow Duck humphed. "I bet you could marry you right now, as fat and ogly as I'm. But hit ain't nothin' in yo favor dat appeals to me."

"I hope you ain't jokin'," the old lotman said. "'Cause I'm too old to run away now." He put on his hat. "Marry talk skeers me," he added. "B'lieve I git on back to de barn and see if Riley's merrin' things." He bowed. "Goodby, all," he said. "Fare ye in yo prayers."

"March wid de angels," the Widow Duck replied.

AT THE barn, Uncle Henry came upon a half-grown pet pig. "You know, Robbit," he told the pig, "b'lieve she want to marry me."

"Say which, Uncle Henry?" It was Riley, standing inside the barn, who answered.

"Say I b'lieve I'll go by de dago's and git me a er wine," the old lotman said.

"Didn't know you dronk wine," said Riley.

"Lot of things 'bout me, I don't know," Uncle Henry declared spiritedly. "Let alone you."

After a few minutes of finding absolutely nothing to do, he ambled half a mile down the black-top road to the combination filling station, grocery and package liquor store. The sun was hot and he walked slowly. "I swear, I bet Mis' Duck do want to marry me, sho nuff," he told himself.

At the dago's, several young people were hanging around.

The Widow Duck picked up her chair. "Charlie," she said menacingly, "efn you says one word er de marriage over me and Henry, I'll knock yo haid

## Announcing the new Packard for '43

ABOUT THIS TIME of the year, if there weren't a war to be won, we'd probably be talking about new 1943 Packard models.

Today, of course, no cars are rolling off our assembly lines. Instead, we are turning out Packard-built Rolls-Royce aircraft engines at top speed — and Packard super-marine

engines for the Navy's hard-hitting PT boats.

So your 1943 Packard is now a *brand-new 1943 War Bond* — and it's a mighty fine model! You get it F.O.B. your nearest bank or post office, or wherever War Bonds are for sale . . . and it has a galaxy of all-star features . . .

Every dollar you put into War Bonds is put into power. War-horsepower! Planes! Tanks! Guns! More of *everything* America needs to win!

**VARIETY OF STYLES AND PRICES!** Big ones for big wallets — and little ones for little pockets with just as much patriotism but in your pocketbooks.

**EASY TERMS!** A down payment of a dime, a quarter, or a half-dollar starts you on your way. When you've bought enough War Stamps, you just exchange them for a War Bond. Easy? Even the youngsters are doing it!

**ASK THE MAN WHO OWNS ONE!** He'll tell you every War Bond is backed up by the strongest company in the world — the good old U. S. A.! And Uncle Sam stands back of every War Bond you buy!

**TRADE-IN VALUE!** When it comes time to turn in that War Bond, you get *more* than you paid for it — *plenty more!*

**- SO BUY WAR BONDS! FOR IF AMERICA DOESN'T WIN THIS WAR, I'LL NEVER BE BUILDING PACKARD CARS AGAIN, MISTER — AND YOU'LL NEVER BE BUYING EM!**

**WARTIME SERVICE PLAN FOR CAR OWNERS.** Although Packard is now 100% in war production, we're not forgetting our motor car responsibilities. Packard dealers are *staying in business* to help keep your car running at top efficiency. Drive in for a free check-up and inspection — and get the details of our "Car Health" Plan — today!

**WAR BONDS AND STAMPS — AND KEEP ON BUYING!**

# PACKARD

PRECISION-BUILT POWER

# DRIVE SLOWLY—

at 25 miles  
you get  
**40% LONGER  
TIRE LIFE**  
than at 35

# P.S.

PREVENTIVE SERVICE

Sponsored by Collier's  
for Motor Car Owners

## How to get along on 4 coupons a month

WE'VE all discovered that distance is no longer a matter of miles. Today, it's coupons—4 coupons a month to be exact. The big problem is to fit your essential driving into these precious coupons.

Stretching gasoline to cover more driving has long been a favorite subject of your P.S. editors. Now, rationing makes gasoline-stretching mandatory with every motorist.

The first step to getting more from your gasoline is to find out just what mileage you do get. Make a regular habit of checking the gasoline you put in against the

mileage on your speedometer. If you find you're not getting what you should, get your service man and P.S. on the job. (When you figure, remember the new low speed limit should automatically give you 25 or 30 per

cent more mileage than driving at 50.) Gasoline wastage is usually a sign that something's "out of whack." It may be that the lack of a replacement or a needed repair is cutting your ration book in half. Let's take one illustration:

### Spark Plugs Can Eat Up Half a Coupon

In the course of a thousand miles, your spark plugs fire more than a million times! Thus, it's only natural that the electrodes of the plugs, subject to tremendous heat, get out of adjustment and eventually burn off.

When this happens, you'll have a missing cylinder that wastes 1/6 of the gas in a

six cylinder car and 1/8 of the gas in an eight cylinder car. But long before this, your plugs haven't been sparking efficiently, and the inefficient spark hasn't been making full use of the gasoline in the cylinders. On this count alone, gas wastage can run as high as 10%.

Your service man can make a Preventive Service inspection of your plugs very quickly and easily. Have him do it regularly.

### Ignition System

Checking spark plugs is just one point in Preventive Service. All the inter-related parts of the ignition system (distributor, coil, generator, battery, wires and cables) as well as other parts of the engine and car can make serious cuts in your ration book—unless you pay strict attention to P.S.

This Collier's column has endeavored to call your attention to certain car facts that will help you get along on 4 coupons a month. Remember the first step is to check the mileage you're getting. Then check your service man for P.S.

There'll be more Preventive Service columns in later issues. In the meantime, send for the FREE P.S. Check List. This form will help your service man tell you what Preventive Service is needed on your car now—and what can be deferred. To get your free copy, merely write Collier's P.S., 250 Park Ave., New York City.

fun. A juke box was moaning a slow tune and couples were "dragg'n' hit out" on the floor. Uncle Henry recognized one of them.

"You, Doralee," he chided, "you ain't hardly dry f'm gettin' baptized and hyar you is jest a-dancin' like a fool."

The young girl released her partner and laughed. "Us ain't dancin', Uncle Henry," she told him. "Us doin' what you calls 'cenchin' along.' Jest like de hymn say, 'Keep a-cenchin' along like a po little worm—like dis.'" She moved her feet in a slow, rubbery slide and ended in a sudden "bump."

Uncle Henry laughed and slammed his hat on the floor. "I swear, daughter!" he exclaimed. "Dat might not be's dancin' but hit'll do ontwell de dancin' start. Yah, Bad Eye, bring me a pint er dat sweet wine whilst I sets and watch dese chilluns."

"WHY, Uncle Henry!" Doralee scolded. "You's de haid deacon and fixin' to drink wine?"

"Paul say wine is good for de belly-ache," Uncle Henry pointed out. "I et a mighty big dinner and I'm li'ble to git one efn I don't pitch a little er dis anjylicker down amongst all dem cabbages and beans and stuff."

He sipped the angelica and watched the merriment with approval, patting his feet to the music and exchanging banter with the youngsters.

Before he realized it, the bottle was empty and Bad Eye had brought him another. Presently Doralee announced, "Hit's gittin' late and Albert'll run me plum to It'll efn his supper ain't ready. You goin' my way, Uncle Henry?"

"I wouldn't risk myse'f wid you, down de road, daughter," he declined gallantly. "Pray hard and let yo light so shine."

Bad Eye brought another bottle to Uncle Henry, and then lighted the lamp. People left and new ones came in. Uncle Henry presently dozed.

"I'm fixin' to lock up now," Bad Eye told the old lotman, shaking his shoulder. "Think you kin make hit home okay?"

Uncle Henry batted his eyes and shook his head. "Sho, I kin make hit home," he snapped. "How come I can't?" "You drunk three pints er anjylicker," Bad Eye suggested.

"Den, gimme another pint." "You owes me sixty cents for what you done drunk, already."

Uncle Henry pulled a silver dollar from his pocket and slapped it on the table. "Bring me two pints, den," he ordered, "and keep de change."

"Hit won't be no change," said Bad Eye. "Hit's twenty cents a pint and dat'll make five."

"Den don't keep de change," Uncle Henry ordered, "jest bring me my wine."

Outside, the moon was full and bright and the old lotman felt mighty pleasant as he strolled leisurely down the road.

It was, Uncle Henry discovered soon, a brand-new road. The way from the dago's to Uncle Henry's cabin on Little Bee Bend was smooth and level. The road he was now walking rolled and pitched beneath his feet—uphill and down and from side to side. But Uncle Henry did not mind.

"I'm gittin' about de country," he told himself happily. "Leavin' out f'm hyar so's Mis' Duck can't marry me." He concentrated on the Widow Duck for a while and then he got angry. "She too smart," he decided. "She claim she won't marry up wid me, jest to th'ow me offn my gyards, and den she fixin' to sneak up and marry de fool outn me, whilst my back is turned! Dat kind er stuff sound mighty close to hyppercrittin' to me."

He weaved a little farther down the

road. "But she can't git me now, I'm gittin' about." The idea of pleased him and he forgot his angelica a little tune to himself—a song he had not thought about for a quarter of a century:

"Gonter roll my britches up-a  
knees,  
Gonter wade up de bayou far  
please.  
Goin' up de bayou, goin' up de  
Goin' up de bayou, durn my so

He stopped singing, shocked. "V swear!" he exclaimed. "Hyar me a reel and me de haid deacon! E me kindly, Lawd."

But the Lord did not excuse him. Lord suddenly transferred him from strange, rolling highway to the black-top road that led directly to Bee Bend and to the man-ma Widow Duck. Right before his stood the familiar landmark—the of Reub and Sugar with the big wood tree between house and fence.

Uncle Henry blinked and saw. There was no mistaking it. But was that stream of water doing, running right across the road before him seemed to come right from under R house!

"Now, dat's what de Lawd dor for singin' dat bayou-wadin' reel," Henry said. It seemed a reasonable ishment for a reel-singing deacon he accepted it with good grace. He down the two bottles of angelica, moved his shoes, trousers and shirt, ing them into a neat bundle, he them high above his head to p them from the water. The proba of getting his long underwear we not concern him. What did were the bottles of wine on the ground. He made up his mind about them. He his clothes on the ground and p up the bottles. Stepping cautiously waded across the dark shadow of the tonwood tree that stood before R house.

"I'M TOO good a Baptist, Lawd," he weary 'bout wadin' in a little w, Uncle Henry said.

That he reached the other side of shadow without getting wet did no cur to him. He felt comfortable happy in body and soul.

Where the footpath left the road the bayou bank, he instinctively turned. A hundred yards farther, Uncle Henry saw a billowy white mound on Widow Duck's porch.

"Dat you ketchin' de air, Duckie?" he asked.

"Henry?" the Widow Duck called. "Hold hit whilst I git some clothes c ain't got on nothin' but my nightgo

"Aw, go 'haid," the old lotman proved. "I ain't ashamed er you gown. Too hot to put on clothes, how. Keep a-settin'." He strolled the yard and sat on the porch.

"What you doin' in yo underdraw the Widow Duck demanded.

Uncle Henry glanced down. At he was surprised, then he remembered. "I been wadin' in de water," he said.

The Widow Duck leaned forward touched him. "You ain't wet," she him. "Folks which wades in de water most gen'ally gets wet."

He thought about that for a while. "De Hebrew boys didn't git wet v dey waded across de Red Sea," he minded her. "Efn dey kin wade in water and not git wet, well, so kin

"Aw, don't be a fool," the Widow Duck said. "De Hebrew boys didn't wet, on account er de Lawd passin' merricle on 'em."

"You mean," Uncle Henry demanded, "that Lawd ain't got stuff enough to make merricle on me, too? You tawkin' 'bout de Lawd, at yo age?"

The Widow Duck leaned over and said, "Henry, you's dronk as a goat," she accused. "What you got in dem bot- tles, Licker, I bet."

Uncle Henry had forgotten the bot- tles. He raised them and looked. "Anjy- ck," he modified. "But I ain't dronk. I feels pleasant. Bofe er dese bot- tles plum full."

"What you fixin' to do wid two pints of wine?"

Uncle Henry had to search way back in memory for the answer to that one. He'd forgotten when, where or why he'd got the bottles. "Wine for de wed- ding feast," he finally offered. "In case I change my mind, and marries me up, I've got wine for de weddin' feast, like in de Bible."

The Widow Duck took both bottles. "Dis," she said, placing one bottle against the wall, "will do for de First Sunday over at Old Ship." She yanked the cork from the second bottle. "And she added, 'is fixin' to fulfill de promise: 'Take a bottle er wine for yo stomach-ache,' so say de Sperrit, Henry. I will change conditions." She raised the bottle and took several gurgling swal-

"You got de stomach-ache, too?" Uncle Henry asked.

"Now, but I might git," she told him. "I had a big supper er collard greens, cawn- and black-eye peas. One time I et and hit gi' me de stomach-ache."

"It is kinder dangersome," Uncle Henry agreed, as he took a mild swig from the bottle and passed it back to her. "Dat's how come you settin' on de edge in yo' nightgown?" he asked. "I couldn't git to sleep?"

"I took another pull at the bottle and set it down. 'In a way, yas,' she said. 'How come I got outn my bed and set out hyar. But what I been seein' in yo' kinde kept me settin'.'"

"And dat is?"

"Young folks," the Widow Duck said. "I and gals gittin' up and down de bayou path. Some of 'em married and some of 'em ain't. Some of 'em wid dey husbands and some of 'em wid some- body else's husband."

"S, hunh?"

"I ain't seed a lick er sin. Er cou'se, I been settin' hyar. No tellin' what I might see efn I got up and started peepin' about."

Uncle Henry weighed this carefully. "You's right," he admitted. "But maybe hit ain't no sin efn nobody don't see hit."

"Amen, soul," the Widow Duck said. "You's speakin' wid de tongues er men, now. Say on, Henry."

He glowed with the compliment and felt a gallant reply was necessary. But he could not think of one.

"Next Sunday ain't but de Third Sunday," the Widow Duck remembered, "and hit's five Sundays in dis month." She reached for the bottle which had been dedicated to church use. "Hit'll be a long time befo' First Sunday rolls around agin." She uncorked and drank.

Uncle Henry observed, "I bet I c'd preach me a sermon 'bout all dis sin."

"Not f'm settin' on my po'ch, you couldn't," the Widow Duck pointed out. "Cause f'm hyar you can't see a lick er sin. I been scein' a heap er people gittin' up and down de bayou path but I ain't seed sin one."

"Den what you been watchin' for?" demanded the old lotman.

The Widow Duck set down the bottle and chuckled. "To keep my business 'tended to," she stated.

"Like which?"

"Like maybe you remembers Amos and Tildy's boy, name er Albert?"

"Don't tell me Albert been up to some- thin'," Uncle Henry challenged.

"Let me talk," the Widow Duck said. "You know Amos be's a full deacon and Tildy be's a full ursher and Albert be's a junior deacon and all of 'em holy."

"Amen," said Uncle Henry.

"But Albert backed up and married a little chocolate twister f'm Duke's Bend, name er Doralee. You mind dat?"

"Yeah, and Doralee got saved and baptized de first day of meetin'," Uncle Henry recalled.

"And dat same day," the Widow Duck added, "she set out to git herse'f befo de committee to git to be a junior ursher."

"Ain't dat good for a young member to try to git to be a junior ursher?"

"Hit is and hit ain't," the Widow Duck said. "I seed de Lawd smack some sinners a powerful lick in my day and time, when He poured His sweet salvation on 'em. But I ain't never yit seed Him smack a sinner hard enough to knock 'em f'm

## FALA OF THE WHITE HOUSE

by ALAN FOSTER

"Oh, boy! I just kissed Congressman Luce"

## Pardon Us...while we attend to a little matter overseas

WE wish we could say, as we could a short time ago, that any high-grade camera dealer anywhere could supply you with any Filmo Motion Picture Camera or Projector or Filmosound Projector you might desire. But Filmo Cameras, Projectors, and Filmosounds have gone to war. Wherever American men are fighting—or training, Filmo motion picture equipment is likely to be with them. That, we know you agree, is as it should be. Winning the war comes first.

To the ultimate victory of America and our Allies, Filmo Motion Picture Cameras and Projectors are rendering vitally essential contributions. The Filmo slogan—"What you see, you get"—pleasant in peace, is *priceless assurance* in war. What men in training see on the motion picture screen, they *get*! To men in combat, the unfailing eye of the camera provides indisputable record of achievement and the key to better weapons and better tactics.

The craftsmen of Bell & Howell who made the slogan mean what it says to thousands of home movie makers are now working *all out* to provide our fighting forces with the finest motion picture equipment and sighting devices American ingenuity can produce.

Bell & Howell Company, Chicago;  
New York; Hollywood; Washing-  
ton, D. C.; London. Established 1907.

de onrightheous path to de ursher's seat in one lick. De Lawd mos' gen'ally lets a new-bawn soul twile in de vineyard, some."

"Well," Uncle Henry said, "I reckon de Lawd got dat figgered out 'bout right, at dat. But what all dis stuff got to do wid settin' out hyar on yo' front po'ch?"

"Doralee," the Widow Duck announced, "is walkin' de bayou bank, tonight. I seed her pass down when I first comed out and she ain't passed back on-twell yit."

"H'mm," Uncle Henry mused. "She jest about de right size to do hit, too. I seed her over at de dago's dis evenin'. She say she wa'n't dancin' but she was doin' all right. And Albert wa'n't around. She ought to git named out in meetin' 'stid er gettin' a junior ursher."

"Nawp," argued the Widow Duck. "I ain't seed her did a thing. She jest walked by de house and cut across de fiel'. What I'm watchin' for is to see efn some man come along and do likewise."

"Heap er mens walkin' de bayou dis night."

"All of 'cm walkin' wid dey womens, too," the Widow Duck said. "Doralee is de onliest one I seed gittin' about by herself. Quick as I seed dat, I figgered efn Doralee was fixin' to do a sin, de man would pass down de path, too. So I looked in my Bible and de fust page I looked hit say, 'And hit shall come to pass.'"

"For true?" demanded Uncle Henry. "Wonder who dat man c'd be? I ain't seed nobody hangin' 'round, and over at de dago's she was steppin' out wid fust one man and den de yuther. Jest havin' a little fun and no harm dat I c'd see."

"I BEEN studdin' my mind about dat, too," the Widow Duck said. "She been stayin' 'way f'm de mens, good, for a Duke's Bend gal."

"Who stood up for her when she went befo' de committee? Albert, maybe?"

"Naw, worse'n dat," the Widow Duck snorted. "Hit was B'r Charlie. He testified dat Doralee felt like a angel when he baptized her, on account er she was so full er de Sperrit."

"B'r Charlie, hunh?" Uncle Henry was shocked. "Dat ole goat chasin' after young gals?"

"Now go 'haid, Henry," the Widow Duck scolded. "I don't like B'r Charlie no gooder den you does, but he de pastor. And ain't nobody gonter set in my house and low-rate my pastor."

Uncle Henry refused to be squelched. "I seed many a two-legged hyppercrit in my day, but a one-legged hyppercrit is somethin' for de books. He can't pray and he can't sing and I kin stand flat-footed and outpreach him any day in de week."

"Shut up, Henry," snapped the Widow Duck. "He ain't much good but he do de best he kin."

"How come he don't preach agin all dis sin goin' on along de bayou?" Uncle Henry asked.

"Maybe he don't know about hit."

"Den how come he don't find out about hit?" Uncle Henry said indignantly. "He kin git around wid dat crutch okay, but naw! He might lose a little sleep efn he done dat!"

"He got to run de blacksmith shop endurin' de day," the Widow Duck pointed out. "He tired at night."

"He ain't sharpened a plowpoint since de crop plowin' stopped," the old lotman said. "And he ain't got to hit a lick on-twell de winter start. He ain't too tired to find out about dis sin. He jest too lazy."

The Widow Duck raised a finger for silence, and listened intently. "Well, speakin' er de devil!" she exclaimed.

Uncle Henry cupped a hand to ear and listened. The rhythmic "tip-bap, tip-bap" he heard could be made only by the one-legged preacher crutching his way hurriedly along the bayou path. Uncle Henry grinned. "Yo Bible ain't never lied to you, Mis' Duck," he said. "You sho made hit come to pass."

The Widow Duck didn't answer. She waited in a grim silence until B'r Charlie was directly in front of her gate.

"You Charlie!" she called. "You come hyar and talk to me!"

THE Widow Duck's voice startled the preacher almost into a state of collapse. He hadn't wanted anyone to know he was not at home at that hour of night, least of all the Widow Duck.

"Yas'm," B'r Charlie said, turning reluctantly in the gate. He searched his panic-stricken brain for a reasonable explanation which he knew was going to be required of him. He was not a very

the old lotman suggested. "Maybe you such a hyppercrit, yo company ain't welcome."

"I ain't fixin' to let dis kinder stuff go on in my church," the preacher went on. "I'm gonter marry y'all up, right hyar and now. Line up and lock hands!"

"Uh-um!" Uncle Henry mumbled mournfully. "I b'lieve he'd do hit, too."

"Sho, I'll do hit," B'r Charlie declared. "Line up and lock hands!"

The Widow Duck arose and picked up her chair. "Charlie," she said menacingly, "efn you says one word er de marriage over me and Henry, I'll knock yo haid off wid dis chcer. Onderstand?"

B'r Charlie understood perfectly. Uncle Henry was very pleased. "Amen, Sister Duckie," Uncle Henry seconded. "And when you do's dat I'll stand up and preach his funeral."

"You be quiet, Henry," the Widow Duck said. Turning to the preacher, she said, "Maybe hit don't look right for me

did you say you was doin' gittin' bayou at night?"

B'r Charlie had hoped she'd find that, but now he did the best he could. "Jest walkin' 'bout," he explained. "I ain't workin' much dese days. I don't git tired enough to sleep. A hyared hit was a heap er sin gittin' so I figgered I might git out an' go sho, so's I c'd preach agin hit."

The Widow Duck nodded indignantly. "Hit's a good thing for de to do. I and Henry was argyin' 'bout dat thing, when hyar you come."

"Wait a minute, Mis' Duck," Henry reminded her. "You lo yo Bible for a certain man to pass, and dat man was B'r Charlie. dat's a fact?"

"Yas, but maybe I ain't all dat"

"Efn I'm holy enough to be a"

"cle," Uncle Henry reasoned, "yo holy enough to make B'r Charlie"

"B'r Charlie, is you dar?"

THE END

"I'm getting fed up with this giddy whirl. What I'd really like to do is settle down and have a home and husbands!"

COLLIER'S

GREGORY D'ALESSIO

smart man, but a lifetime of living on the precarious fringes of sin and holiness had given him a certain cunning. He was quick to take advantage of the scene that now met his eyes.

"As my Redeemer live!" B'r Charlie roared in righteous outrage. "My senior ursher and my senior deacon, jest a-settin' out hyar, nekked as a jaybird! Mis' Duck, ain't you got no shame? Henry, hell ain't hot enough to fry you!"

"Aw, dry up," the Widow Duck ordered. "We got on plenty clothes. Hit's nine yards er domestics in dis gown er mine and Henry wearin' long draw's in de summertime. Hit's mo' clothes den we was bawn wid."

"Hit's a open shame!" B'r Charlie opined. "I'm gonter th'ow you bofe outn de church."

"Humph!" grunted Uncle Henry. "You ain't holy enough to th'ow me and Mis' Duck outn nothin'. I and Mis' Duck is about de holiest people—"

"I ain't holy as you?" B'r Charlie demanded. "Well, I don't set on a widow woman's front po'ch in my underdraw's!"

"Maybe you ain't never been invited,"

to be sittin' hyar in my nightgown and Henry in his underdraw's. But dis is my front po'ch and when I went to bed I got hot so I comed out hyar and set. And when Henry comed along in his draw's, I figgered we was bofe old enough to set like we did efn hit suited us."

"And holy enough," Uncle Henry put in. "Mis' Duck been sittin' hyar makin' things come to pass, right outn de Bible—"

"Like which?" B'r Charlie interrupted.

"Like you," retorted Uncle Henry.

B'R CHARLIE looked to the Widow Duck who nodded confirmation. He felt uneasy. "What you been doin'?" he asked, turning to the lotman.

"I been a merricle," Uncle Henry answered. "I been wadin' in de water and comin' out dry, jest like de Hebrew boys comed outn de Red Sea!"

"Hunh?" B'r Charlie inquired. "He been doin' dat for true, Mis' Duck?"

"He was dry as de burnin' sand," the Widow Duck corroborated. "Wa'n't even sweatin'. And dat's all hit is to I and Henry settin' on de po'ch—now, what

# "What a Dad I've got

*... at 49, he's going to town  
in a new job!"*

"When I left home to join the Army Dad wasn't sure how long his job would last. He used to work for an eastern manufacturing concern. He liked his job—made enough to support the family comfortably, and put my sister and me through school. But after the United States entered the war, priorities began to hit Dad's firm, and business got pretty bad. It was a tough outlook for a man nearing 50. I was plenty worried about him.

"Then Dad heard that there were great opportunities for men over 45 in life insurance. Wartime conditions have broadened the market and they need capable people to handle the business. Dad wrote me that he was especially interested when he found out how large a percentage of insurance premium dollars goes into U. S. bonds. He figured that a fellow selling insurance would actually be helping the war effort. I told him I sure subscribed to *that*!

Union Central Life was Dad's choice. Now, it's a 75-year-old company with over a billion dollars of insurance in force, and sells the average policy of any company its size. Dad passed Union Central's capability tests and was given a complete training course including slide-films, books and joint work with U. C.'s seasoned salesmen. Dad says he learned quickly and soon began making money in his new career.

"Today, my parents are happy and I've got a load off my mind. Dad's making enough for them to live well and to save for the future by purchasing bonds and insurance themselves. Dad's manager and home office give him valuable sales help, and both Mom and Dad feel that he's being of real service to the community. You hear a lot about dads being proud of their sons these days. Well, I'm sure proud of my Dad! And you can't blame me, can you?"

**IF YOU ARE OVER 45** and want a well-paid new career, this may be *your* perfect opportunity. Don't decide "against yourself" that you can't sell life insurance—your own self-estimate is probably not accurate. Our capability tests, backed up by our experience in selecting thousands of men and women for this work, will give you a frank and reliable appraisal of your basic qualifications for insurance success. Find out how you "stack up"—write today to Union Central Life Insurance Co., Dept. C-7, Cincinnati, Ohio.

me and my bird dogs would ramble these woods. Done got too old now, though, and had to cut out whisky and woods rambling. An old man ain't fit for much, boys," he said matter-of-factly. "See them woods yonder? Four of my daddy's brothers got a bait of fighting the Yankees and they deserted and holed up in them woods for four years. Kept their horses tied and ready saddled on the edge of the camp for lookouts, and whenever the horses sensed something coming, the boys they mounted and rode off the other way. See that lime sink yonder? One of the boys had a fast mare, and one night the soldiers jumped him and they had a race for the woods, with them shooting at him with buckshot. The mare come to that lime sink unbeknowing, and there wasn't nothing to do but jump it or fall in it, so she jumped it. They come back next day after the soldiers had give up and gone, and measured it, and it was thirty-two feet across."

It would be a poor writer who couldn't make a story out of material like that. I remembered everything that had been said, and after a time the finished story developed in my mind, and I wrote it, and then Collier's bought it. A day wasted?

John Gates had been listening, too, but he hadn't forgotten that he'd made big talk about Butch and she had—through no fault of her own, of course—let him down.

Now he said, "Butch is feeling better. She's really going now! Look 'way over yonder on that rise."

We looked, saw a swiftly moving spot of white flicking through the woods. But then, just ahead of us, Butch appeared, still jumping along stiffly. Happily trailing along behind her, stopping to peer into bushes and sniff at grasshoppers, was the well-built male puppy.

"That's not Butch," I said in amazement. "That's the other puppy!"

The dog making the beautiful swing ahead was the undersized bitch named Sister that I had dismissed without another glance. She had quickly tired of her brother's puppy-dog play and had gone hunting. And she kept it up. It was obvious that she was no ordinary dog. Furthermore, although her general conformation was all a mistake, her stride and style afield was that of a class dog.

I watched her a while longer, saw her find and stylishly point a covey of birds, and I said to the farmer, "What do you want for your puppies?"

### A Matter of Finance

It took him about forty minutes to get around to giving me an answer. We rode on, and he talked about other things, and finally he complained, "Well, I hate to just come right out and say what I'll take for them. Might be you'd give more than I'd think to ask, and then I'd cheat myself."

But he finally named a price for the two of them, and it was not high, and so I said, "I'll pay that, and only take the little bitch. The dog is a nice-looking animal, but I don't want him."

"He is a damn'-fool sort of dog, ain't he?" agreed the farmer, and the deal was closed. Sister is now fourteen months old, and a good one.

But for every good dog you get—by raising or buying—there are dozens that you reject. Mostly they're simply inferior animals, without the deep will for hunting, or they may be good hunters

and bird finders, and yet not have the style and dash that really tingles your blood.

It's the outlaws that break your heart. There was a setter bitch named Rose, for instance. Never have I seen a dog better at going to game—by which is meant locating the birds after the first vagrant scent has been struck. Upon finding scent, Rose would go into a frenzy of action. Most dogs slow up and pussy-foot around. But not Rose. She would whip back and forth—then stop for an electric second—then move up and stop—and she had them. Somehow she could get smack into the middle of a covey without accidentally flushing a bird. All her flushing was on purpose. She would hold her point a few seconds, then jump forward and flush them and follow the streaming covey out of sight.

I never broke Rose. During her puppyhood, she and a litter sister used to get out and self-hunt. When they got to killing goats, her owner gave her to me. This was two weeks before the end of hunting season. I hunted her by herself every day, and in a few days she was holding her birds long enough for me to get there and shoot. I believe if I could have kept hunting her, she'd have been saved. But by the time next season came around she had slipped back into her old ways.

Her worst trait—and I never came even close to curbing it—was her jealousy. When another dog pointed, she inevitably dashed in and sent his birds

scattering—a habit she had acquired I'm sure, in her puppy days when she had roamed through the woods with her sister.

Rose had a way of whipping against her sides and she kept the tail so that when she hunted, her side became blood-streaked.

Once a Negro woman stuck her head out of her cabin to see who was passing and she exclaimed, "Lawdy, Boy, done shot your dog, ain't you?"

After I'd given Rose up as a lost dog, she used to slip off to the self-hunting, and I'd know what she been up to by the splashes of blood on her sides.

### Tall Tale

Rose was very different from a friend of mine claims to have had. Spot his name was, and his stanch point was absolute. Once Spot was lost while hunting, and my friend, sure that the dog was pointing, searched for him for hours. Finally gave up, hoping that Spot had found his way home. But Spot never came. Next year, my friend happened hunting in the same territory and upon a skeleton of a dog, and standing there with head and tail in a stylish point, and he knew it was Spot. Spot was still holding his point for huddled there in the grass in the middle of him were twelve tiny quail.

Or so my friend says.

THE END

"It's very patriotic and pretty, but I don't believe the War Department would be interested"

COLLIER'S

CHESTER G.

# The Sky's the Limit

Continued from page 20

The general chuckles, chats easily with the corporal, as he hurries through the barracks, the PX, the mess hall. He uses and calls to the mess sergeant, "here's the menu?"

"It's on the bulletin board, sir."

"No, I mean a big menu over the counter, so the men can see it before they get to the hotplates. They like to look up and see what they're going to have to eat. I know I do." Over his shoulder, as we start back to the flying field, he adds, "Better get one made."

The plane takes off and heads back to Washington, the members of his staff limp wearily in their seats behind news-

papers and magazines. The general's fingers drum restlessly for a moment on the arm of his chair. He rises and goes forward to the pilot's office, and motions Major Peterson back to the cabin for a little rest. A grin of satisfaction appears on his face as he takes over the plane's controls.

Now at last he is really at home. First, last and always, he's a flying general. He guides the ship with a veteran hand, and you realize as you watch him what it is that makes it possible for him to get so close to every last member of his outfit. You recall the wording of his most recent citation, when he was

awarded the Distinguished Service Medal for flying the Pacific from Brisbane to San Francisco in the record-shattering time of 35 hours and 53 minutes:

"As commanding general of the Army Air Forces, he has given a conspicuous demonstration of leadership, the strategic mobility of long-range Army aircraft, and the ability of the high air commander to maintain intimate contact with his units in the field."

He lives every job himself. He knows firsthand the feelings and reactions of every pilot, every officer, every cadet, every enlisted man in the ground crew. He worked his own way up, a step at a time, and he hasn't forgotten a single lesson that he learned.

That's why the safety of the youngsters in his command is more important to him than anything else in the world. That's why he has refused to build planes that might gain a few hundred extra feet of altitude, at the sacrifice of essential armament or leakproof gasoline tanks or other safety devices. He's proud of the fact that the accident rate in our Army Air Forces is so low today; and he intends to keep it that way.

## Hap Has What It Takes

His grin hasn't faltered, for all that he's faced with the toughest job in history. Creating overnight the bestest and mostest and fustest air force in the world—buying days with dollars, as he says—is a big job; it takes a big conception. It takes vision. Luckily he has that. All the incredible feats you see taking place today on a thousand scattered airfields didn't happen without a lot of preparation; don't fool yourself. He's planned an air force big enough to win.

"The size of any structure," he says, "depends on the size of its base. That's how we've designed this air force of ours, with the biggest base possible: the whole United States. Our foundations go from the Atlantic to the Pacific, from Canada to Mexico. No matter how heavy our eventual load, no matter how high we may have to build, a base that size will be able to carry it." The famous grin. "The sky's the limit."

We're dead on our feet by the time we get back to Washington late that night. Mrs. Arnold, a gracious and considerate lady, recognizes our condition at a glance and mixes us a drink. We gulp it gratefully.

The general, fresh as a daisy after covering a quarter of the country, calmly sips some buttermilk. There is a sudden scrambling in the hall, and Warrie rushes in, shoving a couple of scatter rugs ahead of him. He is a black cocker spaniel—Warrie is a nickname for Noir—and full of tricks, the general tells you.

The general takes some peanuts from a tray. "Let's see you do some of your tricks, Warrie," he says. "Let's see you sneeze."

Warrie promptly sits up and begs.

"All right," says the general, equal to the occasion, "let's see you sit up and beg."

Warrie rolls over.

"Well, then," says the general quickly, "roll over."

Warrie sneezes.

"The trouble with Warrie is," the commanding general of the Army Air Forces confides to us plaintively, "he won't do anything I tell him."

## Tired Kidneys Often Bring Sleepless Nights

Doctors say your kidneys contain 15 miles of tiny tubes or filters which help to purify the blood and keep you healthy. When they get tired and don't work right in the daytime, many people have to get up nights. Don't neglect this condition and lose valuable, restful sleep.

When disorder of kidney function permits poisonous matter to remain in your blood, it may also cause nagging backache, rheumatic pains, leg pains, loss of pep and energy, swelling, puffiness under the eyes, headaches and dizziness.

Don't wait! Ask your druggist for Doan's Pills, used successfully by millions for over 40 years. They give happy relief and will help the 15 miles of kidney tubes flush out poisonous waste from your blood. Get Doan's Pills.

## The Three Droll Dukes

Continued from page 39

Jimmie McLarnin knocked out Young Corbett III with one punch a decade ago in California, in a bout advertised as being for the welterweight championship although booked for only ten rounds, the New York commission recognized Jimmie as the world's champion.

Yet when Henry Armstrong outpointed Mike Belloise in a 10-rounder billed as a featherweight championship contest in California several years later, the New York commission refused to accept Henry as the champion. The fact that Belloise was a New Yorker with political influence may have had some bearing on the case, or the Droll Dukes may have been merely giving another exhibition of their inconsistency.

There's a stock courtroom scene in burlesque that reminds one of a meeting of the New York State Athletic Commission, only the stage skit isn't half as funny.

General Phelan, who always interrogates his subjects in a "So you won't talk, eh?" tone of voice, even though they are the most garrulous group on earth, will eye his "victim" over his glasses with what is supposed to be a stern look, then fire a question at him that is unanswerable, both factually and grammatically.

The fight manager (or maybe the promoter), undaunted by the fact that he doesn't know what the general is talking about any more than does the general himself, will open his yap, as they call it in the profession, all ready to unburden himself of a second Gettysburg Address. He'll get no further than the first malaprop however, before the general checks him up sharply with a stern: "No back talk! This body operates by authority of the state of New York!"

Commissioner Bill Brown is more direct. Bill not only calls a spade a blasted shovel but he doesn't hesitate to designate a tramp as a bum. Bill wasn't a fight promoter refereeing his own fights for years without learning to recognize a bum at fifty paces. Nor is there any appeal when Bill terms you a bum. If Bill Brown says you're a bum, you're a bum in spades, and that's all there is to it.

Commissioner Wear seldom engages in any of this amusing byplay. He sits, smokes and listens, or if the mood strikes him, listens, smokes and sits.

### A Prize Complicated Sentence

General Phelan is noted for handing out long sentences—but only in his official statements, never to offenders against the boxing code. A typical Phelan sentence is the following, plucked out of a letter he sent to Jerry Giesler, chairman of the California commission, relative to the Salica-Ortiz bout:

"Regarding your statement that you feel that our commission must recognize clearly the very unfair position in which any decree of ours requiring Salica to fight in New York State, ostensibly for the world's championship, which is now nonexistent, would place Salica, New York's sister state of California and the integrity and good morals of the great sport of boxing in the United States, of which both these great states form an important part, wish to reiterate that Salica has not been ordered to box in New York State."

Another paragraph from the same letter:

"The 15-round rule was passed in 1935, and proviso was made that a champion would be permitted to box a lesser num-

ber of rounds than 15 which would be considered a nontitle bout, provided he conformed with Section 7 of the rules (championships) of the New York State Athletic Commission, which means that at the time he entered into the contract for the championship within the six-month period of his last defense."

Involved though the general's written sentences are and obscure though their meaning may be, they are models of simplicity and clarity compared with his spoken words. General Phelan rambles along, getting his phrases and clauses hopelessly mixed up until he runs out of breath, whereupon he stops and starts all over again on a new tack.

Count Campello, chairman of the Italian Boxing Federation, who met General Phelan at a meeting of boxing delegates from all nations in Rome several years ago, described him as "a charming gentleman, though a bit difficult to understand."

There is a certain small group of sophisticates who go to Madison Square Garden, not to see the fights but to watch General Phelan in action. The good general never fails these connoisseurs of exotic entertainment.

One night last spring, Balogh, the redundant Roscoe Conkling, was trying to get off a 5,000-word introduction for a third-rate fighter when the crowd, spotting the Yankee baseball idol in a ring-side seat, set up a loud chant: "We want DiMaggio!"

Balogh, annoyed that his extemporaneous speech (which he had spent four afternoons memorizing) should thus be rudely interrupted, appealed to General Phelan for a ruling. The general, who works himself into a purple lather over such crises, shook his head in a violent negative and waved his arms at Balogh as if casting a spell over him. Balogh again turned to the crowd and tried by rapid talking to sneak in at least a few hundred words of his speech before the gallery chanters could get organized again.

Alas, it was no soap! By this time, Brigadier General John Reed Kilpatrick, president of the Garden, who sat two seats away from the general, turned to

him and asked him to authorize Balogh to introduce DiMaggio, so the show could go on.

"Not over my dead body!" shouted the general, dragging in the commissioner pet hyperbole by the heels.

Brigadier General Kilpatrick was that time only a colonel and a Reserve Corps colonel at that, so he couldn't overrule a full-fledged brigadier general who was a veteran of countless St. Patrick's Day parades down Fifth Avenue into the bargain. In vain Colonel Kilpatrick pleaded with General Phelan using flattery, logic, and wheedling in turn. The general not only wouldn't budge but he turned more purple with each successive refusal.

### Soft Words from Uncle Mike

Just when it seemed that General Phelan would burst his aorta, Colonel Kilpatrick beckoned to Mike Jacobs and whispered a few words in his ear. Mike then whispered a few in General Phelan's ear, and the general, turning from purple to pink in a twinkling, signaled Announcer Balogh that it would be a right for him to introduce Joe DiMaggio, which he promptly did. General Phelan beamed like a full moon, conscious having again saved boxing. The general does not take orders from Mike Jacobs unless they are whispered.

If General Phelan weren't constantly alert, the game, as he likes to call it, would be menaced perpetually by the who would deceive the public. A boxer can jump a contract and get away with but one of the deceptions for which the general will not stand—and he means positively, not possibly, in this case—the use of a *nom de guerre* by a fighter. So, whenever a boxer like Willie Pep, Hartford, whose real name is Papaleo fights in the Garden, he must cover with adhesive tape the "Pep" lettered on the back of his bathrobe, and be announced under his real name. The public would be swindled if a man named Papaleo used the name Pep when knocking out an opponent.

General Phelan doesn't take lightly his responsibility to make every fight

"This year I've resolved to limit myself to one cup of coffee a day, own only five tires and pay bigger taxes"

COLLIER'S

GARRETT PRICE

January 2, 1943

COLLIER'S

CROCKETT JOHNSON

and, clean, stand-up affair. One afternoon at Stillman's gymnasium on Eighth Avenue, the benevolent expression in his blue eyes changed to one of horror when he saw two boxers clinching.

Summoning Lou Stillman, the proprietor, the general pointed a finger of fury at them and fumed, "Look, they're clinching. I'll have none of that around here."

That other guy is his sparring partner," said Lou, "and I don't know what to do about it. Besides, General, the fellow on the left has an acalaris in the knemis and I don't dare eptude him."

That makes no difference," said the general, laying down the law to Stillman. "I don't want any more clinching around here and I'm holding you responsible!" Once, the world was almost deprived of Cinderella Man champion because General Phelan didn't like his style. As back in 1934, Jimmie Braddock, who had been suspended, was applying for reinstatement. The good general obeyed. Joe Gould, Braddock's manager, demanded that the general state what objections he could possibly have to a man

wanting to earn a living. This twist flabbergasted the general, but Gould insisted that he state his objections.

The general hemmed, hawed, cleared his throat, whinnied, snorted and finally blurted out, "I don't like his style."

"Show me his style!" challenged Gould. "I'll bet you can't show me!"

Not realizing that he, the judge, was being cross-examined by the witness, the general jumped to his feet and holding both hands clenched in front of him like Al Jolson crying for his mammy, said, "He goes like this!"

After much hilarious pantomime but before anyone died of heart failure from laughing, the commission finally reinstated Braddock, and a year later he won the world's heavyweight championship.

The boys in the boxing racket will miss the Three Droll Dukes, particularly General Phelan, who was always in there swinging with both hands. It is unreasonable to expect that any of the new commissioners will be in the general's class when it comes to fuzzen up there in acalaris with the frammiscamp.

THE END

## Wing Talk

Continued from page 8

a place of heavy coatings of grease, the American Armed Forces are now using a chemical product known as silica desiccant. Plants costing millions of dollars are now being built to produce large quantities of it.

It is a dehydrator. A small package packed in a crate of machine guns will keep them rustproof for weeks. A sack of the crystal is tied to each cylinder of aircraft engines shipped overseas and keeps them dry.

In postwar days, the desiccant is expected to have an important use in shipping and storing aircraft and automobile parts and machinery of all types.

The amazing substance keeps metal under all but exceptionally heavy humidity conditions. To guard against damp weather fouling the equipment, airplane motors and other arms are wrapped in the new Goodyear product—Pliofilm. These wrappers have transparent "windows" wherever the bits of silica gel are placed. If the air becomes so full of moisture as to threaten to corrode the metal, the "magic crystal" gives a warning. It turns a deep pink and then red when the danger point approaches.

MARINE Corps and Navy fighter pilots on Guadalcanal have been maintaining a five-to-one ratio on Japanese shot down in combat, but it seems that those blankety-blank brass hats in the States are never satisfied.

Every plane sent out or back to the Pacific front from the overhaul base, carries an envelope containing a

dozen decalcomanias of Japanese flags. The stamp makes it easy for mechanics to reproduce a replica of the Rising Sun emblem on the fuselage of each warplane downing an enemy craft. Formerly the Navy airmen recorded their scores by painting them on by hand.

But helpful as this package is, it contains a subtly irritating challenge. Each pack bears a notation stating: "When you use these up, we'll send you more."

HERE'S a yarn that should be much reading for all of us who kick about food rationing and who forget what our Allies have to face. It concerns some American airmen who landed at a Scotch airfield early one morning after a flight across the Atlantic. With them was David Wills, chief of the British Information Service in Washington, who was making a quick trip home.

Hungry as wolves, the party descended upon the principal hotel in the Scottish town nearest the air base. Everyone ordered a huge breakfast—orange juice, bacon and eggs, hot cakes, etc. A dour Scottish waitress silently went back to the kitchen and returned a few minutes later, putting down a kippered herring before every member of the group.

The famished Americans looked at their breakfasts and all began to protest at once. Where was the fruit juice, eggs, etc? Hadn't she gotten their order straight? Wasn't there any choice?

The Scottish lass answered the latter question.

"Aye," she said. "Ye can take it or leave it."

## YEAR OF DESTINY

The dawn of 1943 will soon loom red before us, and we must brace ourselves to cope with the trials and problems of what must be a stern and terrible year.

—Prime Minister Winston Churchill, London, November 29, 1942.

**G**REAT climactic years signpost the road of modern history—1492 . . . 1571 (Don John of Austria at the Battle of Lepanto starts the decline of Turkish power in the western Mediterranean) . . . 1648 (Treaty of Westphalia ends the Thirty Years' War and splits Germany into a multitude of small states governed by some three hundred princes) . . . 1653 (Oliver Cromwell proclaimed Lord Protector of England) . . . 1763 (Treaty of Paris establishes British supremacy on the North American continent) . . . 1776 . . . 1789 (storming of the Bastille; French Revolution begins) . . . 1815 (Waterloo; Napoleon's power ends) . . . 1865 . . . 1870 (Franco-Prussian War) . . . 1918 . . . 1933 (Hitler becomes German Chancellor).

Mr. Churchill has expressed the belief repeatedly, almost since the present World War began on September 1, 1939, that 1943 would be the year of the great decisions in Europe; the earliest year in which the Allies could mount the grand offensives which should knock out Germany.

The first part of the Churchill expectation has come true: the Allies have not been able to summon the armed and trained manpower and the masses of material needed to defeat Germany in the war years preceding 1943. It remains to be seen whether the rest of the long-standing Churchill belief will come true.

Predictions are foolish. We won't attempt one. We think one can get a great deal of sound encouragement, though, out of a look back over the previous New Year's days of this war.

As 1940 came in, western Europe was in the deceptive doldrums of the "phony war" following Hitler's three-week conquest of Poland—the first

blitzkrieg, whose terrible implications the French and British generals then in the ascendancy failed to grasp. In the east, Russia was battering little Finland; and the Finlanders under Baron Mannerheim were putting up a fight comparable to the ancient Greek showing at Thermopylae.

New Year's Day, 1941, was a black day for the Allied cause.

The year just finished, 1940, had seen Hitler absorb Denmark and conquer Norway, almost nonchalantly tossing out the would-be British rescuers of Norway. Hitler had then (May 10th) marched into the Low Countries. He had leveled a square mile of Rotterdam in a cruel mass bombing raid and had conquered Holland in four days.

The Battle of France followed, with the turning of the Maginot Line, the German break-through to the sea, the desperate British withdrawal from the continent at Dunkirk, the fall of Belgium, the plunge of the German legions down through northern France, the flight of the French government to Bordeaux, and the sudden end of Hitler's war with France.

By the end of 1940, the great air blitz against England was in full swing—though the British, as slowly became apparent, had on the previous September 16th foiled Goering's supreme attempt to knock the R.A.F. out of the skies and thus open the path for a German invasion of England. Mussolini had attacked Greece, which was putting up a fight as gallant as the Finnish resistance to Russia; and Hitler, in a radio speech on December 31, 1940, predicted victory for Germany in 1941.

The only bright spot on the Allied map on New Year's Day, 1941, was in Libya, where the British offensive against Graziani's Italians was moving rapidly westward, being just outside Bardia.

New Year's Day, 1942, was a much more promising occasion for the Allies. True, the United States was only three weeks past Pearl Harbor and was still groggy, enraged and a bit confused. But

Hitler, on June 22, 1941, had attacked Russia; by the end of 1941, it had begun to look as if it had been the gravest mistake of Hitler's whole career.

The Russians had recaptured Rostov (November 29, 1941) in their first big offensive of the year, and the German civil population was solicited by the Nazi high-pressure experts to turn all the warm clothing it could spare, and some, to the winter-bitten armies in the east.

Hitler, however, had conquered the Balkans (except for General Draja Mikhailovitch's Yugoslav Chetniks, who remain unconquered and are still writing), and he had turned most of Europe's productive apparatus to the uses of his fighting machine.

The year 1942 was a black one for the Allies until events took a sudden, dramatic turn in the first two weeks of November, with General Bernard L. Montgomery's routing of Rommel in the desert, coinciding with General Dwight D. Eisenhower's crash into Northwest Africa.

Prior to that, Hitler had again mounted against Russia an offensive which at one time seemed most sure to reduce Russia's fighting power to guerrilla size only. In the Pacific war theater had been driven by the Japs out of Wake Island, Guam and the Philippines; the Dutch had lost their entire East Indies empire; the British had lost Hong Kong, Malaya, Singapore, Burma, Borneo, and important parts of New Guinea; the Solomon Islands.

Beginning with November, momentous events occurred which are so fresh in all our memories that it hardly seems necessary to detail them. The President has expressed the opinion that the turn of the war has come; Mr. Churchill has echoed that White House statement.

We can still count on setbacks, reverses, difficulties, griefs. It still looks like a long way to Tipperary. But that we are now as close to winning the war eventually, we think no superoptimist can doubt.

CALIF

IT'S the little things that disturb courageous men. Butch came through a couple of bombings and never batted an eye. But when it came to a second one with Lulu "he wanted out."

#### It was "Sailor, Beware!"

Sure, Lulu was a good-looker. Good gams, and plenty of "oomph". But when shore leave is short, a man doesn't want to spend it with a girl with halitosis (bad breath).

If men and women would only realize how offensive bad breath can be, they wouldn't risk offending this way. There's no doubt of it, off-color breath is a strike against you from the start.

Why take a chance when Listerine Antiseptic offers such an easy, delightful and quick precaution? Simply rinse your mouth with it before any date. Note how Listerine Antiseptic freshens and invigorates your mouth. And how much sweeter and more agreeable your breath becomes.

#### How it Acts

Listerine Antiseptic quickly halts bacterial fermentation of food particles in the mouth, then overcomes the odors it causes. Fermentation, you know, is held by some authorities to be the major source of off-color breath, although some cases may be of systemic origin.

#### Before Every Date

Don't take your breath for granted. Put your best foot forward so that others will like you. Never, never omit Listerine Antiseptic. It's part of your passport to popularity. Lambert Pharmacal Co.

**LISTERINE ANTISEPTIC**  
*for oral hygiene*

**ATTENTION PLEASE!** There's another member of the Listerine family that you ought to try. It is Listerine Tooth Paste. From the standpoint of gentle and thorough cleansing it yields to none, and the big 40¢ tube lasts many as long as 90 days.

## ANY WEEK

WE HAVE a letter from a gentleman who says that, as far as he knows, he has received all the questionnaires the government has compiled thus far. He isn't quite sure how many he has received but he thinks a hundred and twenty-seven. "Maybe some arrived while I was having my nervous breakdown," he writes from Atlanta, Georgia. "I collapsed on page eight of C-2X-2678A—re 42Y from the Department of Agriculture." However, since having his nervous breakdown he has taken his government questionnaires calmly, even philosophically, realizing that that's cheaper than nervous breakdowns. But last week he almost had a serious relapse. He got a questionnaire from the Rent Control Division, Office of Price Administration, and he was doing splendidly until he reached this question: "What is the name of the tenant occupying your house at 90 South Street and what is his address?"

AND from Sante Fe, New Mexico, arrives word that the rear tire of Mr. Brian Boru Dunne's scooter blew out with a populace-terrorizing roar last week. Mr. Dunne, who has been riding up and down New Mexico on his scooter for almost a year, found that the tire could not be vulcanized. Ration board refused to give him a new one. Somewhat desperate, Mr. Dunne consulted his dentist. Between them, they made up a mash of sawdust, flour, cement and warm water. They forced the mash into the tire with a plumber's pump. Mr. Dunne is again happily flashing over the roads of New Mexico. The dentist figured it out that the fitting will last as long as Mr. Dunne remains under one hundred and forty pounds. "Therefore," says Mr. Dunne, "I am no longer picking up hitchhikers or riding my two war-industry neighbors to work in the morning. Also, my new tire filling has a queer odor when I speed up to fifteen miles an hour. And so I'm mixing my next batch with rose water."

INSPIRED by the Army Quartermaster, who is shipping even ham and eggs to our overseas forces in briquet-like cakes, several enterprising chemists are making beer, whisky, gin and wine in tablet form. This thriller comes

from Mr. Broadus Conatchey of Chicago, Illinois. He says that bootleggers are already peddling the concentrations and that a wild party can be thrown with a cardboard box eight by ten by four inches. Furthermore, the stuff can be sent through the mails, and customers seldom if ever see their bootlegger. "I hear that they're working on cocktail tablets, too," writes Mr. Conatchey. "You drop four Martini tablets into the shaker, add crushed ice and water, and shake. After you drink it, you shake some more."

MR. FRANK KAVANAUGH of Kansas City, Kansas, contends that women working in war-industry plants are not only as good as men in their jobs but have lent an air of hitherto impossible refinement to work which has always been regarded as wholly male. "The women do everything the men ever did and do it neater," says Mr. Kavanaugh. "Only the other day, a girl who works in one of our big munitions plants—in the foundry—was riding in a Parallel Street car, chewing her tobacco like a lady and minding her own business. Unlike a man, she spat out the window."

WHILE all this was going on, we were in Washington. As a result of that experience, we have nothing to report except that we saw an Army sergeant walking down Pennsylvania Avenue accompanied by not one but three very pretty girls. We might have ignored them entirely had they not been followed at six or eight paces by two corporals chanting, "Hoarder, hoarder, hoarder!"

WE'D have left Washington sooner if, in our efforts to find our way around the Army's new Pentagon Building, we hadn't been caught in the excitement. One of the young ladies in the visitor-dispatcher office told us that there hadn't been anything like it since Mr. Bob Hope, the comedian, dropped in unexpectedly. Anyway, one of the women employees gave birth to a baby right in the middle of a brand-new directive. We tried to get the details but failed. Too much excitement. And anyway, we were looking for a Military (Continued on page 26)

*"You bet I'm sold on tires made with synthetic rubber"*

**These tires started 2 years ago . . .  
have already covered 23,451 miles . . .  
but read the whole story here . . .**

MUCH of the late news about synthetic rubber cannot be told. But enough can be told to assure anyone who wonders how good it is. Our files are filled with case histories of tires made with more than 50% Ameripol . . . the B. F. Goodrich synthetic.

This is one such case history. A whole year before Pearl Harbor, the Western Union Telegraph Company put two Ameripol tires on a maintenance truck. This truck didn't pick

out the smooth highways. It went where linemen have to go—over all roads in all kinds of weather.

What happened? Nothing—that's the interesting thing about these Ameripol tires. You wouldn't notice much that's unusual about them. You'd probably think they were natural rubber if you were not told otherwise.

These Ameripol Silvertowns were in excellent condition at 23,451 miles. Says the section

lineman who drove them, "We should receive 30,000 miles from them."

And the chances are he will—because many of these tires have bettered 30,000 miles. One of the reasons that Ameripol is good is that our scientists were working on it when Calvin Coolidge was President and no one thought of war.

Each year has brought improvement. And the result—in the summer of 1940—was the first tires with

synthetic rubber ever sold to American motorists.

You might be riding on Ameripol tires today were it not that our total production of this wonderful synthetic is needed in our war effort. But you'll have to wait now, for that and a lot of other things we'd all like. Meanwhile, we've still got to do our best to save the rubber we have. For America has no rubber to waste—and no use for a rubber-waster!

## KEEP UP WITH THE WORLD

By Freling Foster

Any manufacturer or dressmaker who makes a woman's dress that copies too closely the uniforms of the WAACS, the WAVES, the WAFS or any other such government organization violates a federal law and is subject, upon conviction, to a fine of \$300, or imprisonment for six months, or both.

The greatest swindle in history was perpetrated by Germany in her payments of reparations after the first World War. Among the numerous absurd items chalked up as "payments" to the Allies to compensate in part for her devastations were the cost of the German warships which were scuttled by their own crews in Scapa Flow after being turned over to the British, and the interest on the \$7,500,000,000 lent to her by the Allies after the war to enable her to get back on her feet.

Between 1937 and 1941, a representative of the mysterious Black Dragon Society of Japan, working out of the Japanese Consulate in Los Angeles, secured a total of 12,000 members for his two California organizations, the Japanese Military Servicemen's League and the Imperial Comradeship League, both of which maintained schools of espionage and sabotage.

Not long ago, a study made among 272 men and women teachers and 200 inmates of a prison to determine their group opinions of the relative seriousness of various crimes revealed that the prisoners were the better judges. They gave greater importance than the teachers to arson, burglary and kidnapping, while the teachers gave greater importance than the prisoners to drunkenness, driving while drunk, and resisting an officer.

When civilians are examined for military service in Japan, they never suffer loss of "face" through disqualifying defects. Those who fail in their physical examination are classed as "fit," while those who pass are classed as "absolutely fit."  
—By J. M. Keavey, Flushing, New York.

In war production plants operating twenty-four hours a day, seven days a week, the pay, hours and night work of four shifts of workers are equally divided over a four-week cycle. A popular schedule is the one in which a worker gets a day off after seven days on the day shift, two days off after seven days on the afternoon shift and four days off over a week end, after seven days on the night shift.

The cost of transporting the freight that can be carried by a Liberty ship on a round trip from California to Australia is 250 times greater by air than it is by water.

The only animal whose grave has ever been designated on the map of its country is Buzoe, a pet cow that died of old age in the Gibson Desert of Australia in 1876 while she was with a party mapping the territory. "Buzoe's Grave" was indicated on the original chart and, consequently, the place was included on many maps of Australia published in the past sixty years.

Clouds sometimes remain stationary for such long periods that they are given individual names. One example is a large, low formation that appears over the Rock of Gibraltar and does not move for as long as twelve days. Because it is created by moist winds from the eastern Mediterranean, it is known as "The Levant."

A standard method for mixing and serving a mint julep has never been universally accepted. Bases include rye, bourbon, rum and brandy; fruits range from cherries and pineapples to none at all; containers run from large glasses to small silver cups; and serving temperatures vary as much as fifty degrees. There are even seven schools of thought on how to brew the mint.

Five dollars will be paid for each interesting or unusual fact accepted for this column. Contributions must be accompanied by satisfactory proof. Address Keep Up with the World, Collier's, 250 Park Avenue, New York City. This column is copyrighted by Collier's The National Weekly. None of the items may be reproduced without express permission of the publisher.

# Training the CLIPPER PILOTS

*with*  
**JACOBS**  
AIRCRAFT  
*Engines*

Long before the day when he took the controls of this huge skyliner, the Clipper Pilot served an apprenticeship exacting in the extreme—an apprenticeship of countless hours aloft, under every conceivable condition, flying mostly “on instruments”.

This comprehensive training requires Training Planes powered by the most reliable of engines.

Pan American Airways Clipper Pilots—like our Army Bomber Pilots—are schooled in twin-engine Trainers powered by JACOBS.

**JACOBS AIRCRAFT ENGINE CO.**  
POTTSTOWN • PENNSYLVANIA • U.S.A.

Servicemen sit quietly for hours hoping to get seats for trips for which they will have time only if they can travel by plane

## WING TALK

**R**UNNING a civilian airport or airline is never what you'd call a jolly job. Its chief attraction is that you meet so many kinds of people. But now it's even more harrowing, what with priorities, lack of labor, fewer planes and other war-born problems.

A full colonel—a reserve officer appointed to his exalted rank from civilian life—recently let out a bellow that raised whitecaps on the muddy old Potomac, when he was tossed off a plane to make room for a shavetail Air Transport Command pilot. The lieutenant had a priority and an assignment to ferry an Army plane somewhere important. The colonel was going to New York to celebrate a furlough from his desk job in the Southwest.

The colonel huffed and puffed, but he couldn't blow the shavetail's priority away, nor could he properly terrify airline officials. He was the last man on the plane, hence the first one off. The fact that he got the bounce before dawn on a cold winter morning may have contributed to his ill humor.

**T**HE priority business has constant heartbreaks. Recently a young Navy officer, back from the Solomons, was hurrying home on a ten-day leave before getting aboard a new ship and heading back into the Pacific. His reservation was canceled to make way for a publicity man attached to a defense industry, theoretically traveling on business important enough to warrant a priority. The Navy boy took the train—and as a result had exactly twelve hours with his family. There wasn't a man attached to the airline who, if he could have thought of an excuse, wouldn't cheerfully have given the press agent the merry heave-ho.

**P**ERHAPS the most embarrassing incident an airline and airport have faced recently came in the West, where a new field was just opened. One of the first planes to come down brought Mrs. Roosevelt.

An early-morning fall frost covered everything, and the plane made quite a picture as it taxied up to the flying line. Attendants snapped about vigorously,

making sure this great event would come off with appropriate flourish. The wheeled the unloading ramp into place with the zip of a top sergeant saluting and stood about with smart alertness.

Other plane passengers stood aside to let Mrs. Roosevelt leave first. As she stepped out of the ship, her foot hit a eighth of an inch of frost, and she slid down the ramp with considerable emphasis. It caused quite a furor. The only person not in the least bothered, as a matter of fact, was Mrs. Roosevelt.

**M**RS. ROOSEVELT'S charm has been the delight of many a flyer. On her trip back from London in November, her plane hit unusually cold weather. The plane's purser rummaged around and came up with a couple of spare blankets, which he tucked around the First Lady, and he did a dozen other little things to make her comfortable.

When the ship reached Washington the President was waiting on the field in his car. Mrs. Roosevelt got out quickly and sat in the big White House auto, talking with the President and watching the planes. Other passengers left, the crew got out, and finally the purser.

Mrs. Roosevelt waved him over. "I wanted you to meet my husband," she said, and then to the President: "This is the man I told you was so nice to me on the way over." The President's hand stretched out of the car, and the purser not only shook it, but talked for several minutes with the owner. It was probably much more exciting than merely flying back and forth from here to London.

**P**ROBABLY the most pathetic people around airports these days are the servicemen who sit quietly for hours hoping to get seats for trips they will have time for, only if they can fly. Usually these waiters, whether civilian or military, are quite well behaved, but occasionally one becomes such a nuisance that he wouldn't be allowed on a plane. He waited two weeks. One recently staged a Commando raid on the public address system of a Middle Western airport and broadcast his woes to the whole terminus. . . . R. Mc

The poster features a dramatic illustration. At the top, a man (Paul Muni) in a light blue shirt and dark tie looks upwards with a concerned expression, holding a woman (Anna Lee) in a red dress. Below them, three soldiers in military uniforms are running forward, holding rifles. The background is a fiery, orange-red sky with smoke and a ship visible in the distance. The overall tone is one of intense action and romance.

**F**OR us at home, the *Age of Electronics* is a promise for the future. For our men at the front, the *Age of Electronics* is here, today! Their planes, tanks, ships and weapons are equipped with miracles of electronic science which, when Victory is won, will bring to a world in freedom thrilling new wonders of comfort, convenience and entertainment.

The scientists and engineers of Philco Corporation, whose achievements have won leadership for Philco in the field of

radio, have been charged with an important share of these developments. In their laboratories, they have accomplished years of progress in electronic research in a few short months. And today, Philco waits only for Victory to convert their war achievements into peacetime products of new and undreamed-of benefit for all humanity.

For the men and women of Philco, this vision of the future gives added incentive to their war production pledge . . . "More-Better-Sooner."

*This cartoon by C. G. Werner is another in the series being drawn for Philco by America's leading editorial cartoonists to interpret the spirit of Philco's soldiers of production. It is being posted on bulletin boards of the Philco factories as a symbol to the men and women of Philco of the purpose and significance of their work in the united effort for Victory.*

## Miracle of the Fifteen Murderers

By Ben Hecht

ILLUSTRATED BY WILLIAM REUSSWIG

They were a congress of killers, but no jury, interested solely in justice, would find them guilty

THERE is always an aurá of mystery to the conclaves of medical men. One may wonder whether the secrecy with which the fraternity surrounds its gatherings is designed to keep the layman from discovering how much it knows or how much it doesn't know. Either knowledge would be unnerving to that immemorial guinea pig who submits himself to the abracadabras of chemicals, scalpels and incantations under the delusion he is being cured rather than explored.

Among the most mysterious of medical get-togethers in this generation have been those held in New York City by a group of eminent doctors calling themselves the X Club. Every three months this little band of healers have hied them to the Walton Hotel overlooking the East River and, behind locked doors and beyond the eye of even medical journalism, engaged themselves in unknown emprise lasting till dawn.

What the devil had been going on in these conclaves for twenty years no one knew, not even the ubiquitous head of the American Medical Association, nor yet any of the colleagues, wives, friends or dependents of the X Club's members. The talent for secrecy is highly devel-

oped among doctors who, even with nothing to conceal, are often as close-mouthed as old-fashioned bomb throwers on their way to a rendezvous.

How then do I know the story of these long-guarded sessions? The answer is—the war. The war has put an end to them, as it has to nearly all mysteries other than its own. The world, engaged in re-examining its manners and its soul, has closed the door on minor adventure. Nine of the fifteen medical sages who comprised the X Club are in uniform and preside over combat zone hospitals. Deficiencies of age and health have kept the others at home—with increased labors. There is a part of science which retains a reluctant interest in the misfortunes of civilians and has not yet removed its eye entirely from the banal battlefields on which they ignominiously keep perishing.

"CONSIDERING that we have disbanded," Dr. Alex Hume said to me at dinner one evening, "and that it is unlikely we shall ever assemble again, I see no reason for preserving our secret. Yours is a childish and romantic mind, and may be revolted by the story I tell you. You will undoubtedly translate the whole thing into some sort of diabolical tale and miss the deep human and scientific import of the X Club. But I am not the one to reform the art of fiction, which must substitute sentimentality for truth, and Cinderella for Galileo."

The most disturbing factor was that we both knew there was nothing to be done. Dr. Kroch showed signs of hysteria

And so on. I will skip the rest of my friend's all-knowing prelude. You may have read Dr. Hume's various books, dealing with the horseplay of the subconscious. If you have, you know this bald-headed mastermind well enough. If not, take my word for it he is a genius. There is nobody I know more adept at prancing around in the solar plexus swamps out of which most of the world's incompetence and confusion appear to rise. He has, too, if there is any doubt about his great talent, the sneer and chuckle which are the war whoop of the superpsychologist. His face is round and his mouth is pursed in a chronic grimace of disbelief and contradiction. You can't help such an expression once you have discovered what a scurvy and detestable morass is the soul of man. Like most subterranean workers, my friend is almost as blind as a bat behind his heavy glasses. And like many leading psychiatrists, he favors the short and balloonlike physique of Napoleon.

The last dramatic meeting of the X Club was held on a rainy March night. Despite the hostile weather, all fifteen of its members attended, for there was an added lure to this gathering. A new member was to be inducted into the society.

Dr. Hume was assigned to prepare the neophyte for his debut. And it was in the wake of the round-faced soul fixer that Dr. Samuel Warner entered the sanctum of the X Club.

Dr. Warner was unusually young for a medical genius—that is, a recognized one. And he had never received a fuller recognition of his wizardry with saw, ax and punch hole than his election as a member of the X Club. For the fourteen older men who had invited him to be one of them were leaders in their various fields. They were the medical peerage. This does not mean necessarily that any layman had ever heard of them.

Eminence in the medical profession is as showy at best as a sprig of edelweiss on a mountaintop. The war, which offers its magic billboards for the vanities of small souls and transmutes the hunger for publicity into sacrificial and patriotic ardors, has not yet disturbed the anonymity of the great medicos. They have moved their bushels to the front lines and are busy under them, spreading their learning among the wounded.

The new member was a tense and good-looking man with the fever of hard work glowing in his steady dark eyes. His wide mouth smiled quickly and abstractedly, as is often the case with surgeons who train their reactions not to interfere with their concentration.

HAVING exchanged greetings with the eminent club members, who included half of his living medical heroes, Dr. Warner seated himself in a corner and quietly refused a highball, a cocktail, and a slug of brandy. His face remained tense, his athletic body straight in its chair as if it were poised for a sprint rather than a meeting.

At nine o'clock Dr. William Tick ordered an end to all the guzzling and declared the fifty-third meeting of the X Club in session. The venerable diagnostician placed himself behind a table at the end of the ornate hotel room and glared at the group ranged in front of him.

Dr. Tick had divided his seventy-five years equally between practicing the art of medicine and doing his best to stamp it out—such, at least, was the impression of the thousands of students who had been submitted to his irascible guidance. As Professor of Internal Medicine at a great Eastern medical school, Dr. Tick had favored the Education by Insult theory of pedagogy. There were eminent doctors who still winced when they re-

called some of old bilious-eyed, arthritic, stooped Tick's appraisals of their budding talents, and who still shuddered at the memory of his medical philosophy.

"Medicine," Dr. Tick had confided to flock after flock of students, "is a noble dream and at the same time the most ancient expression of error and idiocy known to man. Solving the mysteries of heaven has not given birth to as many abortive findings as has the quest into the mysteries of the human body. When you think of yourselves as scientists, I want you always to remember everything you learn from me will probably be regarded tomorrow as the naïve confusions of a pack of medical aborigines. Despite all our toil and progress, the art of medicine still falls somewhere between trout casting and spook writing.

"There are two handicaps to the practice of medicine," Tick had repeated tenaciously through forty years of teaching. "The first is the eternal charlatanism of the patient who is full of fake diseases and phantom agonies. The second is the basic incompetence of the human mind, medical or otherwise, to observe without prejudice, acquire information without becoming too smug to use it intelligently, and most of all, to apply its wisdom without vanity."

From behind his table old Tick's eyes glared at the present group of "incompetents" until a full classroom silence had arrived, and then turned to the tense, good-looking face of Dr. Warner.

"We have a new medical genius with us tonight," he began, "one I well remember in his prewizard days. A hyperthyroid with kidney disfunction indicated. But not without a trace of talent. For your benefit, Sam, I will state the meaning and purpose of our organization."

"I have already done that," said Dr. Hume, "rather thoroughly."

"Dr. Hume's explanations to you," Tick continued coldly, "if they are of a kind with his printed works, have most certainly left you dazed if not dazzled."

"I understood him quite well," Warner said.

"Nonsense," old Tick said. "You always had a soft spot for psychiatry and I always warned you against it. Psychiatry is a plot against medicine. And who knows but it may some day overthrow us? In the meantime it behooves us not to consort too freely with the enemy."

You may be sure that Dr. Hume smiled archly at this.

"You will allow me," Tick went on, "to clarify whatever the learned Hume has been trying to tell you."

"Well, if you want to waste time." The new member smiled nervously and mopped his neck with a handkerchief.

DR. FRANK ROSSON, the portly and distinguished gynecologist, chuckled. "Tick's going good tonight," he whispered to Hume.

"Senility inflamed by sadism," said Hume.

"Dr. Warner," the pedagogue continued, "the members of the X Club have a single and interesting purpose in their meeting. They come together every three months to confess to some murder any of them may have committed since our last assembly. I am referring, of course, to medical murder. Although it would be a relief to hear any one of us confess to a murder performed out of passion rather than stupidity. Indeed, Dr. Warner, if you have killed a wife or polished off an uncle recently, and would care to unbosom yourself, we will listen respectfully. It is understood that nothing you say will be brought to the attention of the police or the A. M. A."

Old Tick's eyes paused to study the

GLUYAS WILLIAMS

# CONGRESS CAN SAVE ITSELF

BY ALBERT GORE

REPRESENTATIVE 4th DIST., TENNESSEE

lumbling along under 50-year-old methods, Congress is losing its independence to the streamlined executive and judicial branches and forfeiting public esteem, says Mr. Gore, but it can regain both, and he tells you how

**W**HAT Congress needs is to have its valves ground and the carbon cleaned out. The old motor has lost its zing. Congress, in other words, should reorganize itself. Its fundamental design is good but it should step up its efficiency. It must reach a swift, sure pace to keep up with current events and to keep its place in our three-cornered system of government.

I hope I'm not being presumptuous in making such a dogmatic statement. I'm not precisely a Congressional veteran, but that may only give me greater objectivity in approaching the problem of what's wrong with our legislative branch. I am, after all, in my fifth year of service and I have studied the situation as extensively as I could because I've been disturbed by Congress' loss of prestige. Our democracy would be a farce without a strong, dignified and lively Congress.

Congress has reorganized, or allowed to be reorganized, both other branches of the government. In the fury of fighting over the so-called Supreme Court packing bill, many of us overlooked the fact that court procedures actually were revised rather extensively by the legislation, though the proposal to increase the number of justices was defeated. And twice the President has been given considerable authority to remold the executive end of our government. Only Congress has been untouched and is still plodding along with the methods and ceremonies of fifty years ago.

Asking Congress to modernize itself is like expecting a dentist to pull his own tooth, but I believe it could be done with little pain, compared to the advantages to be gained from it.

Congress should, it seems to me, take three definite steps: First, it should hire itself a staff of specialists in each of the major areas of public welfare. These experts would not represent the biased views of bureaus or private groups, but just what Congress represents—the public. Second, it should reorganize its committees to end the confusion and complexities which now tie us down. Third, it should give more power and responsibility to its leaders, the Speaker of the House and the President Pro Tem of the Senate, bestowing upon them authority to speak for Congress in formation of national policy and to preserve the integrity of Congress.

In behalf of Congress, it should be said that much of the criticism and contempt has not been leveled at Congress alone, but vaguely at something called Washington, of

which Congress is only a part. The institution is blamed in the abstract for the confusion and contradiction emanating from the capital. In short, Congress takes the rap for many things of which it is innocent.

For instance, a person who had become confused by conflicting statements on the draft asked me, "Why doesn't Congress clear up this confusion?" Another person wrote me ridiculing Congress for being so slow in passing a pending bill, but later, when he became dissatisfied with the administration of the law, he cursed Congress for ever passing such an "infernal law."

Nevertheless, there are basic reasons why Congress has steadily declined in public popularity and power, and the need for an overhaul job is clear. The fact is that Congress has failed to keep step with national development. Appropriations for the federal government leaped from a little more than one billion dollars in 1916 to over thirteen billion dollars in 1940. Yet Congress has remained the simple, parliamentary body that was conceived by the Founding Fathers. So Congress has become wholly unable to function on an equal footing with the ever-swollen executive branch of the government. Circumstances have been too much for Congress.

Even the initiation of legislation—certainly a basic function of any legislature—is now mostly in the hands of executive bureaus and agencies. Rarely does Congress pass an important law that does not originate in some executive agency. Today, executive officials not only draft legislative proposals and submit them to Congress, but they use the facilities and overwhelming strength of the executive branch to push and persuade the people and Congress to their points of view.

According to Doctor Floyd M. Riddick, "In the first session of the 75th Congress—a typical session—no less than 271 drafts of proposed bills were fed into the Congressional hopper," after having been sent to "The Hill" by the heads of departments, bureaus and commissions. Many of them became law as they came to us.

This is a far cry from the attitude of the Senate in 1908, when a terrible row was created because a Cabinet officer had sent to the Senate the draft of a proposed bill. The Senate indignantly ordered the bill sent back and adopted a rule ordering all gratuitous executive communications returned unless transmitted through the President.

Perhaps the most ironical reflection to be found in the Congressional Record was uttered by Representative Monroney last year while speaking in support of a bill I had offered as a substitute for the Administration-sponsored price control bill. He said, "There is criticism attached to this substitute bill, a blight that I (Continued on page 32)

How Miss Martha Goode of New York inflamed the male vote at Huitzapil. It took a visiting fireman (name of Donovan) to extinguish the blaze

HER eyes were a modest shade of blue, her fair hair shone inconspicuously, and six little freckles powdered the bridge of her unassuming nose. She might have been a kindergarten teacher; about twenty-eight; naïvely excited over her first trip to a foreign and romantic land—all of which she was. Even her name fitted into the homespun picture: Martha E. Goode. The E was for Ellen.

This was the girl who, after a week of "sight-seeing" Mexico, suddenly wandered off the tourist-beaten track; and choosing a train here and a bus there at random, found herself at last in Huitzapil. The little town dreaming in the semitropical sun struck her at once as

rather like heaven: such peace, such beauty could hardly exist on earth. Not in the sound and fury of the twentieth century; not in 1941. There was only one slight flaw: the charming people of Huitzapil showed a tendency to stare; from the moment she had set foot in the place all eyes had been upon her. But well, she was a stranger, an *Americana*. In a day or two they would get used to her . . .

"Señor," she had murmured after her first night on the rack that was snowily disguised as a bed, "if it is possible to do something about the mattress—"

"Señorita!" Plump, dark, with large and melting eyes, the *patron* of Huitzapil's only hotel had gazed at her, stricken. "You have not rested well, you have suffered. A thousand, ten thousand pardons! But do not fear; it will not happen again. Everything will be arranged. At once! I give my sacred word." Heaven indeed. For though experience had already taught her that "at once" was the rarest of all phenomena in the sunny land of *mañana*,

that very night she had slept on a fine new mattress!

Slept deliciously—and, in the small hours, wakened deliciously to music. Guitars and voices yearned and pleaded, exulted, despaired in a serenade fit for a goddess. Spellbound, Martha had admired from her heart the lovely custom of saying it with music in the night, and wondered to whom it was being said, and had a vision of the señor *patron's* young sister whose room opened on the other side of the patio. Sloe-eyed and lissome, flowered to a demure and subtly wise sixteen . . . Ah, Concepción, are you listening? Is your cheek like a rose on your pillow? Do you know who it is that has gathered these voices to weave into the drifting night this record of your youth and your beauty?

Her own heart had pattered and ached a little with gentle envy of beauty and youth: for a moment or two it had ached a lot . . .

Concepción was nowhere to be seen the next morning, so after an excellent breakfast (barring the coffee) under the

hovering supervision of the *patron*, Martha went out into the sunshine alone. Across the way was the main plaza, the prettiest of plazas. Tall trees spread wide their branches so that the sun might sprinkle only filtered gold on the lush grass, on the terra-cotta benches inlaid with blue tile, on the flower-bordered paths that wound to meet at the bandstand in the heart of the square.

Martha sat down on one of the benches. It was market day, and Indians from villages in the neighboring hills were drifting into town with their wares. Barefoot, the men in white cotton dungarees, the women with the bright-hued *rebozos* of the region draped about them, they balanced laden baskets on their heads with effortless grace. It was a living frieze, brilliant with color, flowing with grave and rhythmic movement. Martha, dazzled, watched it all—and Huitzapil watched Martha.

Nobody passed without looking, and nobody looked whose gaze didn't linger—on the only fair-haired, blue-eyed

(Continued on page 48)

# PAL OF THE PUPPETS

By Frank J. Taylor

Nine thousand little wooden men move in fantastic syncopation through one of George Pal's color puppetoons. "With puppets," he says, "anything can happen"

**I**N TULIPS SHALL GROW, just as the little Dutch boy finds the little Dutch girl, his accordion gets tangled in the windmill, making lively dance music to which the pair clog dance in wooden shoes until the Screwball Army sweeps over the horizon, devastating the lovely tulip beds and the windmill, and driving Janette from Jan, who prays for rain in the ruins of the church. And just in time, too, for the raindrops begin to fall, rusting the Screwball soldiers so that they fall apart, as do their tanks and planes—whereupon boy finds girl, and the tulips spring into blossom again, as the windmill turns anew.

All this happens in less than eight minutes. This little George Pal puppetoon gives you the throbs of a full-length moving picture. Nobody says anything about Adolf Hitler or the Nazis, but in those eight minutes, your heartstrings run the gamut of the years from the placid, busy, spick-and-span Netherlands through the Nazi devastation to the resurrection of Holland after the goose-steppers are gone.

George Pal is a soft-spoken, blue-eyed little guy, once a Hungarian, but now an American, who packs a terrific wallop with his puppetoons, which he calls "color cartoons in three dimensions." Instead of drawings, he uses characters carved of wood. It takes about nine thousand of them to act the syncopated sequences of a Pal puppetoon. The action is accomplished by placing the puppets, one after another, on miniature papier-mâché scenery and photographing the scenes at a rate of one a minute. It is slow, tedious business.

In contrast to the Disney studio, which employs hundreds of artists to ink and color sequences, the Pal puppetoonery is an old garage, converted into a Santa Claus workshop. In it a dozen skilled woodworkers with lathes and carving tools turn by the hundreds the wooden figures which another dozen artists paint in gay colors, and a handful of intensely absorbed photographers slowly and tediously shoot in technicolor. When they have shot about 30,000 pictures, the sequences are set to music and speech, and run off in the projection room across the street.

## Syncopated Rhythm in Wood

Suddenly, by some magic, the little wooden figures come to life, almost as real as flesh and blood. They do things that human actors never do, such as Johann Strauss taking a walk in the woods, hearing a bird and scribbling the notes on his cuffs; listening to squirrels and jotting more musical notes on his dickey; then finally, pulling a violin from his coat pocket, placing the notes on a stump, and syncopating them into Tales From the Vienna Woods, while the rabbits, the skunks, the squirrels and the birds catch the spirit and join in.

Then there is the puppetoon about Jasper, the little colored boy who just can't stay out of the watermelon patch. Jasper goes with the old scarecrow to a watermelon world where the mountains are big, rosy slices of melon, the trees are watermelons on trunks, and the rivers are all watermelon juice. Little Jasper has some bad moments when all the watermelons give him the bum's rush as Watermelon's Enemy Number One, but he finally makes it back to his mammy with the aid of some lively boogie-woogie music.

In spite of all the work involved, George Pal and his staff in Hollywood have been turning out puppetoons at the rate of one a month for the past year. They have been booked as tidbits of fantasy in some six thousand theaters in this country, and more in Great Britain, Russia and Latin America. Already, smiling little George Pal, his wife Szoka, his sons, George, Jr., and Peter, are Hollywood rages—with this one reservation—Mr. Pal is too shy and too busy dreaming up new musicals to play the Hollywood game. All he wants to do is (Continued on page 61)

George Pal calls his puppetoons "color cartoons in three dimensions." Here he places two characters in their miniature setting, prior to shooting one of the thirty thousand pictures which make up a puppetoon. The sequences are later set to music and speech

One step ahead of the Nazis, George Pal fled the Netherlands for Hollywood, where he now ridicules Hitler's hordes. In Pal's latest puppetoon, a fiddling Johann Strauss plays the Pied Piper and leads Nazi soldiers to destruction, to the stirring strains of The Blue Danube

# THE HUNTERS

By Mary Hastings Bradley

ILLUSTRATED BY ELMORE BROWN

## The Story Thus Far:

IN AFRICA, Michael Garrick learns that the girl he had idolized, and still idolizes, in England—Claire Alloway, who had promised to become his wife—has jilted him to marry a much older man: the wealthy John Winston. Desperately hurt, wretchedly unhappy, he turns to drink, for forgetfulness. Then, a few years later, he marries and settles down on a coffee plantation.

Disgusted by her husband's frequent splees, Michael's wife—"Tommy"—sees much of, and falls in love with, a young neighbor: Robert ("Bob") McNare. Later Bob goes to England, to take over a baronetcy he has inherited.

Months pass. Bob—now Sir Robert McNare—returns. And Tommy soon learns, to her dismay, that he is madly infatuated with a beautiful blond widow who has come out on the same boat with him: Mrs. John Winston!

The meeting between Mrs. Winston and Michael is a strange one. Introduced, realizing that neither Tommy nor Bob knows about their past relations, they act as though they had never before seen each other. Michael, despite what Claire had done to him, still adores her. And Claire? Michael wonders. . . .

At Bob's suggestion, the four—Claire, Tommy, Michael and Bob—go to the Congo for a long lion hunt. Claire and Michael are often alone; and Michael soon makes a discovery that shocks him terribly: the charming Mrs. Winston is willing to flirt with him, do anything—except marry him! The charming Mrs. Winston, he realizes, wants a title. . . .

Tommy, Claire and Bob are charged by a lion. Claire and Bob, together, kill the brute. By this time, Bob—noting that Claire and Michael are far more intimate than they should be—is suspicious, jealous. He warns Michael not to poach on his preserves. Michael retaliates by telling him, bluntly, that Mrs. Winston is—well, she is not all that Sir Robert McNare's wife should be.

A few hours later, as the four prepare to go out to try to bag another lion, Michael pretends that he is ill and cannot go. Claire, too, says that she cannot go—she has a headache (Michael's idea). So the question is: Shall Bob and Tommy (who still loves him) go alone? Listening to Bob, as they talk it over, Tommy thinks, "He doesn't want to go, he doesn't want to go!"

## VII

BOB'S eyes blazed back with wrath and with contempt and yet there was uneasiness beneath those less complicated feelings. Then Mrs. Winston caught at his attention with a soft-voiced, "You don't think I'm too unsporting not to see it through? I'd rather carry on than have your poor opinion."

"You couldn't have that."

Bob said that sharply, as if affirming something. He said, "It wouldn't do at all with a headache," and gave her a clear, direct look, and then shot a quick, hard glance at Michael, and swung about to Tommy, and the waiting porters, being very brisk and businesslike, trying to shake off the sense of having been, somehow, maneuvered, having been rushed. "Let's go," he said again.

Michael walked out about the table. "Good luck, Tommy. Shoot straight."

"I'll try. Turn in early."

Mrs. Winston rose and followed them out. "Good luck, Mrs. Garrick."

"Goodby. I hope your head won't be too bad."

"Goodby, Sir Robert. A lion for you, too."

"Thanks. Well—cheerio."

"Cheerio."

"Quaheri."

"Quaheri."

Tommy waved back to them, as she hurried off. For a little time, she thought, for the last time that she would probably have, she could pretend that he was all hers again.

CLAIRE'S eyes watched the figures that grew smaller and smaller on the plain. She said thoughtfully, "I don't think that went any too well. He looked—peculiar."

Michael chuckled. They were at table again, and Michael had ordered a cheese savory and fresh coffee. "Moth being parted from the flame," he said lightly.

"I wonder. . . . It was pretty pat, you know—your fever, my headache, the chance of rain tomorrow night."

"All unassailable."

"Your wife was keen to go. You know, Michael, I rather fancy your little wife is somewhat gone on him."

"They're old pals. You get amazingly pally in these parts."

They were very merry over the savory. Michael felt a curious lightness and recklessness of spirit. The sun set swiftly; one moment it was a red ball on the rim of the world and the next moment it was gone and the air took on the soft, shadowless clarity of the African twilight that is so fleet and fugitive. A brightness lingered on the high face of the cliff, and then it vanished and darkness took over.

The porters built up their fires, red gleams in the dark; the indistinguishable babble of their incessant talk and the thin shrilling of the insects became interwoven, like a tapestry of sound, against which other sounds sprang out, the beat of a small tom-tom, a little tune on an *mbichi*, the cries of the baboons in the high trees by the river.

Claire was stretched out in a steamer chair and Michael had a small camp chair beside her.

"You're supposed to be in bed," she reminded him. "With aspirin. Or whatever you take for fever."

They laughed. A lion grunted along the river. Then they heard one out on the plains. Claire said suddenly, "If they get one early, won't they come back?"

"At night? It isn't done."

"Why not? They've got guns."

"No good against a spring from the back . . . besides, it would look dashed silly, tearing back. And there's always the next lion. They'll be keen, once they're there. . . . They won't quit the boma before sunrise."

"You sound very sure."

"I am sure."

"Sure of me?"

He looked at her; the starlight showed that he was smiling.

"I might fool you, you know," she said to that smile. "I meant to, at the start. I meant you to want me and then—"

(Continued on page 44)

Tommy leaned closer, peering through the leaves for the skulking shadow. She could hear the horrid, rending noise. "Could we shoot?" she whispered

THEY'RE due back soon," said the English colonel.

"Yes, soon," agreed Captain Perrault. He looked at the sleeve of his Fighting French uniform. It gave him strength.

"Pretty rough," said the colonel, "bombing your own country."

"Unavoidable," said Captain Perrault.

"Quite." The Englishman glanced at a map. "I hope they got the right place. Funny about those villages."

"Yes, very funny."

Captain Perrault pressed his hands on the desk to keep them from trembling. That morning at 3 A. M. he'd been called to Air Intelligence. The colonel seemed excited, for once.

"Captain," he cried, "do you know who Karl Schupp is?"

Captain Perrault nodded. "The cruelest German in France."

"Well, we know where he's sleeping tonight. It came from the Underground. He's there for some sort of meeting. Too secret for Paris."

"And we shall bomb him, no?"

"We'll bomb that village off the map."

The captain shuddered. He was doing his duty to help the English bomb France, but he always shuddered a little.

"It is worth the cost," he said. "Karl Schupp is important, and to prove that we know his movements is more important still."

"Take a look at these," said the colonel. "Your part of France, I think."

On the desk were two air photographs. Each showed a village of eighteen houses arranged in two short lines. A narrow road ran straight through each. Around them were featureless fields—no railroads, no streams, no forests. Captain Perrault flinched and a chill ran through him. One village was Lichères. He knew it well. The other was Gondreville—his own little town where Claire, his wife, was living.

"They're only two miles apart," said the colonel with annoyance, "and as like as two peas. We're attacking at dawn, when there's usually plenty of mist. The pilots are apt to confuse them."

Captain Perrault was silent. He didn't trust his voice.

"We could plaster them both," said the colonel, "and make sure of getting Schupp. But—" He put his hand on the Frenchman's shoulder. "But, my friend, we don't enjoy hurting your people."

"I know those villages," said Captain Perrault at last. "They are almost exactly alike. They were destroyed by the Germans in 1917. The government rebuilt them, and the contractor saved money by using the same set of plans."

"So that's the reason." The colonel gave him the pictures. "See if you can remember some distinguishing feature which doesn't show up in the photos. Something the pilots can spot at dawn."

"In which village are you interested?" The captain's voice was level, but the question was almost a prayer. The answer came: "Karl Schupp is sleeping at Gondreville."

The captain held himself tightly controlled. He went to his desk, but he already knew the solution. The villages looked alike to the camera, but the roofs of Lichères were dark gray slate while the roofs of Gondreville were red. He put the pictures side by side. *Gondreville! Lichères!* He held their fate in his hands. But

really he had no choice. Karl Schupp was sleeping at Gondreville.

He fought for delay by pretending to study the photographs. They were clear as crystal. He could see each cabbage and vine. He could see his own small house—the fancy brick path, the rustic stone bench, the vegetable garden. He reached for his magnifier.

In the garden a woman knelt. It was Claire! He knew it was Claire! She was hardly more than a vague dark dot, but somehow a graceful dot, an adorable dot. Tears came to his eyes. Claire! His wife! His darling! She had dimples when she smiled, and a tiny heart-shaped birthmark under her chin.

He looked down at Claire as if from a bombing plane, and a furtive, sneak-footed thought crept into his mind. *Perhaps it was Lichères which had red slate roofs.* Such things were hard to remember. Yes, he'd tell the colonel so. The bombs would fall on Lichères, and he would see Claire again.

But still he looked at the photograph. The little dark dot came closer, as if he were floating down. He saw Claire spring to her feet and smile. Her arms went around his neck.

"Why so sad, my husband?" She tweaked the lobe of his ear. "We are both good soldiers of France. We'll meet again later on. Let the bombs rain down on Gondreville. The Germans are sleeping here."

The vision suddenly vanished. As if in a trance Captain Perrault got up and went to the colonel's desk. "Tell the pilots to look for red roofs," he said in a hollow voice. "The roofs of Gondreville are red. The roofs of Lichères are gray. Bomb the red roofs only, not the gray."

"That's just what we need," said the colonel with satisfaction.

CAPTAIN PERRAULT went back to his desk where he waited in agonized silence. The hours crept by. He bent his head.

"Claire, darling," he begged, "forgive me—"

Then he felt her soft arms around his neck.

"Do not be sad, my husband. You are doing your duty." Her voice was tender as if to a little child. "You have sent many bombers to France. They have killed many people. Tonight it is you and I."

The minutes and hours dragged by. The colonel answered the telephone. "They're landing, Captain," he said. "You'd better go talk to the pilots."

Captain Perrault dragged himself out of his chair. Many times he had questioned these English boys. Could he face them today? They had just killed Claire.

He squared his shoulders and started across the room. His telephone rang. He picked it up.

"We have news from the Underground," said a voice in French. "About Gondreville."

An icy pang stabbed the captain's heart. He waited speechless.

"The Germans are using the village," the voice continued. "Some congress of swine. They've moved the people out to keep it secret."

"Moved the people? Quick tell me! All the people?"

"All the people. They took them in trucks to Lichères."

The captain dropped the telephone. It rolled to the floor.

"Lichères," he murmured. "The roofs of Lichères are gray."

# King OF THE NAVY

BY ROBERT MCCORMICK

PORTRAIT BY BOB LEAVITT

With both his private and official life trimmed for action, the Commander in Chief of the United States Fleet runs his part of the war without fuss or feathers

**T**HE important thing to remember about Admiral Ernest J. King is that he has a fixation. He wants to win the war. He has stripped his life of every frill that might distract him and he has grooved his mind into the single comforting channel of trying to end the mess as quickly as possible. He doesn't want to build himself up to be a glamor boy, a public hero, a dictator or a president. He wants only to do a cool, calculating, businesslike job as Commander in Chief of the U. S. Fleet and Chief of Naval Operations.

When he tells a newspaperman that he will be delighted to give a birthday interview "when the war is won," when he informs an influential club that he cannot address it on Thursday, "because I'm too busy with the war," when he declines an invitation to an official Washington party on the grounds, "I won't have time," he means precisely what he says. Nothing is implied, nothing is withheld.

As a result of King's single-mindedness, he has been presented to the public

as a combination bogeyman, mystery man and miracle man. But he is quite a normal person. He is still called "The Thin Man" by those who serve under him, he is still an artist in profanity on the few occasions he uses it, he still prefers a ship to a house. He is simply trimmed for action, in both official and private life.

The manner in which he runs the Navy has never been understood by the layman because the admiral's conscience has never allowed him to take time out to explain. He judges his subordinates by the results they obtain and he expects to be judged the same way. He hasn't time to alibi or explain as he goes along. He simply feels—as do most military men—that a war is a technical job which the public pays him to do, and that he should let nothing interfere with his attempt to do the business as he's been trained to do it.

As the admiral talks, you realize that there is nothing complicated or devious about his policy. It has two main points: Complete decentralization and the theory of "calculated risk." Both have brought torrents of criticism upon him, which doesn't perturb the admiral.

The extent to which he parcels out responsibility for details is apparent when you enter his rather plain office. On his desk, he has a few of today's dispatches from the front, marked "Secret" in terrifying big red letters. He doesn't read all that are received—"Just those few

which very trustworthy aides think I should see. They know what should be given me. I couldn't read them all and have time for anything else."

There is no clatter of telephones or windy conferences with subordinates—two characteristics of most Washington offices. Much is going on, but most of it is in the admiral's head. He is not frantically busy in a physical sense. A memorandum will come to his desk representing months of labor and research by his subordinates, and King will either approve it by inscribing a chaste "K" in the corner, or reject it with a terse (and frequently acid) comment in the margin. His only concern with the detailed work involved in the memo is the fact that it was done.

## Not a Watcher of Details

He never interferes with this work while it's going on, never attempts to supervise closely anything but the final result.

"I give my men the tools, the assignment and the authority," he explains. "The rest is up to them. I will tell a commander to patrol a certain area but I'll never tell him how. He should know how. If he doesn't we must get a man who does."

King has split his chores into two groups. He runs active naval operations, with the chief of staff directly under him. Everything else—the man-

agement of shore establishments, construction, repair, development and such—he has turned over to Vice-Admiral Frederick J. Horne, his Vice-Chief of Naval Operations. Horne consults King only on policy. Otherwise, he is lord high boss of his field.

The admiral's subordinates can be wrong—once. Twice is too often. Such an attitude is not considered hard-boiled by the admiral, but only sensible. Mistakes interfere with the quickest possible victory. It cannot be a pleasant business for King to relieve of his command an officer whom he has known most of his life; but if he thinks it must be done for the sake of the war, it comes off with dispatch and firmness—as a few breathless officers now sitting on the side lines can testify.

By making individual officers take full responsibility, King is left free to decide major policy, which is what he is supposed to do. He is in every sense boss of the Navy, but he is uncluttered and unconfused by trivia. He rarely even makes the inspection trips so beloved by most officials. He will sometimes stop over to go through a naval establishment; if it's not out of the way. But he has an inspector general to do the inspecting, directly responsible to King himself.

"So why should I have to do it?" he asks.

He objects violently to issuing an order to obey an order. If a rule is

broken, he believes the offender should not be reminded to obey it in the future, but should explain why he broke it in the first place.

The admiral's reprimands are terse and clear, and despite his talent for passing responsibility to subordinates, he has a great capacity for small things if he thinks the small things are important. But he doesn't beef. He simply states his case.

When he was Commander in Chief of the Atlantic Fleet, his flagship was anchored at Newport, awaiting a visit by another admiral. Presently a seaplane landed on the water close by, and one of King's aides set out in a small boat to meet it, expecting to pick up the visiting admiral. As the boat approached the plane, the officer stood up to direct the crew in lashing life preservers around the bow to prevent staving in the plane's pontoon. The admiral was not aboard, and the boat returned with the pilot.

A few moments later, the aide was summoned to King's quarters. "Don't we have a regulation," the admiral said, "that men must not stand up in small craft?"

"Yes, sir."

"Then why were you standing up?"

"I was boat officer, sir, and directing the crew in the approach."

"Yes. But why were you standing up coming back?"

That's all there was to it, but it was enough.

In return for these exacting standards, King respects the desires of his field commanders with inflexible steadiness. He clamped down completely on publicizing the exploits of our submarines because the commander of a fleet unit protested a story released about one of his subs. It was good publicity for the Navy, but King pointed out that the commander was responsible for the sub, hence should control everything pertaining to it.

### The Theory Explained

King's explanation of his theory of "calculated risk" is simpler than the phrase itself. "We simply don't have enough tools to give each commander all he wants or needs in ships and planes," he says. "So we have to figure out where to send what we have with the best chance of success."

Sometimes the American people have shivered for days and weeks while the theory of calculated risk was working out—but so has the Navy. "The Japanese task force we met at Midway, for example," Admiral King explains, "might have been going to Alaska or Australia or even to this country. We could not defend adequately all the possible points of attack. On the basis of what we knew, we thought our best bet was to attempt to intercept them at Midway. We would have been in a very bad position if we had missed the enemy."

"I have always believed the Japs intended their occupation of the Aleutians to come a short time before Midway, rather than after, but their schedule went haywire. We had already decided, however, that an attack on the Aleutians would not be immediately dangerous, first, because it would be planned as a diversion tactic, and second, because the enemy would still be a thousand miles away from Kodiak, the nearest point at which he would become a really serious threat to Alaska. We let them have those two far western Aleutian islands for the time being. As a matter of fact, the invasion has been very costly to the Japs—something we hadn't really hoped for."

The results of calculating a risk are frequently heartbreaking to King's of-

ficers and men, too. Referring to one of the periodic conferences he holds with Admiral Nimitz, he said, "I had to tell Nimitz about the North African offensive—our ninth front—and what it would mean to him in the number of fleet units in his command. It wasn't fun."

Through all this major policy are woven King's ideas on giving out news of naval matters. He disagrees frankly with the civilian propaganda experts who say the question of how much aid and comfort would be given this country by the release of information is at least as important as how much aid and comfort would be given the enemy.

"So far as I am concerned," King says, "information given the public is information which will almost certainly reach the enemy. You know yourself how many holes there are through which published news can get to the enemy, either directly or by proper channels, which go through neutral countries. I have no intention of giving the enemy anything from which he can derive a shadow of aid and comfort. That's the way I am,

have wings. If the Japs, during that time, had been sure of just how much damage they had done, they would have closed in. That would have been disastrous. Had I been the Japs, I would have pushed the battle anyhow. I've never quite understood why they didn't. Certainly, our only chance was to keep them from having definite knowledge of how successful they'd been."

Admiral King's philosophic calmness under the constant cross fire is a miracle of self-discipline and concentration. Each morning he gets a chart showing the disposition and activity of his fleet units, but sometimes he goes for days without knowing the fate of a particular ship or the outcome of a particular engagement, some of which may conceivably push the whole war into a new direction.

"But what would be accomplished if I worried about it?" he asks in a puzzled way. "I have supplied the best men with the best equipment we have, and have given them what seems the wisest mission. That's all I can do. If a ship has been sunk, I can't bring it up. If it's go-

sticks close to his ship, reading histories of the Civil War, on which he is a consummate expert. When he does go forth of an evening, he insists on being back aboard by 11 P. M. He gets up at 7:30, does a few setting-up exercises, eats a small breakfast, gets into his official car and rides to within a mile of his office, from which point he walks, usually hitting his desk just as the ship's clock on the wall touches 8:20.

Until 9, he reads dispatches, then staff members come in to discuss developments and plans. At 9:30, Secretary Knox has a conference with department officials, which occupies King up to about 10:15. Then he has appointments with congressmen, diplomats, officers from the combat areas, and others who might have something worth hearing. Promptly at 12:45, he adjourns to a small private dining room near his office, where he eats soup and salad with members of his staff.

He's back at 1:30. Two afternoons a week are absorbed with meetings. Tuesday, he gathers with General George Marshall, Army Chief of Staff, Lieutenant General H. H. Arnold, Deputy Army Chief of Staff in charge of the Army Air Forces, and Admiral William Leahy, the President's personal Chief of Staff. The four together are the joint Chiefs of Staff, the All-American grand strategy board, which decides major United States war policy. The meeting lasts from two until four, five or six in the evening.

### Planning World-Wide Strategy

Friday, this same group meets with representatives of the British army, navy and air force, and these combined chiefs of staff harmonize American and British military operations all over the world.

Perhaps once every couple of weeks, the admiral goes to the White House for a huddle with the President, but otherwise his afternoons are devoted to mail, appointments and—most important—thought.

King works on Saturdays as routine, and a few hours every Sunday. Wednesday afternoon he goes for a walk. His only other dissipation is an occasional—very occasional—glass of sherry during his brief appearances at parties he can't avoid. He serves nothing with even a taint of alcohol on the Dauntless, in accordance with Navy regulations for all naval vessels.

In this severe atmosphere, it's easier to understand why the admiral resents anything that distracts him from his one big project. He is concerned, for example, about the idea of Congressional committees keeping check on the day-to-day progress of the war.

"If you want some indication of how it would probably work," he says, "remember what the Committee on the Conduct of the War did to the Union Army in the Civil War. It furnished interference—but it interfered only with the man carrying the ball."

And on the subject of unified command in the Pacific, he has this to say: "The Pacific is divided into five reasonable parts, based on the type of military operations necessary in each part. It was done on a technical basis, and it's by far the most intelligent system, from any reasonable aspect."

And once recently at a small dinner, while he was being questioned about his refusal to give out news, he was asked belligerently how many Jap ships have been sunk.

"I don't know," he replied with a grin, "the Japs don't tell us."

THE END

that's the way I always have been, that's the way I always will be."

Occasionally a roar goes up over the functioning of the Navy in a particular engagement. Demands for unified commands and personnel changes fly back and forth across the country, accompanied by frightful tales of naval stupidity and incompetence. Sometimes these tales have shreds of truth, but almost without exception, they differ on major points from the accounts of the engagement in the secret, accurate reports on King's desk. Should he believe or pretend to believe the published stories and the whispers, and thus avoid irritating political pressure? The admiral isn't fighting that kind of war. And ninety-nine times out of a hundred, he feels he cannot broadcast the information in his reports without giving the Japs the equivalent of a major victory.

### Cruisers Don't Have Wings

He has been slugged at violently for not announcing sooner the loss of three American cruisers and one Australian cruiser in the Solomons in October. "Replacing those ships was not a simple matter of slapping three more into the holes they left," he states. "We had to figure out from what area they could best be spared (the calculated risk again) and we had the North African invasion coming up. We finally chose those we thought wisest to shift, but then we had to get them to Tulagi, and cruisers don't

ing to be sunk, I can't stop it. I can use my time much better working on tomorrow's problem rather than fretting about yesterday's. Besides, if I let those things get me, I wouldn't last long."

As it is, he's lasting very well. His eyes are clear, his face firm, his waistline taut, and he thinks with the precision of a cash register. Yet he is sixty-four, the legal retirement age for Navy officers. One reason he's been able to keep an even keel is because he has separated himself from the hysterical social life of Washington. He lives on his flagship tied up at the Washington Navy Yard, the U.S.S. Dauntless, which was Mrs. Dodge's yacht Delphine, now painted battle gray and stripped for military use. Six or eight of his staff live on the ship with him.

The admiral's family stays in a monstrous old red brick house of many gables and chimneys in Observatory Circle, the grounds of the Naval Observatory, close to the embassy neighborhood out on Massachusetts Avenue. The house is owned by the federal government and is available to every chief of naval operations. King's family consists of Mrs. King, six daughters—four of whom are married to Army officers—and one son, Ernest J., Jr., who is now a third-classman at the Naval Academy. The family population at the Observatory Circle house varies, but King eats dinner two or three times a week with those who are around.

Outside of his office, he otherwise

## What a terrible fix I'm in!

I WOULDN'T FEEL so badly about it if they had put just an ordinary whiskey-and-soda in my hand.

But they gave me one of the world's most glorious drinks . . . a wonderfully smooth and flavorful Four Roses-and-soda.

Then they let me freeze, so that I can't possibly raise the Four Roses-and-soda to my lips. It's tragic, I tell you.

But you who are not snow men aren't in the fix I'm in. YOU can get a Four Roses-and-

soda at your favorite bar. Or you can take home a bottle of this gloriously rich and mellow whiskey. Then YOU can pour a generous jigger of Four Roses into a glass and add ice and soda.

And, best of all, YOU can lift this magnificent drink to your fortunate lips and sip it. Lucky, lucky you!

*Four Roses is a blend of straight whiskies—90 proof. Frankfort Distilleries, Inc., Louisville & Baltimore.*

# FOUR ROSES

# Miracle of the Fifteen Murderers

Continued from page 12

growing tension in the new member's face.

"I am sure you have not slain any of your relatives," he sighed, "or that you will ever do so except in the line of duty.

"The learned Hume," he went on, "has undoubtedly explained these forums to you on the psychiatric basis that confession is good for the soul. This is nonsense. We are not here to ease our souls but to improve them. Our real purpose is scientific. Since we dare not admit our mistakes to the public and since we are too great and learned to be criticized by the untutored laity and since such inhuman perfection as that to which we pretend is not good for our weak and human natures, we have formed this society. It is the only medical organization in the world where the members boast only of their mistakes.

"And now," Tick beamed on the neophyte, "allow me to define what we consider a real, fine professional murder. It is the killing of a human being who has trustingly placed himself in a doctor's hands. Mind you, the death of a patient does not in itself spell murder. We are concerned only with those cases in which the doctor, by a wrong diagnosis or by demonstrably wrong medication or operative procedure, has killed off a patient who, without the aforesaid doctor's attention, would have continued to live and prosper."

"Hume explained all this to me," the new member muttered impatiently, and then raised his voice: "I appreciate that this is my first meeting and that I might learn more from my distinguished colleagues by listening than by talking. But I have something rather important to say."

"A murder?" Tick asked.

"Yes," said the new member.

THE old professor nodded. "Very good, he said. "And we shall be glad to listen to you. But we have several murderers on the docket ahead of you."

The new member was silent and remained sitting bolt upright in his chair. It was at this point that several, including Hume, noticed there was something more than stage fright in the young surgeon's tension. The certainty filled the room that Sam Warner had come to his first meeting of the X Club with something violent and mysterious boiling in him.

Dr. Philip Kurtiff, the eminent neurologist, put his hand on Warner's arm and said quietly, "There's no reason to feel bad about anything you're going to tell us. We're all pretty good medical men and we've all done worse—whatever it is."

"If you please," old Tick demanded, "we will have silence. This is not a sanatorium for doctors with guilt complexes. It is a clinic for error. And we will continue to conduct it in an orderly, scientific fashion. If you want to hold Sam Warner's hand, Kurtiff, that's your privilege. But do it in silence."

He beamed suddenly at the new member.

"I confess," he went on, "that I'm as curious as anybody to hear how so great a know-it-all as our young friend Dr. Warner could have killed off one of his customers. But our curiosity will have to wait. Since five of you were absent from our last gathering I think that the confession of Dr. James Sweeney should be repeated for your benefit."

Dr. Sweeney stood up and turned his lugubrious face and shining eyes to the five absentees. Of all present, Sweeney

was considered next to old Tick the ablest diagnostician in the East.

"Well," he said in his preoccupied monotone, "I told it once, but I'll tell it again. I sent a patient to my X-ray room to have a fluoroscopy done. My assistant gave him a barium meal to drink and put him under the fluoroscope. I walked in a half-hour later to observe progress and when I saw the patient under the fluoroscopic screen I observed to my assistant, Dr. Kroch, that it was amazing and that I had never seen anything like it. Kroch was too overcome to bear me out.

"What I saw was that the patient's en-

caused the belching for which he was referred to me."

"A rather literary murder," said old Tick. "A sort of Pygmalion in reverse."

The old professor paused and fastened his red-rimmed eyes on Warner. "By the way, before we proceed," he said, "I think it is time to tell you the full name of our club. Our full name is the X Marks the Spot Club. We prefer, of course, to use the abbreviated title as being a bit more social sounding."

"Of course," said the new member, whose face now appeared to be getting redder.

"And now," announced old Tick, con-

had a slight fever, felt some nausea—but was not vomiting. It seemed obvious that he too was poisoned to a lesser degree. Accordingly I prescribed an equal dose of castor oil for the youngest child—just to be on the safe side.

"I was called by the father in the middle of the night. He was alarmed over the condition of the seven-year-old. He reported that the other two children were much improved. I told him not to worry, that the youngest had been a little late in developing food poisoning but would unquestionably be better in the morning, and that his cure was as certain as his sister's and brother's.

"When I hung up I felt quite pleased with myself for having anticipated the youngest one's condition and prescribed the castor oil prophylactically. I arrived at the Horowitz home at noon the next day and found the two older children practically recovered. The seven-year-old, however, appeared to be very sick indeed. They had been trying to reach me since breakfast. The child had 105 degrees temperature. It was dehydrated, the eyes sunken and circled, the expression pinched, the nostrils dilated, the lips cyanotic and the skin cold and clammy."

DR. DAVIS paused. Dr. Milton Morris, the renowned lung specialist, spoke. "It died within a few hours?" he asked.

Dr. Davis nodded.

"Well," Dr. Morris said quietly, "it seems pretty obvious. The child was suffering from acute appendicitis when you first saw it. The castor oil ruptured its appendix. By the time you got around to looking at it again, peritonitis had set in."

"Yes," said Dr. Davis slowly. "That's exactly what happened."

"Murder by castor oil," old Tick cackled, "plus an indifference to the poor."

"Not at all," Dr. Davis said. "All three children had been at the picnic, over-eaten alike and revealed the same symptoms."

"Not quite the same," Dr. Hume said. "Oh, you would have psychoanalyzed the third child?" Dr. Davis smiled.

"No," said Hume. "I would have examined its abdomen like any penny doctor, considering that it had some pain and nausea, and found it rigid with both direct and rebound tenderness."

"Yes, it would have been an easy diagnosis for a medical student," Dr. Kurtiff agreed. "But unfortunately, we have outgrown the humility of medical students."

"Dr. Davis' murder is morally instructive," old Tick announced, "but I find it extremely dull. I have a memo from Dr. Kenneth Wood. Dr. Wood has the floor."

The noted Scotch surgeon, famed in his college days as an Olympic Games athlete, stood up. He was still a man of prowess, large-handed, heavy-shouldered and with the purr of masculine strength in his soft voice.

"I don't know what kind of murder you can call this," Dr. Wood smiled at his colleagues.

"Murder by butchery is the usual title," Tick said.

"No, I doubt that," Dr. Morris protested. "Ken's too skillful to cut off anybody's leg by mistake."

"I guess you'll have to call it just plain murder by stupidity," Dr. Wood said softly.

Old Tick cackled. "If you'd paid a

BUTCH

by CPL. LARRY REYNOLDS

"Shh, you clumsy ox! There's people trying to sleep upstairs!"

tire stomach and lower esophagus were motionless and dilated, apparently made out of stone. And as I studied this phenomenon, I noticed it was becoming clearer and sharper. The most disturbing factor in the situation was that we both knew there was nothing to be done. Dr. Kroch, in fact, showed definite signs of hysteria. Shortly afterward the patient became moribund and fell to the floor."

"Well, I'll be damned!" several of those who had been absent cried in unison, Dr. Kurtiff adding, "What was it?"

"It was simple," said Sweeney. "The bottom of the glass out of which the patient had drunk his barium meal was caked solid. We had filled him up with plaster of Paris. I fancy the pressure caused a fatal coronary attack."

"Good Lord," the new member said. "How did it get into the glass?"

"Through some pharmaceutical error," said Sweeney mildly.

"What, if anything, was the matter with the patient before he adventured into your office?" Dr. Kurtiff inquired.

"The autopsy revealed chiefly a solidified stomach and esophagus," said Sweeney. "But I think from several indications that there may have been a little tendency to pyloric spasm, which

sulting a scribbled piece of paper, "our first case on tonight's docket will be Dr. Wendell Davis."

There was silence as the elegant stomach specialist stood up. Davis was a doctor who took his manner as seriously as his medicine. Tall, solidly built, gray-haired and beautifully barbered, his face was without expression—a large, pink mask that no patient, however ill and agonized, had ever seen disturbed.

"I WAS called late last summer to the home of a workingman," he began. "Senator Bell had given a picnic for some of his poorer constituency. As a result of this event, the three children of a steamfitter named Horowitz were brought down with food poisoning. They had over-eaten at the picnic. The senator, as host, felt responsible, and I went to the Horowitz home at his earnest solicitation. I found two of the children very sick and vomiting considerably. They were nine and eleven. The mother gave me a list of the various foods all three of them had eaten. It was staggering. I gave them a good dose of castor oil.

"The third child, aged seven, was not as ill as the other two. He looked pale,

## R-R SHELLS SPEED COMPLETE ROUT ... MORE THAN 500 TANKS DESTROYED

The Remington Rand organization was the first producer of large-calibre armor-piercing projectiles, used with such conspicuous success in the new high-velocity anti-tank guns in North Africa. The factory formerly devoted to the building of Remington Noiseless Typewriters produced the first of these shells, and to date, several million have been delivered.

This is but the beginning of the good news about American armament which you can confidently expect to receive, with growing frequency, from battlefronts all over the world. For the nation's industrial capacity is now fully geared for war output...today, every original Remington Rand factory, plus several new ones just completed, are producing solely for war. Our major war contracts are shown graphically at the right.

We are proud of our production of weapons and war equipment. We are equally proud

that the typewriters, business machines and control systems we normally make are helping the armed forces and government departments do the thorough planning so essential to successful campaigns. And we are proud that these same machines and systems are helping thousands of war manufacturers deliver tremendous production increases. For example, more than two-thirds of all winners of the Army-Navy "E" use our Kardex Production Control System to speed the flow of war goods from factory to fighting men.

We will continue to increase production of war materials and help others increase theirs.

We will continue to back up our 2295 employees, from every branch and factory, now serving with the colors.

We will fight the war not only with our skill and ability but with the dollars which thousands of us are regularly putting into War Bonds.

*VICTORY, absolute and final, is our only objective ☆ ☆ ☆*

little more attention to diagnosis than to shot-putting you wouldn't be killing off such hordes of patients," he said.

"This is my first report in three years," Wood answered modestly. "And I've been operating at the rate of four or five daily, including holidays."

"My dear Kenneth," Dr. Hume said, "every surgeon is entitled to one murder in three years. A phenomenal record, in fact—when you consider the temptations."

"Proceed with the crime," Tick said.

"Well," the strong-looking surgeon turned to his hospital colleague, the new member, "you know how it is with these acute gall bladders, Sam."

Warner nodded abstractedly.

Dr. Wood went on: "Brought in late at night. In extreme pain. I examined her. Found the pain in the right upper quadrant of the abdomen. It radiated to the back and right shoulder. Completely characteristic of gall bladder. I gave her opiates. They had no effect on her, which, as you know, backs up any gall bladder diagnosis. Opiates never touch the gall bladder."

"We know that," said the new member nervously.

"Excuse me," Dr. Wood smiled. "I want to get all the points down carefully. Well, I gave her some nitroglycerin to lessen the pain then. Her temperature was 101. By morning the pain was so severe that it seemed certain the gall bladder had perforated. I operated. There was nothing wrong with her gall bladder. She died an hour later."

"WHAT did the autopsy show?" Dr. Sweeney asked.

"Wait a minute," Wood answered. "You're supposed to figure it out, aren't you? Come on—you tell me what was the matter with her."

"Did you take her history?" Dr. Kurtiff asked after a pause.

"No," Wood answered.

"Aha!" Tick snorted. "There you have it! Blind man's buff again."

"It was an emergency," Wood looked flushed. "And it seemed an obvious case. I've had hundreds of them."

"The facts seem to be as follows," Tick spoke up. "Dr. Wood murdered a woman because he misunderstood the source of a pain. We have, then, a very simple problem. What besides the gall bladder can produce the sort of pain that that eminent surgeon has described?"

"Heart," Dr. Morris answered quickly.

"You're getting warm," said Wood.

"Before operating on anyone with so acute a pain, and in the absence of any medical history," Tick went on, "I would most certainly have looked at the heart."

"Well, you'd have done right," said Wood quietly. "The autopsy showed an infraction of the descending branch of the right coronary artery."

"Which a cardiogram would have told you," said old Tick. "But you didn't have to go near a cardiograph. All you had to do is ask one question. If you had even called up a neighbor of the patient she would have told you that previous attacks of pain came on exertion—which would have spelled heart, and not gall bladder."

"Murder by a sophomore," old Tick pronounced wrathfully.

"The first and last," said Wood quietly. "There won't be any more heart-case mistakes in my hospital."

"Good, good," old Tick said. "And now, gentlemen, the crimes reported thus far have been too infantile for discussion. We have learned nothing from them other than that science and stupidity go hand in hand, a fact already too well known to us. However, we have

with us tonight a young but extremely talented wielder of the medical saws. He has been sitting here for the last hour, fidgeting like a true criminal, sweating with guilt and a desire to tell all. Gentlemen, I give you our new and youngest culprit, Dr. Samuel Warner."

Dr. Warner faced his fourteen eminent colleagues with a sudden excitement in his manner. His eyes glittered and the dusty look of hard work and near exhaustion already beginning to mark his youth, lifted from his face.

The older men regarded him quietly and with various degrees of irritation. They knew, without further corroboration than his manner, that this medico was full of untenable theories and half-baked medical discoveries. They had been full of such things themselves once. And they settled back to enjoy themselves. There is nothing as pleasing to a graying medical man as the opportunity of slapping a dunce cap on the young of

tionary. His poetry was a cry against injustice. Every kind of injustice. Bitter and burning."

"Wait a minute," Dr. Rosson said. "The new member seems to have some misconception of our function. We are not a literary society, Warner."

"And before you get started," Dr. Hume grinned, "no bragging. You can do your bragging at the annual surgeons' convention."

"GENTLEMEN," Warner said, "I have no intention of bragging. I'll stick to murder, I assure you. And as bad a one as you've ever heard."

"Good," Dr. Kurtiff said. "Go on. And take it easy and don't break down."

"Yes," Dr. Wood grinned. "I remember when Morris here made his first confession. We had to pour a quart of whisky into him before he quit blubbering."

"I won't break down," Warner said.

"Look, Harold, in those days, they built a tank around each man!"

science. Old Tick, surveying his colleagues, grinned. They had all acquired the look of pedagogues holding a switch behind their backs.

Dr. Warner mopped his neck with his wet handkerchief and smiled knowingly at the medical peerage.

"I'll give you this case in some detail," he said, "because I think it contains as interesting a problem as you can find in practice."

DR. ROSSON, the gynecologist, grunted, but said nothing.

"The patient was a young man, or rather a boy," Warner went on eagerly. "He was seventeen, and amazingly talented. He wrote poetry. That's how I happened to meet him. I read one of his poems in a magazine, and it was so impressive I wrote him a letter."

"Rhymed poetry?" Dr. Wood asked, with a wink at old Tick.

"Yes," said Warner. "I read all his manuscripts. They were sort of revolu-

"Don't worry. Well, the patient was sick for two weeks before I was called."

"I thought you were his friend," Dr. Davis said.

"I was," Warner answered. "But he didn't believe in doctors."

"No faith in them, eh?" old Tick cackled. "Brilliant boy."

"He was," said Warner eagerly. "I felt upset when I came and saw how sick he was. I had him moved to a hospital at once."

"Oh, a rich poet," Dr. Sweeney said.

"No," said Warner. "I paid his expenses. And I spent all the time I could with him. The sickness had started with a severe pain on the left side of the abdomen. He was going to call me, but the pain subsided after three days, so the patient thought he was well. But it came back in two days and he began running a temperature. He developed diarrhea. There was pus and blood, but no amoeba or pathogenic bacteria when he finally sent for me."

"After the pathology reports I made a diagnosis of ulcerative colitis. The pain being on the left side ruled out the appendix. I put the patient on sulfaguanidin and unconcentrated liver extract, and gave him a high protein diet—chiefly milk. Despite this treatment and constant observation the patient got worse. He developed generalized abdominal tenderness, both direct and rebound, and rigidity of the entire left rectus muscle. After two weeks of careful treatment the patient died."

"And the autopsy showed you'd been wrong?" Dr. Wood asked.

"I didn't make an autopsy," said Warner. "The boy's parents had perfect faith in me. As did the boy. They both believed I was doing everything possible to save his life."

"Then how do you know you were wrong in your diagnosis?" Dr. Hume asked.

"By the simple fact," said Warner irritably, "that the patient died instead of being cured. When he died I knew I had killed him by a faulty diagnosis."

"A logical conclusion," said Dr. Sweeney. "Pointless medication is no alibi."

"Well, gentlemen," old Tick cackled from behind his table, "our talented new member has obviously polished off a great poet and close personal friend. Indictments of his diagnosis are now in order."

BUT no one spoke. Doctors have a sense for things unseen and complications unstated. And nearly all the fourteen looking at Warner felt there was something hidden. The surgeon's tension, his elation and its overtone of mockery, convinced them there was something untold in the story of the dead poet. They approached the problem cautiously.

"How long ago did the patient die?" Dr. Rosson asked.

"Last Wednesday," said Warner.

"Why?"

"What hospital?" asked Davis.

"St. Michael's," said Warner.

"You say the parents had faith in you," said Kurtiff, "and still have. Yet you seem curiously worried about something. Has there been any inquiry by the police?"

"No," said Warner. "I committed the perfect crime. The police haven't even heard of it. And even my victim died full of gratitude." He beamed at the room. "Listen," he went on, "even you people may not be able to disprove my diagnosis."

This brash challenge irritated a number of the members.

"I don't think it will be very difficult to knock out your diagnosis," said Dr. Morris.

"There's a catch to it," said Wood slowly, his eyes boring at Warner.

"The only catch there is," said Warner quickly, "is the complexity of the case. You gentlemen evidently prefer the simpler malpractice type of crime, such as I've listened to tonight."

There was a pause, and then Dr. Davis inquired in a soothing voice, "You described an acute onset of pain before the diarrhea, didn't you?"

"That's right," said Warner.

"Well," Davis continued coolly, "the temporary relief of symptoms and their recurrence within a few days sounds superficially like ulcers—except for one point."

"I disagree," Dr. Sweeney said softly. "Dr. Warner's diagnosis is a piece of blundering stupidity. The symptoms he has presented have nothing to do with ulcerative colitis."

Warner flushed and his jaw muscles

## To Every Mother in America

Somewhere in America, tonight, a young man sits in a railroad car . . . bound for a destination unknown. He wears the olive drab of the Army, the blue of the Navy, or the forest green of the Marines.

He may be your son.

We know how you feel about that boy. We know what was in your heart when you said goodbye.

We know . . . because that boy is our son, too. And wherever he's going, we promise you this:

That to the very limit of our abilities, where he's concerned, it will never be "too little and too late." Because . . . it can blow or storm or sleet or rain . . . we'll get the supplies through. The guns he needs to do the job. The food to sustain him and give him strength. The medical equipment, the winter clothing, the mail from home . . .

That every hour of every passing day will see a million freight cars rumbling across the land . . . carrying raw materials to factories, steel mills and refineries . . . rushing the finished cargoes of

war to the ships waiting in the harbors . . .

And that with us, the men of the railroads, *your son will always come first!*

For he is the hope of America.

Tonight, mothers of America, remember these things, and listen for the whistle of the trains as they go thundering in the dark. Listen . . . and you'll hear the voice of a nation's fury . . . the battle-hymn of free men working together, fighting together, until Victory is ours.

moved angrily. "Would you mind backing up your insults with a bit of science?" he said.

"Very easily done," Sweeney answered calmly. "The late onset of diarrhea and fever you describe rule out ulcerative colitis in ninety-nine cases out of a hundred. What do you think, Dr. Tick?"

"No ulcers," said Tick, his eyes studying Warner.

"You mentioned a general tenderness of the abdomen as one of the last symptoms," said Dr. Davis smoothly.

"That's right," said Warner.

"Well, if you have described the case accurately," Davis continued, "there is one obvious fact revealed. The general tenderness points to a peritonitis. I'm certain an autopsy would show that this perforation had walled off and spilled over and that a piece of intestine was telescoped into another."

"I don't think so," Dr. William Zinner, the cancer research man, said. He was short, bird-faced and barely audible. Silence fell on the room, and the others waited attentively for his soft voice.

"It couldn't be an intussusception such as Dr. Davis describes," he went on. "The patient was only seventeen. Intussusception is unusual at that age unless the patient has a tumor of the intestines. In which case he would not have stayed alive that long."

"Excellent," old Tick spoke.

"I thought of intussusception," said Warner, "and discarded it for that very reason."

"How about a twisted gut?" Dr. Wood asked. "That could produce the symptoms described."

"No," said Dr. Rosson. "A volvulus means gangrene and death in three days. Warner says he attended his patient for two weeks and that the boy was sick for two weeks before Warner was called. The length of the illness rules out intussusception, volvulus and intestinal tumor."

"THERE'S one other thing," Dr. Morris said. "A left-sided appendix."

"That's out, too," Dr. Wood said quickly. "The first symptom of a left-sided appendix would not be the acute pain described by Warner."

"The only thing we have determined," said Dr. Sweeney, "is a perforation other than ulcer. Why not go on with that?"

"Yes," said Dr. Morris. "Ulcerative colitis is out of the question considering the course taken by the disease. I'm sure we're dealing with another type of perforation."

"The next question," announced old Tick, "is what made the perforation?"

Dr. Warner mopped his face with his wet handkerchief and said softly, "I never thought of an object perforation."

"You should have," Dr. Kurtiff stated.

"Come, come," old Tick interrupted. "Let's not wander. What caused the perforation?"

"He was seventeen," Kurtiff answered, "and too old to be swallowing pins."

"Unless," said Dr. Hume, "he had a taste for pins. Did the patient want to live, Warner?"

"He wanted to live," said Warner grimly, "more than anybody I ever knew."

"I think we can ignore the suicide theory," said Dr. Kurtiff. "I am certain we are dealing with a perforation of the intestines and not of the subconscious."

"Well," Dr. Wood spoke, "it couldn't have been a chicken bone. A chicken bone would have stuck in the esophagus and never got through to the stomach."

"There you are, Warner," old Tick said. "We've narrowed it down. The spreading tenderness you described means a spreading infection. The course taken by the disease means a perforation other than ulcerous. And a perforation of that type means an object swallowed. We have ruled out pins and chicken bones. Which leaves us with only one other normal guess."

"A fishbone," said Dr. Sweeney.

"Exactly," said Tick.

Warner stood listening tensely to the

voices affirming the diagnosis. Tick delivered the verdict.

"I think we are all agreed," he said, "that Sam Warner killed his patient by treating him for ulcerative colitis when an operation removing an abscessed fishbone would have saved his life."

Warner moved quickly across the room to the closet where he had hung his hat and coat.

"Where are you going?" Dr. Wood called after him. "We've just started the meeting."

Warner was putting on his coat and grinning.

"I haven't got much time," he said, "but I want to thank all of you for your diagnosis. You were right about there being a catch to the case. The catch is that my patient is still alive. I've been treating him for ulcerative colitis for two weeks and I realized this afternoon that I had wrongly diagnosed the case—and that he would be dead in twenty-four hours unless I could find out what really was the matter with him."

Warner was in the doorway, his eyes glittering.

"Thanks again, gentlemen, for the consultation and your diagnosis," he said. "It will enable me to save my patient's life." . . .

A half-hour later, the members of the X Club stood grouped in one of the op-

erating rooms of St. Michael's Hospital. They looked different from the men who had been playing a medical Halloween in the Walton Hotel. There is a change that comes over doctors when they face disease. The oldest and the weariest of them draw vigor from a crisis. The shamble leaves them and it is the straight back of the champion that enters the operating room. Confronting the problem of life and death, the tired, red-rimmed eyes become full of greatness and even beauty.

On the operating table lay the unconscious body of a Negro boy. Dr. Warner in his surgical whites stood over him.

The fourteen other X Club members watched Warner operate. Wood nodded approvingly at his speed. Rosson cleared his throat to say something, but the swift-moving hands of the surgeon held him silent. No one spoke. The minutes passed. The nurses quietly handed instruments to the surgeon. Blood spattered their hands.

Fourteen great medical men stared hopefully at the pinched and unconscious face of a colored boy who had swallowed a fishbone. No king or pope ever lay ill with more medical genius holding its breath around him.

Suddenly the perspiring surgeon raised something aloft in his forceps.

"Wash this off," he muttered to the nurse, "and show it to these gentlemen."

He busied himself placing drains in the abscessed cavity and then powdered some sulfanilamide into the opened abdomen to kill the infection.

Old Tick stepped forward and took the object from the nurse's hand.

"A fishbone," he said.

The X Club gathered around it as if it were a treasure indescribable.

"The removal of this small object," old Tick cackled softly, "will enable the patient to continue writing poetry denouncing the greeds and horrors of our world."

THAT, in effect, was the story Hume told me, plus the epilogue of the Negro poet's recovery three weeks later. We had long finished dinner and it was late night when we stepped into the war-dimmed streets of New York. The headlines on the newsstands had changed in size only. They were larger in honor of the larger slaughters they heralded.

Looking at them you could see the death-strewn wastes of battles. But another picture came to my mind—a picture that had in it the hope of a better world. It was the hospital room in which fifteen famed and learned heroes stood battling for the life of a Negro boy who had swallowed a fishbone.

THE END

## Any Week

Continued from page 4

Police sergeant who was slowly recovering from a nasty shock. The night before, while inspecting his detail in Washington Southeast, he suddenly grabbed one of his men by the arm, pointed down the street and asked: "Look! Do you see what I see?" The MP private did. Together, they grabbed what the sergeant had seen. It was a large Negro soldier who had had the world's most magnificent uniform zoot suit made of officer uniform material. It was pavement-wide in the shoulders, the coat knee-length with slouch pockets, the pants blimp-wide at the hips and sock-tight at the ankles; also reet pleats halfway to the knees. They had him in the military sneezer before we could get there with

our camera. The sergeant was feeling better but wouldn't talk.

WE GOT to talking to a gentleman who is one of the innumerable workers in the countless federal bureaus. His duties in one of the more populous war agencies are not overwhelming. Anyway, he had plenty of time to discuss postwar problems. The one which was engrossing him most at the moment had to do with what is to become of several hundred thousand clerks who have recently come to Washington to help those who preceded them to while away the day. "This government cannot let us down simply because the war ends," he contended with some heat. "So I'm working out a plan to send large

numbers of us to the devastated countries after the war. Those countries will need reorganization. Their governments will need lots of clerical help to do the reorganizing. That is where we wartime Washington office workers will be useful—in the Army of Reorganization. We can be sent on a Lend-Lease basis. You'll hear of this from Congress."

ON THE other hand, Mr. Hugh Fullerton informs us from New Port Richey, Florida, that the war is not a major problem in the life of his neighbor, Uncle Dave Haines. "Stopped yesterday to get some honey from Mr. Haines," says Mr. Fullerton. "He's kicking. He came down here thirty-one years ago because he had

high blood pressure and rheumatism and wanted to fish. He got to falling over in the boat and riding around unconscious in the Gulf and he was afraid he'd float away some day. So he quit fishing and started keeping bees. Bees stung him all the time—cured his rheumatism and high blood pressure. Only trouble is that when the bees are dormant, his rheumatics get bad, and he has to stir them up and make them get to work on him. But now, he says, with palmetto honey selling for fifteen cents a pound instead of five, and orange blossom honey twenty cents instead of eight, the bees are getting so independent they won't waste time stinging him and his rheumatics are getting awful again."

. . . W. D.

## Who was the man who saved Jim Bailey?

\$10,000, the court said. That's what they said Jim must pay—for driving his car around the block!

No, this didn't happen in Nazi Germany. It happened to Jim right here, and it could happen to you. It happened suddenly, unexpectedly, as such things always do. Jim was taking his car around the evening to put it in the garage. Just as he turned the corner, a youngster darted into the street. Jim didn't see her till too late... and now the court says Jim must pay.

Jim would have had to sell his home, mortgage his future earnings, if he'd had to pay that \$10,000 himself. But, luckily, he didn't have to. He was saved from this disaster by a man he didn't know six months ago.

Who was the man who saved Jim Bailey?

**He Saved Jim Bailey—and There Are 7,000 Like Him Ready to Help You**

A representative of State Farm Mutual Automobile Insurance Company saved Jim Bailey from paying that \$10,000 himself.

Jim had thought he didn't need auto insurance. After all, he couldn't drive over 35... he wouldn't be driving far. But the State Farm representative had changed Jim's mind with some startling facts. He showed Jim that the majority of accidents don't occur at high speeds, but at speeds less than 35 miles an hour. He showed Jim that accidents happen in a split second, no matter how slowly or

how few miles you drive. So when Jim had an accident, his car was insured.

Any one of State Farm's 7,000 representatives throughout the United States and Canada is just as interested in *your* welfare. The protection they offer is so reasonable in cost no one need be without it. And it's important to know that State Farm representatives are backed by the largest automobile casualty insurance company in the world. State Farm's auto insurance is non-assessable.

State Farm insurance is geared to wartime conditions. For instance, State Farm Liability and Property Damage insurance rates are adjusted to the type of gas ration card you have. Another example is State Farm's coverage for pool car drivers.

With repair costs higher today, State Farm's unique 80% Collision Plan becomes most important. Unlike ordinary collision insurance, this plan pays 80% out of every collision repair bill dollar on your car up to \$250, and 100% of everything over \$250... whether it's just a dented fender or a costly accident.

State Farm offers similar advantages in other important types of auto insurance. Medical Payments Coverage pays medical expenses of members of your family and passengers injured in your car at the lowest cost in history. Comprehensive Insurance protects you against fire, theft, and most of the other hazards that threaten your car. Emergency Road Service and Bail Bond Insurance pays 80% of the expenses incurred on a public highway for mechanical first aid, towing, and other services, and reimburses you for 80% of any premium or fee paid for a bail bond. A State Farm representative will be glad to point out the advantages of State Farm's life and fire insurance, too. (For obvious reasons, the name used in this advertisement is fictitious.)

Write for free booklet presenting basic facts you should know about auto insurance. Address request to Dept. C-13, State Farm Insurance Companies, Bloomington, Illinois. There is no obligation.

This drenched and dripping corvette man is the author, Chief Radioman Jack McDonald. They all look like this after a few minutes on deck in rough weather

# THE ROUGHEST THING AFLOAT

By Jack McDonald

Life aboard a corvette, the bucking bronco of the sea, was once described by an Englishman as "a perpetual hang-under." But as a submarine killer this tricky little boat just hasn't any superior

PHOTOGRAPHS BY JOSEPH DEARING, BRITISH COMBINE AND BRITISH INFORMATION SERVICES

JUST what is a corvette, anyway? Perhaps not one person in a thousand can tell you. Guesses range all the way from a new type of girdle to something that looks like a tugboat. Webster could have put it all in one sentence, "the roughest thing afloat," but he muffed it. He defines a corvette as an old-fashioned sailing vessel, sort of a cross between a frigate and a sloop of war. Any experienced U-boat commander could give you a more accurate definition than that, for even if he has never seen a corvette he surely must have felt one, at one time or another. But since a U-boat commander isn't handy, I'll undertake the job. It won't be easy, for although I was on a corvette for ten months as chief radioman, I spent much of that time standing on my head, where the view is slightly out of focus.

The corvette was designed and built strictly with one thought in mind—to fight the submarine. It is extremely broad of beam, round-bottomed, exceedingly shallow in draft, displaces about 1,000 tons, and is, roughly, about two thirds as long as a destroyer. Born of World War II expediency, it can be slapped together in no time at all, like an FHA house. But it's no New Deal brain child.

The corvette is strictly a British concoction. All those now in service, even the ones the American Navy is using, were blue-printed in English shipyards. The British announced at the start that the corvette would be built primarily for fighting efficiency and not for comfort. Nothing seems to have diverted them from this idea. Like any corvette man, I have bucked shins, cuts, abrasions, bruises and bumps in assorted sizes to show that they've stuck to it.

No matter what kind of a saddle you use or how you adjust the stirrups, a corvette still rides rough. Indeed, the going on them is so discommoding that the Canadian navy gives every corvette man a bonus of twenty-five cents a day just for being on one. This they call "hard-laying money." And it means precisely that. When the ocean and a corvette collaborate in a tantrum it's a day's work in itself just trying to hang on. It's not only a day's work, it's a life-and-death matter. And after a day devoted to just trying to stay aboard, your troubles have only begun. If you can sleep

on your back you may be able to get a couple of hours' rest. A sidewheeler like myself has little chance. Fall asleep on your side and you'll wake up against a stanchion with a crushed kidney. Fail to make yourself secure and you'll wind up on the floor with broken legs and arms. That happened to two of my mates who were pitched out of their bunks. And you'll put your shoes in your bunk or wear sodden footgear the next day, because the floors are usually awash.

There is little that a corvette man gets in the way of personal comfort that goes with the life of a battleship sailor. Nearly every inch of space on one of these small craft is filled with tools of war. The result is cramped quarters, lack of modern refrigeration, and a basic rough-weather diet of soup and more soup. Where a battleship sailor comes to take nightly movies for granted, to say nothing of a refreshing malted milk at ten o'clock, the corvette man will settle for an apple or an orange, turn in and try to sleep. And the knowledge that you're sandwiched between two depth charges, each carrying 600 pounds of TNT, as I was, while directly overhead is 24,600 pounds of the same, isn't very conducive to restful slumber.

Navy men who have sampled all kinds of craft have seen waves break over every part of a corvette but the smokestack, and marvel at her seaworthiness as she takes a sudden 40-degree list and rights herself again before starting down the other side. But rolling is the corvette's ace-in-the-hole for the title of "roughest thing afloat." She can outroll a destroyer like breaking sticks. And she can hold her own with a tin can in the pitching department. That's when a man's life depends on whether he can hang on.

To play safe, every corvette man wears a whistle around his neck, just in case. Once whisked into the water he is supposed to blow it, to let all hands know there is a man overboard. What if you don't feel like blowing a whistle at a time like that? Well, that's too bad. Even Bosko, our ship's dog, is prepared for dunking. He wears a life preserver, with a pocket on one side big enough for a dog biscuit. On the other side is a slit into which a bone can be inserted.

Some effort has been made to acquaint the public with what a corvette looks like

The boys eating soup here are, left to right, Joe Arsenault, Cambridge, Mass.; John Torielli, Danbury, Conn.; and Robert Knocke, Pasadena, Calif.

The men who hunt the submarines in corvettes live in cramped quarters. There's more room in bed than anywhere else on the boat, and not too much even there

and rides like. A film outfit recently fared forth boldly with a battery of Hollywood cameramen, bent on shooting a whole picture showing just what life is like in the raw aboard a corvette. But it was too rough. First crack out of the box when the ship docked the movie boys walked off, their picture half completed. They just couldn't be enticed back aboard.

The British navy lists its corvettes as being of the "flower class," giving these turbulent little fuss-budgets of the sea such disarming monickers as Godetia, Cowslip, and Violet. When I was ordered aboard a corvette for duty I suffered from a sickening fear that I would land on something called Daffodil or Buttercup! But the name thinker-uppers of the American Navy tacked far more fitting names onto these fighting craft, and I drew one of the most appropriate.

Our skipper is an Annapolis man, Lieutenant Commander Noah Adair, of San Bernardino, California. He is both human and efficient. One has to be to skipper a corvette. Rarely have these two qualities been blended so effectively aboard a ship. The fact that Skipper Adair was once on the Tennessee, badly bombed at Pearl Harbor; on the Pecos, sunk with heavy loss of life in the Pacific; and aboard the destroyer Kearny when she was doing Iceland patrol before the official outbreak of "hostilities" is regarded by the crew as no jinx to the ship. Indeed, the corvette seems to lead a charmed, if not charming life, for she has convoyed a grand total of 487 freighters and tankers all over creation since last March and has never lost a ship.

#### Dressed for Action

No casual observer would even suspect when Skipper Adair, tall, red-haired, handsome and immaculately dressed, walks down the gangplank at the completion of a convoy trip that he has just spent as many as nineteen days, hand running, without taking his clothes off. But that is routine with him at sea, as he makes his lanky six-feet-two-inch frame fit onto a narrow five-and-a-half-foot bench, built window-seat fashion in the chart house. There he gets his sleep in small takes, only three jumps from the bridge above where he can go on the double when he is wanted, which is often, day and night.

The U-boat captain has come to know the corvette as his most deadly enemy, the key instrument for dealing out the kind of poison it will take to win the battle of the Atlantic. He knows that a corvette, to a submarine, is what a mongoose is to a cobra. Rarely does a corvette come out second in a brush with a sub, and for some very obvious reasons.

The experienced U-boat man knows, for instance, that once a corvette tracks him down there is little chance of his escaping the invisible eyes of that craft's foolproof and telltale listening devices. He knows a corvette can pass directly over him, drop a pattern of depth charges, make a hairpin turn and in a matter of seconds be back over that same spot, ready to let him have it again with 1,800 more pounds of TNT. No other ocean-going craft in creation can maneuver so quickly.

He knows that no matter which way he turns, the jig is up, for a corvette can more than match his best underwater speed. And he knows that the amazingly

shallow draft of a corvette makes it painfully difficult to stop her with a torpedo unless that torpedo is set skin-deep in the water. And skin-deep torpedoes lose their accuracy in rough weather.

He knows that when he spies a corvette-escorted convoy his chances of working his way inside the protecting screen without being detected are negligible. And that his chances of safely weaving his way out again are next to nil. And this helps explain why so very few corvette-escorted convoys have been attacked.

The public may come by its lack of knowledge of what corvettes look like honestly, for such are the demands on our particular type of craft that we are seldom seen in port. When we sailed last spring in the vanguard of the first Atlantic seaboard convoy of this war and headed for the Florida Keys, we did a stretch of 63 days at sea out of a possible 80. There followed a nine-day overhaul period and the corvette again pointed her prow seaward for another 65 days at sea out of a possible 81.

These two long cruises entailed a lot of sea duty, and seldom a night passed without us being routed out of bunks at least once to man battle stations following a submarine alarm. Many nights it was four or five times. Yet the crew, aside from some very normal griping about being worked harder than a coterie of Volga boatmen, could complain of few dull moments. No two escort treks were alike and while there were the same 86 faces in the crew to look at, day in and day out, there was always that chance of survivors being picked up from some torpedoed freighter and hauled aboard, to give the corvette man a fresh slant on the submarine situation.

One of these occasions was when 33 men in a lifeboat were picked up 400 miles off Cuba on a blistering hot mid-August afternoon. The corvette espied the lifeboat chock-full of merchant sailors, steamed alongside it and was confronted with the bizarre sight of those 33 men gorging themselves on apple pie à la mode on the open sea.

The smoke from their burning ship, now beneath the waves, was still plainly visible, forming a black umbrella over the lifeboat. One of the merchant crewmen, a boy from Maine, explained how that pie à la mode happened to be in the lifeboat.

"Yesterday morning," he told me, "our cook had been taking plenty of kidding  
(Continued on page 62)

Here is Bosko, the corvette's mascot, wearing his specially tailored life preserver fitted with pockets for food. The sailor is Junior Hynd, Gloversville, N. Y.

Reloading a depth charge Y-gun on a British corvette. This famous ship rammed a U-boat four times after blowing it to the surface with depth charges

A sub commander fears the corvette more than any other type of escort vessel. At right, the little seagoing fuss-budgets shepherd a British convoy

# Constant Champion

BY GRANTLAND RICE

Willie Hoppe has seen champions come and go and after thirty-six years of competition he sits secure on his throne. He owes it all to clean living, concentration and a burning desire to keep on being the champion billiard player

PHOTOGRAPH FOR COLLIER'S BY GEORGE DE ZAYAS

IN THE spring of 1906 burly James J. Jeffries had just retired as heavy-weight champion of the world. Runaway Ty Cobb was starting his first full season as a big leaguer with Detroit's Tigers. Jack Dempsey, eleven years old, was thirteen years away from his annihilating attack against Jess Willard at Toledo.

Babe Ruth was a pug-nosed kid in a Baltimore industrial school. Lean Bill Tilden still had fourteen years to go before winning his first national tennis championship. And Bobby Jones was only four years old. In that same spring of 1906, Willie Hoppe, a chunky 18-year-old kid, won the billiard championship of the world from Maurice Vignaux of France. This happened in Paris, on Vignaux's home billiard table. And today, gray-haired Willie Hoppe at the age of fifty-four is still the billiard champion of the world. The grinding, championship pressure of thirty-six years has failed to check his march or to affect his skill in any way.

"Billiards," according to P. Hal Sims, the bridge expert and billiard authority, "is the most exact science known to sport. In handling this exact science so perfectly for so many years, Willie Hoppe has shown the greatest co-ordination I have ever seen. In my book he is the most remarkable champion that ever played a game."

"You know," Sims continued, "Hoppe is one of the few child prodigies in sport that ever got anywhere later on. He and Bobby Jones, both stars at the age of twelve or thirteen, were the two exceptions. I have seen many of these kid prodigies come along, only to be among the forgotten men at the age of twenty."

Hoppe today is slightly gray, still chunky, but in perfect physical shape.

"I started playing billiards," he said, "the year the Spanish-American War broke out. My father was my only teacher and I had to use a soap box to stand on, so that I could see the top of the table. By the time I was eighteen I felt I was ready for anybody."

"But that doesn't explain," I suggested, "why you are even better at fifty-four than you were at eighteen. What does it take to remain a champion for over thirty-six years?"

"Let me try to explain," Hoppe said. "As you know, there are two main factors in championship play, no matter what the game. One is physical. The other is mental. On the physical side, I worked and lived according to plan."

"I've led a temperate life. I've always eaten plain, simple food—meat and vegetables—but nothing highly seasoned. I take a drink once in a while; limit my smoking to ten or fifteen cigarettes a day. I get my full share of rest and sleep—at least nine or ten hours every night. You need more nerve control in billiards than in any other game I know. And I practice four or five hours a day."

Hoppe will practice the simplest strokes from two hundred to three hundred times a day.

"What about the mental side?" I asked.

"That's the hard part," Hoppe said. "Much the harder part. First of all, I have tried to train myself in complete concentration. I believe this is the hardest thing in sport. I know golfers and ballplayers who tell me the same story. It is just as important in football or in boxing. You have to work on it, just as you have to do to build up muscles. It must be made a habit."

"I'll give you an example. Two years ago I was playing in a big tournament in Chicago. I felt awful when the match started; felt weak and dizzy. But I was intent on winning, and kept concentrat-

ing so on that one purpose that I didn't realize the fix I was in. After I had picked up a good lead I collapsed and was rushed to a hospital with a temperature of 106, plus pneumonia. My long-developed habit of concentration had carried me up to the collapsing point."

"The next important point," Hoppe continued, "is to keep alive your keen interest in winning, after you have won many times through many years. You know how it is. A fellow wins a title, defends it a few times, and then loses the keen edge he once had. He begins to get tired of the training routine, and the hard work necessary to beat back those younger wolves after his hide."

"It isn't hard to pay the price in hard work and training on your way to the top. And it isn't too hard to keep on paying this price for a few years. But then it begins to pall. A good many champions retire after winning a coveted title, and I can understand why."

"Two athletes that I can recall offhand kept the flame burning year after year—Ty Cobb and Bill Tilden. They never lost their keen desire to win, but unfortunately their legs gave out. I'm luckier: you don't need legs in billiards—not to any appreciable extent."

"Oh, I'll admit I've had my moments when I felt fed up. When that happened I just forced myself to keep going. I like to win as much today as I did nearly forty years ago. And I know that the only way I can keep winning is to keep on working and trying."

## Watching the Parade of Stars

One of the greatest thrills Hoppe has known through his thirty-six years of stardom has come from watching the long parade of other stars come and go.

"There was Ty Cobb," he said, "who was one of baseball's great at nineteen. I can still see him along those base lines, pulling stuff no one had ever dreamed about. Scoring from first on a single, scoring from second on an outfield fly. He was a wild horse for the better part of twenty-four years."

"Then in 1907 I remember a tall, gangling kid from the West who came to Washington. He was a pitcher by the name of Walter Johnson, with more speed than anyone had ever seen, before or since. Opposing batters couldn't hit the ball he threw. They couldn't see it."

Willie took another nostalgic look at the past. "It was something to see Bill Tilden and Bobby Jones just starting out. And that ferocious man at Maumee Bay by the name of Dempsey. What a crop this country has turned out."

We took another look back together through Hoppe's career. John McGraw as a young man, Connie Mack, when he was in his 40's, Frank Chance winning his first pennant with Tinker and Evers. Christy Mathewson when he was in his early prime—of that group of stars who were monopolizing the headlines none remains in action today, except Connie Mack, now a manager.

That is, no one except for Willie Hoppe who keeps on winning, and continues to practice four hours a day.

A billiard champion of the Hoppe type has been able to earn more than a champion golfer or most of the star ballplayers. From prize money, exhibitions and business connections Hoppe has averaged \$25,000 a year, every year. Up and coming champions have stormed his championship citadel without success. But youth will keep trying and Hoppe will be defending his title again this year.

"And I'll be more anxious to win," he says, "than I was in 1906."

That kind of champion, boys, is tough to beat. ★★★

# Try these famous Louisiana Shrimp —ocean-fresh as when caught!

BURLINGAME  
PUBLIC LIBRARY  
Burlingame, Calif.

1. To match these Shrimp, ma'am, you'd have to go a long way—plumb down to the Gulf of Mexico in Louisiana! And then, chances are, you couldn't tell the ones you'd just plucked from the briny depths from those in any Birds Eye package!

2. For these plump, delicious mouthfuls are the famous Louisiana Shrimp—Quick-Frozen soon's they're caught! Birds Eye brings them to you—fresh as fresh—wherever you live! And, sincerely, there is nothing like them on the market!

**BIG FEATURES!**  
Jan. 11-16

**Shrimp  
Peas**

Another Good Value!  
**SPINACH**

3. Available all year, they're delicious in cocktails, salads, sauteed, à la Newburg—and unforgettable as Creamed Shrimp and Peas! (See recipe). Called "uncooked Shrimp in the shell," they run 25 to the package—each a mouth-watering morsel!

4. Birds Eye knows you've never tasted any Shrimp to match these! If you try them and think you have, get your MONEY BACK—for they're GUARANTEED! Ask for these superb Shrimp by name: "Birds Eye Shrimp!" Ask today!

## FOR DINNER TONIGHT— Creamed Shrimp & Peas

Cook 1 box Birds Eye Shrimp and 1/2 box Green Peas as directed on packages. Combine. Add 2 cups seasoned cream sauce, 1/2 teaspoon scraped onion, and 2 teaspoons lemon juice. Heat. Serve on toast points. Serves 4.

Note: If desired, add 1 egg yolk, slightly beaten, just before serving.

## 16 WONDERFUL FARM-FRESH VEGETABLES!

Buy Birds Eye, and you have your choice of:

Asparagus Spears	Broccoli	Squash
Asparagus Cuts	Brussels Sprouts	Peas
Wax Stringless Beans	Cauliflower	Peas & Carrots
Mixed Vegetables	Cut Corn	Spinach
Green Stringless Beans (1-inch cut or French-Sliced)	Lima Beans (Baby Green or large Ford Hook)	

ALL ARE super-delicious! Ready to cook, rich in Nutrition—Vitamins A and C, and in Phosphorus, Iron and Copper! You may not always be able to get the complete line of Birds Eye Vegetables during war, but you'll always find a good variety.

# A Sign of Real Hospitality

WHEN you serve G & W Whiskeys, you are paying your friends the highest compliment to their good taste. ☆ G & W Five Star, for example, is blended with skill that is the fruit of 111 years' experience in the making of fine whiskeys. Specially "rounded" spirits impart an almost unbelievable smoothness and mellowness . . . while rare and high-priced base whiskeys lend richness of flavor. ☆ When folks drop over for a drink, serve them G & W Five Star. You'll glow with pride at their enthusiastic appreciation. Gooderham & Worts, Ltd., Peoria, Ill.

**SYMBOLS OF CRAFTSMANSHIP**  
The "Flying Cloud"—queen of the Yankee Clippers—an outstanding example of American craftsmanship. For 111 years, the G & W Label has been a symbol of craftsmanship in whiskey distilling and blending.

86 proof, 75% grain neutral spirits

## Congress Can Save Itself

Continued from page 13

am afraid may kill it, according to the popular conception on Capitol Hill, and that is that the bill originated in Congress."

Then, in the field of public relations, vital in a democracy, the legislative branch is at a distinct disadvantage. The executive, fully realizing the power of public opinion, has become extremely skillful in shaping and controlling it. The Presidential press conference, invented by President Wilson and adopted and improved by President Roosevelt, has become a terrific propaganda weapon. When our President speaks, whoever he may be, the world listens and absorbs. He can bring public opinion to bear upon a Congress in a most potent manner.

### A Weakness in Publicity

Even with the heads of executive departments and agencies, Congress is painfully handicapped in public relations. The heads of these agencies speak with authority, and their names and words make news. If, for instance, the Secretary of the Treasury makes a statement on the tax bill, it is carried to the whole country. A score of congressmen may make statements of equal profundity and even more sense, but nobody pays much attention.

The proceedings of Congress are open to the public, press and radio. The routine sessions seldom make headlines; a crackpot idea or an intemperate speech usually does, and Congress takes a blast of ridicule, for all such utterances are for some reason considered typical of the whole body. But the deliberations and discussions of an executive agency are closed to the public eye and ear. If some participant in the discussion has a wildly ludicrous quirk of mind, it is not broadcast to the country to make the whole conference look foolish. Only the result of the conference, a carefully worked-out program, dripping with dignity, is released.

On the other hand, Congress is frequently used as a whipping boy. For instance, Secretary Morgenthau now criticizes Congress for not having enacted a compulsory-savings program. Though the public has forgotten it, members of Congress know that this is the same Mr. Morgenthau who for months resisted every effort to pass such legislation.

On last May 11th, I introduced a carefully drawn compulsory-savings bill and it received a very favorable public response. Three days later, Speaker Rayburn told me that Secretary Morgenthau had called, expressing concern lest such a move hinder the bond sale program, and he wondered if I would not "lay low" on the subject as a matter of co-operation. I did.

On Labor Day, for another notable instance, the President gave Congress perhaps the most severe castigation of any President in American history. He undertook to blame Congress for its failure to enact a proper bill to combat inflation, without mentioning the fact that Congress passed the bill he then wanted and which he signed into law, and without mentioning that several months ago, the Administration itself brought about the defeat of the very kind of overall price control bill we were now accused of having stalled.

The President not only blamed the Congress for both its action and inaction but said he would impose an overall

control, similar to that previously proposed, unless Congress acted by October 1st. So Congress was scolded by the President and the public as well as by the President for doing almost precisely what the President wanted done. A few members publicly pointed out that Congress, though mistaken, had acted upon what it supposed was excellent advice, but this did not even dent public opinion.

So in an age marked by rapid change and quick decisions, Congress is finding itself at an increasing disadvantage, a traditional legislative procedure clashed with a well-oiled, well-staffed and organized executive branch with its myriad bureaus, commissions and boards.

Now, how can Congress regain its rightful place as an independent branch of the government and recapture public esteem? Obviously, such a significant political metamorphosis cannot be wrought quickly or without conflict. The more one studies the problem, the more difficult the task appears, and yet the deeper becomes one's conviction that unless it is to become even more impotent, Congress must open its eyes and face the problem with courage and intelligence.

In wartime, Congress has an egg-walking job. If Congress fails to perform the legislative functions necessary for victory, the President, though against his will, would be driven to an assumption of such powers. On the other hand, Congress cannot abdicate its constitutional responsibilities. What it can—and must—do is make itself more efficient, so that it can handle the responsibilities it will have if it is in fact independent and undominated.

### Specialists Come in Handy

Executive agencies, whatever their shortcomings, are fully staffed with specialists in all fields. Congress has not thus modernized itself, and the bureaus consequently speak with more assurance and respectability. At committee hearings on a proposal from some bureau the bureau presents exhaustive statistics and smooth arguments to establish its viewpoint. Then the skilled advocate of special interests and groups particularly affected by the bill present their side of the question.

It is a rare sight indeed when someone appears before a Congressional committee with a disinterested viewpoint. This is not to say that the bureau misrepresents the facts. It presents its point of view, and bureaus have a habit of becoming overenthusiastic about the particular field of endeavor. At any rate everybody gets ardent and skillful representation except the general public—the one group that should get a special break.

Of course, members of Congress are supposed to be guardians of the general welfare. Many are, but heavy duties and many problems make it impossible for individual members to study every proposal in detail. They need help—help of their own. This help could be provided by an efficient, strictly nonpartisan staff of trained specialists and analysts, assuring the presentation of at least one factual, unprejudiced viewpoint, and supplying the necessary information for policy and program planning. The first step in making Congress efficient.

I would go further and give to the principal minority party (whichever might be) a staff of its own to assist in developing a political program.

onger minority opposition would make for a stronger and better majority performance. But, of course, this may well be forgotten, because no party power would want to strengthen the opposition party. It would be helpful, though.

In overhauling the Congressional committee system, the committees should be set up along the broad lines of policy, program planning and functional need. As an example of the duplication and illustration in the present committee system, let us take fiscal affairs: Any one of several committees in both the House and the Senate can consider and report bills authorizing appropriations. Any one of several different subcommittees can consider and report appropriation bills, and yet, in both the Senate and the House, entirely different committees must consider and report tax bills.

This confusion is still further compounded by the Bureau of the Budget being a purely executive agency. In this situation, how could Congress have a fiscal policy or follow it, if it had one? Impossible!

But what is even more essential is for the legislative branch to become more coherent in its relationships with the executive branch, and this is where its leadership must be made stronger. Unless Congress can unify in support of its basic rights and in giving authority and responsibility to its agents to defend them effectively, domination will continue to be its lot.

Before the revolt which overthrew Speaker Czarism," led by the then young Representative George W. Norris against the legislative reign of former Speaker Joe Cannon, the Speaker of the House of Representatives actually was second only to the President in power and prestige, and he frequently exercised even more influence over legislation. Overthrow of the system undoubtedly

resulted in more democracy within the House, but it just as surely denuded the leadership of Congress of sufficient authority to maintain its position as a co-equal branch in the American political system.

True, there are majority leaders in both the House and the Senate, but they have no authority other than that arising out of party organization. Too, the party having a majority in Congress has usually held the Presidency also, so the majority leaders have been, for the most part, men satisfactory to the President. Under such circumstances, the majority leaders, quite understandably, are more truly spokesmen for the White House than for the Congress.

#### A New Policy Needed

These leaders—the Speaker and the President Pro Tempore—should represent all Congress in defending it against encroachments, preserving its power in the general governmental situation and making it a leader rather than a docile follower in national policy and planning. To mitigate this concentration of authority in leadership, strong joint House and Senate committees on policy and program should be created to work constantly with these leaders empowered to aid as well as check use of power.

In this way, Congress could exercise some initiative in solving the nation's problems, thereby adopting the surest way to get public confidence and avoid domination by the executive branch of the government.

This suggested plan of action need not result in a battle between the executive and legislative branches for prestige and power. It would not strip down the executive branch: it would only build up the Congress, which I consider absolutely necessary to democracy.

THE END

COLLIER'S "Some day I'm coming back to this place for my vacation" ROBT. DAY

AWAKENING early one morning, in his San Francisco apartment, Jason Amboy—inventor of a revolutionary airplane engine—finds a girl, a stranger, there. The intruder knocks him out; then, taking a packet of letters (from Jason's brother, Wayne), she steals away.

A few hours later, Jason learns that Wayne—who has been working for the powerful Grazzard family in Hawaii—cannot be found and has probably been murdered. Losing no time, he boards a ship and starts for "the islands." Before he does so, however, Flack, his eccentric manservant, does some sleuthing and learns that the female burglar is Luana Topping, of Kokala, Kauai Island, Hawaii. . . .

To Jason's amazement, he finds Luana among his fellow passengers. He meets her, has a number of friendly chats with her; but she gives no indication that she has ever seen him before. He soon learns that she is a member of a very important party—old Mrs. Hiram Grazzard ("Queen Bertha"), dictatorial head of the Grazzard clan; her son, Lorrin Grazzard, who is Luana's fiancé; Channing Mace, manager of the Grazzard plantation at Kokala, and his attractive blond wife; and one or two others. Jason (distantly related to the Grazzards) meets all of them. And he does not trust them.

Jason has more surprises in store. The first comes when he finds a stowaway—a man who greatly resembles Wayne—in his stateroom. The man says that he is Arthur N. Garson, a former assistant district attorney of Los Angeles, and that he is being pursued by two ruffians who want to kill him. Certain that the fellow is *not* Garson, Jason nevertheless permits him to share his stateroom, secretly.

Another surprise comes when Flack (who was supposed to stay behind in San Francisco) suddenly appears—disguised and using the name of "Rodney K. Kitchener!"—and warns Jason to beware of the Grazzards, who, he insists, were somehow involved in Wayne's disappearance. . . . Meanwhile, Jason has made a new friend: Mrs. Mace. She tells him that she hates the Grazzards, but likes Luana Topping; she tells him that her husband is a cruel brute; she tells him that she believes Wayne has been murdered by the Grazzards. . . .

Following a talk with "Kitchener" (who distrusts the stowaway) Jason goes to his stateroom. The stowaway is not there!

"You're late," Natalie said. "I've been expecting you for an hour." Looking up smilingly at him, she did not interrupt her knitting

## Five Who Vanished

By George F. Worts

ILLUSTRATED BY GILBERT DARLING

### IV

JASON went to the bed. The covers were thrown back. He felt the bed, and it was still faintly warm. The man who had occupied it could not have been gone longer than a few minutes.

Jason switched on the ceiling light and looked quickly about the room. The stowaway's clothes were gone. He investigated the bathroom. The toilet articles the room steward had bought at the post exchange were still there.

Jason returned slowly to the bed, frowning. A suspicion had crept into his mind and he considered it. His mysterious roommate had left recently and suddenly. Natalie Mace would have had just enough time to tell the Grazzards that he was suspicious of the stowaway, and one of them could have warned the man by telephone. Jason felt slightly ill at this possibility that she had tricked him and was now, in her animated way, relating to them his confidences.

He stopped near the stowaway's bed. He noticed that the heavy brass-rimmed port on the right-hand side was swinging in from the hole and back and in again, moving an inch or so each time the ship rolled.

Several things crossed his mind at once. One was the pale face and the entranced eyes of Luana as she had passed him on the stairs. Another was Flack's melodramatic warning that the stowaway would murder him and push his body out the porthole.

And he recalled that the heavy brass-rimmed glass

disk with its coats of blue blackout lacquer had been in place, bolted shut, the last time he had noticed it. He also recalled the instructions the Tasmania's captain had given over the public-address system before the convoy sailed. These instructions had been sternly repeated several times since. The captain had mentioned that, during blackout hours, all portholes and windows were to be kept closed.

Jason went to the porthole, opened it quickly and closed it again. The hole was large enough to admit a man's body, unless he was fat or very broad shouldered. A dark stain on the lower surface of the brightly polished brass rim of the porthole attracted him. He looked closer. He tested it with a finger tip. It was sticky. He held his finger to the light. The sticky substance was red.

It was blood. The stain was a narrow smear of blood that reached from the inner to the outer edge of the porthole rim.

He turned and looked down at the pale green carpet. Between the edge of the stowaway's bed and the side of the ship, a pace apart, were three drops of blood of about the size of one-karat rubies. The blood was so fresh that it was just beginning to coagulate.

The room steward was a thin, slightly bent man of about fifty with a meek and mousy air. His hair was iron-gray and curly and his eyes were sharp and bright.

When Jason opened the door to his knock, he watched his face closely. The steward peered quickly into the room, then glanced into the bathroom, but his face betrayed no emotion.

"You wanted me, Mr. Amboy?"

"I wanted the steward who has charge of this room."

"Yes, sir. I'm your steward."

"What's your name?"

"Emil Roth, sir."

"Come in and shut the door."

"Yes, sir." The steward came in with his meek air and gently closed the door. "Is anything wrong?"

"Take a good look at that (Continued on page 63)

# The Last Hour of the War

**NO ONE KNOWS** the day or the hour when this war will end. But the end will come sooner as America steps up the speed of war production today . . . and every day. If this is not true, then all our talk of production means nothing.

Yet the life or death of thousands can depend on shortening the war, even by a single hour.

*Think what can happen in one hour! A machine gun can fire over 10,000 bullets. An anti-aircraft gun can hurl more than 1,000 shells into the blue. In a single hour a battleship can throw over 500 tons of armor-piercing steel more than 14 miles.*

*In that same hour a flight of 1,000 bombers can drop 2,000 tons of bombs... enough to cause heavy damage in a city as large as St. Louis, or Los Angeles, or Cleveland, or Philadelphia, or Chicago.*

No one can say what happened in World War I, in that hour between ten and eleven A. M. on November 11, 1918. But we do know that throughout that morning there were many casualties on both sides. We know that the New York Times published casualty lists showing that 1,021 American soldiers were killed in action or seriously wounded during that one morning's fighting. And some of those casualties must have occurred within *minutes* of the end!

*That was World War I... compared to which the present war is as a tropical hurricane to a March breeze.*

Any war worker who can do *anything* to save man hours on the production of *any* vital war material . . . can feel that he is helping end the war perhaps seconds sooner.

Whatever helps, even a little, to speed the production of war materials, might help bring that last hour of the war nearer. One thing that *is helping* is good lighting. Over and over again we have had reports from war plants of production increases after lighting faults have been corrected. Increases ranging all the way from three per cent to twenty-five per cent or more, *especially on the night shifts.*

Even a 3 per cent increase in production could amount to a staggering total if applied to the thousands of plants that are not properly lighted for efficient night production.

So, if you have anything to do with a war plant, won't you find out whether lighting can work harder in your plant . . . especially at night? General Electric Company, Nela Park, Cleveland, Ohio.

**G-E MAZDA LAMPS**

**GENERAL  ELECTRIC**

*If you call your nearest G-E lamp offices, they will place a trained Wartime Lighting Counsellor at your service. Perhaps his suggestions may help to increase production. Your local electric service company or your G-E lamp supplier can also help you.*

# The Flying Hawks

Kyle Crichton

Repairs on the Mary Ann are being completed when the Japs appear overhead. Sgt. Winocki (John Garfield) is firing at the enemy planes while Cpl. Weinberg (George Tobias) totes fuel and shouts angrily. Lt. Hauser (Charles Drake) and Sgt. White (Harry Carey) continue with repairs

The Army asked Howard Hawks to record the saga of our Air Forces with all its bitterness, sadness and heroism. He's in his element in the air. Air Force, directed and produced by Mr. Hawks, promises to be his greatest achievement

HOWARD HAWKS is spending two and a half million dollars of Warner Brothers' money making a picture called Air Force and he is doing it practically under his breath. Hawks is the director who keeps a sign posted saying: Silence is expected on this set. Watching him making a picture is like watching two mermaids con-

versing in a tank. You see them but you don't hear anything.

Air Force may be the greatest of all aviation pictures. In any event, it's the real stuff. There are no women in the cast; there are no great stars. The heroine is a B-17 bomber that the crew affectionately call Mary Ann. It is the story of a United States bomber that is headed from San Francisco to Hawaii, runs into the Japanese attack at Pearl Harbor, makes an emergency landing at Maui, takes off again for Wake Island, is ordered immediately to Manila, makes a hazardous landing when it finds Clark Field destroyed, starts for Australia, takes part in a battle off Lingayen, and finally gets down safely with part of its crew killed. They patch Mary Ann up, start again, run into the Coral Sea battle, but finally make Australia, where the bomber burns. It is based on the experience of a bomber and is being made with the co-operation of the War Department.

Hawks was a flier in the last war and has kept a private plane since. He made Dawn Patrol, first of the great air pictures, and Ceiling Zero and Only Angels Have Wings. He is both producer and director of Air Force and worked with Dudley Nichols on the script. In offering the government's co-operation on the production, Lieutenant General H. H. Arnold, chief of the U. S. Army Air Forces, insisted on complete authenticity.

"Tell how the Japs laced hell out of us at first," he told Hawks. "Then tell how we struck back to give them a taste of their own medicine. Tell the whole story, with its bitterness and sadness and heroism. Tell the story of the greatest fighters this country has ever known."

After months of preproduction, Hawks headed up three units and started work. The biggest job was done at Drew Field, Tampa, Florida, where Hawks caused the gutted, flame-seared Hickam Field

of Honolulu to live again. Other scenes will show Colin Kelly's sinking of the Haruna; the battle of Coral Sea; Wake Island's historic stand and the never-to-be-forgotten heroism of Captain Wheeler and his bomber crew.

To get the South Pacific island shots it was necessary to transport an entire jungle ten miles outside of Tampa. The real jungle gave no footing for the bombers, so the jungle was moved intact across a highway. Ten cameras, under the supervision of James Wong Howe, recorded the odyssey of the Flying Fortress; three camera ships were flown from Hollywood to do the battle shots from the air; two hundred extras were added to a technical crew of over a hundred. For six weeks the unit struggled against intense humidity and heat so searing that Jack Sullivan, assistant director, suffered a painful burn when he laid his bare arm on the side of a Fortress.

Hawks was right in his element. The louder the noises roared and the gun bellowed, the quieter he became. When he conferred with the bomber crew before taking a shot, it had the appearance of something seen through a glass darkly. Old-timers in the mechanical crew said this was nothing.

"You should have seen him with Gary Cooper," they said.

It seems that when Hawks and Cooper were making Sergeant York and Ball of Fire, people on the set inclined their heads gently and spoke as if afraid of waking the baby. Between takes, Hawks read magazines and Cooper whittled. They communicated without antennae, semaphores, relays, couriers or trumpeters. If downright necessary, they spoke to each other.

## Flying Horse for Carey

On Air Force, Hawks had only three well-known actors, Harry Carey, John Garfield and George Tobias. Old man Carey was not too keen about flying.

"Anything over seventeen hands is too high for me," he said.

Hawks finally broke him down by making him a present of a Tennessee walking horse. That got Carey in the air but it didn't make him feel better.

"I'm sixty-five years old, my first job was driving a horse-car for my old man, and now I'm an eagle," he said morosely.

Although he had never won the Academy Award, Hawks has had a distinguished career in Hollywood. He made Scarface, first of the gangster operas; Twentieth Century, first of the zany pictures; Barbary Coast and The Criminal Code, gangster smashes; The Road to Glory, a fine war study and also a romanceless picture; and His Girl Friday, considered by many critics the greatest achievement in sound known to films.

Recently a friend brought Hawks the news that Orson Welles considered Twentieth Century the finest comedy ever made. Hawks listened without a change of countenance.

"Don't tell me you aren't flattered when a man like Welles says a thing like that!" cried the friend.

"In small towns," answered Hawks glumly, "they used to put that picture on at noon and take it off at five o'clock. It played in dozens of places where it never had a customer. We finally figured out that native runners were going ahead with drums, spreading the news of how bad the picture was."

Hawks was born in Goshen, Indiana, where his family owned paper mills. Despite his slender build, he was a noted athlete at Cornell, being particularly good as a tennis player. He was teamed as a doubles partner with his brother Kenneth, who was killed several years ago

With no trucks available on Clark Field, the Mary Ann is refueled by bucket brigades. That's Lt. Williams (Gig Young) running toward the camera. Left: A Japanese Zero runs into fire from a Marine anti-aircraft unit hidden in the swamps

Above: The Japanese Fleet has been sighted off Lingayen and the only B-17 available, the Mary Ann, is hastily loaded with bombs to engage the enemy. Below: Air Force is a virile, fighting epic, full of the kind of action that delights Howard Hawks

in an airplane crash while directing a picture. Howard is over six feet tall and is now entirely gray, giving the impression of being a scientist or an engineer—which he was at one time.

During his college days, Hawks visited Hollywood and got a job at Famous Players-Lasky as a prop boy. In later years, when Hawks was doing Sergeant York for Lasky, the latter was amazed at finding Hawks chumming with the men on the set.

"Sure I know 'em," said Hawks. They used to boot me around out here."

#### Easy Come . . .

After his service as a World War aviator in France, he hurried out to Hollywood with his inheritance of \$150,000, cash money, which he promptly but unwisely invested in producing pictures directed by that famed harum-scarum clown as "Mickey" Neilan. In no time they made a profit of \$500,000—and picked it away just as quickly.

"The good old days in Hollywood!" says Hawks caustically.

Hawks is mild, exceedingly quiet of speech, and very tough of mind. Such

doughty fighters as Sam Goldwyn, the Warners and Darryl Zanuck will confess that they have never won a battle from Hawks. If they don't like the way he is doing a picture, he walks out. He walked out on Viva Villa, at M-G-M, and on Come and Get It, at Goldwyn's, just to mention two. Since this is *lèse majesté* of a peculiarly horrid sort, his friends used to hold their breaths for him. However, his only bad period came with sound, when the old-timers were run off the reservation on behalf of Broadway stage directors cashing in on their doubtful reputations.

"When they got tangled up in the camera, they'd be kind enough to let us help," says Hawks bitterly. "But it was over a year before I got another picture."

Hawks is one of the best golfers in the film colony, with a steady average in the low seventies, and he is also addicted to sailing and horse racing. He owns the Sea Hawk, a famous 65-foot Norwegian racing sloop, with which he has won several races as skipper and navigator. A few years ago, he designed a racing automobile with which Louie Meyer won the Indianapolis Speedway

(Continued on page 53)

Conner put it baldly to her. "Sayre, we've fooled around enough with this week-end marriage. It's no good"

## MARRIAGE ISN'T EASY

By Nancy Titus

ILLUSTRATED BY WENDELL KLING

**The story of a girl who learned that a sailor's wife is not always first in his thoughts**

ALL the way through the dark, deserted Newport streets, Sayre lay drowsily against Conner's shoulder, her legs curled under her on the car seat. It was four A. M., but dawn—wartime dawn—was more than four hours away. The night was drawn in a tight, black cap over the city.

Sayre yawned and curved her fingers about her husband's arm. There was no sleepiness in Conner. Just by the feel of his muscle under the thick fabric of his Navy overcoat sleeve she knew he was more than awake; he was alert, his whole body tuned to awareness. She marveled

at the quick transition he could make from sleep to complete consciousness, at the first sharp ringing of the phone with a summons for him to report back to the ship.

They drew up at the gates. The Marine on guard saluted and let them through. Conner drove down to the docks. His boat, Eagle 45, a two-hundred-foot patroller, vintage of the last war, but tough and seaworthy as an old salt, was alongside, its deck already active.

Conner said, "So long, kid."

She caught his face in her hands, wanting to see it clearly . . . to see the black brows and the black-lashed blue eyes; the flat, windburned cheeks, the big, strong nose and mouth.

She knew better than to say, "When will you be back?" She whispered only,

"So long, Conner. Bring me a U-boat."

For a moment he caught her close. "I'd like to bring you the universe."

Their hands, their lips, clung hungrily. The bitter quarrel of last night, the strain that had been between them for so long, was forgotten. Although it was not settled, could never be settled, it did not, in this minute of goodby, matter.

He was out of the car and striding along the dock. Several of the crew saluted and she saw his arm come up briskly, saluting in return.

*He's beautiful,* Sayre thought. *Conner. My husband. Dear God, take care of him!* An age-old prayer, but it helped to stifle that overwhelming desire to call him back to her.

She let in the clutch and drove off slowly.

As soon as she entered their temporary

suite in one of the many private Newport homes which let rooms to Navy men and their wives, she went to the ugly, old-fashioned bedroom and began peeling off the slacks and sweater she had pulled on hastily over her pajamas. She glanced at the marble clock on the massive dresser. Twenty past four. A long, long day ahead. . . .

"I'll make the bed and clean up. I'll write Dad and Madge and I might drop a few postcards to the girls in the store. . . . I won't eat until nine . . . that will shorten the morning. Bridge this afternoon with Captain Miller's wife. . . . If Conner's not back tonight, I'll . . . I'll . . ."

Grimly she forced herself to fill in that part of it. "I'll go to the movies . . . the evenings aren't so long if you go to the movies . . . I'll read until late."

When she had dressed in a dark skirt

THE SUN

FIGHTING JEEP

## TILL HELL FREEZES OVER

AS this is written the Russian flag still floats defiantly over glorious Stalingrad. Day after day, for endless, bomb-shattered, tank-battered weeks, those incredibly brave Russian soldiers, factory workers, women, and even children, have held Hitler's mad hordes at bay.

The crushing toll they have taken of Nazi armed forces and Nazi morale is a contribution to the Allied cause that is beyond computation today. And what an example of *love of country* it is.

Aiding the heroic Russians, in fierce counter-attacks and in many other equally vital operations—as swift, as determined, as deadly to the Nazis as the inspired Russians themselves—are the Jeeps built by Willys-Overland.

Yes, on the volatile Russian front and on every other front in this war, the Jeep is on active duty. With its "GO-Devil" engine heart, and rugged body of steel, it is setting an example of all-out patriotic service; an example that every man,

woman and child in America must emulate if *our* fighting forces are to win this war.

The Jeep puts *everything it has* into every job it has been fitted to do in this war, *for your freedom*.

We are proud of the Willys-Overland engineers who assisted the U. S. Quartermaster Corps in designing the Jeep. And it is to *their* credit that the Willys-designed "Go-Devil" Engine drives *all* Jeeps being built for the U. S. Army and for our Allies. Willys-Overland Motors, Inc.

and crisp blouse, she got out her typewriter and paper and sat at the desk in the living room. She lighted a cigarette and began the letter to her father:

"Dear Dave: This is quite a vacation I'm having. It's..."

Her head came down on the typewriter.

*I'm pretending and it's no good. I can't fool myself. I can't stay here, Conner, no matter how much you want me to, I can't. Even if I didn't have to work to take care of Dave... even then I couldn't give up my job and adapt myself to the life of a Navy wife; to this wretched life of waiting. This holiday up here has shown me that.*

IF CONNER had kept his promise to her... If he had held to the terms in that unwritten covenant they had drawn up before they were married... They were such simple terms. Sayre was to go on working, living through the week in her one-room apartment in New York and joining Conner in Newport, where he was stationed, for week ends and holidays. That was their extent.

But ever since the wedding, Conner had been going back on his word. Each week end she came to see him, he showed more clearly that he was growing impatient of their bargain, and intended to break it.

She thought: *Conner, why did I have to love you? I didn't want to fall in love. I knew why marriage couldn't work for me. Why did you have to come?*

But he had come. Right into her life, without knocking, without ringing the bell.

She was Sayre Tennant and she had never been more than ankle-deep in love and did not intend to be. She was that rare phenomenon, a young woman who was not a career girl but a girl with a career. Four years ago she had come to New York, a bright college graduate, to sell skirts and sweaters in the sportswear department of Mayne & Lewis; an eager youngster with no experience and a wealth of ideas. She had worked and fought for those ideas until she had established and become head of the store's college shop, The Campus.

Her big, generous father had, like her, worked up from the bottom rung, from newsboy to top-flight crusading columnist on the very paper he had once hawked. Still, though the heart attack that had caused his collapse five years ago had forced him to give up working, people spoke his name. "If Dave Tennant were around he'd do something about this..."

But Dave would never crusade again. The very fire he had used to scorch the things he hated and illuminate those in which he believed had consumed him. The paper had offered him a pension but he had refused it. "I will never take something for nothing!" he had roared.

Sayre would not ask that of him, but when he had to turn over his affairs to her, she had found there was not much left of the money he had once earned. He had always spent freely... sending her to one of the most expensive colleges in the East, giving her fur coats, a car, trips. Little remained but the big rambling house on Long Island Sound in Connecticut, the house he had built ten years earlier for Sayre's mother. Lila Tennant had lived in the house only a year before she died, but she had loved it and because she had loved it, Dave could not give it up. Sayre thought he felt that Lila was near him there.

But with no income he would have to lose the house. And his heart would truly

break were he penned in a small apartment.

The doctor said, "He must have no worries. Heaven knows he will fume over the state of the world enough, without adding any troubles." Sayre took the worries to herself. She mortgaged the house; she found the job with Mayne & Lewis. She said, "I'll pay my debt to Dave."

There was no room for marriage in the life she had created.

She had no idea of finding room for it on that late summer evening when she went to Madge Wilmar's cocktail party. She stood in the smoky, noisy room, chatting to a cavalry officer and a middle-aged lawyer, and thinking, "I like this way. Variety. No one man for me."

And then she saw the young ensign staring at her. He stood in the middle of the room, alone, with a sidecar in one hand and a fish-paste canapé in the other. His black hair was on end and his blue eyes were on her.

Sayre flicked him with her gaze and looked away. She was used to stare. She had long brown-satin hair, lighted by hidden flames, and amber eyes with the same unexpected fires, like sunlight shining through sherry. She had white skin and a wide, intriguing mouth and long, perfect legs. Any girl who looked like that is accustomed to inspection.

She did not know why her glance returned to him again. But when her eye caught his, he smiled and crossed the room. He said to the cavalry officer, "Madge wants to see you." He put himself between the lawyer and Sayre.

Sayre said, "That wasn't so subtle."

He didn't answer. He stood looking down at her.

He said, after a moment, "Wow!"

"I beg your pardon," Sayre said coolly.

"Would you mind pinching yourself to see if you're a dream?"

The blue of his eyes was entirely too warm; he was going entirely too fast.

"I'm perfectly real," she said smoothly. She should have moved away then.

"In that case," he said, "I'm not." And ate the canapé. "What do you think of this party? One of those affairs where half the people don't know the hostess and the other half don't know each other. And I'm the latter." She saw there was a humorous twist to his mouth, but strength too, and strength in his square-tanned hands. "But now I know you," he said. "That must have been what I came for. Let's go. I know a place where we can sit at a table with a checkered cloth in a dark corner, and drink beer."

Sayre said, "I'm sorry. I really can't."

"What did you say the name was?"

She had to smile at his persistence.

"Sayre Tennant."

HE SAID, "Look, Sayre... I'm Conner Lock. Ensign Conner Lock, U.S.N.R. Formerly of Pritchard, Rickard, Wickard & Rice. Advertising. No. 45 of Newport, R. I., and Eagle 45. Single. I'm twenty-six. Male. Unmarried. Hobbies, bowling and brown-haired girls. Now how about it?"

"I told Madge I'd stay a while," she said.

"Please." He touched her arm and his touch was a shock. The surprise brought the flames to her eyes. "Please, I've got three-day leave and the first day is gone. Where's your patriotism? What about my morale? That's got you, hasn't it? All right, then. We're going to that place where I can talk and you can think."

That was all there was to it. From the first, there was his own demanding against her own powerlessness to deny, her will to give in. There was the place with the checkered tablecloths. The little cell restaurant where they ate. The place

where they danced. And another where they talked and talked and somehow let their hands find each other. There was a taxi and finally there was a bench in Washington Square, with the shadows round them and the dimmed-out city towering behind them.

They sat silent, holding hands, and then, as though moved by the same set of muscles, they turned toward each other. Conner caught her to him, and the singing and the lightness and the fever in her body was something she had never known.

He let her go. "Will you marry me, Sayre? I know I'm going to ask you eventually. I'd rather do it now and get the worrying over."

Sayre leaned her head on his shoulder. She said, hardly recognizing her own voice, "You'd better start worrying now."

"You won't marry me . . ."

"No. . . . I mean . . . I will."

Later, when their senses had returned a little, she could say, "There'll be so much to work out,"—could tell him about her job and Dave.

Conner said, "We'll solve all that. When I walked into that party today I didn't believe in marriage, either. I didn't think it mixed with the Navy. Now I can believe in anything. As long as it's us."

He said so many lovely, understanding things. It *would* work out, because they loved each other.

Yet almost from the beginning it had not gone as they had thought it would. The first week end she had spent with him in Newport, Conner had said, "I wish you didn't have to go back." She cried, "Not half as much as I do. But I must, Conner." He knew how it tore her apart for him to ask her to stay when she so longed to, so hated the weekdays without him, yet could not do otherwise. Though he did not say it in words, he intimated more and more strongly that he wanted her to leave the store, give up trying to keep the house for Dave, and live in Newport. But not until last night had he put it baldly to her.

"Sayre, we've fooled around enough with this week-end marriage. It's no good. You'll have to come here."

He had been undoing his tie and he flung it onto the bed with a decisive gesture.

"I can't let you go back to the store this time when your vacation is over. I want more of you than a few hours each week."

SAYRE faced him, drawing a brush through her shining hair. "Conner, you told me we'd never have to go through this. I know how hard it is this way. It hurts me, too, not seeing you. But what can I do, my darling, when I have so many responsibilities?"

"I'm beginning to think I should be one of your responsibilities."

She put down the brush. "You agreed once on their importance."

"Yes," he said. "That was before I was a husband. Now I am a husband and I find I feel like one. I want to be one. I think I have the right to ask that you be here whenever I can see you."

"Aren't you forgetting it isn't just me? There's Dave."

"I could afford to take care of Dave if he lived with us. If you didn't have to build up your pride by hanging on to that white elephant of a house for him. Dave's a good guy. . . ."

"And the house is all he has left of what he's been. I won't let you sacrifice him."

"All right," he said with dangerous quiet. "Go on being the successful businesswoman, then. Go on being your father's brave little wage earner to prove

to him you're as good a man as he ever was. I'll go on being a game for week ends."

Anger ran all through her. She cried, "You wanted me. . . . You have to take me the way I am!"

"I wanted you," he said. "I don't have to take you."

When she lay beside him in the dark, later, his body was stiffly withheld from contact with hers. The late rising moon threw its light over the bed, touched his rough black hair with pale hands. His eyes were shut but she knew he did not sleep. Tears burned beneath her lids.

She turned restlessly and her arm brushed his. Instantly the blind, swift magnetism between them flared. He reached out, pulling her close to him, and she buried her face against his chest.

"Oh, Conner . . . Conner, we mustn't do this. I love you so."

He held her tightly, his mouth pressed against her cheek. "It's my fault. . . . But it *isn't* right for us. We couldn't have a normal peacetime marriage now. . . . But we ought to give it all the chance we can."

"Conner, I want to, but there's so much else to consider."

"I know," he said. "Something will happen to work it out for us."

SAYRE pushed back the typewriter. Something *had* happened. The very thing that must not.

She had made an appointment with the doctor for that morning, more to fill the day than anything else. He said, when she went to him, "This is too early for *me* to be able to tell you, but the test can reveal it without leaving any doubt."

She thought, returning to her room, "I should be impatient to learn the result of the test. . . . And I'm only afraid."

There was a letter from Madge waiting for her. Without much interest she opened and read it. Just the usual tidbits of news.

Then she was gripping the pages so tightly she all but tore them, her eyes scanning the last paragraph swiftly . . . going back to reread it.

"And I've been apartment-hunting for the baby sister, Tess," Madge wrote. "She's getting married next week to a Navy man, who, by the way, has Conner's old job at 90 Church Street in Public Relations. He's a good kid but don't tell Tess this. . . . I understand the Navy would give anything to have Conner back and didn't want him to leave in the first place when he asked for a transfer to a ship. Not that he isn't doing a splendid job on the Eagle but I saw Lieutenant Commander Nicolls yesterday and he said your C. was one man he really wished was twins. If that doesn't make you . . ."

She dropped the letter in her lap.

He had never told her anything about being in Public Relations. She thought he had been on the Eagle since joining the Navy. But they had been married so quickly there was much they had not had a chance to tell.

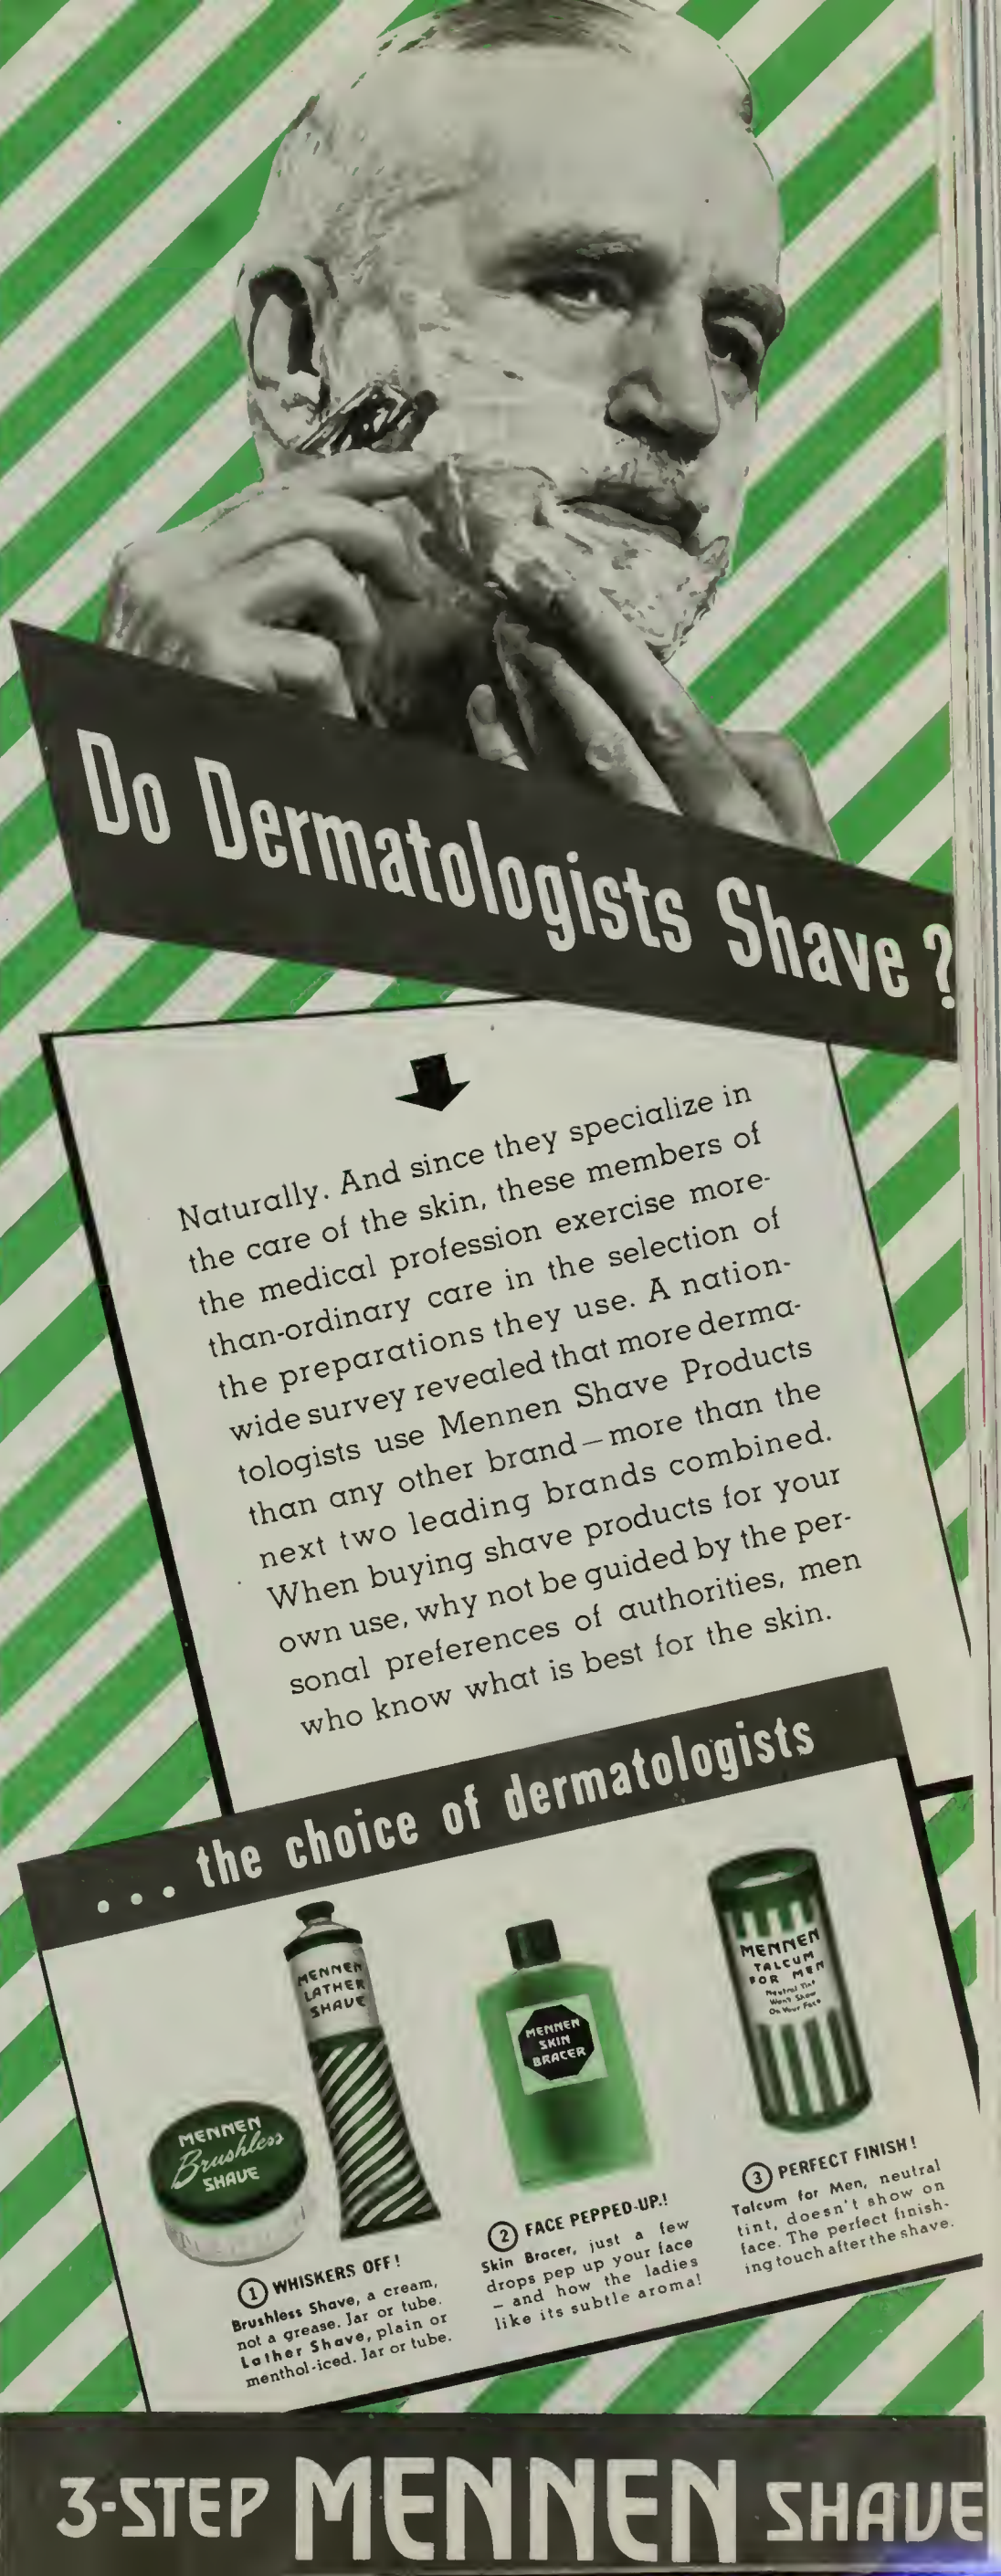

She thought, "If he had a Navy job like that now, we could live in New York. I'd be with him all the time. I could take off several months before the baby was born and then get a nurse. It would work out beautifully."

The sudden flowering of that thought filled her with new hope.

If he could be transferred back to shore. . . .

The hope lived with her for the next few days while he was still at sea.

The baby . . . why the baby *was* their salvation. Oh, surely, with a baby coming he would want a safer berth. They could have an apartment . . . see each

# Do Dermatologists Shave?

Naturally. And since they specialize in the care of the skin, these members of the medical profession exercise more-than-ordinary care in the selection of the preparations they use. A nationwide survey revealed that more dermatologists use Mennen Shave Products than any other brand—more than the next two leading brands combined. When buying shave products for your own use, why not be guided by the personal preferences of authorities, men who know what is best for the skin.

## ... the choice of dermatologists

- ① WHISKERS OFF!  
Brushless Shave, a cream, not a grease. Jar or tube. Lather Shave, plain or menthol-iced. Jar or tube.
- ② FACE PEPPED-UP!  
Skin Bracer, just a few drops pep up your face — and how the ladies like its subtle aroma!
- ③ PERFECT FINISH!  
Talcum for Men, neutral tint, doesn't show on face. The perfect finishing touch after the shave.

# THE "BLUE TIN" ENLISTS...

## THE NEW EDGEWORTH SEAL-PAK CARRIES ON!

I stepped into a store today,  
To buy a "tin of blue,"  
The clerk said "EDGEWORTH?...  
Here you are!"  
—But gave me something new;  
"Edgeworth has enlisted"—  
He informed me with a grin,  
"This SEAL-PAK Pouch has  
now replaced  
The famous true-blue tin."

"You see," he said, "it's  
moisture-proof,  
The inside's neatly lined,  
It folds down as you use it,  
It's conveniently designed—  
And Edgeworth keeps its flavor fresh—  
In SEAL-PAK, I've been told—  
It's easy, too, to fill your pipe..."  
"O.K.!" I said, "I'm sold!"

Easy to fill  
your pipe

Fits your pocket  
neatly

Yes, that blue tin of Edgeworth Pipe Tobacco, famous for 40 years, has now been replaced for the duration of the war, by the new and handy Edgeworth SEAL-PAK Pouch. You'll find this new SEAL-PAK Pouch easy to carry in your pocket—easy to fill your pipe from—and best of all it keeps your favorite Edgeworth Pipe Tobacco in a flavor-fresh condition. Edgeworth, you know, is America's Finest Pipe Tobacco.

Enjoy a generous sample at our expense.  
Write Larus & Brother Company,  
201 22nd Street, Richmond, Va.

**EDGEWORTH**  
"AMERICA'S FINEST PIPE TOBACCO"

other nightly. There would be no further ground for quarrels.

Two nights later the phone rang and Conner's cheerful voice was in her ear: "The fleet's in."

Her spirits soared. "I'll be down to get you in our go-cart, honey."

In their rooms he put his face against her hair. "It's so good to be back with you. . . Mmmmm . . . your hair smells nice. Like fog."

"Oh, Conner, that's not very romantic," she laughed.

"Why not? I like the way fog smells."

She slipped out of his arms and looked up into his brown face. His dark hair was tousled . . . his eyes blue as morning sky. His baby would have hair like that, the same eyes. Her heart turned in her breast.

"Conner . . ."

She was telling him, delight in her, because she could watch it come to him.

"Sayre, really?" He gripped her hands. "Are you sure?"

"Of course. I have to go back to see what the test was but . . ."

"It's wonderful, isn't it? It's swell. I hope he has your brains and my beauty!"

THE last sign of tension between them was gone. Certainly he would wish to be transferred again. She need only broach it tactfully.

Presently she did. She said, "Conner, you never told me you were in Public Relations in the Navy."

"Didn't I? I must have forgotten. There's a lot of my dark past you don't know. How did you find out the horrible truth?" He was teasing her, but she said, "Could you get back in again?"

His black brows went up in surprise. "I suppose so . . . never thought of it."

She did not pursue it. She had planted the seed. He would think of it now. He would see it as the solution for both of them.

She returned in the morning to the doctor. He had told her to come back sooner, but she had put it off until she saw how Conner took the news.

He told her at once:

"Mrs. Lock, you are not going to have a child."

She did not listen to the medical explanation, to his "Nothing at all to worry about . . ." She was clutching her purse, torn by a bewildering sense of deprivation. It was as though she had actually been carrying the child and lost it.

She was still shaken when she left the office. The belief in the baby had brought her more than pleasure. It had given her the answer to their marital difficulties. Although it had never been real, she felt the solution had been snatched from her.

Or had it? Would he still not see that a transfer back to New York was the best thing for them? . . .

She could not, when she met him that night, bring herself to tell him at once. They went with a group of other officers and their wives to the Skoal Room and all evening she was in agony, seeing his happiness and the difficulty he had in keeping to himself what he felt was his big news. She was so achingly, passionately sorry for him.

It was Clia Hobart, slick, sharp-tongued wife of Bill Hobart, lieutenant j. g. and Conner's immediate superior, who brought her a new kind of agony.

Clia asked Conner, "How did you ever happen to give up Public Relations, Conner? Don't you get sick of the Eagle?"

The question was casual but Sayre looked at Conner quickly.

"Sick of it?" he said. "Hell, no. That other work has to be done, but it was too much like my civilian job. I don't want to just taste this fight. I want to get my teeth into it. I wouldn't go back if

they offered to make me a rear admiral."

His words slid into Sayre with razor sharpness, cutting her before she knew she had been hurt. He would not go back. Not even when he thought there was to be a baby. He had no intention of making the move that would end their problem.

She knew when he drove her back to their rooms that he had thought all along she would be the one to yield. He put an arm about her, unaware of her withdrawal. "Tomorrow, Sayre, we'd better go hunting an apartment."

She said, "Conner—" but he went on: "Surely you don't mean to go on working now? This changes everything. Dave will understand that."

She said dully, "Don't . . . please don't. . . There isn't going to be any baby."

He turned sharply to look at her, "Sayre . . ."

"I was wrong. That's all. And I'm—

She drove down to Connecticut. Tomorrow she would have Sam, Dave's chauffeur, return the car to Conner. The day was biting cold, lashed with a December gale and a sleety rain. The rain sluiced over the windshield, coming harder, obscuring her vision. She did not care. Rain could not blind her more than her own tears.

She stopped in the drive when she reached her father's home, and stood for a moment, when she got out, looking up at the white house as though for some sort of assurance. She had not been home for some time, living in New York as she must through most of the week and going to Newport over Saturdays and Sundays. But Dave was wise. He would not question her unexpected arrival too closely.

When she went in she found him in the library, sitting on the window seat with binoculars to his eyes, staring out

"I know you'll do what's expected of you, Himpel. The Army's a little tougher than we are in that respect!"

I'm not sorry, Conner. Because I know now you'd have made no effort to make things easier. You never meant to go back to shore. You . . ."

"Wait a minute." An icy anger coated his words. "Let's get this straight. Did I say anything about going back? This is where I belong. This is what I want to do. And let's get something else straight. You wouldn't let a baby change your mind, would you? Or did you ever believe you were having one? . . . Was this just a trick, Sayre, to get around me?"

"If you can think it was a trick," Sayre said with cold fury, "then I think we never have had a marriage."

"I can think it." She felt his temper, white-hot, under the coldness of his tone, matching her own. "I can think it because I know we never had a marriage."

There was no retraction. That night Conner slept on the couch and in the morning he was gone. Sayre packed. She did not leave a message. There was no need. Both understood what the unspoken words were between them. It was over.

over the tormented waters of the Sound.

He put the glasses down when he heard her and turned. Sayre thought, with a pang, that he looked white and ill.

He said, "Hello, there. Didn't expect to see you this week. Conner have to go out? This is devilish weather."

BUT there was a note of envy in his voice. Sayre knew he was proud of his son-in-law.

"No. Conner didn't have to go out." She threw her sheared beaver coat over a chair and went to kneel beside him. He looked at her sharply but he said nothing more.

"What are you watching, Dave?"

"Not a darned thing. I'm trying to find something to watch. . . Sayre, if you knew how I wish I were in Conner's shoes. Able to do . . . see a little action. They won't even let me be an air-raid warden. A warden! . . . After what I went through at the Marne." His tone was bitter.

Sayre said, "I didn't know you were so bored."

"Bored? I'm more than bored."

Suddenly he raised the glasses to his eyes. "What's that . . . out there?"

Over the whining of the storm there was the sound of a plane. A wrong, irregular, spluttering note in the motor's tune. She leaned toward the window.

Dave said tersely, "Looks like a Navy scout plane . . . in trouble." There was some of the old excitement in his voice.

Sayre saw it, then, flying low, out of the mist, wavering over the wild water.

"Pilot's trying for a crash landing . . ." Dave said. "She won't last five minutes in this water. . . ."

The ship wobbled, fighting into the wind. Sayre clenched her fists. "He's too near the point. The tide will throw him against the rocks."

"There she goes!" Dave cried.

The plane hit with an impact they could hear; water foamed up like smoke, crashed over it, one wing dipped; the tail lifted with a wave.

Dave dropped the binoculars. "Call the filter station, Sayre, in case they haven't spotted it. Call the hospital and tell them to send an ambulance. . . ."

SAYRE saw the figure that had climbed out of the forward cockpit and was trying to struggle along the fuselage toward the rear one.

Dave snapped, "Hurry, Sayre. That's the pilot. The other must be hurt. They'll have Mae Wests but we've got to get to them. The Center will call for help if they've seen it. But we can get there first."

He was striding across the room. "Where are you going?" she cried.

"Out there. Sam and I will take the dinghy."

"Don't . . ." She ran after him. "Not you. Let me go with Sam."

"Sayre," Dave said, "shut up. This is my story. And don't say 'your heart.' I don't give two hoots about my heart. Get on that phone."

She made the calls, rushed into the hall and snatched a slicker from the closet. When she raced out the back way, her father and Sam were already running down toward the dock. She tried to plead with Dave once more.

"Don't waste your breath," he said, but he gave her arm a pat in reassurance.

Through the curtain of rain she could see the plane piled against the rocks now . . . and the two bobbling heads. One flier supported the other, trying to catch at a rock, pull himself up. She knew the barnacles and razor clams must be cutting his hands to ribbons.

Dave had already climbed into the boat and Sam had taken the oars. Sayre dropped into the stern. The little dinghy tossed as though it were in mid-ocean, water sloshed over its sides, rolled into the scuppers. Sam strained against the oars, his black face wet and gleaming. Sayre forgot her worry for Dave . . . forgot Conner, everything but the two figures out there. A shout came thinly to her ears.

Dave said, "Here, let me at the oars a while." He would not let Sam protest. He bent his great shoulders.

When they were near enough to see the two fliers clearly, they heard the chug of another boat's motor, but they had pulled up to the men in the water before the Coast Guard launch came in sight.

The pilot had given up trying to climb up the point and was holding the head of the other man above water. Sayre sucked in her breath. The second flier was unconscious, wounded, blood streaming over his face and mingling with the salt water and the rain. With his free hand the pilot clutched at the gunwale of the boat.

"Glad to see you, pal. Give Eddie, here, a hand up, will you, and get him out of those water wings."

Sam and Sayre pulled the limp, awkward body laboriously into the boat while Dave held the dinghy as steadily as he could, backing water to keep from drifting onto the rocks. Sayre bent over the figure sprawled at her feet.

"He's . . . been shot," she whispered. The pilot had let himself into the skiff.

"Yeah . . . he's bad, I think." He helped Sayre remove the unwieldy life belt, then took off his own and began to tear at his shirt. "He's bleeding a lot. . . ."

Sayre had opened her slicker and was ripping her blouse. "No. . . . let me stop it with mine. It's drier."

The launch had come up to them, idling its motors.

"We'll take over," the Coast Guardsman in the bow shouted.

Dave called back, "One man's in a pretty bad way. He should have attention. . . . There's an ambulance ought to be waiting back on shore. Please give us a tow in."

"Right."

Sam threw out the painter and a seaman caught it, fastened it securely to a cleat at the stern of the launch.

Sayre crouched beside the wounded flier. She looked up at the pilot, who sat on the stern seat, smoking a cigarette she had given him. His fair hair was plastered flat on his skull.

"What happened?" she asked.

He shook his head. "Sorry. I can't tell you that. I'll have to phone my base as soon as we get in. And the Coast Guard will want a report. But I can't tell you. You know how it is."

She protested: "My husband's in the Navy, too."

"Sure. You understand then."

The ambulance was waiting when they got back to the dock. The intern bent over the wounded aviator. He looked up quickly at Dave. "Can we take him into your house? This chap can't last to the hospital unless I attend to him now."

Dave said quietly, "Anything you say."

The four men from the Coast Guard launch filed up to the house with them. The intern and the orderly carried their burden to the kitchen, laid him on the table, and the doctor gave orders crisply; asked the others to leave.

Dave fixed strong highballs in the library. Sayre went to hunt dry clothes for the pilot and to put on a fresh blouse herself. While she changed she heard the flier on the phone in the hall and got, unintentionally, a part of the story. She could supply the missing details for herself.

The plane had been scouting fifty miles off the North Shore of Long Island and had spotted a U-boat on the surface, apparently having trouble with its engines for it did not submerge. Eddie had radioed the position and they had dived to attack. The submarine crew opened fire. The boat was destroyed in three attacks but when they came out of the last dive there was no answer when the pilot—Hank Winter, he had said his name was—spoke to Eddie on the two-way phone. He tried his own radio and found it dead. The motor was heating. The oil line had been hit. He thought he could make it back to the base. The motor heated more and more rapidly. He changed his course and headed in toward shore, where they could be picked up more easily, and made a crash landing.

It was incredible he should be telling such a story in dry, terse, undramatic sentences. But when the intern came into the

library, she saw Winter's coolness waver, his knuckles whiten and he gripped the glass he held.

"How is he, Doc?"

The doctor shook his head. "I've done what I can. I don't know whether I've saved him. He seems like a pretty strong lad. We'll take him on to the hospital. I think he can make it now. Who notifies his relatives?"

"The Navy. I'll see to that."

"If he has a wife you'd better send for her. He's been calling someone—sounds like 'Ellen.'"

"Yes. That's his wife. She's in Chicago."

The intern was putting on his overcoat. "He has one chance in a thousand to live until she gets here."

Sayre pressed her hands against her throat.

"He's got to," she cried. "He must live."

The pilot looked at her. He said slowly, as though he were talking to himself, "They had a fight a couple of months ago. She went back home then. She didn't want him to fly." He lit a cigarette. "He had to. If he's gone out, he's gone out his way." He got up. "Do what you can for the kid."

He left in the launch, still wearing Dave's clothes, his own in a bundle under his arm.

Dave watched the boat put away from his dock. "If he has a chance, Sayre. . . . That boy, Eddie. . . ."

Then his face went ashen, his lips blue and stiff, moving without sound. He slid to the floor at her feet. With a cry she dropped beside him, calling for Sam.

Together they got him up to bed and for the second time that day she was phoning for a doctor, fear mingling acidly with another new, unnamed emotion that was growing in her.

She waited outside the door for the doctor to come out of Dave's room, thinking, "I should have kept him from going." . . . And yet he had seemed almost happy. . . .

When Doctor Harrison stepped into the hall, she clutched his sleeve.

"Dave. . . ."

"Is going to be okay," he said. "It's surprising what the heart can take when it must, Sayre. In fact I think this did him good. He's come around nicely. Seems to feel he's done something useful. He's cut up about the boy who was hurt but he knows if there is that thousandth chance, he helped to give it. He was telling me the paper wants him to try a weekly column and I think he'll have to do it. It's worse for him to be cooped up in this house, out of things."

"Cooped up!" Sayre echoed.

SHE went down to the library and sat staring into the fire. She could not get the faces of the two fliers from her mind. The wet, blood-streaked face of the boy who had called for someone named Ellen. The young, strong face of the pilot who had said, "If he's gone out, he's gone out his way."

There was another face: Conner. Conner somewhere, hurt, calling her—calling her when she was too far away to reach him.

She jumped up, tore upstairs, got out of the wet skirt she had not yet bothered to change, put on a dry one.

She stopped in the door of Dave's room. "Dave, I . . . I've got to go back to Newport. Will you be all right?"

"Sure I will." Oddly he looked better than he had when she had come this noon. "I've got Sam. You go on."

She was driving again, through the rain, over the familiar roads.

It was dark when she crossed the

## "Behind the 8 ball, mister?"

● *Your car is stuck and your face is red from cold and embarrassment because you're blocking wartime traffic?*

It's a mess all right and you'll be plenty late.

*You wonder what you can do?*

You'll just wait this time, brother. Wait for a snowplow or a tow car. No use wasting rubber and gas trying to churn your way out.

. . . Let's hope this won't happen to you, gentle reader. And it needn't if you keep Weed Tire Chains handy for winter driving. Any garage or service station will put them on or you can do it easily yourself. But first you've got to have them.

So get out your used Weeds and have them reconditioned right away. If you need new ones ask for Weed American Bar-Reinforced—they give *double the mileage*. The next best buy is Weed Regular—the standard of value for 40 years.

Jamestown bridge. She could not see whether the Eagle was at the dock.

*Let her be in. Let Conner be there. Dear God, don't let it be too late. Don't let him be through with me.*

She drove straight to the gates. Yes, the guard told her, the Eagle was in. Conner was on board.

Relief flooded her . . . but her heart still pounded with fear. If she had already killed what he felt for her . . .

And then he was coming. He was there, in shiny oilskins, standing awkwardly beside the car.

"What are you doing here, Sayre? I thought you'd left."

"I . . . had . . . but I had to come back. Conner, I had to come. I'll never leave you again. I belong where you are. It's the only way." She rushed on. "I'll give

up my job. You're right. It's not important. Not as important as us. Dave doesn't need the house. He doesn't want it; doesn't want my help. He wants to help himself. He could be happy anywhere as long as he thought he was being some use. Oh, Conner, I . . ."

He had grasped her hands. "What happened, Sayre? Do you mean all this? What makes you say it, darling?"

"Nothing happened . . . not to me. That's it. I was waiting for something to happen. Something that would smooth it all out for us and make it go the way I wanted it to. I thought if I had a baby . . . if you were transferred back. Anything as long as it came from outside myself. As long as it saved me from giving up what I wished to have. But things don't happen. There aren't any solutions

—except the ones you make yourself, are there?"

He leaned in, cupping her chin in his hand. "No. There aren't, Sayre. I faced myself today, too. I was waiting for that magical occurrence that would change you, make you see things as I did. Today I knew if there was to be any change I'd have to have a hand in it. I was going to call you tonight, Sayre, and tell you . . ."

"Not that you'd try to get back your old Navy job!" Sayre cried. "No, Conner. You don't want that. This is what you have to do."

He laughed. "Sayre, I wasn't going to tell you that. I do know my place. I was going to tell you we couldn't wait for fate to take a hand. We'd have to do it ourselves. I think you need to work. You aren't suited for pure domesticity.

But you could work here. We never thought of that. I met the manager of one of the department stores here the other day. They're shorthanded. You could get a position. And Dave . . . I always knew he hated feeling indebted to you, but I couldn't point that out."

She took his hand and laid it against her cheek. "Conner . . . are you coming with me now?"

"No. I'm not free yet."

"Have you still got the room rented?" "Yes," he said.

"I'll be there when you come back. I'll be waiting for you."

The words stretched between them, warm and satisfying, words that were a bond and a comfort.

"I'll be waiting for you, darling."

THE END

## The Hunters

Continued from page 16

you remember," she said with a sudden sharp inflection, "what you wrote me once?" She quoted, "I am served first or not at all."

Michael was silent, the smile gone.

"Do you remember?"

"Yes, I remember."

"You wouldn't come back when I wanted you. After I married. You could have come, your next leave. . . . But no, you had to write that. Now you want me. And now—" there was something cruelly exultant in the low, deliberate voice, "now you are not being served first."

"Don't!" he said harshly.

"You were so very arrogant."

"I know. I was rather arrogant."

"Don't you wish you had come back?"

"No."

"Yet you want me now?"

"This isn't sneaking behind your husband's back."

"Only behind your wife's."

"Yes. And the back of your future husband. But," said Michael, very gently, "I am more versed in sneaking than I was. Not the raw boy you knew."

"ANYWAY, you have to eat your words," she said triumphantly.

"Every word."

"You were cheeky to write that. If I was willing—"

"I had scruples about you, my sweet."

"And now you haven't?"

"Only one."

"What's that?"

"I wouldn't come to your tent tonight, if you"—Michael paused, then murmured ironically—"I was the first blot on the escutcheon . . . I wouldn't make a dishonest woman of you."

"Sweet of you, darling!" Her blue eyes mocked, derisively. "So now you come because you're not the first?"

"Whimsical, isn't it?"

"Yet you don't like me to have had lovers?"

"Who am I to throw the first stone?" said Michael.

"Who indeed! Why shouldn't I have fun? Why not?"

"No reason—if you wanted to. . . . And Winston never knew?"

"N-no. I wasn't—careless. . . . I don't think he was exactly easy in his mind," she owned, with her cool, indifferent smile, then added thoughtfully, "but he didn't want to know."

"You'll find Sir Robert a bit stiffer."

"He'll be all right. . . . I'm going to make him an M. P."

"He won't like that."

"I shall."

"I should have thought you'd have

found one nearer home. Or," said Michael, casually, "were there stories going around?"

She looked sharply at him. "I don't know that I want you in my tent tonight!"

"As you choose."

"Pretty indifferent, aren't you?"

"Was I indifferent by the river?"

"No . . . no, you were lovely, Michael. . . . I like you when you're wild about me. . . . You're sure you won't be seen?"

"I'll make sure."

"Don't come until you're sure."

Their words went back and forth a little longer, then Claire rose, and with loud "Good nights," for the benefit of the camp, she strolled off to her tent. Michael stretched out in the steamer chair, finished his cigarette, then flung out a sharp "Hapana Kilali," to the groups of porters, that stilled their talk, and started them settling down to sleep.

He called his boy and told him to bring hot water to his tent. "Much hot water," he said, impressively. He went to his tent, lighted a lantern and put out his shaving things. The boy looked at them curiously when he brought the pail of water.

"Finished," said Michael. "Tomorrow at first cockcrow, send out the porters to the boma. Whether you hear shots or not. Understand?"

"Sikia, Bwana," said the boy, still eyeing the shaving kit.

"And do not wake me. Do not come to my tent. Tell the boy of the Memsahib Winston not to go to her tent. He is

not to bring tea, he is not to wake her for any reason. She wishes to sleep. Understand?"

"Sikia, Bwana," said the boy, expressionlessly. His eyes glinted.

"Now I want the camp quiet. Tell the boys to go to sleep. Quaheri."

"Quaheri, Bwana."

Michael washed and shaved; the lantern light threw his shadow on the tent wall and he thought the boys must be noticing it. They would tell about this shaving later. He put on a suit of silk pajamas—his only suit of silk—and wrapped himself in his bathrobe, put out the lantern and lay down.

THEY were at Constantia Bay on the Cape and the wind was ruffling the leaves of the silver trees on the slopes about them and the sea was half a hundred blues. She was uncertain, half won, half hesitant, crying confusedly at him, "How can I tell so soon? It's all so—strange." He had urged, "I need you so, Tommy! I need you as a man needs water in a thirsty land."

She had given him a quick, touching look. He had her then. Water for his need—his need that water could not quench. . . .

She must have looked back, often, to that day, thinking, "If it had not been so beautiful—! If he had not urged me so!" But never once had she admitted a regret. Not even on that night when he had told her they could have no children. He had tried to forget that night, but he had not forgotten it and now he looked

back to it quite steadily, seeing her face as it looked before she made it brave and cheerful for him.

If she had had children she might never have come to care for Bob. But children did not make up for everything. A woman wanted to be loved, to love someone she could believe in.

Bob was the right one for her. Bob would turn back to her, contritely, once he was shocked into awareness of what Claire was like. Michael could give that shock.

He thought about it grimly. He turned his torch on his wrist watch but it was not yet time. The darkness and the waiting and the tightness in his stomach made him think of waits in the trenches for the zero hour, only then his stomach had been tighter and his nerves had been crisped by dread. That young Michael had wanted, so terribly, to come through alive, unmaimed.

He had come through—a pretty decent youngster for all the bitterness and brutality of war. Not a drinking chap, then. His high spirits had been his own. Yet there must have been the seeds of his disintegration in him then, he thought; a steadier chap would never have played the fool because a girl was faithless to him. Perhaps a steadier chap would never have loved so wildly.

Well, that was all past—no use looking back on his life now. He had gone downhill recklessly and he would have gone further if it had not been for Tommy. He knew that; he felt a grateful affection for her and a deep compassion—very odd emotions for your wife, he thought, his lips curling sardonically, when you are going out to make love to another!

Tommy would never understand. She would think him an utter heel. That could not be helped. The first shock would not be pleasant for her, but Bob would help her to get over it. And she would help Bob to get over it. . . .

Almost midnight now. He got up, turned on his torch, dragged out his medicine kit. He tied some tablets into a knot of his handkerchief that he thrust deep in a pajama pocket. Those tablets would act swiftly. They would think it was his heart.

That was the ending he had decided upon.

It seemed almost foolproof. Claire might try to talk herself out of it; she might say he had come against her will or that he had staggered in, wanting help, but Bob would remember her convenient headache and all the other things, and the boys would talk about the supper and the laughter, and his boy would tell of his

"I wish you cops had told me the whole story when you phoned for a tow car!"

COLLIER'S

REAMER KELLER

## MORALE IS A LOT OF LITTLE THINGS

**M**AYBE IT'S THE HOT AND COLD TOWELS . . . Or the tingling stuff he puts on your face.

Or maybe just the improvement you see when you look at yourself in the mirror.

Anyhow, many a man has got his smile back in the barber's chair . . . the way an open fire lifts the spirits . . . or a new dress perks up a woman.

Funny, isn't it—how much little things count? Especially nowadays. Little everyday enjoyments . . . familiar things around you . . . simple pleasures . . .

They help to turn the dark clouds inside out—they boost the old *morale*.

☆ ☆ ☆

It happens that millions of Americans attach a special value to their right to enjoy a refreshing glass of beer

. . . in the company of good friends . . . with wholesome American food . . . as a beverage of moderation after a good day's work.

A small thing, surely—not of crucial importance to any of us. And yet—*morale* is a lot of little things like this. Little things that help to lift the spirits, keep up the courage.

And, after all, aren't they among the things we fight for?

*A cool, refreshing glass of beer—a moment of relaxation . . . in trying times like these they too help to keep morale up*

shaving and his preparations and his orders for the morning quiet.

He got out a whisky bottle, and two glasses and set them on a tray. That whisky bottle and two used glasses would be evidence. Pity he couldn't be there to see Bob's face!

He dropped his torch into a pocket of his dressing gown, took up the tray and made his way carefully out through the mess tent. The moon was under a cloud, silvering the edges of it; it was a beautiful sky but not a brilliant light for those two in the boma. He thought about them out there, in their circle of thorn. He saw Tommy's small dark head. Good little Tommy! "You all right, Michael?"

He looked out toward the plain. Tomorrow night he'd be out there beneath a spliced-together cross—Tommy would see to that—with rocks piled on him to keep hyenas from digging in.

He did not care, not particularly. He was sick of the whole show, and the thing to do was to go when the going would do some good. He wasn't losing many years. Tags of phrases floated through his mind. "This is a far, far better thing I do—" "Nothing in his life so became him as the leaving of it."

The world would not think so. Well, that couldn't be helped.

A man ought to have some last thoughts, but he had no coherent last thoughts and he felt too indifferent to evolve them. He felt like a waiter, carrying that tray. It was ridiculous to feel ridiculous, going to his death, for death was a solemn thing, a desperate finality, but he felt ridiculous and a little unreal and self-mocking, because he detected in himself, for all his wry bravado, a sorriestness that his death would be one more discredit to his name.

For a moment his face in the moonlight looked lost and lonely, the face of a younger Michael, asking how he found himself in such a plight, then he smiled bleakly, ironically, and moved on to Claire Winston's tent.

**TOMMY GARRICK** did not speak for some time after they started out from camp. She was afraid that if they began to talk, Bob would say something that would reveal his reluctance for that night in the boma, something that would make her offer to go back. So she trudged on in silence.

This was the hour, in Africa, that, next to dawn, she loved the most, when the sun was sinking and the shadows lengthening, and the air freshened each instant as the heat lessened, so that vigor sprang up in you and it was a pleasure to move, to feel the cool air on your skin, to look about in a light that was beautiful and not blinding to your eyes.

Bob was setting a swift pace against the coming of the dark, and she followed as swiftly, the three porters at her heels, loads on their heads, guns in their arms. They were talking back and forth to one another of their ill luck for having been chosen for this walk, and their voices had the wailing repetition of a folk song. "Kazi wa Wasungu," they intoned mournfully. "The work of the foreigners." The white men who could not carry for themselves. The white men who were forever saying, "Go here," and "Bring this," and "Come with me."

It was dusk before they reached the boma, and a lion was already grunting in the distance. Bob said, eagerly, "You know, if we got one first off—" and Tommy knew that he was thinking of a possible early return. But he was interested now and cheerful, careful of her comfort, making a blanket he had brought into a cushion for her back in the chair. Ironical to reflect how much this would have meant to them once, in

the old days, these twelve hours alone. Twelve hours in which they could talk to their hearts' content, with no fear of listening boys, could look their fill, could touch each other—it would have been a little bit of heaven once.

This was the first time she had been really alone with him since he came back from England. There had been that time when she had been packing on the veranda, but the boy was about then, and there had been a stroll, the evening at Fort Portal, but Michael and Mrs. Winston were strolling near, and there had been hours together in the car, but then Bob had had his mind on the driving and on the car ahead, and all she could do was to be as unobtrusive as possible and make him feel more at ease with her. And there had been that moment in the mess tent when she had flared out at him: "I am glad you are so dependable."

**NOW** she had long, uninterrupted hours. Suppose she stopped playing up, suppose she spoke out openly—not bitterly—and told him, "I know how it is—let's be frank. You can't help it,

rid, rending noise they made, tearing at the buck in the darkness.

She whispered, "Could we shoot?"

"No. Scare the lions. . . . They won't take too much. I'll shoot if more come."

"How about the torch?"

"That's right. Put the light on them. That may scare them off."

She drew in the barrel of her rifle and thrust the electric torch out the hole and clicked it on. Its ray fell on an uplifted hyena head, the eyes gleaming with reflected light. Bob made a clapping sound with his cupped hands and the head vanished. But in a few minutes the rending recommenced at the far side of the buck.

"They'll sneak off if a lion comes," Bob told her.

"I hate hyenas."

"Who doesn't?"

"Only other hyenas, I expect."

But even hyenas were exciting in the darkness of the plains. She breathed, "This is fun, isn't it?"

He made an affirmative sound. After a moment he said, "You love Africa, don't you?" and his voice was reflective.

and I can't either. But never think that I don't care."

Why should she let him go off, salving his conscience about her with talk of Michael's sobriety and "things being all right?" Could he actually believe she wasn't cruelly hurt? Had he forgotten everything? He knew that she had counted on him with all her heart and he had failed her!

She thought, aching, "Oh, my darling, my darling!" It was bliss and it was agony to be here alone with him. Their chairs were so close together that their shoulders almost touched when they leaned forward, and the blood beat in her throat and her head felt dizzy. Bob was strong, well knit; he had not Michael's tall, sinewy grace, but he had vigor and solidness and she longed, almost unbearably, to be close against him, to feel the strength of his arms about her. And now that it seemed to her utterly unlikely that she would ever be in his arms again, she looked back at those years of comradeship and wished she had done differently.

No, she couldn't have done differently. But she could wish she had.

Bob nudged her. "There's a hyena out there."

She leaned closer, peering through the opening in the leaves for the skulking shadow. He breathed, "Two of them." She could hear them, then, hear the hor-

She said passionately, "I love it!" It was almost like saying "I love you!" She added, "After the life here—well, there isn't any other."

To that he said nothing.

The moon was a long time coming out. Its rising time was an hour later than the night before, and then there were clouds, obscuring it; when it did emerge the light was pale and misted, but they could distinguish the dead buck quite clearly, and the bushes in the distance were shadows in a silvery pallor. They talked a little, softly, about the way that shadows seemed to change places at night, when watched, so that they seemed like stealthy beasts coming closer. "I could swear that one over there has sneaked up on us," Bob whispered.

"You get some shut-eye and I'll watch," Tommy told him.

"Not sleepy enough yet. Wait till we get your lion."

**HE SOUNDED** friendly and relaxed. She was glad she had not broken down, made him feel miserable and contrite. This was intimate and jolly. In the morning they would have a cheery breakfast (she'd brought bacon and eggs as well as tea) and she'd talk of the future, and of the pyrethrum crop and how he could put in that factory for coffee that he hadn't been able to afford before, and that would appeal to all the

planter in him. The trouble was, he really had not got back yet to his farm; all he'd been doing on it, since he'd come back, was to prepare for this safari. He hadn't thought ahead.

Out of the silence his low voice came, rather suddenly: "How ill—really—was Michael?"

Her heart sank. He was brooding over Michael and Claire, back in camp together, suspecting Michael's "touch of fever." But that fever was real enough, she thought, and she said so. She said, "He was lying down—he felt really seedy. I was surprised he went after buck. But he's always restless with a bit of fever. And I think he wanted to do something rather nice for us. You know how that old buck would have been."

"Just so he doesn't get to drinking."

She said a little stiffly, "He certainly hasn't let you down so far."

"No. But I think he'd had a few nips today."

"Well, I don't. The bottle that was out hadn't been touched since last night." She asked, "Why, what makes you . . . ?" but Bob made no answer.

She said, "He wants to keep fit, you know."

Bob was still silent. Then he murmured, "You know it isn't surprising that she had a headache. The wonder is, that she's stood up to things so well."

"Yes, isn't it?" said Tommy.

"The way she took on that lion!" His voice rose, unguardedly. He lowered it quickly as he owned, "I had all I could do to hold my shot."

"Me, too."

"I had a bead on him. If she hadn't fired the instant she did I wouldn't have dared wait longer. He was in the air."

"I'll never forget it. . . . I felt it couldn't be happening."

"I felt the same thing. I was stiff with fright. . . . She's got more nerve than any of us. She said she wasn't conscious of fright at all. Too intent on getting him."

"She was certainly sporting. . . . But she was frightened about that buffalo, though," said Tommy stubbornly, remembering Claire's white face.

**BOB** gave a little grunt. He said, "That gun of hers has no stopping power." He didn't like remembering the buffalo; it brought too vivid a picture of Michael playing the hero. He said, "We'd better keep still," though it was he who had started the talking.

They sat still, applying themselves to the business of watching and waiting. It was very queer, when you came to think about it, Tommy reflected, that they could be out here like this, queer that the convention of shooting a lion could create this situation. There they were, two isolated human beings in a ring of thornbush on the African plain, with not a soul to look down on them but that faint, faraway moon, and it was all permissible because they were occupied in trying to kill something. . . . It was fantastic and unreal. . . .

Bob would want to hurry back early in the morning. But he'd be hungry and he'd like the eggs and bacon. And if they did get a lion she'd take pictures. She'd brought her camera. She thought of everything that she could do to prolong their time together. Her mind spun little webs of plans.

"What's that?"

It was more an exclamation than a question. She stared out her peephole but she saw no change.

He said, "Hear that?" and she listened intently. A high-pitched quavering sound came to her on the wind, was lost, then came again.

She breathed, "What is it—?"

"Sounds like—" He was listening

again. "It sounds like natives," he said, "out there—across the plain."

"But there's no—"

There was no village, she was going to say, where an *n'goma* might be held. And this couldn't be an *n'goma*; there were no drums. It was a sort of chanting.

"There's a light. Look—d'you see?"

She stared. She saw a distant gleam, that vanished behind trees and then reappeared again.

"It's a safari of some sort," he said. "I wonder—"

There were posts and settlements beyond the plains, but they were on a distant motor road. This little wilderness was fairly untraveled by the whites, Michael had said. A native chief might be traveling, but that would be strange at night, and why travel in this direction?

THEY could see the safari now, a row of dark jogging shapes, and something that their eyes made out to be a litter or a carrying chair. Or it could be tusks slung on a pole. The chanting had grown clearly audible, and its rhythm and recurrent stress identified it as a song that carriers would sing.

"That's a safari, all right," Bob pronounced. "They're carrying someone." He watched a moment as the procession came closer, then said, "We'd better see what's up."

"But why—?"

Tommy felt dismay. She said, "It's probably some chief going through."

"More likely some white. Might be hurt, you know, or ill—some hunting party farther in. We can't sit here and not give him a hand."

"I don't see what we—"

But Bob had stood up; he cupped his hands and shouted lustily through the stockade of thorn, "Hello! *Jamba!* Who's there?"

The singing stopped; after a moment of silence a babble of sound broke out and then a voice, a white man's dominating voice, shouted back, "Allo! Allo!"

"Hello! Hold on—we're coming! . . ."

That's a white man all right," Bob flung out at Tommy. "I wonder what the devil's the matter with him?" He crouched at the entrance, struggling with the brush that filled it, and Tommy turned her torch on his hands and cautioned, "Look out! You'll hurt yourself."

He thrust the brush aside and crawled out and Tommy handed out his gun and then her own and crept out herself. "Look out!" she entreated, for a lion might be anywhere in the dark near that bait. She turned on her torch again, to pick out a path for them, and they started across the plain toward the huddle of dark figures.

A native, carrying a lantern, came forward to meet them, and with him a white man, a stocky figure in khaki shorts and jacket with a muffler—which for a moment Tommy took to be a bandage—tied over his head. Then the man began untying it as they approached. He bowed, quite formally, his eyes flicking from one figure to another.

"Madame—monsieur!"

"We're hunting lion," said Bob, with a little laugh for the humorous unexpectedness of such a meeting. "And we saw your safari—"

"We thought someone might be ill," Tommy explained.

"*Quel rencontre!*" The man, a Belgian, made a gesture that included the plains, the night, the natives gathered about them. "You make the chase at night, yes?"

"Yes. In a boma. . . . We've a camp a couple of miles away."

"And you are English—yes?"

"Yes. From Uganda."

"Uganda! *Les Anglais!*" The Belgian

seemed excited about that, and Tommy thought his manner odd. Then he asked, "And you have not heard?"

"Heard? Heard what?"

"The war, monsieur—madame. The war. We are at war."

"War?" said Bob blankly.

"Belgium?" said Tommy. And then, "With Germany?"

The Belgian drew himself up, as befitted the bearer of extraordinary tidings. He said slowly, hesitating a little for the English words, "Today, England and France have declared war on Germany."

"England—? England and France?"

"*Exactement!* Because of Poland. You have heard of *la crise* with Poland?"

"Why, yes—there was talk—" Bob's voice was stupid with astonishment.

"Now the Nazis have made war on Poland and England has promised Poland—"

"War!" said Tommy, incredulously. They had talked of war for long, of the possibilities of its happening, of the chances of escaping it, and yet, for all the talk, it did not seem possible that it was real, that England was involved—

"War," said Bob. His voice was sharp, now, grim with something almost satisfaction, something that said, "If it had to come, let's get it over with." He asked, "You are sure, monsieur?"

"*Bien sûr.* It has come *par*—how do you say—*par* radio? There is a very good reception at Nguassi where I have been. It has come this afternoon and *immédiatement* I think to leave, to return to Mburra where I live—I am trader, you understand—but the petrol has not come, so the road is impossible and I think to take this way across the plain. It is more short, *n'est-ce pas*, than to wait for the petrol? I have *mes affaires* to arrange. Who knows what will come now to Belgium? So I make the safari all this day and all tonight—*je suis fort*, you understand."

Even in her excitement Tommy had a flicker of wry thought that it was the natives who were being *forts*.

"You have not heard?" he demanded.

"Not a word. We've been absolutely out of touch. What's the situation?"

Bob asked a dozen questions, asking them too quickly, and repeated them more slowly, and the Belgian told them all he knew, which was little more than the bare fact that the declaration had been made. But there was no doubt about that. War had come. The struggle, so long foreseen, had begun.

IT WAS momentous. They stood out there, in the African night, at once oppressed and stirred. It was the beginning of something titanic. All Europe would be involved. The Mediterranean—Gibraltar, Suez. Africa . . . Australia, New Zealand, Canada. . . . And India—?

"We've got to get back," said Bob. "Our camp is two miles back," he told the Belgian. "You must stop there with us, Monsieur—"

"*Ramande.* Antoine *Ramande.* At your service."

"My name's McNare. And this is Madame Garrick."

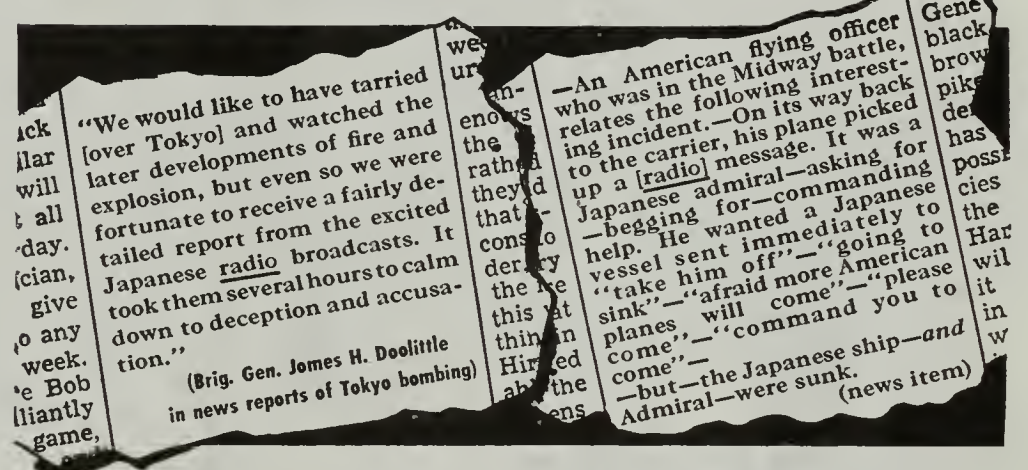

"*Enchanté.*" The Belgian made a polite bow. In the darkness Tommy could not see his expression when he learned she was not Madame McNare but she knew that he was thinking, "Ah—*les Anglais!*" She said quickly, "My husband is back at camp. And another friend. There are four of us."

"We'll go right back," said Bob. He thought a moment. "We've got three chairs and about three loads of other stuff—no, two loads, really—over there in the boma. Have you any men to spare to bring that in? It would save time."

(To be continued next week)

For Instance . . .

Interesting! Watch for radio use in the war news—you'll find it in the air—on the ground—and at home.

WITHOUT radio, the movement of war would still be anchored by telephone lines—the physical hazards of the courier and visual signals.

Now war moves swiftly over the whole face of the earth—instantaneous radio communication thru the ether instead of over copper wires has blasted the barriers of space and time.

Zenith's leadership in the radio industry has been established by a constant achievement of "firsts." Repeatedly, ideas "brand new" when Zenith "first" introduced them, later became essentials on all radios. And that same "forward thinking" of engineers and factory and organization now concentrates on war production of the thing we know—radio—exclusively radio. We are progressing—we learn every day—and this new experience will inevitably reflect itself when Zenith again produces for peace.

For over seven years Zenith Radio Corporation has advertised on short wave sets—"Europe, South America or the Orient—every day or your money back." It has never been called upon for a refund.

So today all our radio production centers on war use.

But what of tomorrow—what effect will this have upon the future—after victory?

One thing is certain—it will revolutionize and speed the great new future form of transportation.

Radio has never been universally necessary in transportation before. In automobiles—on trains—it has been entertainment—in boats it has been a great aid but not an essential.

But today for the future, in that great, new universal transportation that is forming itself—the airplane—radio is essential as the engine itself.

And—mark this well—airplanes and radio are two of the four great industries destined to lead this country back to business normalcy after the peace is won.

—a Zenith Radio Dealer near you is giving reliable service on all radios—regardless of make.

ZENITH RADIO CORPORATION—CHICAGO

## When the Music Stopped

Continued from page 14

creature in town. Martha tried hard not to mind, tried hard not to fidget under this candid blaze of Latin curiosity. . . .

"Señorita—"

Heels clicked smartly together. She looked up at a young lieutenant to whom Concepción, blushing, had bowed in the plaza yesterday. "Buenos días, Señor Lieutenant," she murmured correctly.

"Luis Carbajal at your feet, señorita," he introduced himself in the old-fashioned chivalrous phrase, and asked permission to sit down. She gave it, grateful for the shelter any company would provide against that shining barrage of glances.

HOW charming he was; and what a stunning pair he and Concepción would make! This was what Martha was thinking when the boy's voice, lowered, stammering a little, came to her ears again. "The music last night—did it wake you, señorita, did it disturb—"

"But it was lovely—lovely," cried Martha, and her modest blue eyes smiled warmly at him.

The young face flushed darkly. The young eyes gazed, not returning her smile—and gazed—and gazed. . . .

"Oh," said Martha after a long moment, faintly.

"Did you understand the song . . . your hair like golden light, your eyes the color of heaven itself, your hands pale as the snows that fall in northern lands? I made the words myself yesterday."

No sound came from Martha's open mouth. The boy's glance flashed around him. "Ah, but they stare, they stare," he muttered. "And soon they will all gather round. Señorita," he looked at her with a kind of glowing despair, "I have the happiness to be on leave from my post at the garrison beginning tomorrow. Give me, I beg you, the happiness to be of service to you. Perhaps you wish to ride. Or to drive. Perhaps you wish to see sights—" His voice trailed off; animation fled from his face; he was on his feet, a soldier rigidly at attention before a short, wide, impressive figure packed neatly into a splendid uniform.

There was an instant's silence. Then, "Señor General," said the boy, performing a military duty, "the Señorita Martha Goode!"

The general's bow would have done credit to any six feet of streamlined bone and muscle. "Señorita Goode . . . Goode—is that not a word in English meaning—ah yes!" His eyes gleamed, his teeth flashed. "Goode! Is it not enough that the señorita is beautiful—must she be *buena* as well?"

And he bowed again, gorgeously. The young lieutenant, the image of a junior Hamlet, clicked his heels together dismally and retired to a distance, a mere watcher again.

The three solid-looking citizens opposite rose as one man; advanced; were reluctantly introduced by their friend, the general; bowed; turned phrases with vivacity and grace.

LIKE most other girls, Martha had had some extravagant dreams. There was the one, for instance, in which she was the center of attraction, the cynosure of all eyes. Men vied for her smile and women envied her. Flowers filled her room; exciting engagements sped her days; and every party, every dance was a triumph for her. The prettiest, the wittiest, the best-beloved. . . .

This was the dream that, slightly dazed

and quite incredulous, Martha found herself *living*. Wonderfully busy from morning to night; surrounded, courted, a whole town at her feet! It was fantastic; it took her breath away, and kept her eyes wide and her lips parted, and the color coming and going in her cheeks. And inevitably as the days went by, it left its mark: she bloomed, she glowed. She stood a little taller and stepped a little lighter, and blushed much less—in a word, she began to take to it all like a duck to water. What a vacation! What an adventure! What a tale to tell her friends back home! Alone in her room, she would gaze into the mirror, giggle, pinch herself—and turn away singing. Singing, smiling, sparkling—modestly, to be sure, for she was still Martha. Gentle of heart and mild in temper—enjoying a miracle, and perfectly aware that it couldn't last.

She was still Martha when Manuel

said, softly, "I should like you to see it."

She murmured, "I should love to."

His eyes shone. "Martha—my aunt from Tepic would be most happy to chaperon a visit; I have already written to her. Will you come—next week when my aunt will have arrived?"

Next week she would be on the train going homeward—to New York, to the kindergarten, to the modest apartment. That was where Martha E. Goode belonged: on earth, not in heaven, and she knew it. But his face was so close to hers, and her head was swimming a little, and she heard herself say, "Yes, I'll come."

"And will you stay, will you stay forever, Martha? Will you marry me?"

It had broken out of him; and he saw at once that he had spoken too soon. "No, no, don't answer me now. I want you to take your own time, to know me, to see my way of life that will be your

Cordoba y Valles came to town and took one look at her and stayed.

"But this," he had murmured when his friend, the mayor, whose guest he was, presented him, "this is extraordinary. I ride in for a day's business, for some conversation with my friends—and I find *you* . . ."

It was far more extraordinary than he knew: not in her tallest dreams had Martha ever seen herself sought after by such a man. The richest in the region, its leading *hacendado*; his sugar plantations, twenty kilometers away, were famed for their output—whole villages thrived and flourished on it. He himself was striking: tall, bronzed, with a touch of gray at the temples of his fine-boned face, and the calm look of a man who knew what he wanted, and knew how to get it—what *could* such a man see in Martha Goode? But they rode together in the brilliant sunshine, and laughed over cocktails in little outdoor cafés and danced in the moonlight.

Their eyes often met, their hands sometimes touched . . . and now there were strange moments when Martha could have sworn that her hair was as golden as she had ever wished it to be.

Then, one night—when he had been telling her about his home—the century-old stone and adobe house, the patios where bougainvillea bloomed the deepest crimson and mango trees yielded the sweetest fruit in the region—he

way of life, day by day and week by week. Don't answer me now, *niña mía* . . . beautiful!"

And he took her hands very gently and looked at her in the moonlight. It was a three-quarter moon. The stars were so thick they seemed to jostle, strike brilliance from one another. A soft breeze bore her offerings, all the perfume of the night, the echo of music. She had never seen or felt a lovelier moment—alas, too lovely, too perfect to be real—

But it had to be real, it had to be!

FOR a moment she was struck dumb by the passion of longing that surged up in her. Then she was stammering, "Manuel, listen, there's something I must tell you: It's a mistake, I'm not beautiful. In my own country—if you knew . . . No, don't smile, you've got to understand!" Her hands trembled in his, her heart beat wildly. "Manuel, listen—please listen—it's just that I'm new, different—the visiting girl—the stranger—"

But he kept on smiling, tenderly, adoringly. And he kissed her hands, and then her hair, and then her lips.

"There is nothing," he whispered, "so becoming to beauty as modesty." . . .

She awoke early, rose, and showered, and dressed.

And turned for a last look in the mirror.

Often in these weeks had she seen herself there, cheeks flushed, mouth open, eyes popping with wonder. But the girl who gazed back at her this perfect morning wasn't wondering, nor was she trying to pinch herself back to earth. No. Heaven was the *status quo*. Dreamily she raised her arms to admire their whiteness; and tilted her head so that the light shone on her remarkable hair; and observed that the little dusting of freckles on her nose had a rather piquant effect. Odd that nobody had noticed this. . . .

She did laugh at herself here, but softly.

And, humming the tune to which she had had her first dance with Manuel went out to the dining room. The usual stir and murmur greeted her appearance—and went to her heart today with unusual sweetness. Proudly she walked radiantly she nodded to the right and to the left of her, kind was the smile she gave Luis Carbajal at his corner table—and approaching her own, stopped short, transfixed.

A man was ensconced there.

SHE had never seen him before. But as she stared at him openmouthed, skyscrapers loomed before her eyes, the traffic of New York roared in her ears and radios blared out war news.

"Well," added a thoroughly American voice, "hello!"

"Señorita," it was the *patron* flying to her, "observe—a compatriot of yours!" His flourish suggested that he had produced the man out of a hat for her sake. "Señor James Donovan; he arrived on the train; he says he has not had the honor of your acquaintance in the United States. Señor," and now trumpets might have accompanied his tone and air, "the Señorita Martha Goode!"

Long and loose-limbed, Mr. Donovan bowed; and studied her; and smiled. "Won't you sit down, señorita?" he said in a Spanish rather better than her own. She sat down.

Five minutes passed while the *patron* suggested, advised and planned her breakfast. By the time she was free to greet her fellow countryman she had recovered at least part of her breath.

"How odd," she said, "how very odd to see an American here!"

Mr. Donovan laughed. "I, on the other hand, was prepared for you. In lyric measures—by the porter, the *patron*, the chambermaid, the waiter—by a rare little creature who was at the desk when I arrived." He glanced toward the cubby hole where Concepción sometimes sat to help her brother with the affairs of the hotel. "She's gone now. But yes in deed, I was—er—prepared for you." And again he studied her, and again he smiled.

She dug her spoon into luscious papaya. "Tell me, Mr. Donovan," her voice was steadier now, "if you don't mind my asking—how did you happen to get here? Huitzapil is so very much out of the way."

"Plane to Orizaba, bus to Tepic, and two wrong trains. I was on my way to Jalapa. Listen," he leaned toward her, "who's the girl that was at the desk? Small, dark, enormous eyes, skin the color of ripe apricot—"

"Concepción," said Martha, "the *patron's* sister; and I would advise you to forget about it. They're very strict about their womenfolks here."

It was her tone she regretted; it was her tone, prim and hostile, that made the man stare—with a twinkle fairly danc-

# Watch it, sister... it bites!

**T**HAT BIG-TOOTHED milling cutter you are operating can chew your hands a lot faster than it eats steel.

Give it an instant's chance and it will put you off the war production line for keeps.

Workers get hurt when they get careless—or when their eyes let them down. Defective vision causes far too many accidents and far too much lost time.

70 percent of all the people over twenty-one have defects of vision. At least 98 percent of these have defects that can be corrected by modern ophthalmic science. Yet the majority of them either do not

realize that their eyesight is bad or just let it slide.

Those are the folks who misjudge distances... whose eyes tire rapidly, flicker and mist... whose nerves can't take an eight-hour day... who ruin material, slow up the pace, are sent to the hospital.

Where do you stand? If you haven't had your eyes examined lately you don't know.

For your own sake and for the sake of your country's survival in a world at war, find out!

Go to one of the reputable, competent eyesight specialists in your community. It

is folly to take chances. Assure yourself of the most exacting professional services and technical skills to safeguard the one pair of eyes to see you through a lifetime.

Sharpen your vision for safety and for victory.

**VISION FOR VICTORY**

BETTER VISION INSTITUTE, INC., 630 FIFTH AVENUE, NEW YORK

in his eyes. "Miss Goode! And what is it you're after thinking of, my dear? I merely want to paint the girl."

The color rose to her face, full tide. "Oh," she stammered, "paint—you're a painter—"

"That's right," said Mr. Donovan with charm. "And do you know, it would be very nice of you if you were to suggest to the *patron*—who evidently dotes on you—that when I've a brush in my hand, butter won't melt in my mouth. In a word, I'm safe. I know I don't look it, being so handsome and all, but really I'm safe as Sunday school."

He was not handsome, though there were those who might consider him undeniably attractive. Martha herself, a lifetime ago, would have paid the set of those shoulders and that easy grin the tribute of a flutter or two. But now, as she looked at him, it only struck her that she had never seen a man she liked less. She picked up her coffee—felt a leap of satisfaction at the baffled look on his face as he tasted his. But he chattered on, undaunted.

A little nerve began to twitch in the back of her head. Visions began to drift in and out of her mind. Home . . . the kindergarten . . . the lonely apartment . . . She thought of last night . . . but last night hadn't happened; it couldn't have happened—not to her—not to her. . . .

THEN she saw Manuel enter from the *portales*. Her heart turned over, stood still. He reached the table; and for a moment, before he bowed to Mr. Donovan, his eyes spoke to her. He was still, to all appearances, just a friend, an admirer—the handsomest, the most distinguished of them all. But she had only to meet his eyes; to remember that in a week his aunt would arrive, and they would be gone. To those fabulous acres, the gracious house and the flowering patios that, at a word, would be hers. . . .

She could take Mr. Donovan for a week!

Take him she had to.

Manuel and he had hit it off at once. The general, the mayor—everybody liked him. Before the first day was over he had got permission from the *patron* to paint his young sister—provided that the fair señorita sat by, as chaperon. And lo, there he was, during the hour she had used to spend alone in the patio resting and dreaming under the pomegranate trees. There he was, easel, Concepción, grin and twinkle and all—

"You're a great help, Miss Goode. A lucky break for me all around to have found you here. If ever you should get to New York—"

"I come from New York."

"Oh, do you? You have an—un-metropolitan freshness."

To this pretty way of saying she looked small-town, she had retorted: "You have the gallantry of a Latin."

"Of a Donovan, Miss Goode. Neat but not gaudy." And he had grinned blandly. And, simmering, she had rippled out a laugh. And he had said, musing, a moment later, "Do you know, I've a feeling you don't like me." And she had replied, "But I do. Why, I practically adore you."

Lightly, brightly—with a glint of steel! Feminine steel—that seemed somehow a counterpart of the new and very feminine allure that had begun to gleam in her eyes and flash in her smiles. . . .

And kindle afresh the susceptible hearts she had already conquered! Yes, to Huitzapil she was more enchanting than ever; and yes, to Manuel she seemed lovelier every day. *How I wish we could be alone; there's so much I want to say to you.* But he could afford to wait—

only a little while longer. He could afford—for only a little while longer—to share her charm, her brimming spirits.

The hours passed swiftly, and she had a wonderful time. Serenades kept Donovan awake far into the night. They kept her awake too—but well, at the hacienda she would sleep, she would rest. Only four days more . . . three . . . two . . .

And, at long last, only one.

Only one day more! It came over her, full force, during that siesta hour in the patio, as she lay watching Concepción and listening to Mr. Donovan. She had skipped him at breakfast: a sudden whim had swept her past him—to the table of the stammering and overjoyed young Luis. She had spent the morning in her room, writing letters, going over her wardrobe, fussing at some length with the dress she meant to wear tonight at the weekly dance in the plaza. Her spirits were high—a little choppy with an underlying swell of excitement. She was think-

Señorita Goode would lie in it watching, and swinging and dreaming. I might even," he brought his brush down in careful strokes, "draw the señorita herself, and then you would do the watching . . . but what do you suppose she is dreaming of, Concepción?"

What would a fair girl dream of, swinging idly in a *hamacha* under the pomegranate trees? "Of her beauty," the answer came promptly in a clear little voice, "and of love. Of the whiteness of her skin, and the heaven of her eyes, and the golden light of her hair; and of how these things fire the blood in men."

Mr. Donovan burst out laughing.

It wasn't the first time he'd laughed like that—or looked at Martha as if he expected her to laugh with him! But that little nerve was throbbing in the back of her head, and the whiteness of her skin had scorched a bright red, and it had been a long, long week, and suddenly she couldn't bear another minute of it. She

wine at dinner at Don Felipe's house perhaps, since she didn't eat much, i went a little to her head. There was the man she loved sitting beside her, and the man she hated, across the table . . . easy smiling, watching her, and making no bones about it! The mayor's nephew proposed a toast to her; dark eyes shone upon her; Manuel grew handsomer every minute. So it actually seemed. And the handsomer he grew, the more she sparkled, the brighter she smiled. . . .

And ah, how enchanting it was out doors, in the plaza! The moon was full huge and yellow, it hung low over the scene, a fantastic lantern. Jasmine bougainvillea, orange trees in blossom yielded all their scent to the night. And over it all, above the soft hum of voices the gay and indolent laughter, throbbed that music, more potent than any wine. The promise of love, the very pulse of romance. It got in her blood; it got in her head—that fair head gleaming so conspicuously among all those dark ones.

She danced her feet off. With Manuel who held her close, whispering against her cheek; with, one after the other in a breathless whirl, the flower and glory of Huitzapil manhood. Surrounded courted; the prettiest, the wittiest, the best-beloved . . . almost, almost it was like a dream again. The hours passed in a kind of effervescent haze. Once Donovan claimed her, and she didn't refuse—she was ready, more than ready for him.

But he spoke once, only once.

"Are you very tired, Miss Goode?" he asked softly.

IT WAS so unexpected, she nearly tripped over his feet. Then recovering herself, she laughed in his face. It was a ringing laugh, and she could have sworn he changed color. No, not to night; he couldn't annoy her tonight—or ever again! She wanted to tell him why, but she didn't quite know herself her head felt so light. That moon, that music . . . a little later she saw him watching her as she whirled by with the mayor's nephew. She saw him dancing with Concepción . . . chatting with Manuel. They both waved to her, and he cheeks burned: she felt so charged with love and hatred, she hardly knew which was which.

Then again she was in Manuel's arms for the last dance, as radiant as if the evening were just beginning instead of ending. In perfect step they swayed to the rhythm of her favorite rumba. Slowly they circled away from the crowd . . . past the bandstand kiosk . . . past Donovan, chatting now with the young lieutenant who had never ceased following her with his eyes. In a path of moonlight, they drifted to the shadows; and there they paused, moved apart, and looked at each other.

His face shimmered before her eyes she felt curiously dizzy.

He said, "I'm glad it's over. I war you to myself. Tomorrow . . . my arrival on the morning train."

She said, "Yes—" and saw them young Luis striding ahead, Mr. Donovan at his elbow, as if he were trying to hold him back. Manuel saw them too frowned, clasped her and started to dance her back toward the lights—

But the boy stood in their way planted. Pale, determined, his hot eyes clinging to her face. "Señorita, I beg—must speak with you—"

Manuel said coldly, "Señor Lieutenant you forget yourself." Mr. Donovan spoke at the same time: "Come, my boy, tomorrow—"

"But you just told me she will be gone tomorrow!" Luis' young voice rang with despair. He took a step nearer to her.

ing of Manuel. Of the hacienda. Of the future. . . .

Suddenly that future was close, close as it had never been before.

Perhaps it was because Mr. Donovan, remarking on the sunshine, had just said, ". . . and would you believe it, probably at this moment there's rain at home, and sleet and what not. But still it won't be bad to be back. At a time like this, a couple of weeks of lying in the sun are enough . . . to get a chap thoroughly fit for a uniform. Yes—yes, there's work to be done. . . ."

It was not the first time he'd brought that up, raised an echo of the sound and the fury of a world she was leaving behind her forever.

Tomorrow! A stillness came over her. "Work to be done," he was repeating absently, then in Spanish, to Concepción: "Are you tired, *chiquita*?"

"No, señor."

"Excellent child . . . one day—when it's as peaceful everywhere as it is here—I'll come back and carry you off to my country. How would you like that, *linda*?"

"What," Concepción murmured impassively, "would I do in your country, señor?"

"You'd stop traffic, for one thing." He stepped back a pace and squinted at his canvas. "And you'd sit for me—and sit—and sit—and I'd string up a *hamacha* between two hooks in my studio, and the

swung herself out of the *hamacha*; faced him, the heaven of her eyes flashing fire, if not brimstone. And before she knew it, she had spoken to the man from the bottom of her heart:

"Go—to—hell, Mr. Donovan," said Martha Ellen Goode.

SHE was dressing for dinner, and for the dance in the plaza that would follow; and she paused and stared at herself in the mirror. Anger, recklessness, violent impulse—for the first time she had a sense of how much she had changed, and how extraordinary it was. She caught her breath, bewildered, felt a stab of misgiving—then it was gone in a wave of exhilaration. Yes, she had changed, inside and out!

With a gay laugh, she picked up her rouge—put it down again; obviously she she didn't need it tonight. Mascara, yes. Eye-shadow, yes. (She had purchased both only yesterday at the little shop across the square.) Now, lipstick. A touch of perfume. The corsage of orchids. A little strutting and posing, side view, back view, front view again—and she was ready for her *au revoir* to Huitzapil; ready for that, and for anything else. It was very odd: she was never to remember altogether clearly what happened that night.

There was that excitement, of course, chopping away in her, for all the world as if a storm were brewing. And she had

## Lots of Uncle Sam's Chillun Got Wings

Fighting pilots are made—not born.

And to make enough pilots to fight a global war . . . enough navigators . . . enough bombardiers . . . requires training planes, training planes and *more* training planes.

Since Hitler gave the order to march on Poland, more primary training planes have come from Boeing's Midwestern plant than from any other single American plant.

That's why Boeing men and women get an extra-special thrill when they read of American

bombers and fighters hitting the enemy where it hurts. . . . They know the odds are that the men in those planes got their "primary" in a Boeing trainer.

Boeing training planes include the Army's PT-17, the Navy's N2S-2 and N2S-3, and the new bomber-crewtrainer AT-15 in which pilots, bombardiers, navigators, gunners and other crew members are given integrated training. And at training fields in Great Britain and China . . . in Canada, Mexico and Cuba

. . . in six South American republics . . . Boeing planes are helping young men to sprout their wings of war.

*The engineering and manufacturing skill expressed in Boeing primary trainers, crewtrainers, Flying Fortresses,\* Stratoliners\* and Pan American Clippers will some day be directed to peacetime pursuits. Then Boeing wartime research . . . in radio and refrigeration, heating and hydraulics, soundproofing and a score of other engineering fields . . . will make the fruits of victory ripen sooner and sweeter.*

## ON THE JOB FOR UNCLE SAM

This husky fellow was designed to furnish the motive power for one of the Union Pacific fleet of Limited trains providing comfortable passenger transportation between Chicago and the West Coast. Today, he and many like him are performing an important war-time task. Uncle Sam has called on the railroads,

not only to move vast quantities of war materials, but also to transport thousands of men in service. Thus, we are not always able to provide preferred accommodations for civilians who find it necessary to travel. To these patrons, Union Pacific wishes to express its appreciation for their patience and cooperation.

*The Progressive*

### UNION PACIFIC RAILROAD

ROAD OF THE STREAMLINERS AND THE CHALLENGERS

oblivious of the others. "Señorita, I beg—this morning at breakfast you were so kind—I thought, I hoped . . . and tonight when we danced you said you would ride with me one day. How can it be then—is it true—will you be gone—?"

It was at this moment that the music stopped; and afterward she thought it was that that had done it: the crash of the final chord, the sudden stillness washing over the night, over her. The first thing she knew was how *tired* she was, from head to toe and through and through—she had never been so tired in her life! The next thing she knew was that she had to get away, and instantly, from the tormented face of that poor foolish boy, from Donovan's gaze . . . But Manuel held her arm. His voice stern with displeasure, he was saying something to Luis about the señorita being under his protection from now on—a guest of himself and his aunt at his hacienda—

"No, I can't!" That was the third thing she knew, in every quivering nerve. "Manuel, forgive me, I can't. I can't keep it up, it's too hard—don't you see, I'm not, I'm *not* beautiful! If you saw me in my own country you'd never look at me twice. Nobody ever has. Why should they? There are thousands of me—ask him. My compatriot, he'll tell you, and he's right; he's been laughing himself sick from the moment he arrived, and he's right, it's funny, it's a scream. Me, a glamor girl, me a beauty, me a—fake, a fraud, that's what I am! Oh, Manuel, forgive me, I tried to tell you but you wouldn't listen—no, let me go! I can't any more! I can't keep it up!"

SHE wrenched her arm out of his grasp. As she turned and ran, she saw Donovan catch Manuel by the sleeve. "Let her," she heard him say. "It's nothing, he danced too much, she'll be all right tomorrow."

But it was already "tomorrow."

There was no time to rest, no time to think. There was scarcely time, moving swiftly through the daze that enwrapped her, to do all she had to do. But she was nearly ready when dawn broke; and quite ready when at last she heard the

crazy whistle of the crazy little train. She stepped out into the patio. The cool luster of the morning stung her eyes. But the hotel still slept; there was no sign of life except for the Indian boy who was sluicing water over the blue and green tile.

"Sssh," she whispered to him, beckoning. "Come . . ."

"Sssh," she whispered again, as his mouth opened at the sight of her packed bags. "Quietly, Rosario. To the station. To the train. I'll carry the smaller ones."

It was a ten-minute walk, the back way. The station was deserted. She bought a first-class compartment, locked the door, drew the window blind, and waited—endlessly. But at last it came: the accelerated bustle . . . the lunatic scream of the whistle, piercing her heart once. The train shook as in an ague, groaned, moved. . . .

After a while she got up, unlocked the door. She was in the end car; the observation platform was only a step. She

unfolded one of the camp stools provided for sight-seers, sat down and watched Huitzapil, watched heaven disappear between the looming hills.

"Lovely, isn't it?" said a voice behind her.

It rent her daze, but she didn't turn, she couldn't move.

"I'm sorry, really—"

"Leave me alone," she said without expression, and still without moving.

"Miss Goode, my dear—"

She stood up. But he blocked the doorway. "You weren't, you know," he said, after a moment, "in love with him. Not really."

"Go away."

He didn't stir.

"Go away," she screamed and burst, like a thunderclap, into tears.

He drew her to him. "Here," he said gently, as if it were the least he could do for her, "my shoulder."

She wet it thoroughly, and blubbered against it heartbrokenly all the while, "Why—why did you hound me? Why

couldn't you let me be? What did I ever do to you? I wasn't doing any harm—never did any harm—until you came—you drove me to it! That boy—telling him—What business was it of yours—how did you know anyway that I was going to the hacienda?"

"There, Miss Goode, there, my dear," his voice was soothing, soothing. "I didn't know you were going to any hacienda. I told Kid Hamlet that you were going home. And you are, aren't you? And I knew you would—if I had to pick you up and carry you. I was catching this train myself, you see, and I wanted you on it."

Slowly, after a long moment, she raised her head.

HE TOOK her chin in his hand, mused down on her face. It was very tear-stained and very still. "Tst, tst, if Huitzapil could see you now!" But the twinkle in his eye was definitely on the tender side. "No," he said, "this funny little face will never stop traffic—not where it's going to: home, back home, where it belongs. But that cheek line now . . . I saw it once in a portrait by Matisse, and I think I've been looking for it in the flesh ever since . . . and for eyes that are set in just this way . . . and for a dash of freckles on a cute little nose." He bent suddenly and kissed that dash of freckles. "I bet," he went on, and his voice was a little husky now, "I bet you don't know how cute they are. Or how your eyes are shining—*shining*. And your skin . . ." he touched it, "and your mouth . . ." he paused.

The train lurched drunkenly around a curve, blotting out the last glimpse of Huitzapil, but neither of them noticed. He stared at her, and it was strange and wonderful to see his eyes completely sober now, frowning, in fact, widening with the shock of a perfectly new idea. "Do you know," said James Donovan slowly, unsteadily, "at that, they were right . . . I'll be darned if you aren't . . . any way one looks at it, you are—you are rather beautiful!"

And in that moment, as his lips found hers, she very nearly was.

THE END

## The Flying Hawks

Continued from page 37

ace. Hawks himself has driven in dirt-track races. For a time, he had one of the best racing stables in California but gave it up when his favorite horse, General Chandler, went lame and had to be destroyed.

His favorite sports now are hunting and fishing, and at least once a year he orgathes with Gary Cooper and one Ernest Hemingway, writer, at such a place as Sun Valley, Idaho. Their meetings always result in fearful assaults on elk, ducks, deer, pheasants, rabbits, field snice and pigeons. Hemingway, away from his typewriter, is apparently a character whose idea of play is to wrestle Cooper and Hawks, separately or together, in a room full of china. They are prepared for a series of lacerations and contusions, and this year Hawks came away with a busted hand. Cooper was slightly mangled.

"The arnica flowed like water," reports Hawks.

However, nothing counts now but Air Force, the biggest picture Hawks ever made and the most difficult. The Army fliers who helped on the epic were unanimous in declaring that although the chance of getting killed was much better in Hickam Field, the punishment they

took at Tampa was more trying. One major who led the dive-bombing attacks for the film in a P-43 got to within twenty feet of the ground and was rudely bumped up against by the gigantic explosions of dynamite set off to simulate bomb explosions. The major landed and came over to Hawks indignantly.

"One more like that," he cried, "and you'll be driving that thing yourself."

Jimmy Howe, the Chinese cameraman, handled the Chinese actors who played the role of Japs in the Coral Sea sequences. He used head-on lighting without any softening spotlights whatever; giving the subjects a harsh, straight black-and-white contrast. Then he gave his fellow Chinese a pep talk.

"You're actors, huh? Well, don't look so soft and nice. Who do you want everybody to think you are—Chinese?"

One morning, as a gag, Hawks had Howe listed on the bulletin board with the actors: "Jimmy Howe . . . Japanese General."

The crew made sure that Jimmy saw it, but were then worried by the incident because Jimmy turned swiftly and started away.

"Where are you going?" they cried.

The short, stocky Howe, whose temper

is famous in Hollywood, turned and bel-lowed his anger: "I'm packing up and going home!"

An idea of the particular care taken in making the picture can be had from the fact that the bomber used for indoor shots in the studio cost \$40,000 to build. It was absolutely correct to the last bolt.

"Put another side on that thing," said the awe-struck Army men, "and it'd be a swell glider."

### Accuracy for Realism

The temperature at Tampa was over a hundred, and the humidity seemed to be in the thousands. The crew used nine hundred gallons of drinking water a day, plus two hundred and fifty pounds of ice, plus 1,750 paper cups. Hawks insisted on absolute accuracy and was particularly anxious that nothing should be done that could be criticized by the most captious flier. He resolutely kept the planes from acting, in the usual Hollywood style, "with the gyrations of a punch-drunk humming bird."

"There is nothing more dramatic a plane can do than the simple acts of landing or taking off," he said.

The camera crews took long chances, shooting from the wings of plunging planes and from the cockpits of fighters. Even more trying were the shots taken while dive bombers plunged almost on the camera before zooming aloft again.

Next to Harry Carey, Jimmy Howe was the worrier of the troupe about flying. Before every trip he scrupulously examined his parachute. One morning when he felt he was ready, an Army major ordered him to check the parachute again. Jimmy opened it—to find it stuffed with newspaper comic strips. The gang roared at his indignation.

"Just wanted you to have something to read on your way down," explained Hawks, who is quite a jokester in his quiet way.

By this time, Hollywood is convinced that Air Force is going to be America's first great war film. Its sentiment is not manufactured; its emotions are real and deadly serious; it has the uplifting qualities that come from bravery and great daring.

When William Faulkner, the novelist, saw the first rushes he said, "This isn't a motion picture; this is nine guys on a round trip."

THE END

# MUSCLES FOR VICTORY

BY CHARLES R. WALKER

Rope crawling, monkey-fashion, is an effective means of accumulating the grind necessary to achieve stamina. It plays an important part in air-cadet training.

Are you going into the Army? Then maybe you'd like to start toughening up now and save yourself a lot of grief when you take the "basic." A famous swimming coach tells how you can do it

**T**HIS is a motorized and mechanized war, and too many people think that if we turn out enough machines and technicians, victory is in the bag. They can't see the man for the machines; they forget that it is also, in the final analysis, more than ever before, a war of individuals.

Since the Germans swarmed into Poland three years ago, more men have fought hand-to-hand, more men have marched more miles carrying their equipment, and the coefficient of punishment has been greater than in any war in history.

To withstand the rigors of this kind of warfare, a soldier must be tough. As Bob Kiphuth, famous Olympic and Yale Uni-

versity swimming coach, puts it, he must have "plenty of mileage"—the accumulated grind which a man must submit to if he is to achieve victory stamina. He needs a "whale of a good motor"—which means the muscles of the pelvis, the abdomen and the trunk. Also, operation of tanks and planes, armored divisions and armored ships demands specialized muscles. The parachutist is dependent upon rugged stamina plus delicate muscular co-ordination. The soldier in the pilot tower of a tank should be strong in the deltoids, biceps and latissimus; they absorb the pounding he receives as the tank careens over rough ground. All the crew need strong abdominal muscles. On shipboard, well-developed upper body muscles are necessary for self-hoisting in and also out of hatches and for maneuvering in close quarters.

"The Army's thirteen weeks' basic training," says Kiphuth, "is too short a time to toughen up a man if he is soft. But it's long enough to make him miserable, because it's pretty strenuous. My advice is: Don't wait until you enter the Armed Forces. Begin now to accumu-

late mileage and to tune up your motor. Everybody must be fit if we are to win. In this war, quartermasters and telephone operators are often called upon to fight with knives and bayonets, not to mention fists and teeth. The tougher you are, the better will be your chances of survival.

## Getting a Head Start

"Start with a few simple tests which will give you your own score. Chin yourself ten times. Do push-ups off the floor twenty times. Broad-jump, standing, seven feet. Climb a rope fifteen feet, using your feet if you wish. Vault a fence four and one-half feet high, using both hands. Raise your trunk from a lying position till you're sitting up. Repeat this fifty times.

"That's not easy for everyone, but it will indicate your abdominal strength. Do a vertical jump of a foot and one-half, to measure your "explosive energy" and to see how far you can lift your total body weight straight up in the air. To do this, first make a mark eighteen inches above the highest reach of your right

hand. Then jump up and touch the mark or better it.

"Then you can find out about your all-round fitness and endurance by taking, if possible, the Brouha 'step-up' test which is used for Commandos in England and for some of our own troops. Any competent physical instructor can help you with this. A stool or box, two feet square and eighteen inches high, is placed in front of you. You step up on the box, then step down, and continue in a rhythm of thirty steps to the minute, up and down, every two seconds. At the end of four minutes the instructor takes your pulse at one- two- and three-minute intervals. The speed with which your pulse falls off toward the normal is an almost perfect gauge of your body over-all endurance.

"If you don't do too badly in the step-up test and can perform the others easily, your body has few motor or muscular defects. You needn't worry much about the thirteen weeks' basic you'll get in the Army. If you fail, get busy."

To help you get in shape for the hard work that is to come, here is a simple toughening-up program designed for

# HERE'S ALL THE *Extra* VITAMINS AND MINERALS YOU NEED

## of course VITAMIN A

Children need it to grow. You need it to fight off colds, for good eyesight. With Ovaltine you get all the extra "A" you need—according to experts.

## 3 Average-Good Meals + 2 Glasses of Ovaltine Give the Normal Person All the Extra Vitamins and Minerals He Can Use! Here's Why—

Government authorities say today that 3 out of 4 people are under par—"sub-marginal"—nervous, underweight, easily fatigued—even "well-fed" people—because they don't get enough vitamins and minerals! Result, millions of people taking pills!

But if you are a regular Ovaltine user—and are eating three average-good meals a day—you don't need to worry! Other people who are not using Ovaltine may need vitamin pills or capsules, but as an Ovaltine user, you're already getting all the *extra* vitamins and minerals your system can profitably use, according to experts!

Long before vitamin and mineral deficiencies became a serious national problem, we added to Ovaltine *extra* amounts of those vitamins and minerals most likely to be deficient in the average diet—*enough to be sure*—in scientific proportion—all except Vitamin C which is plentiful in fruit juice.

This is ONE of the reasons why thousands of tired, nervous people and thin, underweight children have shown remarkable improvement in health when Ovaltine is added to their regular meals.

So don't worry about vitamins and minerals! Rely on Ovaltine to give you all the extra ones you can use—in addition to its other well-known benefits. Just follow this recipe for better health—

## 3 MEALS A DAY + OVALTINE NIGHT AND MORNING

*If you want to read more about this extremely interesting subject, send coupon below. If not, start your Ovaltine today and don't worry!*

## of course VITAMIN B<sub>1</sub>

You eat poorly—and you're tired, listless, nervous, "low"—if you don't get enough B<sub>1</sub>. The Ovaltine way, you get plenty!

## of course VITAMIN D

Rarest of all vitamins in food. You get it from sunshine—but 6 or 8 months of the year most people don't get enough sunshine. Rain or shine, you're safe with Ovaltine.

## of course CALCIUM and PHOSPHORUS

They're vital to bones and nerves in adults—also to teeth in children. The Ovaltine way, you have loads.

## WARNING!

Authorities say you can't completely trust "good" meals to supply *all* the vitamins and minerals you need for good health—even with careful meal-planning—because shipping, storing and cooking reduce the vitamin-mineral values of food.

So rely on 2 glasses of Ovaltine a day for all the *extra* vitamins and minerals you need!

## of course VITAMINS G, P-P

You can't be alert, awake, "alive" without them! You get them—and the *entire* Vitamin B complex family in Ovaltine!

## of course IRON

Without iron, you can't have good red blood. Ovaltine supplies all the extra iron you need—in the way you can use it!

## But No!

Don't think vitamins and minerals are *all* Ovaltine gives you. It's a well-balanced dietary food supplement prescribed by doctors the world over. Famous also as a bedtime drink to foster sound sleep and morning freshness.

**OVALTINE**  
THE PROTECTING FOOD-DRINK

These Yale students are not scaling the nine-foot wall around the Bowl to beat the ticket taker. Members of Yale combat teams, they are going through the paces

Hand-to-hand fighting combines the most destructive features of boxing, wrestling and jujitsu. Here pre-flight cadets try bone-crushing holds on each other

Rope climbing is a great "builder-upper" for those muscles that will be subject to the pounding that only a careening tank and a dancing destroyer can deal out

Rugged stamina alone is not sufficient for the highly trained soldier. He must also possess muscular control, displayed by these future aviators walking a narrow plank

The idea is to avoid the mail-order muscles. Body building means what it says, with emphasis on the whole body, and jogging and walking can be very effective aids

Aquatic ability is definitely essential. These air cadets dropping into the pool learn to swim under water, remain afloat motionless and zigzag to avoid strafing

Kiphuth for the average American from 15 to 20 years old. It is good conditioning work for other ages also, but Kiphuth particularly had in mind the thousands of 18-, 19- and 20-year-olds now eligible for the draft, most of whom are "very short on their muscle mileage."

1. Jog-walk a mile daily.
2. Go after your favorite sport.
3. Do some regular body-building at least five times a week. This means emphasis on the *whole* body. The average boy neglects his body for his muscles; overemphasizes his sprinting, tennis or baseball muscles, overdeveloping some part of his body machine at the expense of his motor.

Get from your physical instructor in school or at the Y a plan for free-moment body exercises. Follow it rigorously fifteen minutes a day. If you're already an athlete, you'll experience a surprising increase in your specialized skills. If you're in poor shape generally, the results will astonish you. This is not muscular strong-man stuff; the exercises are designed to step up the potential of your motor.

Pile up under your belt, so to speak, some exercise mileage. One of the best ways to make a deposit in your bank of physical stamina is to take a jog-walk daily or every other day—a jog-walk every day, alternating a jog with a brisk walk every quarter of a mile. Three times a week is better than every day this week and none the next. Figure out what is practicable and stick to your schedule like glue.

Go after your favorite sport, not as a spectator, but as a player. Every hour you spend on a civilian athletic field will pay dividends when you're drafted.

#### Combat Training for Victory

"This," says Kiphuth, "should be a minimum program for all American youngsters. But there is a maximum, also. If the nation is really serious about toughening up, I propose that every school and college in America set up competitive combat teams for physically ambitious and qualified young men. The team should be modeled on the Olympic Pentathlon, but adapted to training for war victories, not athletic ones."

He lists these five events and tests for a war pentathlon:

1. Body motor tests and contests, such as chinning, rope climbing and free vaulting. The standard in these should be high.

2. Wartime swimming. Every member of a combat team should be able to jump from a height of twenty feet fully clothed and swim under water for twenty yards; to swim quietly on the surface with war kit; to remain afloat twenty minutes, motionless; to rescue a comrade and swim fifty yards with him; to straight-arm an enemy in the water; to seize him from behind; and to zigzag in the water and submerge quietly to avoid gunfire.

3. Field conditioning. A forced march of fifteen to twenty miles with full pack.

4. Perform a manual-labor problem in record time.

5. Tests for personal-combat proficiency, including boxing, wrestling and jujitsu in combination, and a knowledge of the principles of hand-to-hand fighting.

"If you'll practice even the minimum program faithfully for a few months," Kiphuth concludes, "you'll get a big boost and satisfaction when you take your basic. Above all, it will enable you to lead when your turn comes. Military leadership is built on team play and physical fitness."

# The kid who used to raid the icebox

Next time you shop for food, keep this boy in mind . . .

He is the kid who used to come in late at night and "polish off" mother's meal planned for the next day. Folks used to say he'd eat his parents out of house and home . . .

He's in the armed services now . . . along with millions of other boys. And, of course, he and all his buddies have taken their appetites with them.

Uncle Sam knows that these fighters need the finest food . . . and plenty of it. And so the men of our Army, Navy, Marine Corps and Coast Guard are the best fed in all the world.

We "stay-at-homes" must make sacrifices in support of our fighting forces. So consider this . . .

When you visit your A&P Super Market and learn that some favorite item is repeatedly unavailable, know that it has probably "joined up for the duration." And should you be asked by an A&P manager or clerk to buy only one of an item you usually purchase in larger quantity, know that it, too, is scarce because it is "seeing service." But remember this . . .

Your A&P Super Market has hundreds upon hundreds of good things to eat. Any average homemaker can shop from the shelves and bins

of an A&P Super Market and assure her family of downright good meals . . . of tasty goodness and needed nourishment. And, of course, A&P's famous policy of selling foods at the lowest possible prices is in effect today . . . as always.

## How You Can Help Win the War

"Let patriotism dictate your shopping list. When you market, follow these important rules: (1) Buy what is plentiful. (2) Buy what is fresh. (3) Buy what is produced locally. (4) Buy what your Government asks you to buy in its Victory Food Features. (5) Do not hoard." . . . from a statement of Claude R. Wickard, Secretary of Agriculture, in *The American Magazine*.

## A&P SUPER MARKETS

### SAVE UP TO 25%\* ON MANY FINE FOODS

## The Dark Road

By Elizabeth Foster

ILLUSTRATED BY RONALD McLEOD

A whole period of her life was a blank. She remembered nothing of it or the man she was to marry. And then she fell in love a second time

LISA moved a little closer to Oliver in the moonlight and laid her cheek against the prickly woolen surface of his American Air Forces uniform. The night was warm and still, and nothing disturbed the gentle peace of the English garden in which they were sitting. Oliver bent his head until their lips touched.

"Happy?"

"Yes . . . oh, yes!"

She ran her hands over his dark hair, loving the way it grew on his temples. Oliver kissed her finger tips. "You were so quiet, my sweet, I was afraid you were brooding about something."

"I was thinking . . ."

"Yes?"

" . . . how many hours we had left before the wedding. We have five days, fifteen hours, and thirty-five minutes. Childish of me to count them up, wasn't it?"

"No—very sweet! Darling!"

Lisa continued, "I was also thinking how wonderful it will be to have you with me all the time—I won't have to say goodbye to you for a *whole week!*"

The unconscious irony of this remark, and its wartime spirit of calm acceptance and gratitude made Oliver wince. He put his arms around her and tried to forget they were marrying on borrowed time.

He said quietly, pretending this was an everyday marriage: "You'll have me longer than that, my darling. We'll be together for years and years. Are you quite sure you want to see that much of me?"

Lisa murmured something flippant, but Oliver was in earnest: "No, seriously, my sweet!—I'm afraid sometimes you haven't given this marriage enough thought. I mean, it's all been so quick, and I don't

believe you've ever sat down and said to yourself, 'Do I want to marry an American flier I've only known five weeks? Do I want to have an American mother-in-law, and American kids, and American friends, and American—'"

"Have you any reason for thinking I don't know my own mind?" Lisa interrupted.

Oliver was silent. A little band of sweat had broken out on his upper lip and his hands twitched in his lap; but in the dark she did not see how nervous he was. She went on smoothly: "This is the second time today you've asked me that. Has anyone suggested that I was being a little foolish in marrying an American?"

"Heavens, no! They've all been simply swell. Especially your mother and father. But you don't know a thing about *my* mother and father, or my home, or—or my friends. You may not like them at all. You're taking a chance, Lisa!"

"So are you," she returned after a pause. "There's something I want to talk to you about. I—I was brooding about something a little while ago. I've been trying to get up my courage all evening to speak to you about it. That was why I asked you to come out here."

"Well, what's on your mind?" he asked after a barely perceptible pause.

"It's—it's hard to explain what it is. Just a certain feeling I've had lately. At first I didn't pay much attention to it, but during the past week it's been getting much worse, and I began to think it wasn't so funny."

Lisa's voice hesitated. Oliver was strangely silent. It was so unlike him to be unresponsive that she was surprised and troubled. (Continued on page 60)

Lisa's eyes were steady. "I wish someone had told me, so I wouldn't have had to find it out this way." Oliver shook his head. "I'll just tell the vicar you couldn't make it"

# FIFTEEN FEET AND MORE OF TROUBLE -FOR THE AXIS!

ANTI-AIRCRAFT GUN USED BY UNITED STATES ARMED FORCES

Naturally, Chevrolet is devoting all its man power, all its plant power, all its production power, to the job of turning out *VOLUME FOR VICTORY*. . . . Our projects range from Army trucks to Pratt & Whitney airplane engines, and from armor-piercing shells to anti-aircraft guns—plus countless parts for other war producers, both within and without General Motors. . . . All of these, and many other weapons, continue to flow from Chevrolet plants, in ever-increasing volume.

B & W COUPONS ARE ALSO PACKED IN POPULAR-PRICED RALEIGH CIGARETTES

"Oh, well," she faltered, "it wasn't really important."

It must have been important or you wouldn't have brought it up," he said quietly. "Go on, Lisa!"

"Well, for instance, tonight—you remember when Mummy and Daddy were talking about Uncle Hilary's journey up from Devon—I had it then, quite badly. Everything was all right one minute, and the next I knew exactly what they were going to say. They were going to argue whether he would have to change at Reading or whether the train came straight through. And then Mummy was going to tell Annie to be sure to have plenty of kippers in the house for Mr. Hilary's breakfast, and then she was going to tell Annie that Mr. Hilary was coming up from Devon to marry us, and Annie was going to look weepy and say, 'Oh, Ma'am, isn't it lovely!'"

Oliver said nothing.

"—and then they *did*," continued Lisa, "and everything went black for a moment and I thought I was going to be ill. Because *at that moment* I was sure I'd heard them say those very words before—I was sure this had all happened to me in a sense—and I tried to remember how and when—but the next instant the feeling was gone and I knew I was wrong because I've never been married before—never even been in love!"

Oliver counted ten before he spoke so his voice would not betray him: "Why, that's a perfectly normal feeling! I have it myself sometimes. You think you know exactly what everybody's going to do and say for the next two minutes, and it's quite amusing to watch it happen the way you knew it was going to, and—"

"Yes," she interrupted, "but I'm sure while *you* have it, one part of your mind knows it's wacky—you never have the ghastly feeling it's *true*—"

Oliver realized to his dismay that she was crying, but he could not trust himself to speak.

"I know you think I'm being very silly about all this, because you're not saying anything," she went on. "I suppose it looks childish and emotional to you—But don't you see why I had to tell you, Oliver? Don't you understand?—Oh, please say it so I won't have to."

"Lisa, I can't imagine what you are driving at," he replied, and this time he was telling the truth.

"Then I'll tell you, if you don't know! I had concussion once. I was out of my mind for days. I've always been afraid that my mind was affected by my accident. How do I know this isn't the beginning of something dreadful?—I had to tell you, Oliver! It wasn't fair not to. And—"

Oliver took her in his arms and kissed her. She resisted him for a moment because she wanted to say something more, but as his lips closed over hers all the dark shadows and fears which had been haunting her the past week faded away into nothingness. Nothing else seemed to matter, nothing in the world.

AFTER Lisa had gone to bed, Oliver sat alone in the dark garden regaining his composure. Then he got up and went slowly into the house. His future father-in-law was waiting for him patiently beside a tray of whisky and soda. Arthur Bellamy was a slender, gray-haired man in his late forties. He had been severely wounded in the last war, and as a result they would not give him back his old commission. He was a member of the Home Guard, which he called the Bath Chair Brigade. He was going on duty after midnight, and his arm band and his tin helmet were lying on the floor beside him. Oliver apologized for staying in the garden so long.

"There was a moon out," replied Arthur with a twinkle. "I expected you would."

Oliver sat down with an absent smile and let the older man mix the drinks. Although he had regained most of his normal composure, he was still pale under the summer tan. Arthur looked at him searchingly and then measured out two stiff drinks. He handed him his glass and then sat down in a battered wing chair on the other side of the hearth. One of the dogs woke up with a yawn and came and laid her head on his knee. It was Lisa's spaniel, Tessie.

"Lisa gone to bed?" said Arthur.

"Yes, sir," replied Oliver briefly.

Arthur waited a moment for him to reopen the conversation and then decided to speak.

"What's the matter, Oliver? Did something happen out there tonight?"

"Yes, it did."

"Something you'd rather not talk about?"

"No, I was going to tell you. I think you ought to know."

"Well, what was it?"

"She almost remembered."

THERE was a pause. Arthur Bellamy cleared his throat and shifted his long frame in the wing chair. "That's interesting," he said, finally. "What occasioned it? Was it anything that was said at dinner?"

"Yes, it was."

"I don't seem to remember saying anything that might make her remember the past, but I may have, unconsciously. What was it?"

"Very peculiar, how it happened—she says you were talking about her Uncle Hilary's trip, and a frightful feeling went over her that she'd heard you say the same thing before, under the same circumstances."

"But that's impossible! We never go as far as making arrangements for the wedding. No, wait a minute! I believe there was something said about Hilary marrying her, the first time. It's hard to remember what we did talk about there. After all, it was only one night, you know, and it's all so terribly hazy in my mind."

"Well, something clicked," said Oliver, "and she remembered the scene perfectly for about two seconds and then she says the whole thing vanished. Someday soon she's going to be able to hang onto one of those flashes of memory. It may happen any time now—on our honeymoon—maybe on our wedding day!"

Arthur Bellamy said nothing. Oliver sprang to his feet and wandered restlessly around the room. Finally he turned to his future father-in-law.

"You're not going to let me tell her, is that so?"

Arthur shook his head. "No, my boy, it simply wouldn't do."

"But I *must*, Mr. Bellamy! It's not fair to her to keep her in the dark any longer. She ought to be allowed to choose whether she wants to be faithful to that other fellow's memory. We're putting something over on her and that isn't quite honorable. I want to go upstairs now and tell her."

"Wait a minute, Oliver!" said Arthur quietly. "Sit down, and don't do anything until you hear what I have to say."

Oliver sat down reluctantly.

"You must realize," continued Arthur, "that the past, as far as Lisa is concerned, is dead. Even if she remembers that her first love was killed in action she'd have to marry some day. She's only twenty-two, Oliver! Her mother and I don't want her to be single for the rest of her life."

(Continued on page 67)

## Pal of the Puppets

Continued from page 15

ork. It has been so ever since he was youngster.

George Pal is, in a way, a part of Adolf Hitler's contribution to democracy. Hollywood regards him as a flesh-and-blood will-o'-the-wisp. Which he is, too, having been here and there and anywhere in recent years. Born in Celgled, Hungary, thirty-four years ago, to a pair of traveling entertainers, George was supposed to learn architecture, then settle down and amount to something. Fortunately, when he enrolled at the Budapest Academy, the registrar absently put him down for an art major. Later, when it was discovered that the new student knew nothing at all of the human figure, he was detoured into a three months' intensive course in anatomy. The mistake was discovered when George Pal returned to the academy. Too bad! You didn't need to study anatomy at all," exclaimed his professor.

When young Mr. Pal emerged from the school a full-fledged architect, his indignation over the error turned to rejoicing. Hungary didn't need architects, so he readily landed a berth in Hunnia Films in Budapest as an animator. Overwhelmed at this good fortune, George rushed to the home of his boyhood sweetheart, Szoka Grandjean, and persuaded her that two could live as cheaply as one. The exuberant couple considered this a sound idea so sound that they eloped, only to find on their return from the honeymoon that the young husband's job was merely an apprenticeship with no pay whatsoever until he became a full-fledged animator. Even after his apprenticeship, the young artist's salary was so microscopic that he migrated to Berlin to seek work at the huge UFA studio, leading

animated cartoon producer of Europe. Within sixty days, he was in charge of UFA's cartoon production.

Living thriftily, the young Pals managed to salt away half his salary, accumulating a nest egg that came in handy in 1933, when during an early Nazi reign of terror, the dread Gestapo came snooping around his home, merely because he was a foreigner. Pal abandoned his lucrative job, headed for Prague, at that time one of Europe's few havens of liberty, set himself up as a one-man animated cartoon business. Unable to afford even a secondhand cartoon camera, he decided to draw the pictures in his studio, then take them out to be photographed by a commercial film company. Unfortunately, in all of Czechoslovakia, there was not a single cartoon camera.

### Then Came the Big Idea

Then came the day when, standing before an exhibit of motion-picture equipment in a musty museum, he shattered the stillness with a resounding "Hurrah!" Alarmed attendants rushed up, only to find an excited young fellow who tried to explain how, by abandoning drawings and using three-dimensional models, he could use any old camera to shoot his pictures. In those days, European animated cartoons were sponsored by advertisers. Pal hit on the idea of using hundreds of cigarettes as puppet actors, marching and wheeling with military precision through the miniature sets. He offered his idea to all the cigarette manufacturers in Prague. They weren't interested, nor were any other Czech businessmen.

The following spring found the Pals

in Paris, where there were many more cigarette companies. The very first French tobacco concern to which George showed his work readily agreed to underwrite a puppetoon short, photographed in Gasparcolor, a then popular French color process. The picture proved a sensation and George Pal found himself famous.

At a Paris theater, one of Pal's films caught the eye of a dynamic Dutch advertising man who had lived in the United States. This Sies Numann lost no time in hunting up Pal to see how he breathed life and music into his little wooden figures. Like everyone else, Numann was overwhelmed at the idea of manufacturing so many thousands of figures.

"Can you turn out these pictures for a reasonable sum, say seven or eight thousand dollars?" he demanded.

George Pal's eyes danced. He had actually produced his first shorts for a thousand dollars apiece. Backed by Numann, he filmed scores of fantastically beautiful puppetoon films and became to European movie-goers the merchant of fantasy that Walt Disney is to America.

In 1939, filled with foreboding about the impending war and disregarding the pleas of his Dutch backer, Pal, with his wife and young son, slipped out of Holland for the United States in a matter of hours before the Nazi machine rolled into action.

George Pal stayed in New York for a while but, like a moth lured by a flame, he soon headed for Hollywood. Shortly after he left New York, Barney Balaban, who is the B in Balaban & Katz, theater magnates, president of Paramount Pictures, and a hard-headed showman, was dragged grudgingly one evening by his wife to a private movie party in Gotham. Prepared to be bored, Mr. Balaban sat up and blinked when a Pal puppetoon was flashed upon the screen.

"Who is this fellow, George Pal?" demanded Mr. Balaban.

"Oh, he's a young Hungarian who was here last week," someone recalled.

"Where is he now?"

Nobody knew. Next day, Mr. Balaban had Paramount operatives scouring the country for George Pal. It took them three weeks to find him in a cottage almost in the shadow of the Paramount studio in Hollywood. Somewhat flabbergasted at the astonishing American manner of doing things, Pal found himself hustled to New York to sign a contract with Mr. Balaban. The deal authorized Pal to produce a series of puppetoons to be released by Paramount.

### Satire—the Deadly Weapon

Having found his niche in American movies, George Pal is not content to entertain only. He still has nightmares of those dread Gestapo agents and he is going after the Nazis with a weapon that hurts—ridicule. In his newest puppetoon, the Screwball Army lays waste to Mr. Pal's beloved Vienna. They devastate their way to the park where stands the statue of Johann Strauss, a favorite Pal character. Mr. Strauss gets out his fiddle and leads the Screwball soldiers, like a Pied Piper, with the stirring strains of The Blue Danube, into the muddy river itself. When they're drowned, Johann Strauss hurries back to resurrect Vienna.

Where there's a Pal puppetoon, there's always hope. As Mr. Pal says, "With puppets, anything can happen."

## The Roughest Thing Afloat

Continued from page 29

about the bum chow he was dishing out. We harped on it all that Sunday morning in a good-natured way until the cook finally gave in. "All right, all right" he told us, "I will fill all three freezers with ice cream this afternoon and I hope you fill your bellies until you bust at the supper table."

"True to his word the cook labored hard all afternoon. He had taken the apple pies out of the oven and had just packed the last freezer with salt at about five o'clock when, without warning, a torpedo crashed through our bow. All hands—and the cook—took to the lifeboat.

"A German sub surfaced, and its commander told our crew to row to one side as he wanted to 'put some more holes in her' by shellfire, to make sure she was going to sink. Since it was four hundred miles to the nearest land we decided to stay close to the burning ship as we would have a better chance of a passing plane or vagrant patrol boat sighting us. In spite of eleven shells the submarine put into our ship after the torpedo, she was still afloat in the morning, though burning fiercely. It was a torrid noonday sun which must have prompted one of the boys to think of that ice cream. He looked over at the blazing inferno and asked us if we thought it was still aboard.

"There's only one way to find out," I told him. So we rowed alongside the blazing freighter and three of us hands climbed up the Jacob's-ladder, walked through fire and smoke and over twisted, cracked and bent deck plates into the galley. There were the three big freezers of ice cream, oddly enough still packed hard."

And there in the shadows of rising columns of smoke sat thirty-three men in a lifeboat on the open sea, gorging their parched throats with apple pie and ice cream, which they scooped out of the freezer with boat oars.

Then there was that time we dropped five charges and got six explosions. We are still trying to figure that one out, since depth charges explode only once, and since the most tremendous concussion came with that sixth explosion. But Skipper Adair did not claim a sub. He wants more tangible evidence than that. I hope he gets it some time.

### Davy Jones' Apples

But not the kind of "tangible evidence" that bobbed up out of the deep blue on another occasion. This was down off the Florida Keys. We got an exceptionally jerky, metallic "pip" on our sound gear.

"This is going to be the real McCoy," one of the boys from the sound hut told me on the way to my battle station.

Seconds later we were blazing away with our depth charges. We dropped a smoke bomb to mark the spot and made one of those famous corvette U-turns at full speed, heading back with all eyes rooted on a patch of ocean 200 feet in circumference, where little flaky, cream-yellow particles were bobbing to the surface by the thousand. With much restraint we repelled our rooting pipes from letting out a loud whoop, for it looked for all the world this time as if we had struck pay dirt.

Directly over the spot again the water was now littered with, well, there could be no mistake about it—dried apples!

Skipper Adair reasoned there must have been a sunken cargo ship under us.

Her masts were what had given us that sharp contact signal. The dried apples were not waterlogged. Neither were the floating fragments of boxes they came in. The explosion of our depth charges had ripped open the seams of the old freighter below us and out popped the apples.

A corvette man won't complain about being hauled out of his bunk at all hours of the night to man his battle station, but one thing he does hate to have the war interfere with is play-by-play broadcast of his favorite football team or World Series game, when these are available.

I edit the daily press newssheet aboard our corvette and the morning the Cardinals and Yanks popped the cork on their 1942 World Series I duly warned all hands:

"We will broadcast a play-by-play of the World Series today but reserve the right to shut off the loud-speaker from our patrons in the event a sub is sighted. After sinking sub, play-by-play will be promptly resumed."

### Ball Game in Spanish

Nothing like that happened, but something menacingly worse did. We were again sailing in Caribbean waters. The heat was intense. The static was worse. Not a United States radio station could be heard.

Frantically your chief radiomar worked with the dials in the hope of tuning in something by game time. With only moments to spare I located Havana. The announcer was drooling out Spanish by the yard. My Spanish vocabulary consists of eight words, five of which are unprintable. But I recognized one—"pelota"—meaning ball. And another, "segundo." Somebody must have just hit a two-bagger.

I dashed down to the crew's quarter and awakened a boy named Perez. I asked him if he understood Spanish. I was just a shot at the moon.

"Fluently," he replied.

I was skeptical but brought him up to the radio shack, clamped the ear phones on his head.

"Is this fellow talking baseball?" asked.

Perez listened intently for a long moment as, eagerly, I tried to read the expression on his face to see if it portrayed any promise. Finally he shook his head.

"I don't think this is anything you want," Perez said. "This donkey is trying to peddle razor blades over the radio."

"Sit right down here and tell me everything that fellow says," I urged.

Perez obliged and translated one of the weirdest World Series games from Spanish to English, in whispered tidbits to Ensign Darby, who in turn rebroadcast it over the loud-speaker. Some funny things happened in that game. In some innings there were only two outs, but then for all we knew they were rationing putouts in the U. S. by now. One fly ball has not come down to earth yet—months later. But we finally got the right score and the gist of the game.

Perhaps the best description of life aboard a corvette was given the first time I ever boarded one. It was by a veteran British corvette man who, apparently reveling in some newly acquired American slang, told me:

"When you're aboard one of these things at sea, life is just a perpetual hand under."

THE END

## Five Who Vanished

Continued from page 34

"d," Jason answered dryly, "and then tell me what you think."

Emil Roth looked at the used bed, then at Jason. His eyes had a glitter of fright, but his face was wooden. "Is anything," he said anxiously, "the matter with it, Mr. Amboy?"

"All I want to know," Jason answered, "is what's become of the man who was in it?"

The steward shook his head with an air of bewilderment. "I'm afraid I don't know what you're talking about, Mr. Amboy. My chart shows that you took single occupancy of this room."

"And you hadn't the faintest idea," Jason said quietly, "that another man was sharing it with me?"

Emil Roth blinked his eyes. "Why,

think? Is he hiding somewhere on this ship or did he go out that porthole?"

The steward sat down weakly in a chair and put his hands to the sides of his face and stared at Jason's shoes.

"It means my job."

"It may mean worse than that," Jason said, "if we don't do some fast thinking. What did that fellow tell you?"

Emil Roth looked up at him with sick eyes. He said feebly, "Please let me have just a moment to think, sir."

"He told me," Jason said, "that he was Arthur N. Garson, the recent assistant district attorney of Los Angeles, and that two men had followed him aboard and would kill him if they found him. I agreed to let him stay here if he could fix it with you. Is that what he told you?"

ishly disagreed. "Don't you see what would happen to us in military court? You and I know that somebody got in here and killed this fellow and shoved him out that porthole. Who was he—a Nazi spy?" Roth stopped. He stared at Jason. "And how do I know that you didn't do it?"

"You've made a good point," Jason admitted. "And how do I know that you didn't do it?"

Emil Roth was nodding. "Yes, Mr. Amboy. It works both ways. What kind of witnesses would we make for each other? What military court would believe our stories?"

"Whoever this man was," Jason answered, "his story may have been true in spirit. At least, we can assume he had enemies aboard. One of them got in here and did away with him."

"Yes, Mr. Amboy," Roth agreed, "but you can't prove that. And anything like this on the high seas in wartime is entirely different from the same thing on land in peacetime. Even if we were cleared in the end, we'd be held for months of investigation. The Navy, the Army, and the F.B.I. would all have us on the fire. I know what these things are like, Mr. Amboy."

"SO YOU'VE been through things like this before," Jason said.

"I've been through several things like this before, yes—but never anything as bad as this. And if you report it, what can the captain do? With passengers and crew, there are more than five thousand people on this ship. Can he find the guilty party, Mr. Amboy?"

"Yes, I see your point."

"You haven't spoken to anybody," Roth went on eagerly, "and I haven't, either. By keeping our mouths shut, we're safe. It's the only way to do it, Mr. Amboy. I know. We won't be held or tried or embarrassed in any way. And I won't lose my job. And I need it, Mr. Amboy. The only reason I let him bribe me into staying here—"

"How much did he give you?"

"He offered two-fifty and I held out for a thousand and we settled for five hundred. I took it only because I've been sick, and so has my wife. We're just beginning to get our heads above water again. It's the only reason I've stuck to this job at all—the war bonus."

There were two sharp raps on the door. It opened. Emil Roth whirled about with a hissing sound.

Flack stood in the doorway. His gentle brown eyes were sharp with wariness. His life preserver was strapped snugly about him. He touched his gray mustache.

"You said a half-hour, sir. The time is just up."

Roth was glaring at him. "Who is this?"

"Take it easy," Jason said. "He's an old and trusted friend. Come in and shut the door, Flack. This is my room steward. Flack—Roth."

Emil Roth said nothing. He was half-crouching and still glaring.

"How do you do?" Flack said coldly. He closed the door. He looked inquiringly about the room.

"Our bird," Jason said, "has flown."

"I thought," the steward said in a thin, angry voice, "you hadn't spoken to anybody."

"This man," Jason answered, "is completely trustworthy."

"Completely," Flack calmly affirmed.

"He was evidently murdered and

ALFRED

by FOSTER HUMFREVILLE

"Alfred only does the capitals"

...sir. It would have been on my chart."

"Roth," Jason stopped him, "we are both on something of a spot, and the less we spend pretending we aren't, the quicker we'll get somewhere."

"I'm afraid, Mr. Amboy, I don't—"

"Look," Jason stopped him.

HE SHOWED the steward the three drops of blood, now rapidly turning black, and the smear of blackening blood on the porthole rim.

"It's blood," Jason said. "It isn't red. Well, Roth, what do you make of it?"

The steward was so white that Jason was afraid he would collapse. He was holding his lips with the tip of his tongue.

"Sit down," Jason said gently, "and try to pull yourself together. Whatever happened to this man, I don't believe you can do anything to do with it. And it certainly looks like murder. Anyway, it doesn't seem likely that he walked out of the ship. You'll notice that all his things are gone, including the pajamas I lent him. He was half undressed the time I saw him. Everything is gone except the toilet articles you bought for him. The bed is still warm. So what do you

The room steward made a faint nodding motion. "That was what he told me. He threw himself on my mercy."

"Yes," Jason said, "he used that line on me, too. But I happen to know Garson."

Emil Roth's mouth was hanging open. "He was lying!" he blurted.

"Of course he was lying," Jason said quietly, "and that doesn't get us anywhere."

The steward's mouth twisted into a snarl. "He was a bad egg! I've been a ship's steward on and off for thirty years and I know one when I see one. I knew he was one! He got what was coming to him!"

Roth's eyes sharpened. "Have you reported this?"

"Not yet, but we'll have to."

"Do you realize what will happen to us if we do? We'll both be held on a murder charge."

"Yes, I know that."

"The least that would happen to us, Mr. Amboy, even if we could talk our way out of this, would be six months for giving aid to a stowaway. And it would be worse in wartime."

"But this has got to be reported," Jason said.

"No, it does not," the steward wasp-

# Don't PUNISH a SORE THROAT

## SOOTHE it with GLYCO-THYMOLINE

Your throat and nasal membranes are delicate. When you suffer the discomforts

and irritation which often accompany ordinary sore throats and common colds, do this — gargle and spray with proven Glyco-Thymoline. This effective alkaline solution helps heal and helps soothe the irritated membranes. Do as thousands have done for 50 years... rely on Glyco-Thymoline. Ask your physician and your druggist. Keep a bottle handy... use frequently.

pushed out that porthole," Jason continued. "Roth has been trying to convince me it would be folly to report it to the captain."

His valet glanced doubtfully at the steward. "Just what is the evidence, Mr. Amboy?"

Jason showed him the drops of blood on the carpet and the smear of blood on the porthole rim.

"Roth is right," Flack said. "It would be folly to report it to the captain. You'd both be charged with murder. What has Roth to say for himself, sir?"

"The stowaway," Jason said, "told him the same things he told me."

Flack took out a cigar, bit off the end of it and lighted it. He considered Emil Roth judiciously. "I think we can dispense with you now, Roth. Mr. Amboy and I have several things to discuss privately."

"So you think you can dispense with me now," said the steward in a shrill snarl. "Well, to hell with you! I'm staying right here until I know what's what."

"Very well," Jason said. "We'll agree for the time being, not to report it. If I should change my mind, I'll let you know before I go to the captain. Is that satisfactory?"

Emil Roth sent another distasteful glance at Flack and said, "Yes, Mr. Amboy. I'm willing to leave it just like that." He went to the door and opened it. He gazed at Flack coldly, then, with an audible sniff, went out and closed the door.

Flack puffed at his cigar and looked thoughtfully at the door. "I haven't any faith in that fellow's integrity," he said. "If it weren't for the opinion I already have, I'd say he might very well be the murderer."

FLACK walked to the porthole and back again. He was puffing absently at the cigar and his hands were clasped behind him.

"This is a very interesting case," he said.

"It occurs to me," said Jason, "that it bears a certain resemblance to my brother's. The same clue was left on each scene—in my brother's case, a little smear of blood on a wrist watch; in this case, a little smear of blood on a porthole rim. And both men vanished."

His valet was nodding approval. "Yes, Mr. Amboy. It is obvious that the same person who killed your brother killed this man. I am very glad that you did not report the stowaway. It is obvious that his remaining here saved your life. I mean, it's very obvious that you might have been killed."

"Is that obvious?" Jason asked.

"Why isn't it?" his valet said tartly.

Jason's eyebrows went up with surprise. The change in Flack was a little hard to assimilate. "You found a snapshot of the stowaway in Channing Mace's suitcase," Jason said. "All we can safely say is that they know who he was and that he may have had some tie-up with them. Anything beyond that is sheer guesswork."

"But we can as safely assume," Flack said with his new obstinacy, "that one of the Grazzard party murdered him and pushed him out that porthole?"

"There seem to be reasonable grounds for that," Jason answered, "but there are no grounds for assuming that they mistook him for me."

"Perhaps you're right, Mr. Amboy," Flack said, and his air was one of indulgence. "Let's proceed on the assumption that we are both partly right and partly wrong."

His animated brown eyes roved about the room. "I am beginning to see a clear design," he said. "A new one. The stowaway," the valet continued, "was sent here by the Grazzards to spy on you."

When he had found out what he could, he was to kill you and throw your body out of that porthole. That was their plan, but their timing was wrong. By the way, sir, I suspect Mr. Mace of being the murderer. Do you?"

"No, Flack; I have no suspicions. But go on."

"Yes, sir—and I see this design very clearly. The stowaway was supposed to kill you. But Mr. Mace didn't trust him."

"Why not?"

"Because of the obvious consequences. Having killed you, what would have happened to the stowaway? Exactly what would happen to you if you reported his disappearance to the captain of this ship! Do you see what that implies, Mr. Amboy?"

"It's a little vague," Jason admitted, "but go on. You said Mr. Mace's timing was wrong."

"Yes, sir. When he came here, he as-

"Flack," Jason said gently, "I'm afraid the sight of that blood has affected you. We are both guessing. We are both excited. We had better both go to bed."

"Very well, sir," Flack said.

He went to the stowaway's bed, picked up the mattress and carried it to the door. He dropped it, with the bedding intact, on the floor so that it lay close to the door.

"I'm going to sleep here, Mr. Amboy," he said. "If they kill you tonight, it will be literally over my dead body."

Flack met Jason's eyes steadily and there was something a little ominous in his smile. "I trust you have no objections, Mr. Amboy," he said, and his voice held more than a trace of a jeer.

"No, Flack," Jason said thoughtfully. "And I appreciate your solicitude." He wondered how much further this once meek and humble little man would expand. He was still delighted with the blossoming of Flack, but he was begin-

ment longer, then gave her order to the steward.

Lorin was still staring at him heavily and Luana had not yet raised her eyes. She was studying the menu as if it fascinated her. She was pale and there was a dark look about her eyes as if she had slept poorly.

He glanced at Channing Mace, and he tried, as he picked up the menu, to keep his hands steady and to appear calm and unconcerned. If one of these four people had gone into his stateroom last night and killed the stowaway, he was inclined offhand to agree with Flack that it had been Channing Mace. The man's gray eyes, as cold as jewels, the cruel, thin mouth, his past record of violence, which had included one known homicide, favored that view.

Yet he found it easy to visualize Lorin, with his passionate nature, doing such a thing. As for Mrs. Hiram Grazzard, a murder of that sort seemed beneath her dignity, yet she was a powerful woman and perfectly capable, at least physically, of lifting a man's body and pushing it out a porthole.

He looked up from the menu and found Luana's dark green eyes looking at him. It was a direct, brooding stare without recognition, as if she were seeing, not him, but the things he stood for. And she did not return his tentative smile.

When they had all given their orders there was a moment of silence about the large round table, then Mrs. Grazzard said, "You look a little peaked this morning, Jason. Are you still worrying about your engine?"

"Mother," Lorin said heavily, "he doesn't like to have anyone ask questions about his engine. It's a very sensitive topic with him."

"You see, Aunt Bertha," Jason said, "your son is what we liquid-cooling men call an air-cooled man, and we find that we always throw the air-cooled man upon the defensive."

SHE chuckled. "I see. But I'm not interested in this childish argument you two are carrying on over the virtues of this type of engine and that. You say your plant was closed down. Why?"

"I thought I mentioned last night that I'd had to shut down to raise more capital."

"How much capital," she asked, "are you trying to raise?"

"A hundred and ten thousand dollars." He was aware that Channing Mace was bending forward, as if he did not want to miss a word of this, and that Luana was staring at him and that she was paler.

"That shouldn't be hard to raise," Mr. Grazzard said, and it seemed to Jason that there was something slightly mysterious, or significant, about this whole conversation.

"No," he said indifferently, "I don't think it will be."

"But if the engine is so nearly perfect," she asked, "why do you need so much?"

"I'm planning to put it into production," Jason answered.

"That won't be enough to put a new engine into production," Channing Mace said.

Jason glanced at him. And it seemed to him there was something menacing in the cold gray eyes.

"No, Mr. Mace. But that will start on its way."

Jason had no interest in the general conversation that followed. And he had little appetite for the orange juice, the bacon and eggs and the coffee and toast he had ordered. He was trying to push Luana into this grotesque pattern. He was certain that one of these three

sumed that the stowaway had already done away with you, so he killed him and put him out that porthole. Why? Because dead men tell no tales, sir."

Jason shook his head. "It's a very interesting design, Flack, but you're assuming too much with not enough proof."

His valet considered him judiciously. "I see we are back again to our divergent viewpoints, Mr. Amboy," he said blandly. "But I still insist that Mr. Mace killed the stowaway on the assumption that the stowaway had finished with his job of killing you. All the evidence points unerringly to that and to nothing else."

"Yet there is a possibility," Jason said firmly, "that the stowaway was telling me the truth in spirit. We can even assume that he knew that if the Grazzards found him aboard they would kill him."

FLACK surprised him by nodding vigorously. "For the sake of the argument, Mr. Amboy, I'll agree with you." There was elation in his soft brown eyes.

"And how did they discover he was aboard, sir?"

Jason shrugged. "They may have known it all along."

Flack was smiling slyly. "Or—might it have been Mrs. Mace?"

"I hate to think it might have been," Jason answered.

"And I," Flack said firmly, "think it was a grave mistake to give that woman your confidence. She is a treacherous woman. She is nothing but the Grazzards' stool pigeon."

ning to see the glimmering of trouble ahead.

When Jason awoke, Flack was gone. The mattress was back on the bed. It was eight-thirty o'clock.

The Grazzards were just seating themselves when he entered the dining room. Miss Cudlip had already eaten and gone. The silver at Mrs. Mace's place was untouched.

As he sat down in the place beside Mrs. Grazzard, he looked across the table at Luana, and he waited a few seconds for her to raise her eyes. But she didn't raise her eyes. The others were looking at him, and both Mrs. Grazzard and Channing Mace said good morning to him, but Luana Topping preferred to pretend that she was unaware of him.

He was conscious of the strain about the table as he took his place. Lorin was gazing at him with heavy-lidded eyes, steadily and with neither humor nor liking.

Jason said amiably, "Good morning, everybody. Mrs. Grazzard, I hope you slept well."

She was calmly appraising him, with neither approval nor disapproval. Her amber eyes were opaque and dull. Her strong, yellowish face, with its liver spots, looked, it seemed to Jason, more formidable than ever. And he sensed immeasurable depths of mystery and power in this awesome woman.

Mrs. Hiram Grazzard smiled. "You may call me Aunt Bertha, Jason."

"Thank you, Aunt Bertha," he said, and almost laughed.

She gazed at him unsmilingly a mo-

Mrs. Hiram Grazzard, her son, or her plantation manager—had slipped into his stateroom last night and murdered the stowaway. He watched their faces as they talked—and the only conclusion he drew was that he was dealing with a formidable triumvirate.

IT WAS a clear morning with a fresh blue sky and a gently undulating sea on which sun sprites danced with flickering fire, and the breeze was already warm with the promise of tropical islands. The convoy was making long zig-zags.

Jason found Natalie Mace sitting on the deck, well forward on the port side. She was knitting a sweater. She was pale and the fine wrinkles about her eyes were pronounced. Her mouth, in repose, looked cynical. But when she saw him and smiled, the illusion that she was much older than she had seemed last night vanished, and she magically became young and, in her bright blond way, extremely pretty.

A trace of the smile dimpled at the corners of her mouth and her blue eyes glowed.

"You're late," she said. "I've been expecting you for an hour." Looking up at him, she did not interrupt her knitting.

Her dimpling smile was disarming, but Jason was once again doubtful of her. He decided to let his suspicions coast along and to encourage her to do the talking.

"I've been having breakfast with the royal family," he said.

She laughed. "Was it fun?"

"Something was going on," Jason answered thoughtfully. "They asked me lots of questions about my engine. They seem to resent it."

"They're just curious," the blond girl said. "It's their way. Something is always going on. They're horribly upset about you and they want to know all about you."

"Why weren't you there?"

"No appetite. Too nervous. My brain ran wild all night. I didn't get to sleep till dawn. I found out some very important things and there are a dozen questions I want to ask you. Sit down, Jason."

Jason sat down on the deck on her left.

"I've found out who your stowaway is—in case he hasn't already told you. Has he?"

"No."

"And I've found the way we're going to destroy the Grazzards. It's going to be difficult and tricky, but it will work. Your stowaway is Hiram Grazzard's second cousin—Winfield Grazzard. And I think they know he's aboard this ship."

Natalie Mace was knitting rapidly. He realized that she was trying to conceal an almost unmanageable nervousness and excitement.

"And," she went on, "I'm sure I know why Winfield Grazzard is hiding in your stateroom. All these pieces have finally come together like the pieces of a jigsaw puzzle, and they make a very surprising picture. What I want to do is to give you the whole picture, because I want everything clear in your mind."

"This whole family background is hazy," Jason said. "Luana told me last night that Queen Bertha was a Grazzard before she married Hiram. What happened to him?"

Natalie laughed. "What happens to the husband of a queen bee or a black widow spider when he's outlived his usefulness? He died of a heart attack after a terrific quarrel they had. There are all sorts of theories about it, but the two most popular are that either he finally turned on her, or she turned on him—and they had it out. It must have been a terrific row. I understand the servants ran out of the house. Uncle Hiram was no sissy. He was a quiet sort of man. He was firm, quite opinionated, but very just. My private opinion is that she kept goading him until he finally blew up."

"Did anyone overhear the quarrel?"

"Yes. Luana's father and mother were living in the house at that time—it was before a separate house was built for the plantation manager—the one Channing and I now live in. But they evidently didn't talk about it. The third was Uncle Colton—Queen Bertha's brother—who is the crux of this whole thing. And, of course, he has never talked."

"You mean, Colton Grazzard is just someone else she dominates?"

"We'd rather you men didn't take advantage of the fact that you come here for your various ration cards, sir!"

"Oh, yes—but more."  
"I want very much to find out who's running this show."

"Well, I can't answer you simply. There's a tradition in the islands that the Grazzard men have always been dominated by the Grazzard women. It's supposed to have gone on since Faith Grazzard and Captain Ebenezzer Grazzard, of the brig Sweet Hope, landed on Kahuna Island a hundred and twenty years ago. But I sometimes suspect there's been a shifting in the balance of power."

"In what direction?"  
"Well, Lorrin is surly and horribly self-indulgent, but he has strength. Sometimes I think he's stronger than the queen, and is running her. He has the same consuming love for the land—especially good fertile sugar land—that she has. And my husband has been rising in power ever since he took the management of the Kokala plantation. I know that she's afraid of Channing. He's a relentless and domineering person, you know."

"So you can't say definitely who the boss is."

"No. Everyone in the islands assumes that she is, because the Grazzard women always have been. I've had loads of time to look into the family history. The Grazzards have always been a greedy, grasping lot. They're land grabbers, and they're the sort of people who gave the missionaries their bad name, but the missionaries were not land grabbers, in spite of the tales you hear. The early missionaries were Calvinists, who believed in torturing the spirit and denying the flesh. And some of the other early settlers were quite honest in their dealings with the natives in land matters."

"But not the Grazzards?"  
"No, Jason. Captain Francis Sinclair, who bought Niihau, now owned by his descendants, the Robinsons, paid ten thousand dollars for it—in 1860—a very fair price. But Faith Grazzard paid nothing for Kahuna Island forty years earlier. She somehow wangled it from King Kamehameha the Second. She got land any way she could—as cheap as she could and by all the tricks she knew. And she set the pace. Every Grazzard since has used the same methods."

JASON was squinting at the sun glints on the convoy leader, a large destroyer. He found now, as he had last night, that most of his instincts were pulling in Natalie Mace's favor. He still felt that this pretty blond girl with her excited blue eyes might become dangerous, but only if her husband became seriously involved, and he was sure that she was not being devious.

He heard her needles click. "Jason, did your brother spend much time in Burma?"

He glanced at her. "Yes. He loved India and Burma. He was always going back there."

"And you gathered, of course, from the snapshot, that your stowaway has been in Burma?"

"Yes, I noticed the stamp on the back."  
"Jason, how well do you remember Kahuna Island?"

"Not very well, Mrs. Mace. It's a tiny island north and west of Kauai. Kahuna is Hawaiian for 'bewitched,' isn't it?"

"Yes. And Uncle Colton has become, since your time, a bright tradition as the prisoner of Kahuna. Kahuna is *kapu*—forbidden to outsiders. No one has been permitted to land there in years. If you try, you're shooed away by grim natives. Uncle Colton lives on Kahuna in magnificent exile, atoning for his sins. Queen Bertha goes over once a month in her big sampan with food and supplies. In the most palatial way, and on the grand-

est possible scale, Uncle Colton is in the family doghouse."

Jason was puffing thoughtfully at a cigarette. "I seem to recall some of this," he murmured.

"It isn't likely," the blond girl said. "You're probably thinking of the other island—Niihau—the one that's owned by the Robinsons. They're powers on Kauai, and their island is *kapu* too. When you were a little boy you may have seen Niihau feather leis which are treasured, or Niihau pupus—they're tiny, very rare seashells that are strung into necklaces and highly prized. Kahuna is north of Niihau."

NATALIE MACE, with her elbow on the arm of her steamer chair, bent closer to him.

"When Channing and I first went to Kauai, I was terribly interested in Uncle Colton, because I'd heard these stories about him. But I never saw him. No

and her eyes were flashing with excitement.

"Jason, here it is—and I'm afraid it the truth. I think they killed your brother because he knew what it was and was trying to blackmail them, and I think, your stowaway isn't very careful, they're going to kill him for the same reason. I've had to guess at some of this, but I'm quite sure that that's it." She hesitated.

"Go on," Jason said quickly.

"I was awakened this morning," the blond girl continued. "by Channing fairly tearing his suitcases apart. He was looking for that snapshot. He asked me if I'd seen it and I said no and I asked him what it was, and he said, 'Oh, just another blackmailer who has the goods on Uncle Colton.' I asked him who was and he said it was Winfield Grazzard. And he said if I mentioned it to soul he'd murder me."

"Was that all?" Jason asked.

"Wasn't that enough? He was in

one but his sister ever saw him. In twenty years, he hasn't once been off that island. He was called the hermit of Kahuna. Everyone agreed that he was an escapist—that he'd gone to Kahuna to get away from it all. He'd had a nervous breakdown. He was always very neurotic, and he'd been completely dominated by Queen Bertha since they were children."

"Is he older or younger?" Jason interrupted.

"Five years older—about sixty. His one passion, so they told me, was rare old books—first editions. It was only lately that the real truth came out. He wasn't a hermit by choice. He was virtually a prisoner. He had been, in his youth, a very black sheep. His sister, years ago, had yanked him back from the ends of the earth and finally immured him on Kahuna."

Natalie Mace bent closer to Jason. "It must have been something that happened in Burma. He spent a lot of time there. It may have been a murder. But it was something dreadfully scandalous. Everybody has been guessing—but no one knows."

The blond girl paused. She was pale

filthy temper. And that explains everything."

Jason had never seen her so excited. It seemed to him that she was on the verge of hysterics.

"What," he said gently, "does it explain?"

"But everything!" Natalie Mace cried. "It accounts for all the time your brother and your stowaway spent in Burma. Don't you see, Jason? They were digging up Uncle Colton's past to sell at fancy price to Queen Bertha! That's why your brother was killed, and it's why Winfield Grazzard is hiding on this ship. He and your brother were working together on this blackmail scheme! He's hiding because he knows they'll kill him if they find him!"

JASON glanced quickly around. Natalie's voice was almost out of control. "Don't you see?" she repeated. "An if you're tactful and persuasive, Winfield will talk. He's at your mercy. He has to talk! And once he tells you what was that Uncle Colton did in Burma we'll have the weapon we need for destroying these arrogant, horrible people (To be continued next week)

## The Dark Road

Continued from page 60

est of her life, and we're very happy that she wants to marry you."

"All right, sir, but give her the chance to make up her own mind about me."

"If you tell her the truth tonight, she may feel that in common decency she has to be loyal to that other boy, at least for a while," Arthur said. And by that time it may be too late, he added to himself.

"Why wasn't she told in the beginning, when it wouldn't have mattered?" exclaimed Oliver with feeling.

"I told you. She was in a coma for five days after the accident," replied Arthur. "When she regained consciousness she had blessedly forgotten everything about her ill-starred love affair. As she nearly died it seemed wiser to keep her in ignorance. After all, my boy," he added, "she'd only known him three weeks."

"She's only known me five weeks," Oliver reminded him, dryly.

"Yes, but in spite of the lightning quality of this courtship, Mrs. Bellamy and I feel that it is going to last. Lisa has been a changed person lately. She's alive, she's happy, she has everything to live for now. Why do you want her to remember anything about that other affair? Telling her won't bring Roger Kinnard back to life."

After a pause Oliver said, "What was he like, that other fellow? Naturally I'm curious."

"I saw him only once, you know, the night she brought him here to tell us they were engaged. The whole thing was such a shock for me at the time that it was hard for me to make up my mind now I felt about him. He was a flier, like you. He came from Yorkshire."

"Good-looking?"

"Yes, but Mrs. Bellamy prefers your looks to his. She also says she thinks you have more charm."

Oliver smiled feebly. "Well, go on—tell me some more. Was he very much in love with her?"

"With Lisa? Yes. He was desperately in love."

"I don't have to ask if she was in love with him!"

ARTHUR made no reply. He rose and hunted around the room a moment for his pipe and filled it. There was nothing to say.

"Where was the accident?" Oliver went on. "You never told me."

"On a back road between here and Oxford. It's a short cut and saves about four miles. The tree is still there at the crossroads. They've patched it up with cement now and put a warning beacon on it so no one else will crash into it. If you go to Oxford on your honeymoon," added Arthur, "as you said you might, I advise you to take the longer route by Chipping Norton."

"She's bound to remember some day, no matter what I do. Please, Mr. Bellamy, let me tell her tonight! It's only fair to her. This is my last chance before the wedding!"

"I know, Oliver, but I can't let you do it. I suppose I should have told you this before, but knowing your feelings in the matter, I went up to town on Saturday and talked to the specialist who took care of her at the time of the accident. I told him she was engaged to be married, and that her fiancé was very anxious to have her know the truth."

"Yes, and what did he say?"

"Exactly what I thought he would. He says that if we tell her now, just as she's

about to be married, he won't answer for the consequence. You see, Oliver," he continued as the boy gave a murmur of protest, "we never have known the whole story of that accident. It's quite possible she was trying to kill herself when she crashed into that tree. If she remembered that she was desperate enough to want to do away with herself, it might affect her permanently. If you love her, keep quiet."

Oliver buried his head in his hands.

"I hope," said Arthur gently, "that after you're married, it won't make much difference. Perhaps that sounds rather callous toward poor Roger Kinnard, but, as I say, life goes on."

Oliver's reply was inaudible, but Arthur seemed satisfied, for the strained look vanished from his face.

LISA was looking at the wedding presents. They were quite impressive for a wartime wedding. She was admiring the Waterford vase from her Aunt Matilda when she heard the faint tinkle of the telephone. She thrust the vase back on the table, and flew downstairs.

"Yes, Miss, it's him!" said Annie, the maid, inelegant with excitement. "He's calling long distance."

The connection was very bad, and Lisa could barely hear him. His voice sounded faraway and urgent: "Can you hear me, darling?"

"Not very well."

"Is that better?"

"Yes, a little. What's the matter, Oliver?"

"I can't tell you over the phone. All I can say is, prepare for a shock."

Oh, God! thought Lisa, he's going to tell me the wedding's off. Oh, God! I can't stand it.

"Are you there?" he shouted in a tiny voice.

"Yes, I'm here, darling. What is it? What's happened?"

"I'm afraid we can't get married on Saturday."

The hall grew black and she had to steady herself against the wall. She thought of Cook, already mixing batter for the cake, and Simmons filling the garden with flowers, and Annie rushing around with the vacuum to get the house ready by Saturday; and she had an insane desire to break into hysterical laughter.

"Lisa! Are you there? Can you hear me?"

"Yes, darling, I hear you," she said, trying to sound normal. "That's all right, we'll just have to put the wedding off."

"The hell we will!" was the reply. "I want you to come down here and marry me right away, this afternoon! There's a train at one-thirty—I looked it up. Can you make it?"

Three years of war had taught Lisa not to ask questions over the telephone, especially if you were talking to the Air Force, so she stifled her curiosity with magnificent self-control and managed to sound calm when she answered him.

"Yes, darling, I think I can make it. What'll I say to the family? They're not here."

"They'll understand," replied Oliver. "Just leave your father a note."

"Shall I bring the car?"

"Yes. No! Take the train."

"All right."

"Goodbye, darling! I've got to hang up now."

Lisa leaned against the wall for a moment. Then, pulling herself together, she ran upstairs and began to fling vari-

ous parts of her trousseau into a suitcase. While she was packing, Tessie appeared from belowstairs.

"We're going—to be married—this afternoon!" exclaimed Lisa breathlessly. "Tessie, did you hear that? We're going to be married in less than five hours! I'm so happy I could die!"

Yes, she was happy about this unexpectedly hasty wedding—deliriously happy. But in the back of her mind was a dark and as yet unnamed fear, which she wasn't going to think about until she knew why she had to be married in such a hurry.

It was twenty-eight minutes past one when she dashed up to the station in the family car. The only person visible was the stationmaster who was loading bags of meal on a truck.

"What's the matter?" asked Lisa with a faltering heart. "Where's the one-thirty to Oxford and Reading?"

"Didn't you know, Miss?" was the reply. "Owing to the bombing two nights ago, it's been temporarily suspended."

"What'll I do?" she gasped. "I simply have to get there—!"

"Where?"

"You know—there!" answered Lisa crazily. You never mention the exact location of an airdrome.

"I see, Miss—I heard you was getting married on Saturday. Congratulations, Miss!"

"I'm getting married this afternoon," replied Lisa wildly. "That's why I have to get a train, somehow, to— What'll I do?"

"Oh, I am sorry, Miss! There's a train to Reading from Oxford at two thirty-five. You can just make it if you drive fast."

"Drive—! Yes, of course! Why didn't I think of that before? There's enough petrol in the car."

As she turned on the ignition and started to back the car away, the stationmaster called after her, his voice full of sympathy and good will, "Take the short cut, Miss, near Wootton—it saves about four miles!"

SHE had ample petrol—the only really scarce commodity was time. She put her foot down on the accelerator and kept it there. Trees and houses flashed by as the world narrowed down to a strip of gray road leading to Oxford, and the clock on the dashboard moved inexorably toward the hour. Tredington, Shipston-on-Stour, Long Compton—recognizable although all the signposts were gone from the roads. And then a little dirt road branching off to the right—the short cut. She remembered it vaguely—or rather she had one of her flashes—but there was no time to think of anything as silly and unimportant as flashes. She must catch the two thirty-five to an unnamed airdrome south of Reading.

The little road was straight and lonely. She clung to the wheel as the speedometer climbed to seventy. The branches overhead made a green tunnel of the road—"green as a dream and deep as death." She was thinking what a pretty road it was when suddenly, without warning, she came to a tree at the crossroads.

The huge oak with its gaping side filled with cement loomed out of the mist, and with it came Roger's face—gay, brilliant, and adoring.

The car gave a sickening lurch as she avoided the tree and crashed into a soft bank of willow herb and hawthorn. And during that moment, when life hovered

## MEDICATED FOR SANDPAPER THROAT

Does your throat feel prickly when you swallow—due to a cold? Benefit from Luden's special formula. Contains cooling menthol that helps bring quick relief. Don't suffer another second. Get Luden's for that "sandpaper throat!"

**NEW!** LUDEN'S HONEY-LICORICE COUGH DROPS! Here's a new flavor in cough relief by the makers of Luden's Menthol Cough Drops. Both are medicated. **5¢**

in the balance a second time, she remembered all there was to remember.

—All those shy, secret meetings—that wild, unreal feeling, like wings! Those short, stammered sentences that held so much of wonder and of love! The little dark pub where he had asked her to marry him, and the bitter taste of the ale, which was sweeter than nectar! And then the handful of days when they had tried to hide it from the world because it had all been so quick. No one knew at first but Winkie Ellis, his best friend. The three of them had had dinner one night at the Savoy, and a fellow officer had seen them, and Winkie had laughed and said, "Now you'll have to tell everybody."

But it seemed hard to believe that anyone would understand how wonderful and how right it was, because she had met him on a Tuesday and had promised to marry him by Saturday. They made their plans for the wedding in that same pub. She was to be married in white satin and lace, because Roger wanted a dignified, formal wedding, and Uncle Hilary was to come up from his church in Devon to marry them. They had drafted a letter to Uncle Hilary, which was never sent...

A LONG shudder went over her, and all the color drained slowly out of her face. Although two years had passed, she could still hear Winkie's voice over the telephone saying, "Lisa, I've got some bad news for you!" Her stomach curled now, the way it curled that terrible afternoon.

—You had known, even before Winkie told you, that Roger was dead. Winkie wanted to help you, but he had to stay on duty, and the family was in London. There was no one to turn to in the first wild agony of loss, no one to comfort you. So you took the car out of the garage and drove recklessly around the countryside. You were grim and desperate—you felt that life was over. Life, which had been so sweet, and so full of laughter. There was nothing to live for now.

The car whirling through the summer afternoon, a tree looming ahead, and then darkness...

Lisa bowed her head over the wheel. "Oh, Roger, Roger, forgive me! Such a stupid childish thing to do! Not worthy of you, Roger! Are you there? Can you hear me? Oh, my heart's darling, how could I have done that when our love was so fine and so beautiful?"

I was cheap, when I should have been strong and brave!... Roger, darling, can you hear me?"

Another tide of memory flowed into her mind. A slender young man in an American Air Forces uniform looking at her from the other side of a crowded dance floor, his eyes full of lively interest. The sudden throb her heart gave as she saw him coming toward her. Then he was standing beside her saying, "Didn't I meet you at the Montagues?" She was afraid when she said "no" he would make some polite excuse and go away again, but he stood there looking down at her with an engaging smile. "Does it matter very much—because if it does, I'll go and find someone to introduce us. My name is Hamilton."

"And mine," she said with an answering smile, "is Lisa Bellamy."

He sat down beside her, and after a while, although they had not been properly introduced, he asked her to have supper with him. When he said good-night, he asked her for a date the next afternoon. She thought it was just because he was on leave and was lonely. It never occurred to her that it might be anything else. She was genuinely surprised and not a little shaken when, at the end of a week, he told her he was in love with her. He said that, of course, it was too soon to do anything definite about it, but in time it might lead to something really serious. And she wondered if he meant marriage, for by then she knew she was in love with him, too.

And now he was going off to war. The thought which you had pushed to the back of your mind all afternoon was too big to dismiss any longer. In a few hours, perhaps tonight when darkness fell, he was going to climb into a plane with his parachute strapped to his back and take off for an unknown destination, like Roger—and like Roger, he might never come back!

You remember all the things he had said to you, the dear words of love, the little kindnesses, and the way he smiled at you when he was happy. . . . You remembered a certain picnic at Godstow, the sunlight pouring down upon the lazy river and the cool shade under the willows and the water lipping against the sides of the punt. . . . Things shared, never to be forgotten as long as you lived. . . . And, above all, you remembered his unfailing tenderness.

As she sat there, bowed over the wheel of the car, she wondered if he knew the truth about her, if the family had told

COLLIER'S

CHON-DAY

im. She was almost certain they had, or Oliver had behaved very strangely the other night; she had caught a look of fear in his eyes as though he dreaded something. It couldn't be death, because he was sure he wasn't afraid of that.

"Oliver!" she said brokenly. "Oh, Oliver!"

The minutes slipped away. She had lost the train to Reading. She leaned forward and switched on the ignition. When she maneuvered the car out of the ditch, and turned it toward Oxford. She must hurry! Hurry!

"Oliver, Oliver! I'm coming—wait for me! I have something I want to say to you! . . ."

DUSK was falling when she saw the airdrome ahead, lying like a sleeping Mammoth in a curve of the Downs. There were guards around it; she couldn't be allowed to go in, but Oliver could be waiting for her outside the gate.

A moment later she saw him, looking dejectedly in the direction of the railroad station. She blew the horn and he came sprinting toward her with a cry of relief: "Lisa, darling—! What happened to you?"

"Nothing," she faltered.

"Did you miss the train?"

Lisa opened the door of the car without replying and asked him to get in. There was a little pub farther down the road and she motioned toward it. "Let's go there, Oliver. I want to talk to you." "But, Lisa!" he protested, "the vicar is waiting at the church to marry us—we're hours late as it is!"

"I know—but I want to talk to you first."

Only then did he realize what she was saying—the full import of her quiet statement. All the light in his face died suddenly as though someone had blown out a lamp. He stared silently ahead of him at the dusty road while Lisa switched on the ignition again and drove the car into the courtyard of the pub. Lisa walked ahead of him into the crowded bar and asked if there was a private room. Oliver ordered beer for himself and tea for Lisa. Then they were ushered into a small room with a large poster of Clovelly on the wall and the door closed behind them.

"I couldn't talk to you out there," she said. "I had to be alone with you. What I want to say won't take very long."

Oliver sat down heavily in an over-stuffed chair and looked at the fire where new flames were playing among the coals. Lisa sat down opposite him on the sofa and pulled off her gloves. There was an uncomfortable pause while their order was brought in.

"You know everything, don't you, Oliver?" she said at last.

"Know what?" he parried.

"Don't try to pretend you have no idea what I'm talking about. I took the short cut by Wootton, Oliver!" she said meaningly.

She forced him to look at her until their eyes met. "Well," he said huskily, "I suppose it all came back."

"When I saw the tree, it brought it all back."

"Well," he repeated, keeping his eyes on the dusty carpet under his feet, "it was a good thing."

"I remembered everything about Roger and me. There isn't a thing I've forgotten about him, not a day, not an hour."

"Fine!—that means you're completely over your amnesia," he said, and his voice was matter-of-fact and calm, although his face was as gray as the ashes in the grate.

Their eyes met again, and he knew

that she remembered she had tried to commit suicide. But her expression was unchanged, and her eyes were steady. "I wish someone had told me, so I wouldn't have had to find it out this way, but it doesn't matter. . . . What does matter is you."

Oliver shook his head. "That's all right. I'll just tell the vicar you couldn't make it."

Lisa went on as though she had not heard him. "And I remembered a lot of other things—things I can't forget."

"Such as?"

"The Sunday we went to Godstow—how happy we both were. It was so perfect and so sweet that nothing can spoil it. Roger and I never went to Godstow, Oliver. . . ."

He did not say anything. She leaned forward until she could have touched him, but she kept her hands in her lap.

"Oliver, listen to me!"

"Yes, Lisa?" he said, turning from the fire.

"I have all those memories of Roger now—the fun we had together and—and everything. But I can't forget Godstow!"

"Don't you think you'd better wait for a while? You don't know what you want this afternoon. You think it over for a while, and when I come back—"

"No," she said. "I sat under the tree for a long time, Oliver—I've done all the thinking I'll ever have to do. Roger's gone. He's part of the sky and the sea, or wherever it is we go when we're through. He can't come back, Oliver—but you can. You will."

"—And so," she said, taking a deep breath, "I'm thinking of the future, I'm not remembering the past."

"But you can't forget him as easily as that!" protested Oliver. "You were in love with the fellow, and he was in love with you. You haven't had a chance to make up your mind whether you want to be faithful to him or not. That's why I wanted to tell you the other night."

OLIVER rose to his feet, and his eyes were dark with pain. She touched him gently on the arm and he reached for her hand and held it.

"Oliver!"

"Yes, darling?"

"Do you want to marry me this afternoon, or not? I mean, what are your own feelings in the matter?"

"Of course I want to marry you, but—"

"—But you're afraid I'm still in love with Roger. How can I ever make you see that I can remember him, but at the same time I can't forget Godstow, or the things you said that afternoon, or the way you kissed me? I can't forget how we've loved each other!"

He pressed her hand and looked at the dying coals. "I love you terribly, Lisa," he said, "and it would make it a thousand times easier for me tonight when I take off, if we were married. But I don't want you to do this on the spur of the moment and then regret it."

"How can I have any regrets, when I love you the way I do? And anyway," she added, "everything we do nowadays is on the spur of the moment. You've got to learn to think fast."

Oliver paused and she could hear the flames fluttering in the grate and the soldiers laughing in the next room. A plane took off from the airdrome and she heard it whine away across the Downs.

"And if I don't come back—what then?" he said. "Perhaps I might die, like Roger."

"Yes, Oliver," she said quietly, looking up at him, "but this time I'll know how to live."

## A Letter from a Sailor

Dear Sir: I am a sailor at home on furlough and at the present time I am very *peevish* about the rationing setup.

In the first place, when a man on furlough goes home, he is creating a hardship for his entire family, due to the fact that his immediate family has to furnish the coffee, sugar and gasoline that he uses.

I don't think just because I have on a uniform, that I am a privileged character, but I do believe there should be some method established whereby my family would not have to do without essentials because of me.

It is beside the point that they (my family) are very willing to sacrifice anything in order that I may enjoy a brief visit with them.

It seems as if everything will be rationed in the future. So why doesn't someone take the initiative to see that the families of men in the service are treated better.

**WE** CALL the above a heart-warming and heart-tugging document. It goes to show what manner of men a lot of our fighters are—hard as Fortress armor outwardly, and inwardly

as generous and as concerned for the rights and comforts of other people as the old-time knights were supposed to be.

This sailor's letter reminds us of the yarn some columnist told a while ago, about a soldier who was having breakfast in a dining car and heard a lady at the next table berating the waiter because he could not serve her a second cup of coffee. The soldier listened to the tirade for ten miles or so, then got up, took his own cup of coffee to the lady's table, presented it to her with a bow, and said, "Madam, here is one thing more that I can do for my country." The pay-off was that the lady took the soldier's coffee and drank it.

We hope the hardship which the sailor describes in the above letter can be remedied somehow. It must occur innumerable times now, and will be multiplied all over the country as rationing extends to more and more commodities.

Whether this hitch can be unhitched or not, the letter serves to illustrate what sort of period this country is entering.

We are in an era when we can't eat exactly what we want, burn the kind of fuel we like best, go as far as we'd like to go in the car of a Saturday or Sunday, take a trip to some place we've long wanted to visit.

The war has done it to us, as wars always have done to even the wealthiest and most fortunate of nations.

There is only one thing for us to do about it, and that is to keep the old chins up and co-operate in any and every form of rationing or other restriction that our common sense tells us must be endured as a civilian contribution to the winning of the war.

Some pretty able, trustworthy men, by and large, have been handed various rationing and conservation boss assignments.

William M. Jeffers, rubber conservator, is a rugged railroad executive who has been around, knows that there are exceptions to all rules, and is determined to keep this country on rubber-tired wheels somehow. Paul V. McNutt, manpower boss, is an experienced politician—meaning he must know that you can order Americans into this job or out of that one with safety to yourself, only if they are convinced that your orders make sense.

Claude R. Wickard, now National Food Administrator, with full responsibility for and control over the nation's food program, has already had solid experience as Secretary of Agriculture and is an advocate of people eating more rather than less if it can possibly be arranged.

All three of these men have the positive "nothing is impossible" outlook, rather than the old familiar "can't be done" attitude that possesses the typical bureaucrat, with his small mind and his passion for inflexible rules and regulations whose enforcement makes more jobs for others of his kind.

Harold L. Ickes as Petroleum Co-ordinator has been doing well by general report. Ickes has courage, and nowadays seems to have found a new capacity to co-operate with men skilled in the oil industry.

If the President can keep on making appointments as good as these to key jobs, whose holders will have to muscle in on our private lives as one essential to the winning of the war, we ought to get through the era of rationing and privation as well as could be hoped. It will not be fun, and we cannot string along with those bright, cheery souls who keep yapping at us that all this is going to do us a world of good.

We don't look for it to do any of us any good. But that isn't the point. The point is that we have got to win this war or we shall all be taking orders from Berlin and Tokyo for the benefit of the Axis peoples, not of ourselves. To fend off that calamity, we've got to deprive ourselves now, no matter how disagreeable it may be.

After the war is won, many a bureaucrat will want to keep right on ruling, restricting and regimenting his fellow Americans. It can't be done and it won't be done.

That is not what we are fighting this war for, thank you very much.

We are fighting this war to keep our democratic system; and one essential feature of that system is individual freedom from all but the most elementary interference by public officials with the lives of private citizens. We mean interference by the courts and the police to keep one person from treading too heavily on other persons' toes, and so on.

As soon as the guns fall silent, we shall rear up unanimously and begin to howl for the restoration of our liberties—all our liberties—and we will get them all back.

We have to sacrifice now in order to be free during the long years to come.

JAN 23 1944  
PUBLIC LIBRARY  
BURLINGAME  
CALIF.

*"Take it easy, Prince; we'll give you  
a run in London tonight!"*

a short, short way to Tipperary as the  
Command flies away. It will be even  
shorter tomorrow.

For the hearts and hands now building planes  
to destroy our enemies will be turned to the  
creation of a new and better world.

If you could only sit down and talk to the  
men in the aviation division of B. F. Goodrich,  
your imagination would be stirred by the  
miracles which are going to take place after  
this war.

They'd be able to tell you about the weather  
five miles up and the fight they've been waging  
to tame it. They could tell you hair-raising

stories of what ice did to planes before B. F.  
Goodrich De-Icers were developed.

They could tell you of a type of brake  
(called the B. F. Goodrich Expander Tube)  
which does wonders stopping the lightning-  
fast fighter planes we're building today, and  
they'd add, "We think your plane-of-tomorrow  
will have this new kind of smooth-stopping  
brake."

They could show you tires used on bombers,  
like the Flying Fortress, that are taller than you  
are and can absorb the 80-ton shock of landing

one of these giants. You'd recognize the  
name of these tires from your own driving  
experience, because it's "Silvertown."

These are only a few of more than 80 natural  
and synthetic rubber products which B. F.  
Goodrich is turning out to hasten the day of  
victory. They'll be here *after* victory, too . . .  
so the airliner you hop for Europe  
will be that much more com-  
fortable—that much safer.

Here are some giant American cargo planes that are supplied  
with B. F. Goodrich equipment!

MARTIN MARS

# Picture OF THE MONTH

**SPENCER KATHARINE  
TRACY · HEPBURN**

in  
**KEEPER OF THE FLAME**

*A Metro-Goldwyn-Mayer Picture*

**WITH:** *Richard Whorf, Margaret Wy-  
cherly, Forrest Tucker, Frank Craven,  
Horace McNally and Percy Kilbride*

**SCREEN PLAY BY:** *Donald Ogden  
Stewart, based upon the book by  
I. A. R. Wylie*

**DIRECTED BY:** *George Cukor*

**PRODUCED BY:** *Victor Saville; Asso-  
ciate Producer: Leon Gordon*

**CAPSULE REVIEW:** If one were to de-  
scribe the mood of this film, reference might  
be made to "Rebecca", for "Keeper Of The  
Flame" is a story of persistent suspense—  
definite, unswerving, with no resort to little  
tricks of bogus byplay. We see the Forrest  
family holding aloft the torch of tradition—  
the great man who was killed in an accident  
at a bridge. Steven O'Malley, as played by  
Mr. Tracy, is a journalistic inquirer who  
finds his mind and his life caught in the web  
of exaltation that was woven around the late  
Mr. Forrest. Call it a mystery, but certainly  
a different kind of one, for its realism is not  
only active but psychological.

That well-known animal magnetism called  
love which is generated between the two lead-  
ing characters is neither syrupy nor moon-  
drenched. Two strong men, in a sense, have  
come face to face—only one of them is a  
woman. The word 'best' is thrown around  
too easily—but this is Miss Hepburn's best  
performance. She is better than in "Phila-  
delphia Story" or "Woman Of The Year".  
Tracy, ever the master of restraint, gives  
his expected distinguished performance.

"Keeper Of The Flame" was directed by  
George Cukor just before he became Private  
George. Its supporting cast is one of great  
excellence, and it is produced by Victor  
Saville with painstaking care in the MGM  
manner reminiscent of "Random Harvest"  
and "Mrs. Miniver". Its details of atmos-  
phere, the play of light and shade on the  
remarkable personalities, have been captured  
with outstanding cameracraft by Director  
of Photography William Daniels. Miss Wylie  
should be pleased with what has been done to  
her book. And the public certainly will be.

**NOTES ON OTHER PICTURES:** "Stand  
By For Action" is hailed by American Naval  
Officers as the greatest picture of the Navy  
in action ever to have been made.

**TWO MUSICALS:** "Cabin In The Sky" and  
"DuBarry Was A Lady". Watch for both.

## ANY WEEK

MR. WENDELL L. WILLKIE'S mail  
was better than ours this week. At least  
one of his letters was. It came from  
Winston Churchill. In it Mr. Churchill  
said: "Your visit to Cairo did no end  
of good and all your most sanguine  
forecasts were borne out by the ensu-  
ing battle." Mr. Willkie was not at all  
eager to have this letter published, but  
we won him over by reminding him  
of what we had printed about his visit  
to the desert. As if he needed remind-  
ing.

**ON PAGE 61 appears a message  
for every alert young woman  
in this country. It is pub-  
lished by the Women's Army  
Auxiliary Corps and shows  
you one vital way in which you  
can help win the war. We urge  
you to read it—every word.**

SOMEHOW, and against our better  
judgment, we got into a nice loud dis-  
cussion of 1943's war outlook. Natu-  
rally, it presently got to postwar talk.  
Somebody inserted the customary  
doleful prophecy of unemployment  
after the fighting stops. But fortunately  
there was a book publisher present.  
"Unemployment?" he cried. "Non-  
sense! Even if we have seven million  
men in our Army, they'll all be busy  
—busy writing books about their ex-  
periences. It is my firm belief, as a  
publisher, that there is not a man or  
woman in America with even the re-  
motest association with our Armed  
Forces who is not now writing a book.  
I shall doubtless publish some of them.  
But I predict that the biggest seller to  
come out of this war will be the tale of  
some fellow who was an extremely bad  
soldier, who saw no action, who was  
nowhere near anyone who was heroic  
or near any place where one could be  
a hero. In other words, the story of a  
guy who was of no use at all to the  
cause of the United Nations. If any  
of you discover such a man, with such  
unusual experiences, will you please  
let me know?"

FROM the home of the Honorable  
Theodore Bilbo, senator from Missis-  
sippi, comes advice that you are quite  
wrong if you believe that Negroes do  
not pay poll taxes in Mississippi even  
if they may not vote. Our informant  
understandably asks us to withhold his  
name. "It is the custom here," says he,  
"for our tax collectors to attach the  
wages of Negroes who work for rail-  
road companies and other large em-  
ployers of Negro labor in order to

collect poll taxes. But there's a catch.  
This attachment and collecting is done  
after the last date for payment has  
passed, so that the tax receipts may  
not be used to insure the privilege  
of voting. Did anyone think of asking  
the filibustering Senator Bilbo about  
this?"

IN AN offhand way, we've been ap-  
proached by several Army people ask-  
ing us to play down the Marines for a  
while and boost the American soldier.  
One suggested that it is in the inter-  
ests of general morale that we make no  
distinction at all in writing of the work  
of American ground forces—that all  
be called just soldiers. We spoke to a  
Marine officer about it. "Maybe they're  
right," said he. "We Marines have been  
having a hard time, though, to save  
enough of the enemy for the Army to  
work on a little. They didn't send us  
to Africa because it wasn't necessary.  
We've been kidding the Army along,  
telling them that they're just as good  
fighters as the Marines, and the damn'  
fools took us seriously and are believ-  
ing us."

A TIMELY bit of intelligence comes  
from a captain of Marines who was  
buying himself a pretty dashing outfit  
in one of New York's high-priced  
shops. A citizen who is no longer  
young but who undoubtedly will ac-  
quit himself with credit was buying a  
Navy overcoat. His wife was present  
to advise. The new Navy officer, sched-  
uled, we'd guess, for a noncombatant  
job, tried on several overcoats without  
any noticeable transformation. Finally  
the salesman looked to the lady for the  
final word. "I'm sure they're all regu-  
lation and very nice," she sighed. "But  
could you do anything to make him  
look less like a policeman?"

WE ARE getting a lot of letters pre-  
dicting the date or approximate date of  
this war's end. The winter of 1943 and  
the spring of 1944 are running neck  
and neck. Too, we're getting letters  
from ladies and gentlemen who deplore  
what they believe to be a growing hope  
that the finish will come sooner than  
that. None of those latter are in the  
fighting forces, of course. They merely

COMBINED PRICE TO MEMBERS  
**\$3.00**

**IF YOU WERE A MEMBER AND BOUGHT THESE SELECTIONS FROM THE CLUB**

*You would have received four of these book-dividends Free*

**A FREE COPY...TO NEW MEMBERS**

*of any one of the Book-Dividends pictured above!*

Begin your subscription to the Book-of-the-Month Club with one of its selections pictured at the top. Surely, among them is one you have promised yourself to get and read. As a new member, the Club will send you, free, any one of the recent book-dividends shown directly above.

**WHAT A SUBSCRIPTION INVOLVES.** Over 500,000 families now belong to the Book-of-the-Month Club. They do so in order to keep themselves from missing the new books they are really interested in.

As a Club member, you receive an advance publication report about the judges' choice—and also reports about all other important coming books. If you decide you want the book-of-the-month, you let it come. If not, you can specify some other book you want, or simply say: "Send me nothing."

Last year over \$5,000,000 worth of free books (figured at retail value) were given to the Club's members—given, not sold! These book-dividends could be distributed free because so many subscribers

ordinarily want the book-of-the-month that an enormous edition can be printed. The saving on this quantity-production enables the Club to buy the right to print other fine library volumes. These are then manufactured and distributed free among subscribers.

Your obligation as a member is simple. You pay no yearly fee. You merely agree to buy no fewer than four books-of-the-month in any twelve-month period. The subscription period is not for one year, but as long as you decide; you can end it at any time after taking four books-of-the-month. You pay for the books as you receive them—the regular retail price (frequently less) plus a small charge to cover postage and other mailing expenses. (Slightly higher in Canada.)

## LIST OF BOOK-DIVIDENDS DISTRIBUTED FREE AMONG MEMBERS:

- A TREASURY OF GILBERT & SULLIVAN (\$5)  
Edited by Deems Taylor
- WAR AND PEACE by Leo Tolstoy (\$3)
- SUBTREASURY OF AMERICAN HUMOR (\$3)  
Edited by E. B. and K. S. White
- A TREASURY OF THE WORLD'S GREAT LETTERS  
Edited by M. Lincoln Schuster (\$3.75)
- SELECTED WORKS OF STEPHEN VINCENT BENET (\$5)
- THIS IS MY BEST  
Edited by Whit Burnett (\$3.50)
- LEAVES OF GRASS  
by Walt Whitman (\$5)
- SHORT STORIES FROM THE NEW YORKER (\$3)
- A CONRAD ARGOSY  
by Joseph Conrad (\$5)
- THE READERS DIGEST READER (\$3)
- REMEMBRANCE OF THINGS PAST  
by Marcel Proust (\$5)

BOOK-OF-THE-MONTH CLUB

A471

385 Madison Avenue, New York, N. Y.

Please enroll me as a member. I am to receive a free copy of any one of your recent book-dividends shown in bottom row, and for every two books-of-the-month I purchase from the Club I am to receive, free, the current book-dividend then being distributed. I agree to purchase at least four books-of-the-month each year from the Club.

**DARLING, IN THIS MOONLIGHT YOUR BRISTLES LOOK JUST LIKE PROLON!**

**FLATTERER! I'LL BET YOU TELL THAT TO ALL THE GIRLS**

For years hog bristle made the best tooth brushes... then along came round-end **PROLON**

Actual Photo-Micrographs

PROLON "ROUND-END" ORDINARY BRISTLE

Bonded Pro-phy-lac-tic

WITH PROLON BRISTLES A PRODUCT OF DUPONT CHEMISTRY

Next time you buy a tooth brush, keep this in mind: Years of laboratory research have produced amazing new synthetic bristles . . . better, longer-lasting than natural bristle.

And among the new synthetic tooth brush bristles being marketed under various trade names, far and away the best are those made by duPont.

#### PROLON—no finer bristle made

"Prolon" is our name for the very finest grade of this synthetic bristle that duPont makes. So, when you read or hear competitive tooth brush claims, ask yourself this: How can the same duPont bristle, in another brush under another name, last longer or clean better than under the name "Prolon" in a Pro-phy-lac-tic Tooth Brush. You know

the answer . . . it can't!

Pro-phy-lac-tic's big plus is that Prolon is the only synthetic bristle that is rounded at the ends.

Yes, under a special patented process, exclusive with Pro-phy-lac-tic, we smooth and round the end of each and every Prolon bristle in the Bonded Pro-phy-lac-tic Tooth Brush. See for yourself how much gentler these round ends are on tender gums!

#### Only PROLON has "round ends"

Remember, no other tooth brush has this important feature. So, next time you buy a tooth brush get the best you can buy for your money . . . get the Bonded Pro-phy-lac-tic Tooth Brush—the only tooth brush, by the way, with a written six-month guarantee.

... and don't miss this new line of hair brushes in gleaming Jewelite!

Pro-phy-lac-tic's latest triumph! Dresser sets and toilet brushes in crystal-clear plastic. Choice of four gleaming, jewel colors. Transparent Jewelite backs. Moisture-resistant, snow-white Prolon bristles. \$1.50 to \$10.00—at most brush-goods counters. Illustrated: Roll-Wave, a unique "curved-to-the-head" brush . . . with comb, \$4.50

PRO-PHY-LAC-TIC BRUSH CO., Florence, Mass.

## KEEP UP WITH THE WORLD

By Freling Foster

No sandwich comes anywhere near approaching the smørrebrød of Denmark in size, variety and color scheme. Laid alongside one another butter side up on a large tray are eight slices of white, brown and black bread covered with generous portions of anchovies, sardines, cheese, veal, lobster, smoked salmon, roast beef, raw oysters and goose liver.—By E. V. Meuhl, Brooklyn, New York.

The only memorial in the United States to German military men of the first World War was erected in 1932 in Asheville, North Carolina. It overlooks the graves of the eighteen enemy sailors who died there in an internment camp in 1918.

Eugene Ely, a civilian aviator, was the first man to fly a plane from the deck of a ship when he took off from the U.S.S. Birmingham in Hampton Roads on November 14, 1910. He was also the first man to land a plane on a ship when he alighted on the U.S.S. Pennsylvania in San Francisco Harbor on January 18, 1911.

On a rock on Adam's Peak in Ceylon, a footlike impression, five feet by two feet, is the object of an age-old dispute among the adherents of three great religions. The Buddhists claim it was made by Buddha, the Hindus claim it was made by their god Siva, and the Mohammedans claim it was made by Adam when he stood there for two centuries, to atone for his sin in the Garden of Eden.—By Blanch Hamilton, Clifton, New Jersey.

The first contingent of America's North African Army required 700,000 different kinds of items of equipment and supplies. Among them were nearly 400 different items of clothing and personal equipment, 10,000 items for the Signal Corps, 68,000 for the Medical Corps and 100,000 for the Engineer Corps, including such things as bridges, trucks, well-drilling equipment, storage tanks and railroad locomotives.

Many persons in Norway still follow the old custom in which both man and wife wear a wedding ring on the third finger of their right hand and, when one dies, the survivor transfers it to the third finger of the left hand. Hence two rings on the left hand and one on the right signify that a woman has been widowed twice and is now married again.

A study of the works of nearly one thousand famous American and British writers to determine at what age they reached their greatest literary ability shows that their masterpieces were written, on the average when they were in their forty-sixth year.—By Grace A. Wagner, Long Island City, New York.

The invention of the Roberts Torpedo in 1866 was followed by the greatest patent litigation in American history. Before the legality of its patent was upheld by the United States Supreme Court in 1880, this device for shooting oil wells was so widely infringed upon that more than 16,000 suits and countersuits were filed, all those brought to a decision being won by the inventor.—By Salvatore Ridolfi, New York, New York.

For every American and Briton who can read and write the Japanese language, there are at least ten thousand Japanese who can read and write English.

Since 1862, when internal revenue laws again became effective, the alcoholic beverage industry has paid more than \$14,000,000,000 in excise taxes to the United States government. Other direct and indirect taxes levied by states and municipalities on dealers and consumers are beyond calculation.

Five dollars will be paid for each interesting or unusual fact accepted for this column. Contributions must be accompanied by satisfactory proof. ## Josiah Sprinkle's oversize dollars

OUT OF THE ROUGH HILLS of Kentucky, one day in the early 1800's, came an old man, Josiah Sprinkle, carrying a sizable buckskin pouch crammed to overflowing with large silver coins.

Entering the town of Washington, the county seat of what was then Bourbon County, he spent his coins as silver dollars, although, other than their outline, they bore little resemblance to the national coin of the period. On one side of the coins was an owl, and on the other a six-pointed star. The inscriptions were rudely done, and the edges of the coins were smooth.

Being considerably thicker and larger than regular dollars, and of pure silver without alloy, they were actually worth more than those minted by the Treasury.

When pressed for information about his oversize dollars, Sprinkle was usually noncommittal.

Only once did he divulge that, many years before, he had discovered a rich vein of silver, had carefully worked it for years, and was now enjoying the fruits of his labors. But where his mine was, he would never say, nor was it ever found out.

We think it may safely be assumed that you are not so fortunate as Josiah Sprinkle. Rich veins of silver are not lying around just for the finding. But you can make your own arrangements to provide yourself with oversize dollars for the times when you need them most. The way you do this is through insurance.

In insurance, you pay out small dollars and get back big ones. This is because of what the economics professors sometimes call the "time utility" of wealth. In plain words, this means that your dollars are worth more to you at some

times than they are at others.

As, for example, when a burglary, a fire, an automobile smashup, or some other unexpected event causes damaging loss of your property, and, perhaps, serious injuries to you. That's when your insurance dollars, available for just such emergencies, look as big as cart wheels.

Your Travelers agent or broker will gladly explain just how you can best provide oversize insurance dollars for any emergency, and assist you in choosing the proper insurance for any hazard against which you want to protect your property, your pocketbook, and yourself.

**MORAL:** Insure in The Travelers. All forms of insurance. The Travelers Insurance Company, The Travelers Indemnity Company, The Travelers Fire Insurance Company, Hartford, Connecticut.

# PATTERN FOR PLEASURE

AS PREDICTED BY DAVE CHAPMAN

NOTED INDUSTRIAL DESIGNER

Dave Chapman . . . though comparatively a newcomer . . . has already become one of the foremost designers in the midwest. Over one hundred million dollars worth of Chapman designed products have been sold in a single year.

What do you think the radio of the future will be like? We have asked that question of a score or more of America's most noted industrial designers. Pictured above is the intriguing prediction that comes from the gifted pencil of designer Dave Chapman.

While both great Admiral plants are devoted exclusively to the production of radio communication equipment for our armed forces, Admiral engineers are already thinking and planning for the day when victory shall be ours. When that day comes, look again to Admiral . . . world's largest manufacturers of radio-phonograph combinations with automatic record changers . . . for "America's Smart Set" and exciting new adventures in radio entertainment. Continental Radio & Television Corporation, Chicago, U.S.A.

**TUNE IN . . .** 2:30-2:55 p.m. New York time, Sunday afternoon. Admiral Radio brings you "World News Today" over the Columbia Network . . . with direct short wave reports from the leading news centers of the world.

**Admiral**  
RADIO

**A M E R I C A ' S      S M A R T      S E T**

**WING TALK**

Officers' caps with the nonchalant droop indicate wearer belongs to the A.A.F., who customarily move wire stiffening. In group above are Generals Frank, C-dee, Eaker, Hunter and Spa. Carrying torch for the ground forces, General Eisenhower, right.

**H**ITLER used to win important victories without bloodshed by showing prominent visitors from neutral countries how strong Germany was. An inspection tour of the Reich's great aircraft and tank factories and its well-drilled land and air forces often was all that was needed to influence a wavering neutral country to enter the Nazi camp.

This one-time potent argument seems to have lost its force as an Axis weapon. Hitler's device has been used against him by Uncle Sam. Recently groups of officials and correspondents from the leading neutral nations have been invited to the United States and given a good look at our growing might. The result has been highly satisfactory to the Allied cause.

There were, for instance, the top-notch Turkish newspapermen who have just left America, following a trip through our arms plants and military, naval and air bases.

Several of the group had learned the rudiments of their profession at our Columbia University School of Journalism, but they were neither pro-United States nor pro-Axis; just pro-Turkey. They were much impressed with what they saw here. This was evident in their observations and their dispatches to their papers at home. Some of the group doubled in brass as both editors and government officials, so their views will have great weight in Turkey—easily the most important remaining neutral.

One of the visiting newsmen, after seeing the huge new aircraft factory at Willow Run, Michigan, cabled his paper that he believed it will turn out more planes than all the Axis plants put together. All of them were especially interested in finding out how we were going to meet the U-boat menace. A stay at the Kaiser shipyards did much to answer them here.

What made the trip especially valu-

able was that the group had just come from a tour of Germany. They were taken through great aircraft factories and arms plants as of old, but this was not what they particularly wanted to see. Just as in the United States they wanted to know how we would be able to beat the Axis submarines, so in the Reich they sought to find out how the Germans fared as to food and raw materials.

At first, they were greatly impressed. Everywhere they went, there seemed to be plenty of good food. They stopped at hotels, and the menus were surprisingly rich for a nation at war—especially one that in prewar days had given butter for cannon.

Some of the Turkish newsmen, however, soon began to smell a rat. The meals, though very good, were so very much alike. Was the New Order re-education so effective that the kitchens of Germany's best hotels all cooked according to party formula? Could it be possible that the best chefs of the country—egotistical and individualistic—are all true artists—had given up their own famed sauces and dressings and were following a Goebbels cookbook?

The Yankee-trained Turkish reporter did a little leg work. They found out that a perambulating Nazi commissar accompanied them. An entire kitchen crew with special supplies of food took over the hotel while they were there. When they moved on to another hotel in another city, the chefs and suppliers moved with them. And after they left the menus at the hostelrys went back to cabbage and potatoes. The backfire Nazi trick helped answer the principal question in their minds as to Germany's chances of winning the war.

**H**AVE you ever noticed that some Army officers' caps stand up stiffly and smartly, while others droop in a rather nonchalant manner? Look farther

(Continued on page 50)

## BLADES OF WRATH

THOUGH the mist of an English shadow comes a gigantic bomber. Across its battle-scarred nose is the name . . . *Spirit of Coventry*. As the setting sun catches the spin "props," it lifts its great wings gone.

In the sky above rocks with the of hundreds of Lancasters. From . . . and Kent . . . and Coventry rise . . . from every corner of and they come. The greatest strike force man has ever launched in . . .

*There will be blood on the moon tonight  
Germany . . .*

After night propellers made by Nash-Kelvinator have carried these . . .  
leading hosts on high . . .

Best on Britain's great Lancasters  
now on many of America's planes

—these staunch blades of wrath are veterans of hundreds of "fiercely opposed operational flights."

Each blade is so beautifully machined and matched with its brothers that a puff of a man's breath sends them turning in a fifteen-foot arc! Yet so powerful that they help take a thirty-ton bomber aloft and pull it along at 300 miles an hour.

A miracle of precision workmanship! Yet—this is only one of the many war production jobs entrusted to the skilled craftsmen of Nash-Kelvinator, who yesterday made refrigerators and automobiles.

All that we have—in men, machines and skill—is being poured into the job to get it done . . .

For they are *our* sons, too . . . those fearless fighters of the sky.

NASH-KELVINATOR CORPORATION

Keep the battle rolling—with War Bonds and all the scrap we can collect!

**NASH**  **KELVINATOR**

Our duty is twofold: To help build weapons for Victory and to help build the kind of America our boys have a right to expect when they come home.

## Telephone wire coming up

Here's a bomber-gunner hurrying to load his 50-calibre gun. . . .

In peace, a lot of that copper would have gone into new telephone lines. Now it's needed for shooting and winning the war.

That's why we can't build new lines right now. That's why we're saying—"Please don't place Long Distance calls to war-busy centers unless it's absolutely necessary."

Thanks for all your help and we hope you will keep on remembering.

BELL TELEPHONE SYSTEM

**WAR CALLS  
COME FIRST**

# Notes for Your Guidance

By **C. S. Forester**

ILLUSTRATED BY EARL OLIVER HURST

The sad case of a heroic young Englishman who went to Texas without an interpreter. He said too little and too late

SOME of the troubles that the squadron leader got into were undoubtedly due to the fact that his name was Eric Price-Marshall; some of them were due to the fact that, as a result of his early environment, he talked exactly like a stage Englishman in a Broadway comedy (there are really very few Englishmen who do talk like this); but the principal factor which, oddly enough, landed him in a military prison in Texas, was that he had mumps in Buckingham Palace.

Not many people can boast of having had mumps in Buckingham Palace, but then not many people (in fact, only three or four in the whole world) can boast of having a second bar to the D.F.C. It was to receive this supreme distinction that Eric was visiting Buckingham Palace.

He had just emerged convalescent from the hospital, because in his last action, the one in which he won that second bar, he had been slightly wounded. On his leave, between the hospital and Buckingham Palace, he had somehow caught the mumps but just how he had done so it might be more gentlemanly not to inquire. All we know is that he was seen dining with Marjorie Combermere-Clough at the Savoy one evening and we know that Marjorie put in some time later on in an A.T.S. isolation hospital.

Even squadron leaders with two bars to the D.F.C. are only human, especially when they are only twenty-two

and are under orders for immediate foreign service. That is the time when they catch mumps from attractive officers in the A.T.S. some way or another.

On the day of the investiture at Buckingham Palace, Eric had felt groggy and out of sorts; but when one has an appointment with King George, one does not allow a trifling indisposition to hold one back. So Eric walked over to the Palace from his hotel in the hope that the walk would make him feel better and, philosophically, was not very surprised when the treatment was unsuccessful.

He found his way to the right entrance with the readiness of long practice—for this was the third time that, in obedience to a royal command, he had waited upon His Majesty—and under the instructions of an official of the Lord Great Cham-

berlain he took his place in the line of officers moving forward to receive their decorations. By this time his head was swimming and he was experiencing difficulty in swallowing.

That same official (a kindly old gentleman in staff officer's uniform with a quadruple row of ribbons, who had marshaled him into line) began to eye Eric oddly the nearer he approached to the Presence; he hesitated about taking Eric out of the line, and against his better judgment and to his subsequent regret, he allowed him to proceed. Those last few minutes, while Eric was receiving his decoration, saw a remarkable acceleration in the progress of the disease. By the time Eric was leaving the big room quite a group of officers and officials were waiting for him.

Eric blinked sleepily at the group which came crowding into his cell, then blinked again more earnestly. "Good heavens!" said the air vice-marshal. "That's Price-Marshall"

"Just a minute, Squadron Leader, please," said the official in staff officer's uniform.

Eric halted and stood at attention.

"Do you feel quite well?" asked another officer with the badge of the R.A.M.C. on his uniform.

"Er—not very, been a bit under the weather all morning," said Eric.

"Is your face always that shape?" asked the doctor.

"What shape?" demanded Eric, not

a little affronted despite his dizziness.

The doctor indicated a gilded Louis Seize mirror hanging on the wall and Eric glanced into it. It was quite an unpleasant sight that he saw there. Eric was vaguely reminded of a hippopotamus that he had seen at the zoo.

"Heavens!" he said, after a second glance.

"Just come in here a minute," said the doctor, and the whole worried group of them made their way into a side room once sacred to ambassadors.

"Sit down there," said the doctor, turning Eric's face to the light. "Open your mouth. Say Ah. Turn this way. Does that hurt?"

"Ouch," said Eric.

"I thought so," said the doctor; "you've got mumps."

"By Jove!" said Eric.

"What do you mean by coming to the Palace with an infectious disease?" demanded the staff officer. "A highly infectious disease, I believe, isn't it, Sir Ronald?"

"Goodness knows how many people you have infected," said another official, the one with the empty sleeve, glaring at Eric indignantly.

"Perhaps," said the most white-haired of all the officials, "perhaps you have even infected—"

He could not possibly finish this speech, but everyone could guess what he meant to say and looked at one another in horror of the bare idea.

"I am wondering what action I shall take, Squadron Leader," said the staff officer, "and—"

"Well," interposed the doctor, "no matter what action you decide upon, the sooner we get him out of the Palace the better. I will write the order to hospitalize him."

"I am under orders to go to the United States this afternoon," said Eric, speaking up for himself at last.

"The United States will have to do without you for a week or two," said the doctor, and then, turning to the staff officer: "How can we get him out of the Palace without the public seeing him?"

That was how it came about that Squadron Leader Eric Price-Marshall did not leave for America in accordance with his orders, and how he came to be separated from his kit and his uniforms, which had already preceded him, and how, when he eventually set foot on

American soil, after a hideously uncomfortable fifteen hours in a bomber, his arrival was quite unheralded and the American authorities had given him up for lost.

Eric had spent fifteen cold and cramped hours in a bomber; he now spent three highly luxurious days traveling to Texas from the place where the bomber landed him.

For reading matter he had a pamphlet in his pocket, "Notes for Your Guidance," which a thoughtful Air Ministry had provided for the instruction of R.A.F. cadets and officers proceeding to the United States.

"You are going to America as guests," he read, "therefore you will receive almost unbounded hospitality."

That was certainly true, as Eric discovered in the observation car. It took him a little while to recover from the shock of being identified as an Englishman the moment he opened his mouth, but he had no sooner explained that he was a Spitfire pilot, wounded in action over the Channel, come to America to give tactical instruction to the United States Air Corps, than the hospitality began. People had a little difficulty

"Hands up!" rasped a voice, a Eric's dazzled eyes could barely make out the pistol with which the order was backed up. He put up his hands. "A holdup, what?" he said.

sometimes in understanding him, than to that ridiculous accent of his, and the were moments when he reciprocated the not understanding what was said to him in reply, but on the whole that railway journey was a tremendous success.

"Sensitize your mind," he read in his instructions, "listen more than you talk. Think of Americans as your distant cousins whom you do not know well but hope to know better. If you speak the standard English of the South you will be accused in America of having an English accent."

That was true too—and it must be remembered that Eric's accent was something even more pronounced than the "standard English of the South." Brother officers in his own mess had been known to smile at it. When they heard it first they had to glance at the ribbons on his breast and remind themselves that this

# CRAN OVERTURE

By **Leo S. (Bill) Disher**

UNITED PRESS CORRESPONDENT IN NORTH AFRICA

BY RADIO FROM LONDON

Loaded with high explosives and ammunition, crammed in the gunwales with Commodore and American shock troops, an old American Coast Guard cutter smashed the boom at Oran in the face of heavy fire. Here is the story of one of the most spectacular operations of the war

HERE was this kid from Kentucky, Lieutenant George Lawrence of Cadiz, stretched out in an armchair in the officers' lounge, swaying to the roll of an old American Coast Guard cutter that pushed southward toward the African coast. He took off his tin hat and let strong fingers drum against its rounded dome. Absently he

Onward sailed the six hundred!" When he looked up and grinned sheepishly. The old cutter—now known as H.M.S. Walney and flying the British flag—pitched through the blackness.

Across the lounge there was Mike, holding his glass against flickering light. Mike was a captain. Not long before he had climbed to the crow's-nest to watch the ships of the greatest armada of the war file out toward Africa while the Walney patrolled against U-boats.

"That sight was wonderful," he said, "Jersey Island twang coming quick in my voice. 'That sight and this Madeira won't forget as long as I live.'"

There was a young Lieutenant John S. Cole, Jr., of Lexington, Kentucky, sitting next to Mike.

"I wonder," he said softly, "I wonder if my kid's born yet. I wish I'd heard from my wife. I keep wondering."

Pimms, the navigator, said, "Damn it, the whisky's getting low. This ship won't get back her liquor supply."

The Walney rolled harder. We were heading to port because of the great extra weight of ammunition, depth charges and guns. It wasn't a good sign. We'd already had two engine breakdowns that took time for repair.

The chief engineer, his lips tight and his fists clenched, came from the captain's cabin. He poured a drink. Sweat stood out on his red forehead. He had to talk to somebody.

"The old boy called me in," he said. The old boy said: 'Chief, what you're about to say is the most important thing you ever said in your life. We are heading for Oran. We are going to break the boom in Oran harbor. Do you understand? We're going in with two old Coast Guard cutters and two motor launches under the guns of seven French shore batteries and eight warships. We are going to land Commando and American troops and naval ratings, capture the port, and board the warships.' "The chief engineer gulped his drink. "That's what he said. And he said, 'Hundreds of lives depend on what you say. If you say these old engines won't make it, we will transfer to a destroyer. If you say they will, we go ahead. And if they don't, so help me God, I'll have you court-martialed.' " The glass thumped down firmly

on the table. The chief engineer wiped a big hand across his mouth.

"I told him okay," he said. "I said: 'Sir, on my professional honor . . . they'll take us there.' "

The kid from Kentucky opened his mouth as if to say, "Onward . . ." but shut it before the words came out.

Next day a soldier on the transport just ahead of us lost his nerve and plunged from the deck into the water. We picked him up. He was in a state of collapse and was taken to our sick bay.

"There's a guy who really fell out of the frying pan into the fire," Mike said, grimly. "I hope nobody tells him where we're headed."

Everybody knew now that our luck depended upon two questions: Would the French at Oran resist? Would the warships there steam out to meet us as we went in after the main invasion began?

That night at eleven o'clock there was a hurried conference to decide what to do about a French cruiser which we learned was in the harbor. It was agreed that if necessary we would run close to the cruiser, board her with grappling irons, and try to take her with tommy guns and hand grenades. It wouldn't be any picnic. Our ship was loaded to the gunwales with ammunition, dynamite, bombs and grenades. We were a floating can of gunpowder.

"I have great confidence," the skipper told me later. "I believe we've got a good chance of getting in and doing the job." He pulled hard on his cigarette.

The blacking out of the men started. Black grease paint was passed around. Men began putting it on their faces and hands.

I propped myself up in a chair at midnight; my ankle had been broken on board ship two days earlier and was in a cast, gleaming white. Commando troops blackened with grease paint.

I began writing my story for the United Press, date-lined, "Aboard a British sloop-of-war approaching Oran"—The chief engineer stopped beside me.

"If you get out of this and I don't," he said in a low voice, "will you send this card to my wife? And tell her—"

## Floating the Plaster Cast

An American who had been reading a biography of Stonewall Jackson tossed the book on a table, looked at the cast on my ankle and laughed.

"When the bullets came," he said, "there stood Disher like a stone wall."

It was about time for action. I got my crutches and practiced hobbling around the wardroom. Already the surgeons, one American and one British, were busy there. I got a tube life preserver and fastened it around the cast on my foot so it would float in the water. I put another around my chest. Mike came in just after midnight. He had enough dynamite strapped around himself to sink the ship. There was a knife strapped to his leg. With his face blackened he looked a little like an end man in a minstrel show, but nobody mentioned it because we all knew what Mike was going to do if the old Walney failed to break the boom. He was going over the side and dynamite it.

After the shooting: three American soldiers walk in perfect security down the main street of Oran, while the residents of the seaport city stand by to watch without resentment

# MIRACLE BEAN

BY PHIL PERDUE

PHOTOGRAPH BY LARRY MONAHAN

It's the lowly soy—eventually you may walk on it, sit on it, ride on it and wear it. Above all, you'll eat it, for it's full of vitamins and good for man and beast

A tableload of soybean products, including everything needed for a complete meal—from soup to nuts

WHEN Herr Schicklgruber, years ago, making out a shopping list for stock war pantry, he put down planes, tank marines and guns. Then he jotted down soy. Much as we hate to admit it, Mr. Hitler was doing exceptionally good sense. The soybean has won him more than a few battles to date. In fact, rather competent military minds believe with that the soybean may be the "secret weapon" which Der Fuehrer has been mumbling of late.

In the insignificant-appearing little bean, has found lubricants for his war machines, glycerin for his bombs, paint for warships, plastics, and, most important, a near-perfect food for his Nazi troops and war workers. German army refer to their official soya manual (issued by German High Command and containing 278 recipes) as frequently as a new bride reaches for her book.

If Hitler thinks, however, that Germany has never on the secrets of processing, milling and cooking that potent and versatile vegetable, he is apt to be cruelly shocked by forthcoming reports from his secret agents. When it comes to knowledge of the nutritional nuggets to be found in the soybean, our food scientists, as usual, are in the front row.

They have found that soybean flour has three times the protein content of meat, produces energy with a minimum of fatigue, is alkaline in reaction, promotes a gram-positive intestinal flora that prevents what radio announcers allude to as "intestinal flatulence," is an excellent source of vitamins and minerals, builds nerves, and has antihemorrhagic value.

All of which prompts Lieutenant Colonel Cartwright, U.S.M.C. commissary officer, to observe: "The obvious conclusion is that it should head the list as the best of all foodstuffs for military rations."

Bearing this out, a majority of the world's armies, including our own, are marching on and replete with soybean products. Each German soldier carries a three-day emergency ration of edibles, and the Chinese and Japs, from whom the Germans borrowed the idea, long have depended on soy for their body-building proteins.

## Soy Flour Improves Army Sausages

Just how much of this wonder food is going into our own Army rations is the quartermaster's secret, but the Army isn't letting any soybean stalks get under its feet. Soy flour is being included in the Army's K ration for paratroops "to provide as complete a nonmeat protein as possible." It will soon replace the Army's pork link sausage to stretch the meat supply, improve the product nutritionally and lower cost. Soy flour also is being tried in bakery products: soups, gravies, cereals, pancakes, muffins, waffles, bread, and even in fruit-juice drinks. All have stood the test of the mess table.

Soybean flour, which is basically a protein food and not a starch like wheat flour, is as cheap as sugar and nutritious, and vice versa. One pound of soy flour contains as much protein as about three dozen eggs, or quarts of milk, or two pounds of boneless meat.

When you figure this flour at 4½ cents a pound, which is what the government has been paying for it, you can get out your comptometer and nutrition charts and get answers like these: For each 100 grams of protein, your eggs, steak and milk cost from 8 to 10 times as much as soy flour. On the basis of calories, your round steak costs about ten times more, your cutlet twenty-five times more, and cheese four times more.

Soy flour is a natural for stretching our meat rations. You can't, of course, transform a pound of soy into a sizzling, juicy porterhouse, but you can mix it in meat loaf, sausage, meat pie, and other stews and dishes, and get something really worth while. Mix a quarter of a pound of soy flour with three quarters of a pound of ground meat adds up to a pound of tasty loaf that is more nutritious yet appreciably cheaper than a pound of solid meat.

But meat is not all. You can use soy flour in a hundred other ways. Mix it in wheat flour, sprinkle it in cereal (if the manufacturers haven't already included it), use it to improve nutritionally gravy, soups, stew, mashed potatoes, cookies, chile con carne—almost infinitum. Or you can eat the green vegetable soybeans just as you would any other beans.

Soya products are now included in concentrated soups distributed by the Agricultural Marketing Administration for the nationwide community school lunch program. These soups (Continued on page 6)

# The *Little Victory*

By Betty de Sherbinin

ILLUSTRATED BY WARREN BAUMGARTNER

Juaquo knew that Clota had to be still for the artist. But this afternoon it was different. He went toward the artist and said, "There's a fever in the town"

Juaquo was a simple man, with simple wisdom. He knew that nowadays people cannot trust luck, or they will be defeated

GRADUALLY Juaquo realized what the German was about. That the knowledge came slowly was natural, as Juaquo was not educated to suspicion. He was a lad of twenty, dark as the caoba wood of his native hillside, red straight and strong as the tree, but ignorant in the ways of town people. He was from above Angras, from the green hillsides that overlooked the little harbor. There he and others like him lived in thatched huts by the side of the red earth path. There was plenty on the hillside, of fruit, of coffee, of cane to sweeten it, and fish from the sea below. The half-deserted port below was nearer to the world and its struggles. Its

people fussed with buying and selling, gathering a cargo for the dilapidated ship that came in occasionally, trying to make something from the sailors who came ashore from the patrol boat, when it docked on its inspection trips. And it was among these people that Meyer, better known as the German, ran the store and the post office. And for Meyer the German, Juaquo worked without suspicion—until the day it was rumored there was fever in the town. Juaquo was carrying in stores, piling them behind the counter and going back for more. Each trip he heard something new, for the store had filled with people and the excitement was considerable. It seemed a family had come down the valley with a sick child and the story of how another had died. At first Juaquo was unconcerned. It had nothing to do with him. He had no intention of working for the German permanently—there was no sense in

lending his strength to the building of another man's prosperity. He was working for a fine bed and some things. And when he had them he would marry Clota, who was so young and so tormentingly beautiful that it hurt him to think of her. It would be soon . . . very soon, providing there were no complications. AND more and more people kept coming into the store. Not to buy but to discuss. They came from all the twenty families in Angras. They kept questioning Meyer as if he knew exactly what the dangers were—and Meyer stood there all afternoon talking to them, and behind him stood Otto, the big red son who ran the little post office and sent the messages out on the telegraph machine. Meyer was as big as his son, but big around the middle, not about the shoulders. His skin was light; the sun inflamed it, the pressure of his blood blotched it when he was angry or excited. And his large head was kept shaved in

the heat. He was a man who did not spare his own energy, or the energy of those who worked for him. And with his activities he had done himself some good. He owned warehouses behind the store where he kept bits of coffee he bought up and held until he had a shipload. He owned the store. And much of Angras was his. Because of this, he was a man whose opinion people considered. "It's bad," Meyer kept telling the people, his tongue dealing heavily with the language he had never been able to master. "It's bad when the doctor is not here." And Otto, still behind him, shook his head. And the crowd, catching the sentiment, shook theirs. Juaquo as he went back for another load kept wishing the afternoon were over and the people were gone so that the German would close the place and let him go. And then, with the shadows

# PRINCESS IN EXILE

BY DOROTHY KILGALLEN

A visit to the crown princess of the Netherlands just before the birth of this continent's first royal child—a child that will mean new hope for patriotic Dutchmen all over the world

AS THEY came toward the house, making small deep footprints in the snow, the little girls looked like illustrations from Hans Christian Andersen—two plump Dutch dolls with silky golden hair, sky-blue eyes, and cheeks glowing with the red of fire engines.

Their mother looked out of the window into the strong sunlight and said, "Here come the children now," and in a moment they were bursting into the room in a bedlam of mittens, snow suits, galoshes and soprano voices, to surround "Mammie" and have her take off their outer wrappings. The mother tugged at overshoes and unzipped snow suits and unbuttoned sweaters with both hands, deftly, as if she had done it many times.

Smiling, she looked up and exclaimed, "Such a nuisance, all this dressing and undressing!" but her face, as she pulled off the knitted caps and smoothed the children's yellow hair, showed clearly that she felt the "nuisance" to be a very happy task for any mother—even for H.R.H. Juliana, of the Netherlands, Princess of Orange-Nassau, Duchess of Mecklenburg, Princess of Lippe-Biesterfeld, Queen-to-be of Holland in peaceful days to come.

Americans, unaccustomed as they are to royalty, would have understood that simple scene as they have never understood jeweled scepters and gilded thrones, for it is a scene that is duplicated on any winter day in Montana farmhouses and Massachusetts mansions. The Crown Princess of the Netherlands, in her Can-

adian exile, is awaiting the birth of her third child—a child which may be the first king of Holland since 1890—in circumstances as closely approximating the life of an average middle-class citizen as any royal person ever has been permitted to achieve.

She lives in a rented house not an inch too big for her family, in Rockcliffe Park, a modestly fashionable suburb of Ottawa, Ontario. She keeps only two servants, a cook and a parlormaid. She takes care of her own children, with the help of two friends who share her exile. She buys her children's clothes in the unpretentious Ottawa shops, where she delights the salesgirls by asking—and taking—their advice; she attends the local movie house; she has been seen shopping in the five-and-ten. Her new child will be born, not in a palace as were Beatrix and Irene, but in an Ottawa hospital, with what the princess fervently hopes will be as little fuss as possible.

Even Juliana's natural simplicity, however, cannot minimize the rapt interest surrounding the coming of this first child of European royalty to be born on the North American continent. If it should be a boy, excitement in Holland is certain to be so overwhelming that the people have been implored, by short-wave radio, not to provoke the Germans by making wild demonstrations when they hear the good news.

The princess herself shyly refuses to predict whether she will need a pink or a blue nursery. "I think it is better not to have premonitions," she says, adding

the inevitable soliloquy of all mothers-to-be, "If it is a boy I will be very happy, of course, but if it is a girl I will be very happy too. It does not matter."

There was a glow about her as she sat in the tiny morning room chatting about the children, her mother, her husband, Holland, and her people. Her face is pleasant and alert, her manner bright, rather sweet. Photographs never do her justice because they do not show that her eyes are a lively flower blue, her hair the pale brown color of honey, her skin fine and fair. When she talks she takes on great charm; her unquenchable qualities of intelligence and sympathy and sincerity begin to shine through the half-regal, half-girlish reticence.

She explained, with no breath of self-pity in her voice, that her husband, Prince Bernhard, now in England as aide to the queen, will not make the trip to Canada to be with her when her third child is born. The reason for this is simple and Spartan. Juliana realizes that other Dutchmen in exile are unable to return to their homeland no matter how badly their wives need them, and she does not wish to assume any privileges that cannot be shared by her countrymen.

She saw her husband only three times last year—each time because he was sent on a government mission that took him to or near Canada—and she considers herself very lucky.

"In 1941," she recalled, "we met only once."

Juliana and the youthful, speed-loving Prince of Lippe-Biesterfeld (who has

successfully lived down the handicap of being a German and is regarded by people as one hundred per cent Dutch) have been married since 1937 and have always been considered one of the most romantically mated and happiest of European royal couples. Certainly they were among the most conscientious and intelligent in their concern for their people.

Before the German invasion, they inaugurated the custom of playing host and hostess to regular gatherings of young people at their beautiful Soestdijk Palace—discussion groups at which young professionals would debate topics of economics and social questions. The prince and princess both entered freely into the discussions, contributed much to them and learned much from them.

Juliana, as a result, has a strong and shining admiration for the generation which will assume the job of rebuilding her nation when the war ends.

"I don't say this because it is my generation, but the younger generation of Holland is extremely progressive—we are progressive even before the threat of war," she said earnestly. "Of course, the progressiveness was sped by the war—but the foundation was there. Those young people were prepared for many of the very fine things, in the moral sense that the war has brought."

## Flight from Danger

When the invaders descended from the sky and the possibility was great that she like her mother, might be taken as hostage by the invaders, Juliana left her country, with her husband and daughter, aboard a British destroyer which the Nazis tried desperately to bomb.

Later, when it became desirable that she and her children remove to the greater safety of Canada, the princess acceded, convinced that her first responsibility lay in safeguarding the future of the House of Orange while her mother and husband in England work unceasingly to carry on the government of the Netherlands.

The Dutch approve this. Today, every church service in Holland starts with prayers for the queen and the princess. This is unlawful, but the Germans have no alternative except to pretend they do not hear the prayers. They are up against their old problem of not being able to arrest the population of an entire country.

Of the Holland that is now under the heel of the Nazis, the young woman who will some day be queen spoke with pity and quiet anger and fierce pride. "The Germans can have all the professors of psychology they want," she said contemptuously, "but they will never understand the Dutch people."

She receives daily cables containing all possible news of Holland and is informed of all underground movements. She does not disguise her triumphant pleasure in reporting that the stolid but courageous Dutch have proved eminently successful at sabotage.

"They have been asked not to do anything violent which would react upon themselves, but they have accomplished a great deal by slow-down movements everywhere and by accidents." She smiled at that last word.

"It's very interesting to notice how the

Mr. Hemingway and Mrs. Cugat set to work. It was only a matter of moments before a somewhat flattened Louderback was brought to light

## REMEMBER THE SABBATH

By Isabel Scott Rorick

ILLUSTRATED BY MARIO COOPER

The calamitous affair of Mr. Cugat and the cellar shelves. An enlightening story of the All-America headache—the job-bungling handy man

SOME men are what is known as “handy around the house.” They can, if need be, fix a dripping faucet, plane off a door that sticks, put up a hook in the back hall or paint the cellar steps. The craftsmen of the genus have workshops in their basements, expensively equipped, and will turn out, in their spare time, an occasional end table for the living room or furniture for the yard. The dreamers, touched with genius, will devote whole lives to model planes or trains—or ships in bottles. Mr. Cugat, though, was none of these.

He was a good provider—sober and industrious, well thought of in financial circles for sagacity and acumen, an excellent poker player and a natural athlete, but he was about as handy as a seal in mittens. Mr. Cugat had been spared, however, any realization of this. His confidence in himself was modest but sublime. In spite of the fact that the base plugs he investigated blew the main fuse, door knobs he tightened came off in his hand, plaster cracked, glass shattered, nails bent double, paint formed puddles and he always cut himself, he was wont to say offhandedly that he must get

around to fixing this or that some of these days, so as to “get it done right for once.”

Fortunately for everybody concerned, the jobbing department of a contracting firm by the name of B. Allerton and Sons Co., at the urgent behest of Mrs. Cugat, generally got around first and, at a price, put things to rights before they could again come to Mr. Cugat's notice.

But one night after dinner he said in a businesslike tone, “I want to look at the basement.”

“What for?” asked Mrs. Cugat uneasily.

“Well, I bought a little wine today. I've decided to lay some away. Start a cellar. The Lord only knows how much longer we'll be able to get anything imported, so I thought I'd buy some while I could and I want to see where's the best place to keep it.”

“Oh,” she said, relieved. The hot water heater had been acting up again and she was afraid he'd decided to look into it. The last time he'd looked into the hot water heater he'd had to go around for a month without any eyebrows. “There's the fruit room,” she said hesitantly, leading the way down the stairs.

The fruit room, however, not unnaturally, appeared to be full of fruit. But clear it out and it was just what he needed. Yes siree! A narrow strip of wood could be nailed along the back of the shelves and another along the front, so that the bottles could be tipped and it was dark and cool. He began making enthusiastic plans.

“But where will we put the jelly?” protested Mrs. Cugat. “There aren't shelves anywhere else and Anna and I planned to can a lot this year—vegetables and things—because of the war.”

“Oh, we can put up a few shelves somewhere else for that,” said Mr. Cugat easily. “There's plenty of room in the laundry.”

“Well, all right,” she acceded doubtfully. “I'll call Allerton's in the morning, then.”

“Allerton's!” he expostulated, shocked. “Do you happen to know, young lady, how much you have to pay a carpenter, per hour, these days?”

MRS. CUGAT, of course, did not. Neither did Mr. Cugat, when pinned down, but anyway, it was universally known to be an exorbitant wage and like throwing money into the street to call one in for just a few shelves. He'd put up a few shelves for her and her jellies—some Sunday after golf. Order up the lumber tomorrow, he said indulgently, and he'd do it this Sunday! Mrs. Cugat attempted tactful dissuasion, but he'd begun to like the idea. Very well, leave it to him then, he'd order the lumber himself, the first thing in the morning. He had a customer, as a matter of fact, who could probably get it for him wholesale. Was there some kind of rule around? He'd just take the necessary measurements.

Mrs. Cugat, actually impressed, produced the tape measure from her knit-

ting bag and he repaired, whistling, to the laundry to stretch it professionally here and there, eyes narrowed.

Perhaps Mrs. Cugat's tape measure was to blame or maybe the obliging customer was simply overgenerous but the truckload of lumber that rolled into the yard the next afternoon looked like a lot. Mrs. Cugat, anxiously, from a window, watched while three men took just under an hour to unload it—partly on the new perennials. Anna exclaimed with interest. A new back porch? She'd wanted to say something for a long time. Summer nights the kitchen got so hot she'd been near to fainting.

Hastily dashing this hope before it could develop the proportions of a grievance, Mrs. Cugat said no, Mr. Cugat was just planning to put up a few shelves in the laundry so they could use the fruit room for something else. Anna looked blank.

“The mister?”

“Yes,” she said lightly, and avoided Anna's eye.

Home from the office, that evening, Mr. Cugat was to be seen from the back windows regarding the pile of lumber soberly. When he came into the house, however, his tone was casual. “Must have made my measurements a bit generous,” he observed, “but no harm done. It's a pretty good idea to have some spare lumber on hand these days.”

“But where will we keep it?” she asked anxiously.

## Why the Japs Hate the Nazis

By Robert Bellaire

FORMER UNITED PRESS CORRESPONDENT IN TOKYO

**The Sons of Heaven think there's room on earth for but one race of supermen—and they don't mean the Germans**

ONE drizzling morning last spring in Kyoto, Japan, a stoutish little German in the uniform of a Nazi general bowed solemnly as he approached a Shinto shrine to worship Japan's war dead.

The stoutish little man, followed by other uniformed Nazis and a dozen Japanese plain-clothes policemen, was the German ambassador to Japan, General Eugen Ott. Except for the raindrops, his well-cut uniform was immaculate. His dozen military medals glittered and jangled as he walked.

As Ott knelt to worship at the damp, moss-covered shrine, he was humiliating himself as part of a nation-wide "good will tour" ordered by Berlin in an effort to stem growing anti-Naziism in Japan.

For some months, Ott had been losing ground in his fight to get the Japs to follow his Fuehrer's orders. At no time had Tokyo ever placed its world-conquering program on Berlin war time. But now that Hitler was demanding that Japan open a second front against Soviet Russia, the Japs had become more insolent and independent than ever.

Tokyo had given no publicity to her independence from the Axis or to her growing hatred of the Nazis. Open acknowledgment that the Berlin-Rome-Tokyo Axis actually was made of glass would merely have comforted Japan's enemies as well as Germany's. But the harder Ott and his Nazi agents tried to rivet the yoke on Japan, as it had been riveted on Italy, the more the Japs hated the Nazis for trying to dictate to them. The Nazis might be supermen, but the Japanese were *gods*—the Sons of Heaven.

Ott's appearance in Kyoto was his twentieth such performance in two weeks. He had also made more than

fifty speeches—urging the Japanese to trust Hitler and accept his leadership. But few Japanese had come to hear him. The government-controlled press had virtually ignored him. Not one of his speeches appeared in print. Several newspapers, however, entertained their readers by printing photographs of the superman Nazi kneeling in worship of the "despicable."

When Ott finally struggled to his feet in front of the Kyoto shrine, he decided to give up his good will tour and return to the capital. Word had reached him earlier that morning that a dozen Nazi agents and more than one hundred of their Japanese stooges had been arrested in Tokyo during the previous night. The charge against them was "attempting to interfere with the administration of Japan."

As Ott returned to his chancellery in Tokyo that evening, still trailed by a dozen Jap detectives who said they wanted to "protect" him, he probably wondered whether those arrests of the

previous night had not been timed as a personal warning to him to terminate his Chautauqua activities. At least, he could tell himself, this obviously was not the season for a Nazi good will tour of Japan anyway.

The Japs have many reasons for hating the Nazis. Some of these reasons are Hitler's own fault. Others are the natural outgrowth of Japan's nationalism and religion—her fanatical belief that it is the mission of the Japanese race to dominate the entire world, including Germany.

Competent Japanese spokesmen have described that mission thus:

"The ultimate end of politics is the conquest of the world by one imperial power, and Japan is prepared to fill this glorious role—her destiny dictated by the gods. Those who resist must be subjugated."

No exception is made for Nazis, and the Nazis know it.

"If Japan goes to war with America and Britain," a ranking member of the

German and Japanese officials drink a toast to the Axis pact. At the extreme right is Herman Stahmer, mysterious German agent supposed to have induced the Japs to sign

German embassy staff in Tokyo told me a few weeks before Pearl Harbor, "our days will be numbered here too. Japan will wage a race war in which we Germans will be regarded as enemies along with the rest of the white race. It is only a matter of time. They intend to conquer all of us, but they are smart enough not to tackle all of us at once."

He then quoted a remark made by a member of the Japanese cabinet several days earlier:

"Because you Germans are our allies," the Japanese leader had told him, "we give you the honor of being the last white men we will drive out of the Orient."

Since a Japanese is expected to be pro-Japanese, and pro-nothing-else, the Japanese government has tried to suppress everything which might make popular sentiment friendly toward Germany.

Not only has the government been suppressing Nazi-subsidized secret societies, but any popular celebration of Japan's membership in the Axis has been outlawed in effect.

On each anniversary of Japan's nominal adherence to the Axis, Nazi propaganda agents in Japan have attempted to organize mass meetings throughout the country. They have distributed thousands of huge Nazi flags which were to be hung along all city streets. They have tried to arrange short-wave propaganda broadcasts from Berlin for rebroadcast over Japanese long-wave stations. But everywhere the Tokyo government has thwarted them.

Since all mass meetings in Japan require police licenses, the government has found little trouble in suppressing Nazi plans for such demonstrations. Police officials issue just one permit for the entire country, and that is issued to the government itself. Speakers are carefully selected. Their speeches must not create sympathy or friendship for Germany or Italy. The meeting is held indoors, so that attendance will be limited to a few hundred. Newspapers are instructed to give the celebration little publicity.

Two years ago, the Germans managed to have the streets of Tokyo decked with Nazi flags the morning of the anniversary, but by noon, most of the Nazi flags had disappeared. I called the editor of one of Japan's largest newspapers to ask

him why the German flags had been removed from his building.

"Police orders," he said. "We were told we could not fly the flag even of our friendly enemies."

The Nazis were even less successful in their attempts to bring Berlin propaganda broadcasts to the Japanese people. The Japanese government took the position that Berlin short-wave stations were so powerful that long-wave rebroadcasts in Japan would be unnecessary. Technically this was true. But possession of a short-wave radio receiver in Japan is punishable by imprisonment or death. Very few Japanese ever heard Berlin's Axis anniversary programs.

I once asked the Japanese Foreign Office for an explanation of the government's obvious attempts to suppress pro-Nazi propaganda in Japan. The reply said: "The government does not find it necessary to suppress pro-German propaganda, because there is very little popular pro-German sympathy in Japan."

The popular Japanese nickname for the Germans is "The Vultures." For several years, Japanese cartoonists have been using the vulture to impersonate Germany.

"Every time our embassy protests against these cartoons to the Japanese Foreign Office," an exasperated German news-agency correspondent told me, "the Japanese claim these vultures are really eagles."

The Nazis won the nickname of "Vultures" by making the Japanese feel that Hitler was attempting to reconstruct Germany's pre-World War I empire in the Orient at the cost of Japanese blood.

#### The Vultures' Demands

The Nazis invited this feeling by the demands they made upon Japan on the grounds of "Axis partnership." The Germans have demanded:

1. The use of former German islands in the South Pacific as "bases from which to attack the United States."

2. A major share of the booty in the fabulously rich Netherlands East Indies, to which the Nazis claim to be the rightful heirs because of the Nazi occupation of Holland.

3. Major economic concessions in Japanese-occupied areas of China.

Japan's reply to all these demands has been a polite but firm, "Very sorry. . . . No!"

"We are partners," the Japanese concede for convenience. "You keep Holland, and we will keep the Indies. You fight the United States in the Atlantic. We will do the fighting in the Pacific. As for China, that must be a special Japanese area. We won that for ourselves before we became partners with you."

Ken Tsurumi, scheming Japanese army agent who operated in the Japanese diplomatic service, was quite frank in his off-the-record discussions of the Nazi problem when the Nazis were making their biggest bid for concessions in occupied China early in 1940.

Tsurumi, a former consul general in Seattle, Washington, and in charge of Japanese espionage activities in Singapore immediately prior to December 7, 1941, spoke with authority. His remarks reflected the opinion of the Japanese army—the only opinion which has mattered in Japan during the past ten years.

## The Story Thus Far:

IN SAN FRANCISCO, early one morning, a girl enters Jason Amboy's apartment, knocks him out, takes a packet of letters (written by Jason's brother, Wayne) and steals away. A short time later, Jason is notified that Wayne—who has been working for the powerful Grazzard family in Hawaii—cannot be found and has probably been murdered.

Jason boards the first ship he can get and starts for "the islands." Before he does so, however, Flack, his eccentric manservant, does some clever sleuthing and learns that the intruder is Luana Topping, of Kauai Island, Hawaii. . . .

Among Jason's fellow passengers is Luana Topping. He meets her, chats with her. She gives no indication that she has ever seen him before. Some of the mighty Grazzards and their satellites are aboard, too—old Mrs. Hiram Grazzard, the dictatorial head of the clan; her son, Lorrin, who is Luana's fiancé; Channing Mace, manager of one of the Grazzard plantations; and his attractive wife, Natalie; and one or two others. Jason (distantly related to the family) sits at Mrs. Grazzard's table.

To Jason's amazement, Flack is also aboard. The fellow is disguised and using the name of "Rodney K. Kitchener"—telling him to beware of the Grazzards. . . .

Jason finds a stowaway in his stateroom. The fellow tells him that he is Arthur N. Garson, of Los Angeles, and that he is being pursued by two passengers who want to kill him. Jason (who has met Arthur Garson) knows that the intruder is lying. Nevertheless, he permits him to share his stateroom. . . .

Jason makes a new friend—Natalie Mace. She tells him that she hates the Grazzards, who, she suspects, have done away with Wayne. Jason tells her about the stowaway. She goes to his stateroom. The stowaway is not there; and, when Jason finds some drops of blood in the room, he feels sure the man has been murdered. But—following a talk with the steward, Emil Roth (who has been bribed by "Mr. Garson")—he decides not to report the matter to the captain.

Ignorant of what has happened, Natalie Mace tells Jason that she has learned the stowaway's identity—he is, she says, old Hiram Grazzard's second cousin: Winfield Grazzard. She believes (so she says) that Winfield and Wayne had been trying to blackmail the Grazzards. She suggests that Jason somehow inveigle the fellow in his stateroom into talking, telling what he knows!

V

THE blond girl watched Jason's face expectantly. When he didn't answer, but continued to consider her, her smile faded and her eyes narrowed.

"Don't you believe me?" she said.

"I believe you're saying what you honestly think is true," he answered. "It's your conclusions that I'm not so sure of."

"But what's wrong with them?" she asked, and her air was now aggrieved. "I've given hours of thought to them. Every piece dovetails perfectly."

"But it's all based," Jason argued patiently, "on such slight evidence, and all of it is so circumstantial. We accept that my brother was killed. We know the identity of this stowaway. You've heard these rumors about Uncle Colton. And this morning your husband told you that Winfield Grazzard is 'another blackmailer.' It seems to me you've put all that together to establish a point that's somewhat fantastic."

"It isn't fantastic at all," the girl said warmly. "It's entirely logical. It explains everything. And whether I'm right or wrong, I won't quarrel with you."

Her hands were trembling. She gathered her things together and started to get up. "I'm going to my room and lie down, Jason. I've a splitting headache. You've upset me more than I can tell you. I'm sure I'm right about all of this. It works out too perfectly."

Jason got up as she did.

"Think over what I've said, my dear," she said. "Talk to your stowaway. I think you'll find I'm right."

She walked away. Jason was more than half sure that Natalie's reasoning was sound and that her convictions were justified. But he would not admit that he believed his brother might have been a blackmailer.

Life aboard the Tasmania was, despite the overcrowding, settling down to an easy routine. Soldiers and the other passengers gathered in groups on the decks, played cards, shot craps, sang songs and talked about the war.

The convoy was spread out in two columns with the leader usually off to the north, the other destroyers roving about or bringing up the rear.

All over the Tasmania, new friendships were blossoming. There was a great deal of hilarity and rough joking. With everything so pleasant, the calm, sunlit sea, the good-natured crowds, it was hard for Jason to realize that a terrified man (Continued on page 40)

Still shaken by his discovery, Jason said heedlessly, "Luana, I wonder if we can't clear up an awful lot of things by trying to be perfectly frank"

Cash helmet, coveralls, Camels — they're "standard equipment" with this truck driver. That's a General behind him—a "General Lee."

Ski champion, U.S. Army model 1943. His cigarette is a flavor champion of many years' standing — Camel — the Army man's favorite.

"Tell it to the Marines!" And this Marine paratrooper, with his parachute pack, will tell you the favorite pack with Marines is Camel.

Dolphins on this sailor's right sleeve mean undersea service. "Pig-boat" is his word for submarine—"Camel" for his favorite smoke.

# Standard Equipment

# Camel

IN THE ARMY  
IN THE NAVY  
IN THE MARINES  
IN THE COAST  
GUARD

With men in the Army, Navy, Marines, and Coast Guard, the favorite cigarette is CAMEL. (Based on actual sales records in Post Exchanges and Canteens.)

FIRST IN THE SERVICE

On land — on sea — yes, and in the air, too, the favorite is Camel. As this high-altitude Army bomber pilot says: "Camels suit me to a 'T'!"

The "T Zone" where cigarettes are judged

The "T-ZONE"—Taste and Throat—is the proving ground for cigarettes. Only *your* taste and throat can decide which cigarette tastes best to you...and how it affects your throat. For your taste and throat are absolutely individual to *you*.

Based on the experience of millions of smokers, we believe Camels will suit your "T-ZONE" to a "T." Prove it for yourself!

R. J. Reynolds Tobacco Company, Winston-Salem, North Carolina

On the right sleeve of these men, above, there's a small white shield. That means Coast Guard. And with men in the Coast Guard, the favorite cigarette is Camel.

Take a jouncing Jeep, a Johnny Doughboy —an "I'd walk a mile" grin—add 'em all up and you get CAMEL—the fighting man's favorite.

## Notes for Your Guidance

Continued from page 12

was the Price-Marshall whose feats in a Spitfire had become almost legendary from the days before Dunkirk until now—it was hard to believe that a man who spoke like that could at the same time be a man of cold daring and brilliant efficiency.

The station nearest to the airfield at which Price-Marshall had to report was only a flag stop, and Eric was the only passenger to descend. The station agent looked at him inquiringly as he stood in his crumpled tropical suit with his little handbag—all the luggage he could bring in a westbound bomber from England—wondering what he should do next.

"The Freshwater Aerodrome?" asked Price-Marshall.

"What?" said the agent; never before in his life had he heard the sort of accent that Price-Marshall used, just as he had never heard the word aerodrome.

"I mean the airfield," Price-Marshall said. "The Freshwater Airfield."

"Are you visiting there?" asked the agent.

"I suppose that's what you'd call it," said Eric. "How do I get there?"

"It's up the road a piece," said the agent.

"Can I get a taxi?"

"Taxis are scarcer than hen's teeth in this town," replied the agent.

"I'll call up the airfield then, dammit. Where's a telephone?"

AT THE Freshwater Airfield a bored enlisted man answered the telephone and endeavored to make sense of what an apparently demented foreigner was saying at the other end.

"What was that? Who is this?" asked the private.

"I want to speak to the officer of the day," exploded Price-Marshall, shouting into the receiver. "Price-Marshall is my name. Eric Price-Marshall."

The bored enlisted man called the attention of his sergeant to the maniac at the other end of the wire.

"I think this guy must be an Englishman, Sergeant," he said, "and he keeps on saying he is some sort of marshal."

"Marshal?" said the sergeant. He picked up the instrument just in time to hear Eric's next explosion: "I want the officer of the day. Hallo. Hallo. Are you there? This is Price-Marshall speaking. Eric Price-Marshall."

"Gee," said the sergeant. A great light was dawning on him—a false dawn, but vivid enough for all that.

"Here," he said to the private, handing back the instrument, "go easy with this guy. I'll be back in a minute."

The sergeant ran like a hare in search of the officer of the day while Eric at the railway station was surprised and gratified at hearing a sudden change of tone at the other end.

"Yes, sir," said the private, "hold the line a minute please, sir. We're getting the officer for you, sir."

The sergeant (he was undoubtedly the cause of much of the subsequent trouble) saluted the officer of the day breathlessly. "There's a British air vice-marshal on the phone, sir. Wants to speak to you."

Once the idea of an air vice-marshal was put into the head of the officer of the day it was hardly likely that when he heard Eric say "Eric Price-Marshall" on the telephone he would be disillusioned; especially as the officer of the day knew that a British air vice-marshal was at that moment visiting certain airfields in the United States.

"Of course, I've never actually seen Dorothy Lamour in a movie. I've just seen her at Army camps, bond-selling rallies, on radio shows and at her house for tea one day!"

COLLIER'S

JEFF KEATE

"Yes, sir," he said very deferentially, "you're at the station, sir? I'll send down for you right away, sir."

Eric hung up with a sigh of relief.

Meanwhile the officer of the day referred hurriedly to a chart and confirmed what he had already suspected, that an air vice-marshal is the equivalent of a lieutenant general and in consequence only two or three grades below the Al-mighty. It was clearly a matter for the brigadier general commanding the airfield.

"Well, for gosh sake," said the general, "this is a surprise visit, I suppose. Call my car—I'll meet him myself. And I'd better have an escort. Warn the guard to turn out when we get back."

ERIC, sitting disconsolately in the scanty shade at the railway station, heard the high-pitched note of the police sirens approaching him and at first did not believe they could have anything to do with him. He knew they were police sirens, of course—his education had included visits to the movies. The motorcycles came shrieking up through a cloud of dust and stopped at the station, and a car stopped behind them, and a dignified military figure stepped out from it into the sunlight and looked around expectantly. Eric got to his feet—this must be the officer sent down to fetch him—and walked toward the general, fighting down the overwhelming British shyness which nearly mastered him.

"Air vice-marshal?" said the general, a little puzzled.

"That's me," said Price-Marshall in all honesty—he was quite shy enough not to hear properly what the general had said, to say nothing of the fact that he was ready by now to make undue allowance for the American accent.

The general looked at the man of twenty-two in the crumpled tropical suit.

"Pardon me, sir," said the general, "we weren't expecting you this morning."

"I'm not surprised, sir," said Eric, "my schedule was upset."

He was referring to mumps in Buckingham Palace, of course.

"It's a pleasure to have you at any time," said the general.

They shook hands, the general still scanning the visitor's face closely.

"Pardon me, sir," he said, "I didn't expect to see someone quite so young in your rank."

"Oh, that's nothing," said Eric. He was undoubtedly very young to be a squadron leader, and he was modest about it. It had just dawned upon him that the single star which the general wore indicated brigadier general's rank and not that of second lieutenant as it would in the British army. "It's very good of you to come and meet me like this, sir."

"You're very welcome, sir," said the general, holding open the car door and handing Eric in despite the latter's modest holding back. The car and the motorcycles rushed away, dust flying and sirens shrieking. Eric went back in his mind to "Notes for Your Guidance." "You will receive almost unbounded hospitality, the American standard of hospitality being as high as any in the world." This was certainly true, seeing that they had sent down a general and a police escort to meet him.

"Was this all the baggage you brought, sir?" asked the general.

"No, I sent my kit and uniform on ahead," said Eric. "I hope they got to the aerodrome."

"I will inquire as soon as we arrive," said the general.

The car tore around the last corner and stopped at the gate of the airfield.

"Will you inspect the guard, sir?" asked the general.

"Well—yes, of course," said Eric, remembering that, in the words of the pamphlet "you will be expected to feel and show appreciation." The request to inspect the guard was quite surprising but, to quote once more, "you will not be expected to tell your hosts what is wrong." If they wanted a mere squadron leader—albeit a squadron leader with two bars to his D.F.C.—to inspect the guard of honor a squadron leader had better do so. He climbed out of the car along with the general and walked up and down the rigid lines of men standing at attention.

"A very fine body of men, sir," he said, raking wildly back in his mind for memories of when he had seen guards of honor inspected—it was not a thing he had ever done before in his life.

"Thank you, sir," said the general holding the car door open for him again.

They drove slowly across the airfield toward the general's quarters.

"You've got a Spitfire there, I see," said Eric, looking eagerly around him.

"Yes, that's one of the machines we have for tactical instruction."

"It's fine to see one again," said Eric. "Do you think I could take her up today?"

IT WAS four weeks since Eric had last flown a Spitfire, and a Spitfire pilot after that period of deprivation yearns for nothing so much—more keenly even than a drunkard yearns for drink or a lover yearns for the sight of his mistress—as to fly a Spitfire again.

"Of course," said the general.

They reached the general's quarters, and the general made the introductions:

"My wife, Mrs. Townsend. My daughter, Louise. My aide, Lieutenant—"

But Eric did not hear anything after he heard the word Louise, and shook the hand which Louise offered him. The memory of Marjorie Combermere-Clough faded abruptly from his mind.

"I hope this room will suit you, Marshal," said the general opening a door, "the bathroom's through here."

"Thank you very much, sir," said Eric. In England he was always very irritated by people who did not address him by his full name with the hyphen, but in America he was determined not to be. And the general, even though he was a general, had never met an air vice-marshal before and was a little doubtful about how one should address one socially.

"Lunch will be ready in half an hour," said the general, "and I'll find out about your baggage."

It was strange to Eric to find that he was expected to take up his quarters with a general, but then everything else was strange to him—it was even gratifying, to one so unpolitically minded, to find that America was so careful of the comfort of the armed forces of her ally. Price-Marshall wallowed in his bath and scrubbed from himself the dust of the plains and the prairies, before he came down to lunch. And a benevolent destiny at lunch gave him the seat next to Louise, so that he only gave half his mind to the general's suggestion that he should take up the Spitfire with a camera gun to show what the machine could do when opposed to an American plane and an American pilot.

"There's a dance at the Post tonight,"

## You're holding up a million-dollar bomber ... try **SYNTHETIC RUBBER**

FOR months a great airplane company had been working night and day to get into production on a new bomber wanted by the Army. Millions had been invested in tools and jigs. But now the latest models were developing a "bug" that threatened to hold up military acceptance.

The trouble was in the gaskets and valve packings of the hydraulic control system that operates the wing flaps, bomb doors and landing gear. These fittings were not oil-tight. They didn't hold the pressure, controls didn't respond properly. After a dozen different types of gasket proved no better, the airplane manufacturer hit the ceiling.

As a result a rush order came to Goodyear for a trial set of gaskets made from our oil-resistant synthetic rubber Chemigum. They were molded and shipped in four days, and proved so satisfactory that we received orders for more than one hundred different sizes of gas-

kets and packings required in the control system.

That was back in 1940. Today this great

bomber is making a magnificent record on all fronts. Its hydraulic controls are standing up, thanks to the oil-impermeability of Chemigum.

Resistance to the disintegrating action of oil and solvents is only one of the many superiorities of Chemigum over natural rubber. It withstands abrasion better and does not become brittle at low temperatures. Today Chemigum production is being vastly multiplied to supply military needs—but the day is not too far

off when there will be a surplus to give you tires and other "rubber" necessities of excellent quality at reasonable cost.

# GOOD YEAR

THE GREATEST NAME IN RUBBER

Chemigum—T.M. The Goodyear Tire & Rubber Company

# How MUCH\* are YOU smoking?

\*Government figures show smoking at all-time peak.

**W**HETHER you are smoking more—or smoking less—this is a good thing to know:

**When smokers changed to PHILIP MORRIS, every case of irritation of nose or throat—due to smoking—either cleared up completely or definitely improved!**

That was reported in medical journals by distinguished doctors—their findings in work with actual men and women smokers.

**NOTE** we do not claim any curative power for PHILIP MORRIS. But this evidence clearly proves them far less irritating to the nose and throat . . . protection added to pleasure.

*And do they taste GOOD!*

## CALL FOR PHILIP MORRIS

America's FINEST Cigarette

Louise was saying. "I hope you'll be coming."

"A dance?" said Eric. "That's top-hole. That is, if you are going to be there."

"Oh, I shall be there all right," said Louise.

"And will you dance with me? I mean, may I have the pleasure of dancing with you?" asked Eric.

"I shall be looking forward to that," said Louise.

The general's aide explained apologetically that Eric's baggage had not yet arrived—naturally it had not occurred to the aide to make inquiries for the baggage of Squadron Leader Eric Price-Marshall, which at that moment was lying tucked away in an obscure corner of the Post—and offered to fit him out with an American flying suit. Eric eagerly acquiesced; now that the prospect was squarely in front of him it would have been very hard for him (supposing he had been able to choose) to decide whether he would continue in Louise's society or fly a Spitfire. The prospect of either was delightful, and he got eagerly up from the table.

**A**N INTERESTED crowd watched him ascend. No one could help being interested in seeing how a man with a lieutenant general's rank handled a plane—especially a man with all the contradictory qualities of this one, with his fantastically youthful appearance and absurdly affected accent. If even English officers were sometimes led into doubting whether Eric was a good Spitfire pilot on account of his speech, those hard-bitten young Americans were certainly justified in having their doubts.

They gathered eagerly around Captain Bergfried when he came down—the sham fighting had taken place too high for the fine points to be observable even through binoculars.

"Boy, oh boy," said Bergfried, "I have to hand it to him, that guy can sure handle a plane. If that had been real it would have been harps for me."

Bergfried headed the rush of men who went forward to greet Price-Marshall as the Spitfire descended. The camera gun was whipped out and rushed away for the film to be developed, and when later they ran it through in the projection room Bergfried sat and bewailed his own lack of skill. The blurred picture of his plane shot suddenly into the middle of the screen and stayed there, writhe and twist as it would. The little audience in the seats writhed and twisted at the same time, as they realized the prodigious acrobatics which not only the target plane but also the Spitfire, must have been going through when the pictures were shot.

"Boy, oh boy," said Bergfried again, watching the picture of his plane dancing helplessly on the screen.

The film flickered to an end.

"Don't you go putting my film on," expostulated Bergfried, but the operator was inexorable. And there was nothing to see except twice a fleeting glimpse of Price-Marshall's wing tip and a momentary view of the Spitfire so far off that it was only a speck on the screen.

"You got me so mad I had a crack at you at long range," explained Bergfried. "I wouldn't have hit you."

"You might have, with luck," said Eric. "That's about the range I was wounded at."

"So you've been wounded too?" said Bergfried.

The Post's opinion of the British air vice-marshal was rising steadily—at the cocktail hour Louise heard enough of the Post gossip to confirm her in all she had thought about him at first sight.

She felt a pleased glow inside her—a proof of her infallible intuition in at first sight a man who had so accomplishments and such a brain record. It only remained to be seen her intuition remained good on the subject of whether or not he was married, and, sure enough, discreet dinner conversation revealed that her intuition had been just as acute in this respect well, and that Eric was still unmarried.

The man had just everything, she herself as soon as she had discovered that he danced the rumba as well as handled a Spitfire, by Captain Bergfried's report. From one point of view it was quite surprising, seeing how well he danced, that she should agree to time out from the dance floor to him how brightly the moon shone in Texas, but from another point of view it was not really so surprising.

Meanwhile in the Post an officer on duty was chatting over the long distance telephone with a friend of his at another airfield. "By the way," he said, "we've got this British air vice-marshal here. Has he been your way yet?"

There was a long pause, and then the man at the other end said, "Will you tell that again?"

"We've got the British air vice-marshal here. Does that seem strange to you?"

"Yes. We've got him here. What's your man like?"

"Only a kid, but they say he can handle a plane like nobody's business."

"Hold the line a minute." Air Vice-Marshal Darlington—a red-faced man in his forties—was at the moment completing his education by playing poker with a group of senior officers of the American Army. He laid down his cards a little impatiently when somebody asked urgently to see him.

"I am sorry, sir," said the officer, "but are you only air vice-marshal in the United States?"

"Yes, of course," said Darlington.

"I've got the Freshwater Field on wire and they say they've got an air vice-marshal out there too."

"Oh they do, do they? Where's the telephone?"

The wires ran hot with the conversations that flashed backward and forward along them that night, from one airfield to another, and from both of them to Air Corps Headquarters, and to F.B.I. and back again.

"The man's a spy," were Darlington's last words. "Lock him up. Keep him in jail—handcuff him—make sure he doesn't get away. I'll be over in the morning and see what he has to say."

**E**RIC and Louise were still admiring the moon when half a dozen but men suddenly closed around them. The glare of their flashlights left Eric dazzled.

"Hands up!" rasped a voice, and Eric's dazzled eyes could barely make out the pistol with which the order was backed up. He put up his hands.

"A holdup, what?" he said. "I thought they only happened in Chicago."

"Shut your mouth, you dirty spy," said the voice.

"How dare you?" said Louise.

"You keep out of this, Miss Townsend, I'm sorry you had to be mixed in it," the voice apologized.

"Mixed up in what?" said Louise.

"Ask this guy, he knows."

"He doesn't," said Eric.

"Shut your mouth," said the voice again, rather inconsistently, and Eric was just going to point this out when something was dug into his back and another voice said, even more unpleasantly, "C'mon. Stand up. Get going."

There was no resisting the demand, and Eric stood up, feeling most undignified with his hands over his head. Somebody stood close behind him and reached over his head, then Eric felt cold steel on his wrists as they handcuffed him.

"Get going," said the voice again, and Eric stumbled down the path.

"I am going to get the general," said Louise with a sort of sob, brushing past him and running ahead.

"Just as well to have her out of the way," one of the men said.

ERIC found himself in jail. It might, he thought, be a practical joke or it might be just a nightmare, and whichever it was, the morning would bring the explanation. He laid himself on the uncomfortable bed and composed himself to sleep as well as his handcuffed condition would permit. A few minutes were enough to show him that Louise's appeal to her father must have been ineffectual. Nice girl, Louise.

The same thought was still in his mind when a jingling of keys and the clash of bits woke him in the morning. He blinked sleepily at the group which came crowding into his cell, and blinked again

more earnestly when he saw the blue of the R.A.F. among the khaki. That made him sit up hurriedly. Air Vice-Marshal Darlington looked at the disheveled figure with a day-old beard, and then looked again, in just the same way as Eric was looking at him.

"Good heavens!" said Darlington. "That's Price-Marshall."

"That's who?" said the general.

"That's Price-Marshall," repeated Darlington, and as far as he and the general were concerned there was no need for further explanation. It was only Eric who needed to be told why he had had to spend the night in prison.

The general took him off to his quarters for breakfast, and again he sat next to Louise. Eric had always said that the test of whether one should marry any particular woman or not was if one could bear the sight of her before breakfast. Louise passed the test satisfactorily. And Louise had always thought much the same regarding whoever it was she would marry. So perhaps it was as well that Eric passed the test, even though he had slept in his clothes and had not shaved since yesterday.

THE END

## Remember the Sabbath

Continued from page 17

He sighed, suddenly weary. "Don't ask me to figure out anything tonight!" he exclaimed. "What a day! I haven't had five minutes to catch my breath."

"You're going to carry it in soon, though, aren't you?" she pursued nevertheless. "It's ruining the grass."

"I'll carry it in," he said patiently, "but I don't have to do it before dinner, do I?"

Dusk finally fell, blotting the raw pile from sight and mind, and Mr. Cugat relaxed peacefully in his chair. The next day he had to go to Washington.

Mr. Cugat was having to go to Washington more and more often of late and, frankly, Mrs. Cugat was getting good and sick of it. At first she had been excited and proud to think of him down there at the helm, helping to make history, mingling with the great, but Mr. Cugat had quickly pricked that pretty bubble.

"The only mingling I ever do is with men about like *myself*," he informed her flatly.

"But you and Mr. Atterbury must meet some well-known people," she protested.

"Not in outer waiting rooms," he muttered.

"I mean," she explained patiently, "after you get in."

"We don't get in," he said in a disgusted voice.

"Never?"

"Never."

Mrs. Cugat was indignant. Lying awake and thinking about it, in her lonely bedroom, on the nights he was gone, she calmed herself by fashioning dreamy palliatives—something she was very good at. Mr. Cugat, finally coming to the attention of Morgenthau or somebody, would be asked to take charge of some difficult tax problem that nobody else could figure out and he would handle it so brilliantly that he would be appointed to some perfectly marvelous position and they would have to move to Washington for the duration, where they would have an apartment at the Carleton and meet simply *everybody*—like Lord Louis Mountbatten and Douglas Fairbanks, Jr.

Here, Mrs. Cugat, finding it necessary

to digress at some length to plan what she would wear for this happy occasion and to dwell on the envy that would surely gnaw at the breast of her good friend, Mrs. Sturm, would usually drift into such a pleasant mood that she'd drop off to sleep without further ado. Which was just as well, for she needed her sleep; the little burdens of everyday living seemed to weigh twice as much when borne alone. And now all this lumber piled up in the yard!

"Well, well! What are we building—an air-raid shelter?" called next-door neighbor, Mr. Cressey, jocularly over the rose bushes on Monday evening.

"Just a few shelves for the cellar," she called back.

Mr. Cressey's eyebrows raised politely. "My!" he said. "Planning on *quite* a few, eh?"

It seemed, somehow, disloyal to shout, for all to hear, that Mr. Cugat had just made a mistake in his measurements, so she let it go by simply nodding brightly.

"Look who's building an air-raid shelter!" bawled a young voice down the block not a moment later. One of the Louderback children, thought Mrs. Cugat resignedly. The Louderback children were a large and virulent brood, who jeered continually and on principle. Anna reported that the Louderbacks considered the Cugats stuck-up. Mrs. Cugat was scared to death of them.

"My deah! How chi-chi!" rang the reply.

PINK and very stuck-up, Mrs. Cugat retired to the house and endeavored to put the whole thing out of her mind. But on Tuesday, in the middle of lunch, the doorbell rang. There were questions and answers and a closing of doors. "What is it?" she asked anxiously, as Anna appeared in the dining-room door.

"Mr. Ernest Hemingway to see you," Anna announced primly. "I put him in the library."

Mrs. Cugat sighed. "I think you must have the name wrong, Anna," she said gently. "What did he say he wanted?"

"He wants to see you," Anna explained patiently. "He's one of them—you know—writer fellas."

Mrs. Cugat, holding firmly to reason,

shaving cream

put down her fork. "Are you sure, Anna?"

"Yessum."

She faltered at the library door but managed to turn the knob.

"Mrs. Cugat?" inquired a very young man with a snub nose. Mrs. Cugat nodded blankly. "I'm from The Morning Spy," he said, swallowing. "I'd like to get a story on this—ah—air-raid shelter."

Mrs. Cugat explained gently.

"You mean you aren't going to build one?" he gulped.

"I'm afraid not," she apologized. "It's just one of those silly things that got started—"

Mr. Hemingway rose violently to his feet, ran his fingers through his hair, walked over to the window and stood looking out, legs spread, back hunched. Mrs. Cugat was distressed. It seemed to mean a good deal to him. He turned the face of a haggard baby. "I've got to get a story," he bit out. "I've got to make good!" And then, in a more normal tone added, "You see, this is my first assignment."

Mrs. Cugat said she was so sorry but what could she do?

"Nothing, of course," he replied in dignified despair and turned back to the window.

After a minute or so Mrs. Cugat cleared her throat tentatively.

"Look," Mr. Hemingway said abruptly, turning around again, "what in the world are you going to do with all that timber?"

Mrs. Cugat sighed and embarked upon the explanation of the shelves but she was brought up short by a terrified scream from somewhere outside followed by what sounded like the cascading rumble of an avalanche. They dashed to the porch. Anna came running around the side of the house.

"Come quick!" she panted. "One of them Louderback brats has got buried beneath our boards!" Mr. Hemingway vaulted over the railing.

In the side yard, the once neatly towering stack sprawled like a heap of jackstraws. From its depths came a faint whimper.

"There was one of 'em on top," gabbled Anna, "and one layin' down on the grass. When it started to go, the top one jumped but the other never had a chance!"

Mr. Hemingway tore off his coat and they all set frenziedly to work. It was only a matter of moments, really, before a somewhat flattened but apparently unhurt Louderback was brought to light but it seemed like an eon. "When my mother hears about this," it said disagreeably, "she's goin' to be plenty sore!" Mrs. Cugat, Mr. Hemingway and Anna sank to the back steps without breath to answer.

**B**UT Mr. Hemingway suddenly recovered. He walked over to his coat, put it on and extracted, from a pocket, a notebook and pencil. "What's your name and age?" he asked Anna eagerly.

Anna obliged him. "Let me have yours?" he said, turning to Mrs. Cugat. Mrs. Cugat, absorbed in picking slivers out of her thumb, complied abstractedly.

Mr. Hemingway beamed. "Boy! What a scoop!"

"Look," said Mrs. Cugat slowly. "What was it you said your name was?"

"Harvey E. Hemingway—E for Ernest. Quite a coincidence, isn't it? I mean us both being writers. Oddly enough," he added modestly, "our styles are not unlike." He turned to go and waved a hand. "Well, be seeing you in the papers!"

It wasn't until fright had subsided and she began to function normally again

that Mrs. Cugat started to worry about him. But by then it was a little late.

"Local Socialite Rescues Tot," announced The Morning Spy next day right on the front page, with a murky picture of her (taken ten years before, in a particularly hideous hat) beside it. "The little boy under the pile of lumber tried to move, but it wasn't any good. It was there crushing him down. 'Maybe I'll be here under this lumber until I die,' he thought. 'Can this happen? Maybe it never did happen—'" The Hemingway style (Harvey E.) here abated somewhat—possibly under the whacks of a blue pencil.

"Mr. and Mrs. Lester P. Louderback's little boy, Sonny," continued The Spy's story chattily, "can thank his lucky stars that Mrs. Mary Elizabeth Cugat, 28, member of a prominent family and wife of the banker, George B. Cugat, of 202 Huntington Drive, was around yesterday. Buried beneath several hundred feet of heavy lumber, the lad was rescued only just in time by the heroic efforts of the ninety-pound blue blood who, with no thought for herself, toiled unceasingly to extricate him, administered artificial respiration and then collapsed. 'Anyone would have done the same,' she is quoted as saying when rescued by her maid."

By Thursday morning no less than a dozen persons had arrived to inspect the scene of the accident—some with cameras. Anna spent a happy hour posing. By Thursday afternoon no less than two dozen had gathered, and Sonny Louderback was trying to take up a collection. Grimly, Mrs. Cugat called Allerton's and for ten dollars and thirty-two cents, which of course covered Social Security and unemployment and workman's insurance, had the lumber carried out of sight behind the garage.

Mr. Cugat, back, once again, from the waiting rooms of Washington, was highly amused. He also seemed rather relieved to find the lumber out of his sight for a while, even at that price. Lord, he was tired! Washington was a madhouse.

Then his wine came and, reviving, he carried it downstairs and, with boyish enthusiasm, unpacked it all over the laundry floor. Sunday came and went.

"Darling, you seem to be so busy just now, don't you want me to call Allerton's again and have them come and finish up those shelves?" Mrs. Cugat urged tactfully. "Whether by accident or design, the laundress had kicked over one

bottle and it had splashed liberally—the clean laundry. Burgundy.

"Hell, no, honey," Mr. Cugat protested earnestly. "Won't you ever get it in your little head that we've got to stop saving money?"

"Will you get at the shelves pretty soon yourself, then? This Sunday, maybe? It's terribly inconvenient—"

Mr. Cugat promised that he would.

Sunday morning arrived and Col. Cartwright called to fix up the usual foursome, but Mrs. Cugat, on the alert, forestalled him. "George can't play golf today, Cory," she said firmly, "he's going to put up some shelves in the basement."

"Well, can't I talk to him a minute?"

"No," said Mrs. Cugat and hung up the phone.

"A perfect day, too," muttered Mr. Cugat wistfully from behind the fun papers.

**H**ATTED and gloved and ready for church, she came out on the porch an hour later to find him still sitting there. "You'll find the key to the cellar door in the back hall," she informed him pointedly.

Mr. Cugat threw down his papers with a sigh, rose, stretched and pulled up his trousers. "Okay," he said, "where are my overalls?"

"Overalls?"

"Yes."

Mrs. Cugat said she'd never seen him in a pair of overalls in her life. He looked pained.

"I had them the summer I worked on the ranch," he explained patiently.

"That was three years before we were married. They were probably given away ages ago."

But Mr. Cugat thought not. What would anybody give away a perfect good pair of overalls? They must be somewhere around.

"The only place I can think of is that trunkful of stuff that your Aunt Edith sent over," she suggested. "It's way up in the attic and I'm not a bit sure where the key is. Can't you just wear an old pair of flannels?"

This, it appeared, was not to be thought of. Mr. Cugat ascended to the attic. Dubiously, she left him there.

And found him, to her dismay, still there when she got back. "Come up and look here a minute!" he shouted happily in answer to her call.

He hadn't found the overalls but he'd found a lot of other things. Old class books, photographs of teams and gle-

clubs, a bundle of letters from a girl named Honey and goodness knows what! Mrs. Cugat looked ruefully around the attic.

"Dinner!" trumpeted Anna, two flights below. Mr. Cugat's jaw dropped in astonishment.

The afternoon shadows lengthened, and Mr. Cugat dozed in the porch swing. Mrs. Cugat bent over him with compassion. Poor darling, he was working so hard. His face looked drawn and very thin. She shook his shoulder, feeling like a brute. "If you're going to get at those shelves—" she began.

Mr. Cugat blinked, glanced at his watch and rose with alacrity. "Jeepers, yes," he said, "how'd it get so late?" And without more ado, leaped down the steps and disappeared around the corner of the house. She followed him anxiously to see if there was anything she could do to help and found him already behind the garage, stalwartly shouldering lumber, a Louderback watching lynx-eyed.

"Where you going with them boards?" it was inquiring suspiciously.

Mr. Cugat grunted: "Down cellar."

"Why?"

"Building shelves."

"Building shelves!" shrilled the mite and proceeded to go off into fits of typically derisive Louderback laughter. "What you going to keep on the shelves?" it piped, when it could speak.

"Toad meat!" barked Mr. Cugat and, swinging around to leer, accidentally caught the Louderback neatly with the end of the board and knocked it flat.

Screams of "He hit me, Mamma!" rent the Sunday quiet as Mrs. Cugat hastened apprehensively across the street after the victim to explain. Mr. Cugat, callously, had continued on his way.

**B**UT when she got home, a bad half-hour later, she found him back in the porch swing. "We haven't any saw!" he explained, surprised and indignant.

"Oh," said Mrs. Cugat blankly.

He shook his head and sighed. "You women! There's nothing out there but an old hammer, a bent screwdriver and a funny-looking thing."

"Well, up to now—" she began a little sharply but he cut her short.

"Every household ought to have a good set of tools," he declared, adding kindly, "I'll buy you some in the morning."

Mrs. Cugat sat down wearily. "Did you leave all those boards in the laundry?" she asked.

"I never got them that far," he grumbled. "They were so long, I couldn't turn the corner and, as I say, I had no saw, so I had to leave them in the areaway. I'm afraid it makes it a little hard to get in and out—"

Somewhat to her surprise, he bought the tools the next day—a beautiful set of them, in a chest—and after dinner, took each out and examined it enthusiastically. Mrs. Cugat kept a watchful eye on him but, in handling something or other called an adz, he managed, as usual, to draw blood. Dr. Buell arrived and took a small stitch in him. Another Sunday came and went. That week the laundress kicked over a second bottle of wine and got a misery in her back—presumably from going through the areaway bent double.

Then Mr. Cugat was sent to Washington again! Really, it was getting to be the limit! Nice, of course, that out of the whole office he was always the one chosen to go but he was worn out from being on the sleeper so much and trying to catch up with his regular work in between. She was getting sick and tired of being left alone, too. And all for nothing! She felt like speaking to Mr. Atter-

bury. As for Mr. Cugat, she felt like speaking to him, and was going to.

"I'm going to call Allerton's, regardless, if you don't get those shelves built this week," she said when, obviously still unremarked by Morgenthau, the seat of his trousers shiny, he came wearily home once again. "The laundress is looking for another place and I don't blame her! The cellar's a shambles!"

**M**R. CUGAT admitted that this was so and on Sunday after lunch meekly and of his own accord called Cory, canceled his golf and prepared to get down to work. "You didn't find my overalls?" he asked hopefully.

"No," said Mrs. Cugat.

"Did you look?"

"No," she said again flatly. He picked up his new tools and descended to the cellar.

An hour passed, during which he could be seen toiling back and forth from the garage to the basement carrying more boards—four Louderbacks watching

wall and their legs outstretched. They were covered with sawdust and hung with shavings, and their hair was curled with perspiration. Between them was a sticky glass pitcher, half-full. Two empty wine bottles, an orange squeezer, a bag of lemons and a plate of cookies were on the ironing board. They greeted her with enthusiasm and pointed excitedly to the opposite wall. "Look at the shelves!" they chorused proudly. "All done." Mrs. Cugat looked.

The shelves, a palsied structure in four staggered sections, towered cautiously to the ceiling. "Darling," she exclaimed, "so many!" The artisans beamed. "What makes them lean forward like that?" she asked hesitantly.

Mr. Cugat considered them with care, head on one side, brow furrowed. Then he lifted the pitcher, drank, and got, rather painfully, to his feet. "We don't quite know," he said anxiously. "Do you think it will make any difference?"

Mrs. Cugat touched the structure carefully and it swayed gently back and then

headache must be even worse than that beetle juice, of course. He were wide and staring. "I can't," he said. She sat up on the edge of bed and tried to concentrate again, tried, again, to struggle upright and back. "I think I've hurt myself."

"Can I help you?" she asked, going over and putting an arm on his shoulders. She gave a little tug. Mr. Cugat yelped. "George!" she exclaimed, really alarmed. "What is it?"

"Well, I slipped off that ladder yesterday," he admitted sheepishly. "I'd better call the doctor."

Back from the phone, she heaved over him sympathetically with a water bag. "Dr. Buell is coming over," she said, "and I called the office," she added with a little gasp. "They were frightfully upset. They said Atterbury was going to Washington again today and you were supposed to go with him. I told them this was time he'd have to get along with somebody else."

Mr. Cugat quivered beneath the covers. "Gosh!" he groaned despairingly. "He'll have to take Bemis, and he'll make a fine mess of things! Give me a phone!" But at that moment, Dr. Buell arrived.

Mrs. Cugat retired to the hall to be anxious, but not greatly alarmed. They were babies about such things. Besides, it would do Mr. Cugat no harm to be a day or two in bed, he was worn out. If Bemis made a fine mess of things around in waiting rooms, so much the better—it would make Mr. Cugat's coming around all the more appreciated.

**T**HE doorbell rang and she went to answer it, Anna being busy in the basement, dourly and without comment transferring her jellies from the old room to their new home. She opened the door to confront no less a personage than Mr. Atterbury. "What's all this I hear about George?" he rumbled, bustling in. "It can't be anything serious. Let me see him! Is he up here?" He started for the stairs.

"The doctor's with him," Mrs. Cugat protested, fluttering after him. But Atterbury kept right on going.

"George, my boy," he bellowed, "in here?"

Mr. Cugat was lying on his stomach, face contorted. Dr. Buell was poking gently at the small of his back.

"By Gad, George, you've got to get up," exclaimed the source of Mr. Cugat's income, breathlessly from the foot of the bed. "We've got to be in Washington this morning!"

"It's his sacroiliac," said Dr. Buell blandly. "He couldn't get to Washington tomorrow if the President was expected."

Mr. Atterbury waved his arms. "That's just it, you fool!" he bellowed. "The President is expecting him! Expecting us to lunch!"

Mr. Cugat strove agonizingly. Dr. Buell probed hopefully. Mrs. Cugat wept. But it was no use. Mr. Cugat couldn't even turn over.

Mr. Atterbury, at length, threw up his hands. "Well, I'll have to take Bemis, suppose," he growled, consulting his watch. "He's a good man though, Bemis—fine strong fella—" Without another glance at poor Mr. Cugat, he clumped disgustedly out of the room and down the stairs unattended—Mrs. Cugat being too prostrate to move. The front door slammed awfully and the house shook. Then—far below them—came a muffled crash, a thin scream. Mr. Cugat's shelf had tipped over.

THE END

from a respectful distance—and then a reassuring pounding began. Better stay upstairs, she reasoned sensibly, so as not to distract him. Zit-zawk, zit-zawk, went Mr. Cugat's new saw. Mrs. Cugat, inspired to industry, got out some darning. How nice, having him at home on a Sunday, busy around the house instead of off playing golf all day!

Twenty busy minutes went by and then the front door slammed. Hastening to the banister, she peered over just in time to see Cory making purposefully for the cellar stairs. Good Lord! She waited uncertainly but, to her relief, the sawing began again. Somewhat reassured, she went back and sat down.

The darning was finished before it began to dawn on her that the sound of the hammer and the saw had become somewhat intermittent. Quickly suspicious, she went to the head of the cellar stairs. But a new pounding began and of such briskness that she hesitated and then decided to let well enough alone and run over to see her mother.

She stayed longer than she meant to and when she got back, the house was dark. Coming up the walk, she thought she heard singing. Opening the front door, she found, emanating from the cellar, a sweet intermingling of Mr. Cugat's mellow baritone and Cory's lilting tenor polishing off "To the tables down at Mory's." She hurried down the stairs.

The warblers were sitting comfortably on the floor with their backs against the

forward again. "It would be awful," she said, "if it tipped over."

"I thought of taking this clothesline," said Cory, rising, "and tying the whole thing to those pipes up there—" He took the pitcher absently from Mr. Cugat and started to lift it to his lips but, recollecting himself, politely passed it first to Mrs. Cugat. "Have a little beetle juice," he urged.

Mrs. Cugat drank gratefully.

"Did you look at the shelves in the fruit room?" she ventured, after a little. "It seems to me, they're nailed to the wall in some way."

"There's a different principle involved here, entirely," said Mr. Cugat with dignity.

In the end, after another experimental pitcherful, made this time with just a dash of gin, it seemed sensible to adopt Cory's suggestion and lash the shelves, more or less firmly, to the hot-water pipes. Mrs. Cugat hoped she wouldn't be there when Anna got her first look at this arrangement. But the mundane concerns of tomorrow seemed suddenly immaterial. Lightheartedly, they repaired to the kitchen to make a rarebit.

**M**R. CUGAT'S alarm clock rang stridently at half past seven next morning, and Mrs. Cugat turned her head with a groan. Mr. Cugat, bobbing up like an automaton, in the other bed, sank suddenly back on his pillow with a sharp exclamation. She blinked at him. His

## "Through the overcast above 20,000 feet" LEARADIO TAKES OVER!

### ... DEPENDABLE COMMUNICATION MEANS EVERYTHING TO THE PILOT —

In this instance, the pilot was none other than the well-known Major Alexander P. de Seversky who tells the following story:

"Sometime before the radio compass was adopted generally, I had an experimental set with me during a flight to Mexico City. I was caught by bad weather and was forced to fly all the way through the overcast above 20,000 feet. Locating the airport and descending through the overcast to the Mexico City airport, which is surrounded by high mountains, was a difficult problem. But Tschaikowsky's Symphony in F emanating from the local

broadcasting station guided me faultlessly to the airport. I landed safely before a group of worried and astonished officials."

Other famous pilots who use Learadio in their planes are Clyde Pangborn, Major Al Williams, Colonel Roscoe Turner, and Bob Hall. *Learadio gives faithful dependable service with a minimum of maintenance.*

Earning its mark as the "pilot's preference", Learadio is now standard equipment on the better known aircraft, including Grumman Amphibians, Wacos, Fairchilds, Cessnas, and most civilian and air cadet pilot training aircraft and itinerant types used in the service of the armed forces.

★ ★ ★ ★

Automatic electrical and mechanical controls of Lear-origin are incorporated in the aircraft manufactured by: Consolidated, Vultee, North American, Douglas, Boeing, Lockheed, Beech, Curtiss-Wright, Grumman, Northrop; and the sub-contractors: Ford, General Motors, Bellanca, Eastern, Nash-Kelvinator.

T-30 RCBB transmitter-receiver is an extremely efficient and dependable 2-way aircraft communication system. It's the "pilot's preference" because every flying need has been foreseen and every installation problem solved in advance—everything is at the pilot's finger tips.

- ★ Powerful 2-frequency crystal controlled transmitter (2900 KC to 6500 KC).
- ★ Telephone and telegraph emission approx. 20 watts output.
- ★ Three Band receiver — radio ranges (180 KC to 405 KC) broadcast (500 KC to 1200 KC) airway communications (2800 KC to 6700 KC).

For "three-way radio", the receiver includes new provision for operating from both the conventional antennae and the famous lightweight Learadia loop (shown below) providing static-free reception or aural-null direction finding. (Approved type for C. P. T. training).

## The Story Thus Far:

CLAIRE ALLOWAY, an English girl, jilts the man she loves—Michael Garrick, who is in Africa—and marries the *wealthy* John Winston. A few years later, Michael (who still adores the girl who had let him down) marries and settles down on a coffee plantation in Uganda.

Unfortunately, Michael drinks far more than any man should; and his wife "Tommy"—meets and falls in love with a young neighbor: Robert ("Bob") McNare. Apparently Bob adores her; and when he goes to England (to take over a baronetcy he has inherited) he tells her that, some day, he will marry her.

Tommy waits patiently, for months. Then Bob returns. He is accompanied by a beautiful blond widow—Mrs. John Winston!—whom he had met on the boat coming out; and it is obvious that he is infatuated with her. . . .

The meeting between Mrs. Winston and Michael is a strange one. Introduced, they act as though they are perfect strangers. And Tommy

and Bob—now Sir Robert—suspect nothing. . . .

At Bob's suggestion, the four—Claire, Tommy, Michael and Bob—go to the Congo for a long lion hunt. Claire and Michael are often alone; and Michael soon learns that the woman he had once loved is a conscienceless flirt—and worse—who does not care for Bob but who wants a title.

Once he is sure of what Claire's true character is, Michael makes his plans. While the little party is preparing to go out and try to bag a lion, he tells Claire to pretend that she has a headache, so that she and he can be alone together. He tells her that he will fake a touch of "fever," that he, too, will stay in the camp.

The ruse works. Tommy (who is still in love with Bob) and Bob go to a near-by boma, and Claire and Michael do not accompany them. . . . In the boma, Tommy and Bob get no lions. Instead, they meet a Belgian—on his way to the coast—who tells them that war has been declared. Bob listens to him; then: "We'll go right back," he says quietly.

VIII  
THE Belgian, it appeared, had extra carriers to alternate with bearing the chair, and they all went to the boma. Bob kept saying, "We must get back to the cars—" and the Belgian asked, "You have automobile—yes?"

"At the village. We can make it there in one day, if we start early enough. Then we'll take you on in the cars."

They set off, Tommy in the carrying chair which she did not want to take but which the Belgian forced upon her. Sitting in it, swinging along rhythmically to the porters' quick jog she heard the voices of Ramande and McNare ahead. She heard Maginot Line and Siegfried Line and Suez. She heard Ramande telling how he had fought in the last war, a boy from Lille. "Les Boches!" he said explosively. "Toujours les Boches."

The tent was bright. Mrs. Winston sitting up, her robe about her. instant Bob appeared she said gently to Tommy, "You won't mind, Mr. Garrick, seeing to that hot water? I've something I must tell Sir Robert."

The Boches. The Jerries. The Huns. Those words were some of Tommy's earliest memories. Standing out in front of Grenville Farm, a little girl of six, watching the troops swing past. Her father working shorthanded, doing what he could. There were no more laborers and groomers to do. . . . The older sisters working for him, and then the other girls, in kitchen. She had helped, too. . . . Bud Gray came back with a wooden leg and worked with them; he said the peg leg was fine making holes to plant in. But she had seen him with his sleeve across his eyes, crying with the pain of the nerves kept growing against the stump. Dr. Thorpe had come back with no legs at all. And his two brothers never came back. . . . Bob Firth with his teeth missing from gas, and an empty sleeve. . . .

They took Belgian refugees on Grenville farm and two little children were pitiful. And an older girl was vacant-eyed. And an older woman was disagreeable and stayed in bed and wanted trays brought up though she wasn't ill, not really. Mother had lost patience with her. . . . But the little children were sweet. Or so scared.

Four years of that. . . . And then many years, and the war was only an old memory, something that happened when you were a child, that would never happen again. There were other young men who said they would never fight, that there was no need to fight. . . .

She thought back to the England she had left. Talk of Mussolini but not much worry—at least not at Grenville Farm. They said in Exeter that Mussolini was all right for Italy; he had cleaned it up and travel was much pleasanter. I saw beggars now before the churches. . . . Germany was rearming, but a strong Germany would be a useful bulwark against the Soviets. . . . The Nazis said that Hitler were a dangerous lot, but they were riding for a fall. A pity about the treatment of the Jews, but, undoubted that that would not last.

Out in Africa the continent seemed far away. There were Nazi settlers pouring into Tanganyika but the concern about them was not as great, in Uganda as the concern about the Hindu settlers in Kenya, not for a long time. And the Germany had grown darker and darker like some monstrous eclipse over the world's sunshine, but still one thought that light would somehow prevail.

And now it was war. The fact of it was dazing.

Tommy's thoughts went back and forth, and under her excitement and foreboding there rankled a small private grief—the safari was over. She had lost her night, the night that might have meant so much, and now she would lose other chances she might have had.

They were nearing the camp and Tommy got out of her carrying chair to walk with the men. The moon was bright now, and the tents looked white in it; at a distance they looked snow-covered. The place was utterly silent except for the muffled snoring of the porters in the brush shelters behind the tents, and had a curiously deserted air, due to the lonely look of the table and chairs in the moonlight in the open.

To Tommy it seemed a long time since they had set off from table, with Michael and Mrs. Winston wishing them good luck. She thought of it, ironically; and

## WE'RE GETTING "MORE FRIENDS PER GALLON" THESE DAYS

WHEN our local rationing board gave us that 'A-Book' of coupons, I said to my wife: 'This means good-bye to our friends. We can't do much driving on 3 or 4 gallons of gas a week!'

Well, we soon discovered our neighbors were in the same fix. People who live across the street—and down the block—telephoned to say: 'How about us folks pooling our cars?'

So we got together—and now we're taking turns driving the dads to work, the mothers to market, and the kids to school.

And frankly—we've discovered that sharing our car, instead of being a hardship, is really a blessing in disguise. For neighbors who formerly were little more than nodding acquaintances are beginning to drop in evenings for

a game of bridge—or a friendly chat over a glass of Pabst Blue Ribbon Beer.

"Like a lot of other folks, I guess we are just rediscovering how much real pleasure there is in home and simple hospitality . . . ."

With wartime restrictions bringing a new appreciation of home and hearth, Pabst Blue Ribbon Beer has become, more than ever, a symbol of friendly companionship.

That softer, kindlier taste of Pabst Blue Ribbon is achieved by FULL-FLAVOR BLENDING—a Pabst process that gives you all the taste tones of a well-rounded beer. Not just 3, nor 5, nor 7 or 8 brews—but no less than 33 master brews are skillfully "woven" into one great beer. There is no finer, friendlier beer in all the world than Pabst Blue Ribbon.

© 1943, Pabst Brewing Company, Milwaukee, Wisconsin.

Now more than ever—A Symbol of Friendly Companionship

## IT'S DINNERTIME IN AMERICA

**I**T'S DINNERTIME...or will be soon. What are you going to have? Steak's a little bit high. Maybe some lamb. Or chicken.

Enjoy it. Enjoy every bite of it while you can. Enjoy it even if it is rationed, even if you *do* pay more for it than you've paid in years.

At least you can still get it...

Not too far in the future...if the Japs and Nazis win...you may be glad to get a scrap of the cold skin of a chicken from a refuse pile. You may fight over a leaf of spoiled lettuce. May risk your life for a bone with a few scraps of meat on it.

Is this revolting? Does this seem drawing the picture a little too grim, a little too black?

It isn't. And it's time that we here in America realized it isn't. Right now, just to feed our armed

forces, we are rationing certain foodstuffs. Can you imagine the shortages the Germans and Japs would make here if *they* took over?

*Planned* shortages. Planned as part of their revenge for our being a "have" nation. Planned as part of their scheme to keep us subjugated for generation after generation.

There's no reason why they should spare *us*, if they're victorious. They've spared no one else. People in Poland and Greece and Yugoslavia now grub for miserable shreds of food from garbage piles. People like *us*.

Think about it. Think of it as something we and our families may face...think about it as one of the things that lost time, half-hearted effort, "letting the other fellow do it," can bring about...

think about it as one of the realities of total war.

Now is no time to relax. Now is the time for all of us...for you who read this advertisement and for us who sign it...to do all in our power to get this war over sooner.

It's up to *you*...and *us*.

## AMERICAN LOCOMOTIVE

30 CHURCH ST., NEW YORK, N. Y. • MANUFACTURERS  
OF TANKS • GUN CARRIAGES • ARMY AND NAVY  
ORDNANCE • STEAM AND DIESEL LOCOMOTIVES

at moment the war with Germany seemed timed by personal malice.

With grunts and sighs of tiredness the carriers were putting down their loads, squatting down beside them, getting their pipes out of their banana-fiber bags. One man was already twirling his fire sticks, another, more sophisticated, had drawn out a box of matches, and another had gone to where the embers of the campfire glowed dully in the ashes. Beside those ashes two chairs were standing, close together, and Bob eyed that conjunction a little askance, then held his wrist up in the moonlight so he could see the figures that had long ago lost their luminosity. "Half after one. . . . Might as well rout everybody out and start backing."

MICHAEL carried the tray carefully to Mrs. Winston's tent. The clearing was a wash of silvery gray, the shadows indistinct, part of the vague obscurity of night. Once he paused to look off at a dim shape, an obese bulk visible in a patch of light, but the shape did not stir and Michael walked slowly on.

"Claire—?"

"Michael—?"

The flaps of her tent were unfastened and he stepped into the darkness within. "Put on a light," he said in a low voice. "I want to set down this tray."

"Tray?" From the darkness came her laughing whisper. "What have you got a tray for?"

"Drinks, my sweet." His somberness had vanished; he felt suddenly gay and amused at the fantastic adventure. Two conspirators whispering intimately in the dark. He murmured, "A light's all right if you don't turn it on me." A shadow would show on the tent wall.

The round eye of a torch showed bright, throwing its light across the tent from the cot. It flickered on an airtight, spread with a white cloth where silver toilet things were grouped, then moved to a suitcase, on its side, posing as a low table. Michael stepped cautiously forward and set down the tray on that, and the light played curiously over the bottle and glasses, then clicked off.

He turned and tied the entrance flaps with tight knots, then groped for the foot of the couch and sat down. She was curled up at the farther end. She asked, "You're sure no one saw you?"

He chuckled. "Someone did. A brute of a fellow."

"Michael!"

"Be easy. Only our old friend of the other night, Monsieur l'Hippopotame."

"What?"

"Out for a bit of night grazing. Out in the open. Just moon enough to see him by. He didn't budge. Stood and stared."

"I thought I heard something! A little while ago. I thought it was you."

"Nothing so solid."

"But if a hippo's wandering around won't it wake the porters?"

"No fear. They're snoring like Billy-be-damned. You're in luck to have your tent so far away."

"But isn't he dangerous—?"

"The hippo? Oh, they roam about at night, but they come and go to the river in those ruts you saw. They stay out of the way."

"A hippo!" said Claire with a soft laugh. A hippo was an amusing concomitant to a night's tryst.

He chuckled with her. "Rather a lark, isn't it? We dodged a number of things, in the old days, after your mother put her foot down, but we never had to reckon with a hippo before."

"Do you think he knew what you were about?"

"Definitely. He winked."

"You donkey!"

He heard her leaning back against the pillows. He said, "I'm putting on a light. Just for a moment," and took his torch from the pocket of his robe, and flashed it on her. It lighted her lovely face and shining hair spread on her shoulders, the soft throat and satin-smooth white shoulders, banded by sheer lace. She was curled up against the pillows, her blue robe across her. He said softly, "Circe, Circe!" looking a long time on her before he clicked off the light and dropped the torch back into his pocket.

Out of the dark she whispered, amusedly, "What do I turn you into, Michael?"

What, indeed? . . . So many Michaels. . . . And, ultimately, a cold, uncaring Michael who would be a horrible embarrassment to her.

"You'll see," he said lightly.

Suddenly he leaned down, and kissed her.

Then he stood up abruptly. "Don't rush your fences, Michael!" he said in a hard voice.

She laughed. "You always did, you know!"

"I know. Remember that spill I took at Braemere? Trying to lead the field? I nearly broke my neck."

"I was frantic till I got to you."

He had lain in the gorse, dizzy from shock. She had galloped up, with that young cub of a whipper-in who was so hot for her, and old Lamentor on her heels. She had got off her horse and flung herself beside him. "Michael—are you hurt?" That was the first time her voice had told him that she cared. She had looked at him out of those great blue eyes with a stark sincerity of fright. His chagrin had turned to purest ecstasy.

HE SAID harshly, "If I'd only had the cash!"

"Poor Michael!"

Her husband must have had tons of cash. John Howard Winston. She hadn't known of any John Howard Winston in those days. She had said that nothing mattered but love, that she would wait.

Well, life being what it was, he could hardly blame her for not waiting. And, love being what it was, he could hardly blame her for writing him to come back, to be her lover. . . . But—those other lovers! And now he—and then Sir Robert!

"How's for a drink?" he said abruptly.

"All right," she lazily agreed. "We didn't have a sundowner, did we?"

"No. This is a moondowner."

"A toast to our one night."

She wasn't going to let him forget it was for only one night, was she? She needn't worry about that. There would be a definite finality to this one night.

If he spun it out, if he kept her oblivious of the time—and he could lie about it for she hadn't her watch on—that finality could happen pretty far into the morning, and the commotion about it might still be going on when Bob and Tommy returned, for Bob would be in a lather to get back early. A pity he wouldn't be there to see Bob's face! All the explanation in the world wouldn't explain away that situation.

He hoped she'd forget about the bottle and the two glasses. He'd tuck them under the cot when they got through drinking. Drinking would keep him from putting his arms about her for quite a while.

If only his heart did not knock so. It

His great scheme had gone to pot. He was no dead lover, only a trapped one. He felt chagrin and disgust and then a flash of sheer, involuntary relief at being let off from that dramatic finality, and a mocking self-derision at recognition of his relief.

He was a rotter! He couldn't even kill himself in time. All he could do now was to stay put and be discovered.

But he wouldn't have it that way. Devil take it, he thought wryly, you had to be a bally corpse before you could stick around and give a woman away!

In a flash he was at the back of the tent, tearing at the cords that tied the flap. No use—there were natives out there, milling around. Sent to look for him, probably. They'd be shouting for him in a moment.

"Natives out there," he said to the rigid figure beside him in the dark. "You step out in front. If they come here, talk to them. Say you haven't seen me. I'll get away later."

He'd hide under the bedclothes. Like Falstaff. Or was it in the laundry?

The voices out in front were coming nearer. They sounded strained, uncertain. They were at Bob's tent now. "No, he isn't here," Bob was saying. Then Tommy: "Do you think a leopard—?"

"No."

"But—"

MICHAEL was at the entrance to the tent now, his fingers struggling with the knots he had tied so tight. He hadn't expected to untie those knots. Through the canvas he could see a light. They had a lantern. The voices were conferring. "But what—?" A low murmuring. Then, "We'll have to tell her, anyway." They were coming again.

No chance to hide from that light. Claire could not keep them out of the tent. Tommy would come in.

"Back to bed," he breathed, over his shoulder. "Pull up the blankets. You have a chill."

He heard swift movements behind him. Then, outside, Tommy said softly, apologetically, worriedly, "Oh, Mrs. Winston! Sorry to wake you, but—"

Michael flung open the flap—had they noticed it was being untied?—and called out, "I say! You back?"

Tommy was standing there, with Bob beside her, holding a lantern, and back of them a trailing procession of boys and natives staring, goggle-eyed, as he stepped out. The silence was thick with shock, discomfort, constraint and uncertainty.

"You back?" he flung again, into that silence. And then, as if recollecting that his presence there called for a word of explanation, "I'm acting as boy. Mrs. Winston's ill. She called her boy but he didn't come, so I did. She had a chill."

From the shadows behind him Mrs. Winston's voice came languidly: "I wanted something hot. I thought the boy could fetch something. . . . Is that Mrs. Garrick?"

"Mrs. Garrick and Sir Robert," said Michael, gravely, informative.

He was enjoying himself now. He was doing this well, he thought. Very casual, very correct. Eyes bland and direct. Not a glint toward Bob McNare. He addressed himself to Tommy:

"You'd better carry on now. Get the boys to heat some water. You had the spirit lamp, you know, so I couldn't concoct anything. I brought some whisky. That helped, I think."

They could make what they pleased of the two glasses. They would think it perfectly in keeping for him to take a drink when offering one as medicine.

Tommy spoke up, determinedly nat-

was beating in his side, and in his throat and in his ears. He was dizzied with it. It would be funny, he thought wryly, if it suddenly stopped beating, if he did not need those tablets. . . .

"MICHAEL!"

"What, sweet?"

"You hear that?"

He sat up, turning his head to listen. He heard a confused murmuring of voices, somewhere out toward his tent. He thought of the hippo, of an accident to a native. If some fool had thrown a spear—

He jumped up, pulled on his dressing gown.

"Michael, what is it?"

"Listen!"

They both listened intently. She was sitting up, her body rigid. The voices were louder, indistinguishable. Bob McNare was out there, saying something. Michael could not hear the words but he could hear the voice. Then he heard Tommy's voice.

Claire breathed, "They're back! What time is it?"

"S-sh!" In the dark he found her robe, thrust it toward her. "Put this on."

They were back, all right. And they had missed him—Tommy had. He could hear the voices of the boys. They had routed out the boys and were questioning them.

ter of fact, though her voice was not quite natural: "Has she got a tempera-  
ture?"

"I wouldn't know."

"I think I did have," said that languid voice from the tent.

Michael hid a grin. The little devil! Carrying it off with her tongue in her cheek. He told them, smoothly, "Bit of luck you came back. But what happened? Lost your bait? I didn't hear any shots."

Bob said abruptly, "There's a war on. England has declared war on Germany."

That curt announcement struck Michael speechless. His eyes went incredulously from one to the other. Then excitement blazed. "War? How the devil do you know?"

They told him in spurts of words and phrases, Bob stiff and constrained, Tommy breathlessly explanatory. From within the tent Claire made a startled exclamation.

"Where's that Belgian fellow?" Michael wanted to know, and McNare said, "Back there—somewhere. Wondering what's going on."

Tommy said hurriedly, "That's why we didn't shout for you—we didn't want him to wonder."

"Oh, to hell with wondering!"

Michael shrugged off the situation that a moment before had held all his thought. They could think what they pleased. Appearances had been saved, at any rate, and they could go on from there. The fact of war dwarfed every other fact; it was ridiculous to bother about personal emotion when men, millions of men, were to die, and women and children, when the fate of England was at stake.

"We've got to pack up and get out of here," he said. "We've got to get back in touch."

"That's what I thought. That's why we came back," said McNare. Then he said, very stiffly and formally, "But if Mrs. Winston is ill—"

"She'll make it in a carrying chair."

Claire called, "You want to start—now?" Her voice was dismayed. She asked plaintively, "Isn't anybody going to tell me—"

"I'd better see her," said Tommy shortly and went in. Claire called, "Please! Sir Robert!"

Michael swung off in the dark, to find the Belgian. After the first steps his hand went quickly to his side and he stood still, his body bent. His knees trembled and he felt weak all over. It was too much, he thought, to have a war flung at him on top of the shock of that return, after the tension and passion of the night.

Careful, Michael! You don't want to pass out now and miss the excitement.

Steady does it. . . . God, what a fool he'd have been if he'd done himself in, as he'd planned to do. He'd never have known about this. . . . He'd been crazy to dream of taking himself off. A man's place was on top of the earth as long as he could stay on top, and before he went under he'd send a few of those damned Nazis before him. He wasn't too old to fight. He could do something. England would need all she had.

England. Memories assailed him. That other time. The crowds on the streets, the cheering, the frenzy of excitement. Oh, to be in London now! Sixteen years since he had been in London. A sharp hunger for the city he had known assailed him, for its streets, its shops, its restaurants, the roaring traffic and the sheen of lights of wet pavements and the gray stone of the Houses of Parliament. For the sound of Big Ben.

He straightened. The acuteness of the pain had passed. He'd manage now, he thought; he'd have to, if he wanted to go back and get into the show. He'd go on the first ship, find some examining chap of the old days who knew him, who knew his record—oh, he'd wangle it, somehow. . . . If only it wasn't all over before he could get in.

McNARE, hearing that "Sir Robert" started to turn his back and make off, but the fear of giving himself away kept him rooted, in painful hesitation. His one clear thought was to try to behave as ordinarily, to keep his guard up.

"Please come in a moment."

He came just inside the flap; he had given Tommy the lantern to take in and the tent was bright. Mrs. Winston was sitting up, her robe about her. The instant he appeared she said gently to Tommy, "You won't mind, Mrs. Garrick, seeing to that hot water? I've something I must tell Sir Robert."

Tommy spun about and went out the tent. Bob had a strong impulse to follow her, but that was too ghastly rude, he thought; you couldn't be rude to a woman even if she was a beast.

"Robert!"

Her voice was so soft that involuntarily he came a step nearer; he stood in stiff attention looking down at her with unwilling eyes.

"Don't be too critical of Mr. Garrick for having rushed in. He was quite nice, really. Frightfully decent, in fact." Claire smiled up wanly. Then, in a rueful voice, "It was all rather horrid—I was afraid I was going to be sick. . . . I think his whisky did save me. . . . I know he's often been rather—cheeky—so I wanted to say this, so you'd know he hadn't been tonight."

The soft sincerity of her voice was dumfounding. So, too, was the homely

"I'd rather draw a package of Sir Walter Raleigh"

THERE'S AN ART to pipe smoking, too. For better taste (and aroma), clean your pipe regularly and fill up with Sir Walter Raleigh. It brings out a mellow taste and satisfying fragrance from even the oldest pipe in your rack. Blended of choice, ripe Kentucky burleys—try "the quality pipe tobacco of America."

UNION MADE

future of Claire Winston afraid she might be sick. Bob did not know what to think. There was such innocence in her clear eyes. Such unconsciousness of any darker depths to his thought than a fear that Michael might have been premeditating.

Yet—that headache. Well, a headache was a natural prelude to a chill. . . . But Michael's elaborate bathing and shaving that the boy had told about. . . . Yet Michael might be shaving to be ready for an early breakfast with her—Michael then shaved at night to save himself the trouble in the morning, Bob remembered. Michael hated to get up.

But Michael's brags? Michael's boasts of Mrs. Winston's willingness? Well, he had thought Michael a liar, then, and why should he believe him now, through the fortuitous evidence of a chill and an untimely visit to her tent?

Michael had been out in the boma with Tommy, and Mrs. Winston had called, he, himself, would have come running. . . . Because he suspected Michael, had he a right to suspect her? To believe her a cheating trickster? The mere notion of it was unbelievable in the light of her clear glance.

He felt ashamed of himself; he felt a confusion of shame and a dawning of infinite relief and a pricking of wariness that mistrusted believing in her because he so wanted to believe in her—and at the same time he felt revolted at believing Michael because Michael was so poisonous. He did not know what to think. All the facts that had seemed such damning evidence whirled in his mind, like pieces in a shaken kaleidoscope, unable to settle to a pattern so he could know what he really saw in them.

Then, suddenly, his mind caught hold of something; he remembered that Michael had never once glanced smugly or triumphantly at him, as surely Michael would have done, if he'd been playing the profligate. Michael couldn't have resisted the impulse to exhibit his winning, to satirize the situation. Michael had been too smooth, but that was Michael, savoring the unconventional atmosphere of his presence there, but not even Michael had dared to inject a sly suggestiveness.

The pieces of the kaleidoscope fell into

a bright pattern, the pattern of Mrs. Winston's innocence and truth. His mind was not such a fool that it absolved her from playing the romantic, a little, with Michael in the past, encouraging, amusedly, his admiration, but it cleared her of any dark complicity in this night's doings. It seemed to him particularly characteristic of her that she was not saying anything about misjudging her, but only about misjudging Michael. She wanted to let him know that she understood that Michael could be presuming and to reassure him.

Or, there might be a little more to it than that—she might think he was blaming her for having let Michael wait on her. She had no notion of anything baser in his mind—you had only to look at her to know that. He had never seen her so gentle, so appealing—like a Madonna. That gold hair on her shoulders. . . .

He turned his eyes quickly away, afraid she might surprise the feeling in them. He did not know what to say and he had to say something; he could not stand there all night, tongue-tied, groping his way back to sanity. When he did speak his voice was gruff from the restraint in it.

"That's all right. I'm glad he was on his good behavior. . . . He's an odd sort."

He was staring down at the whisky bottle and the two glasses under the cot and he looked back quickly to her, not to seem to be staring at them.

"Sorry you're so seedy," he said awkwardly. "If you don't feel up to going—"

Claire smiled up at him. "I'm not too bad," she reassured. "I'll make it."

She continued to smile to herself after he left the tent.

IT WAS a hard safari, by any standard. They started out in moonlight, took only the briefest pauses for rest and food and a short nap at midday, and it was dark before the line of tired porters straggled into the village where the cars had been left. Claire Winston made the trip in the carrying chair, in her role of invalid, which wasn't very sporting of her, she thought amusedly, and the Belgian shared his chair with the others, until he fell asleep in it, in the afternoon.

That carrying chair isolated her from

BUY WAR BONDS

THE WAR is forcing great changes in the lives of people all over the earth. Some are temporary; others will remain.

The greatest permanent change will result from the increasing use of air as a realm for transportation. Therefore unnumbered millions of persons are re-studying geography.

But there is no map of the invisible air.

\* \* \*

The land and sea miles that separate places remain the same. But airplanes cancel the surface barriers and change the proximity of places. Inevitably, as all peoples continue to become closer neighbors, they will have a more direct influence upon each other. No phase of our lives will be immune to the effects of this new propinquity.

\* \* \*

The air map above shows nothing but the names and

locations of places. As our guide we use a polar projection map.

Next, we remove all surface "pictures" of lands and waters, in order to emphasize the essence of what aviation means. Air is not divided into many different parts as are continents and oceans. Air is one unit, boundaryless and universal.

\* \* \*

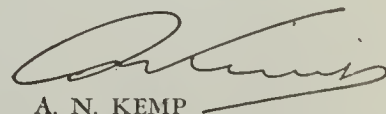

Air is much larger than all waters and lands combined, and is available, alike to all inland and coastal places, everywhere. Therefore we believe air is the dominant realm for transportation. We know that there will always be need for ships, trains and motor vehicles, but we believe that the relative value and effectiveness of all surface methods will be determined according to how well we use what only air transportation makes possible.

Fortunately for our nation's war effort, the United States has the world's greatest system of Airlines. As

one part of their war-work, they are operating numerous new routes to many foreign lands. Another part is the maintenance of an even better air transportation service on the home production front. Great as are these contributions to date, in order to win, Air Transportation must shoulder much more of the war burden.

\* \* \*

But our air efforts must not relax with victory. Immediate development and expansion of America's aviation is necessary also in order to protect our nation at the Peace Conference. Then, either we will be dominant in the air—or we will be dominated in the post-war, air-world.

## Five Who Vanished

Continued from page 20

had been murdered on this ship during the night, that his body had been pushed into the sea, and that the most prominent civilians on board were responsible.

He encircled A deck, then went down to B. He was a little worried about Flack. Flack, in his sudden blossoming, was all at once unpredictable. There was no telling what he might be up to now. He went to Flack's room, but Flack was not there.

Jason was returning to A deck when his room steward overtook him. "I just wanted to know, Mr. Amboy, if everything is all right," Emil Roth said.

"So far as I know—yes," Jason said.

"I mean, sir, there's no longer any question of reporting it?"

"No, Roth."

His room steward seemed greatly relieved. "That's fine. I'm pleased to hear you say that, Mr. Amboy. But I don't trust that fellow Flack."

"Why not?"

"Well, sir, in the first place, his name isn't Flack. I checked over the passenger list."

"Don't let it worry you," Jason said. "He is quite all right."

"Is he?" the cynical room steward said. "I'm not so sure, sir. It's none of my business, Mr. Amboy, but I wouldn't trust him. He's sly."

Jason said gravely, "Well, I'm grateful for your opinion, Roth."

"Don't mention it, sir. Just keep a weather eye on him, that's all I have to say. And by the way, Mr. Amboy, I found this while I was cleaning your room just now. It doesn't seem to mean anything, but I thought it might interest you. I found it under your bed. There's a little smear of blood on it, so I thought it might have belonged to—that fellow."

IT WAS a yellow slip of paper and Jason recognized it at once. It was the slip on which his stowaway had been writing when Jason had gone into the stateroom after dinner. He recalled the man's deliberation in folding it down the middle and then across and pushing it into his vest pocket. And he recalled that one of the man's fingers had been stained with green ink from his fountain pen. This paper had evidently fallen out of his pocket at the time of his murder.

Jason thanked Roth and took the slip of yellow paper into his room. He sat down on the bed and spread out the yellow paper on his knee.

Down the left-hand side was a neat column of double capital letters. Several of the pairs were connected by a line to a pair of letters in another column. A precise pen line ran through three of the double letters, and a broken line ran through one pair:

H	S		
B	S		
L	S		
C	M		
N	M		
L	S		
B	S		
C	S		
H	A		?
J	A		?
E	A		
M	A		

The letters were drawn very ornamentally and there were meaningless scrolls in the margins. On a sheet of ship's notepaper, Jason made a column of names, based on the column of initials. The initials IC and VA meant nothing to him.

Hiram Grazzard	
Bertha Grazzard	----- IC
Lorrin Grazzard	----- IC
Channing Mace	----- IC
Natalie Mace	----- VA
Luana Topping	----- VA
Bruce Topping	
Caroline Topping	
Wayne Amboy	----- ?
Jason Amboy	----- ?
Clark Amboy	
Mary Amboy	

A line had been drawn through the initials of Hiram Grazzard, of Luana's father and mother, but not through the initials of his father and mother. The broken line through his own initials had, it seemed to Jason, unpleasant implications.

He realized that this slip of yellow paper was of immense value. Only that small smear of blood had saved it from Emil Roth's dustpan.

The longer he studied it, the more it told him. It gave him, if not a working blueprint of the enemy's plans, at least something to work on in his mental laboratory. It told him what he wanted to know about the stowaway. And he believed he knew what "IC" and "VA" stood for.

Jason Amboy folded up the two sheets and placed them in his billfold. Then he went on deck. He was more than ever anxious to find Flack, to warn him to be extremely careful, and he wanted to ask Luana some questions.

He did not see Flack. He found Luana on the after deck watching the other ships in the convoy. He stopped. Her dark

color, her soft brown hair, her slim loveliness made him forget, as usual, everything else in his mind.

"I'd love to have a little talk with you, Cousin Luana," he said.

She turned her head quickly and looked up. She was smiling and her dark green eyes were aglow. Her smile vanished and the glow left her eyes. Her lips thinned a little.

"How sad!" she said. "I've received orders to have nothing more to do with you. Isn't that a pity, Cousin Jason?"

There was deep distrust, or dislike, or both, in her expression.

"Really?" Jason drawled. "It is indeed a pity, Cousin Luana. I thought you weren't afraid of anything in the world."

She gazed at him a few seconds. She blushed. Her eyes remained narrow. "This isn't a good place to talk. Lorrin is coming. Where shall I meet you?"

"On B deck—as far forward as you can go. I'll be waiting. To get there—"

"I think I can find my way," she stopped him.

He went forward. He was trying to keep his thoughts on his problems, but they were distracted by Luana. It amazed him to realize that he had fallen in love with this lovely copper-skinned girl who was so independent and so untamed, because it was the last thing in the world he wanted to happen. It had been coming over him slowly, and here it was.

JASON crossed the forward well deck. The wind was blowing hard. He looked down at the bright blue wave with its snowy crest that was being sliced by the sharp cutwater. He supposed he had begun falling in love with Luana yesterday morning when he lay bound and gagged on his bed and she had bent over him and said in her low melodious voice, "Don't be alarmed. I'm not going to hurt you, Mr. Amboy." And each time he had seen her since, the effect she had on him had been progressively more serious. Something had to be done about it.

Something, he decided, was going to be done about it.

Now and then he turned his head to

look aft and he presently saw Luana approaching. The firm wind tossed her hair about and agitated the ends of the ribbon which bound it. The skirt of her red silk dress ballooned out and up and she held it down about her slim legs.

She pushed her hair back from her glowing face. She laughed and said "That's a nice sailing breeze, Cousin Jason."

Still shaken by his discovery, he said heedlessly. "Luana, I wonder if we can clear up an awful lot of things by trying to be perfectly frank."

Her green eyes were glowing. "Is that another truth game, Cousin Jason?"

"Call it that."

"All right," she said recklessly, "let's play it. I adore games. Where shall we start?"

Jason tried to put his thoughts in order, but they were being tossed about on the seas of his emotion. "Let's start with you," he said. "I saw you for the first time yesterday morning at approximately four forty-five, and I've been falling in love with you ever since."

The green-eyed girl gazed at him with alarm. "I don't think I'm going to like this game, after all, Cousin Jason. You see, I'm engaged to Lorrin."

"You aren't in love with him," Jason said.

She studied him thoughtfully, still with her head tilted. "All right," she said with decision. "You've asked for it, and here it is. I've been falling in love with you just as steadily as you've been falling in love with me. I didn't want it to happen because there's nothing—utterly nothing—we can or will do about it."

"Go on," Jason said.

"Even if I hadn't given my word to Lorrin, even if I hadn't taken the bit in my teeth and announced it to those reporters—and I'm awfully glad that I did—I wouldn't do anything about it."

Jason Amboy had started to move toward her. He stopped with his hand near hers on the rail. "Have I the right to ask why?"

"Because I don't trust you. I never could trust you. Keep away, Jason. I'm not sure, but I think I know what you are underneath all your kindness and this nice way you have with women."

"What am I?"

Luana smiled wisely. "You are so akamai, Jason. You are akamai nui loa."

"What does that mean?"

"Very, very clever."

JASON was growing angry. "Haven't we sent up enough trial balloons?" he snapped. "You suspect me of something. Let's talk about it."

Her lower lip was suddenly full with stubbornness. "You're too smart for me."

"Stop saying that!" Jason pleaded. "What is it?"

"Why don't you ask Queen Bertha?"

"So," Jason said bitterly, "it's Queen Bertha. Or is it Prince Lorrin? Or Prime Minister Channing? Or all three?"

Luana's eyes had grown large. "I don't know what you're talking about."

"Isn't it true that you're suspicious of me because you've been told to be?"

Her expression quickly became resentful. "Now I have no mind of my own."

"It isn't that," Jason said, and he tried to control his voice. "They're too akamai for you."

She smiled again. "But not for you, Cousin Jason."

He was growing desperate. "Luana, I love you. I've told you nothing but the

COLLIER'S

## THE CASE OF THE UNCOMFORTABLE PASSENGER

by Raymond Clapper

ROBERTO LIBRARY  
Burlingame, Calif.

I'VE typed out newspaper stories in a good many odd places. On the steps of Warren Harding's front porch at Marion, Ohio, in the corner of a White House ante-room, in the rain in front of the Capitol when Franklin D. Roosevelt was inaugurated, in the court-house yard at the Scopes evolution trial at Dayton, Tennessee, and in trains and the back seats of automobiles riding over hair-pin mountain roads.

But I think the biggest story I ever covered was written on top of a crate of tommy-guns in the hold of a cargo plane 6,000 feet above an African jungle.

The ship was a "flying freighter" of the Air Transport Command, hauling 5,000 pounds of Army freight over trackless wilderness to a remote U. S. Army outpost. It was fighting equipment that

couldn't wait...guns, ammunition and motor parts.

We made the trip that night in ten hours. By surface-ship, rail and motor truck, it would have taken ten weeks!

I say it was the biggest story I ever covered because on that flight, I saw all our concepts of transportation thrown into the scrap heap. I saw the military textbooks being rewritten. And I got a glimpse of what our peace-time world will be like when this war is over and won.

These transport planes, operated for the Army Air Transport Command by Airline personnel, are spanning oceans and continents with vast aerial bridges. They hurdle the Atlantic in 16 hours. They

fly to Australia in four days. To Cairo in five. To Chungking or New Delhi in a week. They bring the farthest fighting fronts to the back doors of America's factories—just as today our domestic Airlines bring factories from California to Connecticut door-to-door.

Our pilot this trip was a big veteran from Ohio, who until a month before had been pushing an Airliner across the midwest. Over sandwiches and coffee he told me: "The Army and the Airlines make a terrific ball-team. We had the pilots, the ground crews and 20 years of experience and the Army had a job for us to do. Every day the job grows bigger . . . because we're getting set to make Hitler sorry he ever heard the word *blitzkrieg*!"

I'm inclined to string along with him on that.

## How to make your gas ration book go farther

WHETHER or not you go in for numerology, you'll agree that 4 is your all-important number these days—4 gas coupons must cover all your driving needs.

If you can make your gasoline go farther, it's just the same as having extra coupons in your hook. So, today, the P. S. job is to help you get more miles out of each gallon of gas.

By comparing the gas you put in your tank with the mileage on your speedometer, you can find out if your car is getting the gas mileage it should. Now that you're driving only 28 or 30 miles an hour, your car should deliver almost 30% more miles per gallon than it did when your average speed was 50. If it doesn't, it's usually a sign that something's wrong—that some part needs Preventive Service—needs to be repaired or adjusted. Your service man, after a short examination, can tell you what it is that's making a gas glutton of your car. For example, he may find it's the distributor.

### The Distributor Can Kill a Coupon

The distributor is the "allocation board" of your car's electric current—allotting the current on a definite and precise schedule to each of the cylinders. Inside it, directly under each of the "octopus tentacles" is a contact point. Circling over these contacts, like the sweep hand on a clock, is a rotor. As the rotor passes each contact, current goes out from the rotor, through the "tentacle" to the spark plug in the cylinder head.

Current to the rotor is supplied through a sort of automatic switch or "breaker," the points of which, in present-day

driving, open and close 100 times a second. Naturally, each time this happens there is a small, hot electric arc that jumps the gap between the points and flashes off a microscopic part of the points' surfaces. In time, the points burn away to such an extent that it upsets the distributor's schedule and the plugs do not get enough current, or else get it too early or too late to fire the gasoline to get full power from each explosion.

Your service man has scientific testing equipment to tell whether the points are opening "on time," whether they are badly burned, if the condenser that steadies the current from the distributor is weak. Have him make a test regularly.

### Remember, Too

The distributor is only one part of the electrical "department" of your car that needs to be watched. And don't forget P. S. for your car's other departments—the fuel system, the cooling system, the engine, the body, the running gear, and the exhaust system. They need regular P. S. attention, too.

**This Collier's column** has endeavored to call your attention to certain car facts that will help you make your ration book go farther. In review—the first step is to check the mileage you're getting. Then check your service man for P. S.

**There'll be more** Preventive Service columns in later issues. In the meantime, send for the **FREE P.S. Check List**. This form will help your service man tell you what Preventive Service is needed on your car now—and what can be deferred. To get your free copy, merely write to Collier's P. S., 250 Park Ave., N. Y. C.

truth. My brother disappeared from Kokala. I'm on my way there to try to find out what happened. That's the whole truth about me. You might explain just one thing. Last night when you passed me on the stairs—why were you so frightened?"

She seemed astonished. "When you were coming down—about midnight?"

"Yes, Luana."

"But I wasn't frightened! I was furious. I'd just had an awful quarrel with Lorrin—over you."

Jason was disappointed. He was sure she wasn't telling the truth. She was protecting Lorrin. It was hard to believe that that look he had seen in her face could have been caused by a lovers' quarrel.

Luana was shaking her head. "No, Cousin Jason; I don't like this game. It's intrigue, and I'm not any good at intrigue."

Before he could say anything, she was walking away. He wanted to call her back. But he didn't. He turned and looked down at the bright blue wave that was being carved out of the sea by the Tasmania's sharp prow.

WHEN noon passed, and still his valet had not reported, Jason grew concerned. He began a systematic search of the ship, and found Flack in the after well deck, talking with a tall, red-haired man who wore a tight black sweater and dungarees. Both were smoking opulent black cigars.

The red-haired man, who had dazzling and wicked green eyes, was doing most of the talking. He was making large sweeping gestures and now and then he grew so excited that he thumped himself on the chest.

Flack, whose resemblance to a middle-aged bookkeeper was enhanced by his contrast with the rakish and raffish appearance of the red-haired man, was hardly less excited.

Jason was upwind from them, so that he heard only a few words of their conversation. But the words he heard were sufficient. They were "cat rig" and "cherry picker." He heard Flack say, "Well, sir, I raised and lowered that boom and got hep on gear ratios so I could hold on high boom or far boom."

And the red-haired man said, "Sure, sure! It's all in getting onto it. But it ain't always as easy as it looks. I've got a wisecracking brother who's a rigger who used to say to me, 'The way to make a rig runner is to catch a dumb truck driver and kick his brains out,' but I set down a load of steel right near him once and I sure cured him!"

Flack and the red-haired man laughed. For the time being, Flack appeared to be in safe hands, so Jason decided not to intrude.

He went to his room, wrote a note instructing Flack to meet him at the paddle-tennis court at seven and slid the sealed envelope under the door of his valet's stateroom.

At seven, Jason went to the boat deck. It was drizzling. He waited in the lee of a deckhouse until seven-thirty, but Flack did not appear. He returned to his stateroom and telephoned Flack's room, but Flack did not answer. He felt somewhat uneasy, but he reasoned that there was no cause for concern. Flack had obviously found a friend in the red-haired man and they were no doubt still talking about the operation of cranes.

Jason dressed for dinner, deciding on a white dinner jacket and a maroon tie. When he reached the table, everyone was there but Luana. He took his place between Mrs. Grazzard and Natalie Mace. Miss Cudlip, more militant than ever in a lettuce-green dinner dress, was

vivaciously describing a match she had seen between Tilden and Budge.

Lorrin sent him a surly glance as he sat down, and Channing Mace's gemlike gray eyes were on him. Mrs. Grazzard said in a firm, friendly voice, "Good evening, Jason," and Natalie Mace said demurely, "Good evening, Mr. Amboy."

He had not seen her since their talk the morning. She was pale and she seemed far away. He sensed tension in her and in Lorrin, and he wondered if there had been some new development.

When Miss Cudlip finished her point-by-point account of the Tilden-Budge match, Mrs. Grazzard and Channing Mace began a discussion of the effect of the war on the Hawaiian sugar industry, and this led to an analysis by Lorrin of the German beet-sugar industry and its present domination of the European market. Jason was surprised at the crispness and the intelligence with which Lorrin discussed it. He had never before seen this surly young man in his role of young sugar magnate.

Luana did not appear until dinner was half over. She was wearing her cerise satin dinner dress. She seemed excited. Her dark green eyes were electrically bright. She glanced at Jason, and it was a puzzled glance.

"I'm so sorry I'm late," she said, and her voice was higher than usual and, it seemed to Jason, tremulous with excitement. "I was talking with some people and the time just slipped by."

Lorrin was scowling, but he said nothing. Mrs. Grazzard had stopped eating. She was tapping on the edge of the table with her long gold pencil. She stared for several seconds at Luana and said heavily, "You know how I feel about punctuality."

Luana was blushing. "I'm terribly sorry, Aunt Bertha, it really was unavoidable."

"Unpunctuality," said the formidable woman with the dull amber eyes, "is never unavoidable."

Throughout the remainder of dinner, Luana was preoccupied. She occasionally sent Jason a bright, searching glance as if something in her mind concerning him puzzled or excited her. He had suspected, when he sat down, that there had been a new development in this dark intrigue, and he was now certain of it.

He had a few seconds alone with Natalie when they all arose from the table. She said softly, "Has he talked yet?"

Jason realized that she was referring to Winfield Grazzard, the stowaway.

"No."

NATALIE was looking up at him expectantly. She made a little grimace of displeasure. "But, Jason, you have him completely at your mercy." Her blue eyes were surprised and puzzled. "You must be absolutely ruthless. There's an old Hawaiian proverb—I kahiki ka ua, ako ka hale: when the rain is far away, thatch your house. Get busy!"

She turned away to join her husband. Jason returned to his room. The phone was ringing.

A muffled voice said, "Mr. Amboy?"

"Yes."

"It's Kitchener, sir. Will you meet me at once at the tennis court?"

"Yes," said Jason.

There had been a strange thickness in the voice, and Jason wondered if his valet had been drinking.

It was raining when Jason reached the boat deck, and it was almost dark.

The rain beat into his face as he mounted the steps and opened the iron-grilled door of the tennis court. As he opened the door, a dark figure came toward him from the center of the court.

Jason was never quite sure whether or

as this dark figure came toward him, the gray afterglow in the west gleamed for a fugitive moment on wet red hair. What confused him and at the same time had prepared him for what followed was his curious impression, aided perhaps by the murky twilight, that Flack had grown several inches taller. But he wasn't sufficiently prepared to defend himself.

THE dark figure moved toward him on sure and silent feet. Jason saw the head coming up, and he stepped quickly to the right when he realized what its intentions were. A fist or some heavy object struck him on the left temple. If he hadn't been moving away from the blow, and if his head hadn't been swinging away, the blow would have at least knocked him unconscious.

It was a glancing blow, but its impact was sufficient to send him staggering backward. The sudden hard pain seemed to burst in his brain in a glitter of fiery needles.

The grilled door behind Jason was still open. He stumbled backward and fell backward down the steps to the wet deck. He fell on his left shoulder and hip and lay for several seconds unable to move while his head spun.

He rolled over on the wet deck and got to his knees, but he could not lift his head. He shook it, to clear it. Then two men in yellow cilskins were helping him to his feet.

He broke away from them and climbed drunkenly up the steps to the paddle-tennis court. His assailant was gone. Jason ran to the door on the opposite side of the court and ran down the steps. He looked forward, then aft, but there was no one in sight.

With his head throbbing, he went to his stateroom. There was a lump on his left temple. The left sleeve of his white dinner jacket was worn through at the elbow, where it had slid along the deck, and he was wet from head to foot.

He telephoned Flack's room and,

when there was no answer, he started to change to dry clothing. He had his choice, he realized, of two explanations of what had just happened. Either Flack was in trouble, or Flack had talked. He recalled the strange thickness of Flack's voice on the telephone—if it had been Flack's voice. Flack, intent on some wild scheme of his own, may have been outwitted. If he had been drinking, and if he had talked too freely, the mysterious attack might be explained.

Considering all the possibilities, Jason began to feel somewhat ill. He recalled his dim and possibly erroneous impression of the gleam of dying daylight on wet red hair. And he wondered if the lean and rakish person with whom he had seen Flack talking in the afternoon might fit somehow into this mystifying pattern. He had been worrying vaguely about Flack since last night, but only because Flack's audacious new personality had become a source of potential trouble. Now he was genuinely alarmed.

He was almost dressed when knuckles rapped sharply at his door. He called, "Come!" The door opened and a young man in a khaki naval uniform came in—a blond young man with alert blue eyes.

He said crisply, "Are you Mr. Jason Amboy?"

"Yes," said Jason.

"Captain Horngold wants to see you at once in his office."

Jason turned back to the dressing table mirror and finished tying his necktie. "What for?"

"I don't know, Mr. Amboy." The other's manner was officially cool. "He requested me to bring you to his office at once."

THERE were three men in the captain's office when Jason Amboy went in. Captain Horngold was a stocky, gray-haired man of about fifty who wore pince-nez glasses and resembled a prosperous broker. Jason had met him at a Bohemian Club dinner a year previously.

Captain Horngold now wore the khaki

## How do you compare with Allen... Bruce... Lombardo?

**ARE YOU LIKE ALLEN?** Fred, star of Texaco Star Theatre and an ardent bookworm, is the practical type. "That Regent crushproof box is tops!", he says. "Just like a custom-made cigarette case." Never crumples the cigarettes, keeps them firm, always fresh!

**OR BRUCE?** Tawny-haired Carol likes discussing her unusual luck, has an eye for economy. She says: "Nowadays the smart buyer takes advantage of value. Regent, with its King Size, is over 20% longer... means extra value!"

**OR LOMBARDO?** This famous Guy, who wins speedboat trophies when not leading his swell orchestra, is the discerning type. "Regents are mild—really mild!", he says. That's because Regents—and Regents alone—get the extra benefit of Multiple Blending!

**ALL THREE AGREE...** that Regent, with its streamlined oval shape, is better-tasting! And no wonder! It's made with choice Domestic and Turkish tobaccos specially selected for finer flavor! Next time, try Regent yourself. Costs no more than other leading brands.

Go modern... smoke  
**REGENT!**

The only modern cigarette with  
all the modern features!

### MR. FALA OF THE WHITE HOUSE

by ALAN FOSTER

"I wonder why the President calls those things 'My Friends?'"

"WHAT A CHUMP I WAS!  
NOW MY FOUNTAIN PEN  
IS WRECKED AND REPAIR  
PARTS ARE MIGHTY SCARCE!"

"YOU SHOULD HAVE SWITCHED  
TO THE NEW PROTECTIVE  
PARKER QUINK. IT CONTAINS  
SOLV-X TO STOP MOST PEN  
TROUBLES BEFORE THEY START."

# Sensational new ink

## gives your pen

## vital wartime protection!

WITH rubber and metals growing more scarce, pen repairs become a real problem.

Actually, the fountain pen that fails now may never write again! So don't take needless chances with that fine pen of yours...

Fill it today with protective new Parker Quink, the only ink containing solv-x. This new Quink has been designed to do more than write brilliantly—smoothly—and dry with extra speed. Parker scientists have created it to prolong pen life!

Solv-x in Quink cleans your pen as it writes. Flushes away the sediment and gum left by inferior inks. It absolutely prevents the corrosion of metal and the deterioration of rubber caused by strongly acid inks.

Start your fountain pen on a protective diet of new Parker Quink today. Fine for steel pens, too. The Parker Pen Company, Janesville, Wisconsin.

Copyright, 1943, The Parker Pen Company

### NEW PARKER QUINK is the only ink containing solv-x

Eliminates the cause of most pen failures:

1. The solv-x in new Parker Quink dissolves sediment and gummy deposits left by inferior inks. Cleans your pen as it writes!
2. Quink with solv-x prevents the rubber rot and corrosion caused by strongly acid writing fluids.

**FOR V... — MAIL "Micro-film Black"**  
New Parker Quink in "Micro-film Black" photographs perfectly. Quink comes in 8 permanent colors: Micro-film Black, Black, Blue-Black, Royal Blue, Green, Violet, Brown, Red. 2 washable colors: Black, Blue. 15¢, 25¢ and up.

THE ONLY INK CONTAINING SOLV-X

uniform of a naval officer with the epaulets of a commander. His face, with its fine lines, its tautness, betrayed the strain that the war had placed him under. Jason had not seen the captain since the Tasmania had sailed. He had heard that Captain Horngold spent all of his time on the bridge. This room was just off the bridge.

The captain was seated stiffly at one end of a long mahogany table. His right hand was cupped on the table. His left was on his knees.

A tall, wide-shouldered man of thirty-five with curly dark hair and steely gray eyes stood beside the captain with his knuckles on the table. He was bending over slightly and his eyes were staring at Jason the instant Jason opened the door. He, too, wore the khaki uniform of the Navy, but with a lieutenant commander's epaulets. Jason had seen him about the ship and had heard that he had been, in peacetime, the Tasmania's chief officer.

**B**EHIND Captain Horngold and the tall curly-haired man, and to their right, stood Emil Roth, the room steward. His face was gray and it looked damp and his eyes had the swimming quality of fear. His lips were apart and he seemed to be breathing rapidly.

The captain was gazing steadily at Jason through his pince-nez glasses. "Mr. Amboy," he said crisply, "this is Lieutenant Commander Matthewson."

Jason felt cold and shaky. Captain Horngold was looking at the discolored swelling on his left temple. All his resemblance to a prosperous broker seemed to vanish when he spoke. He suddenly revealed himself, in spite of his glasses and his comfortable double chin, as a man accustomed to dispensing authority with hard bluntness.

"A very serious thing has happened, Mr. Amboy," the captain said. "Do you recognize this?"

He lifted his cupped hand from the table to disclose a gray mustache. It lay on the table, with one end seeming to droop a little more than the other.

Jason moistened his lips. He said cautiously, "A false mustache, isn't it?"

The keen gray eyes of Lieutenant Commander Matthewson were very alert. Captain Horngold was gazing steadily at Jason. "Yes, Mr. Amboy. The man who wore it vanished from this ship some time this evening."

Jason felt a chill speed the length of his spine. He felt sickness start in his heart and spread outward. And he felt his mouth swiftly going dry. He placed his hands on the table, palms down, and stared at the gray mustache and supported himself on stiffened arms.

"It was found on the floor of your stateroom, Mr. Amboy," the captain went on in that hard, relentless way. "And this"—he took his hand from his knees and placed an envelope on the table beside the gray mustache—"was found on the floor of the stateroom of a man whose name, on the passenger list, is given as Rodney K. Kitchener."

Jason stared at the envelope. It was slightly soiled. He recognized his own handwriting. Across the upper edge of the envelope was a narrow smear of dried blood about an inch long.

He tried desperately to think. He thought of the telephone call he had received, presumably from Flack, about a half-hour ago. He thought of the savage blow that had been aimed at him by his unknown assailant on the paddle-tennis court. It was hard to come to grips with the most important fact of all. Flack had vanished, leaving the customary clue—a smear of blood. Jason's heartbeat settled to a slow, measured pain.

"This mustache," the captain said "was found in your stateroom, Mr. Amboy, by your room steward while you were at dinner."

Jason recalled that Luana had not appeared until dinner was half over, and he recalled her excited expression and the impression he had had at the time—his suspicion that there was a new development. And he wondered if this was it.

He looked beyond the captain and Lieutenant Commander Matthewson at Emil Roth. The room steward's mouth was still open, as if he were having difficulty with his breathing. Staring at Jason, he winked. It was not an ordinary wink. It was a grotesque exaggeration on the part of eye muscles, intended to leave no doubt.

Jason stared at Emil Roth, who, unobserved by the captain and the chief officer, now swiftly placed the tip of his right forefinger to his lips and shook his head. The entire pantomime was as expressive as it was mystifying. It implied that the case was not nearly so clear-cut as the captain and Lieutenant Commander Matthewson might make it appear, and that Jason was to say nothing that might betray him—or either of them.

"We made extensive inquiries before sending for you," the captain went on. "Several of the crew have identified this mustache as having been worn by this man Rodney K. Kitchener. This note"—he dipped his head toward the envelope with its smear of blackened blood—"is signed by you."

The captain paused. He looked at Jason expectantly, but Jason was still too shocked to speak. "Roth brought me this mustache," the captain said. "And this note was found. Then I sent word that Kitchener was to report to me. He wasn't found. I've had this ship searched in the past two hours, Mr. Amboy, from trucks to keelson, and from cutwater to counter. Kitchener is not aboard this ship, Mr. Amboy."

**J**ASON tried to moisten his lips with his tongue, but his mouth was dry. He felt his arms shaking, and his knees.

"A thorough search has been made of Kitchener's stateroom," the captain went on. "The bunk was taken apart, the bedding was inspected, the carpet was taken up, his effects were examined. Two facts of interest were discovered. One was that Kitchener's real name was Flack, the other, that Flack was in your employ."

Captain Horngold bent forward. "When he came aboard, he was wearing a disguise—a gray wig and this gray mustache. Who was this man, Mr. Amboy?"

"My valet," Jason answered in a husky voice.

Captain Horngold straightened up a little, with an air of surprise. "Why was he wearing a wig and a false mustache? Why was he traveling under an assumed name?"

Jason was trying to arrange his thoughts, but his brain was still numb with shock. "That," he answered, "takes a bit of explaining."

"We're ready to hear you, Mr. Amboy."

"Flack was, all his life, a very suppressed individual. I think he was what is known as a split-personality type. One side was meek and conventional, the other, extremely romantic and adventurous. In the five years he worked for me, he was the soul of meekness—the perfect servant. The instant I decided to go to the islands, the other side blossomed. He saw himself, at last, as an adventurer. The fact was, he was virtually out of control."

Jason stopped because he saw that

his explanation was falling on cold and unresponsive soil.

"Why was he traveling under an assumed name?" Lieutenant Commander Matthewson asked.

"It was the name he used on his union card. He was a crane operator. He told me he had a job waiting in Pearl Harbor on one of the outer islands."

There was another long silence while Captain Horngold and his chief officer stared at Jason.

"Do you know of any reason," the captain asked, with an air of measuring his words with the greatest care, "why this man should have vanished from this ship?"

"No," Jason answered. "I know of no reason."

"You must admit, Mr. Amboy," Captain Horngold said, "that it's very mystifying."

"Mystifying," Jason agreed, "and horrible. Flack was not only my valet. He was probably my best friend."

"Do you know if he had enemies aboard?"

Jason had an impulse to tell the truth. But he might be, he realized, wisest to put this whole problem into official hands. Then he recalled Emil Roth's wink and his expressive pantomime.

"I don't think Flack had an enemy in the world," Jason replied.

Commander Horngold settled back in his chair.

"All right, Roth," he said curtly. "Now tell your story."

"Yes, sir," said the steward in a quavering voice.

"Step up here," snapped Lieutenant Commander Matthewson.

Emil Roth came forward. He was gray and perspiring. His manner was that of a man about to wring his hands with anguish, but they hung at his sides, with the fingers wriggling a little.

"Tell it to Mr. Amboy, just as you told it to me," the captain directed.

"Yes, sir. This evening, just about six o'clock it was, this man Kitchener—or Flack—stopped me in the hall as I was coming out of your stateroom, and he

asked me if I knew where you were. When I said I thought you were on deck, he didn't go. He started to talk. He was very blue. He said he'd been thinking about his life and about his future. Then he asked me if I'd ever known of a passenger to commit suicide by jumping overboard."

"Did Flack say that?" Jason said incredulously.

"Yes, Mr. Amboy. I said I'd sailed on many different ships and that four different times a passenger had ended it all by jumping overboard. Then he asked me if anybody who might know him—that is, anybody on board—would be in any way involved if he disappeared in that way. And I said I didn't think it was likely. That was about all. He seemed very blue, but I didn't really think he had any idea of jumping overboard."

JASON had been very fond of Flack and he was sure that Flack, in spite of their recent differences of opinion, had been equally fond of him.

Someone had killed Flack and thrown his body overboard. The evidence—the familiar evidence of the smear of blood—indicated that Flack had met a fate identical with that of Winfield Grazzard. He had been killed in his stateroom, and his body had been pushed out the port-hole.

Jason was sure that Roth was lying. If he wasn't lying, then Flack must have talked about suicide for some sly purpose of his own. And some plan he had cooked up had gone astray and he had been murdered.

"Well, you were wrong, Roth," the captain was saying vigorously. "You've been at sea years enough to know better. You see, Mr. Amboy, the trouble is, no one saw Flack go overboard. We assume, from his confidences to Roth, that he committed suicide, but we cannot be sure. And there are certain circumstances that I consider extremely suspicious. The fact that this mustache was found on the floor of your stateroom is one of them. How did it get there?"

## DOGS ARE LIKE THAT!

GAINES CONTAINS VITAMINS  
A, B<sub>1</sub>, B<sub>2</sub> (G), B<sub>6</sub>, D AND E

A dog's faith never falters—his devotion never dims. Give him the *chance* and he'll dedicate his life to your happiness... come what may. No wonder so many millions keep dogs in their homes! What dogs have to offer is *priceless* these days... yet their needs are ever so few. Just treat 'em right... *feed 'em right*. Millions do this—by feeding GAINES!

NOT A HASTILY  
FORMULATED WAR-  
TIME SUBSTITUTE!

Gaines has been a successful dry dog food for over 14 years. Nothing need be added except water. Surveys find 9 out of 10 dogs like it from the start. It offers vitamins, minerals, proteins, carbohydrates, fats—in fact just the things to KEEP 'EM FED RIGHT.

### DON'T WASTE TABLE FOODS

Feed Gaines exclusively... every day. Costs as little as three cents a day for the average house dog. And, happily, Gaines contains few if any ingredients that are needed at present for human use. Your dealer sells Gaines under a money-back guarantee.

COLLIER'S

# THE FIRE IN THY LODGE

By Michael Foster

ILLUSTRATED BY GEOFFREY BIGGS

The land was friendless, and she learned to endure it only when she realized the true measure of her husband's love

STANDING in his stirrups, the rider stared with a puzzled frown away to the northeastward, at the transcontinental train which, miles away, stood motionless beside the dusty trees of Yellow Horse Creek.

The railroad was still so new through this early Montana country that often, when he had ridden this way during the day, he came out of his way to this high hill at evening to watch, with a sort of dubious wonder, the transcontinental crawling eastward into the distances, and to listen to its faraway lonely wail. He had never seen it stop before, and it gave him a queerly uneasy feeling to see it mysteriously halted beside that dry creek bed, where there wasn't even a shack within miles. It was so far away that he couldn't see if any people were moving around outside the cars.

A sliding, scrabbling sound of hoofs behind him, and Lance MacRae turned his head. His son, on his blue-eyed paint horse, was coming down the slope of loose shale from the higher cliff which he had circled away to climb. As the pony's unshod hoofs left the shale and entered the sagebrush, they became quiet, like the feet of a wild animal. Reining up beside his father, the boy lifted an arm, silently pointing.

To Lance, looking at the small dark elflike face, he was heartbreakingly like his mother, who had been quarter Indian—her grandmother had been the daughter of one of great war chiefs in these mountains. But in the boy, more of the Indian had come out than his mother had ever shown. In his silent Indian manners and in the quiet dignity of the wild and the free, perhaps, more than in his appearance. Lance nodded.

"It does look queer, Jeff. Stopped out there," he said. "May have a hotbox."

Jeff looked away without interest, and pulled his pony's head around. As he went off at a long canter across the hillside, Lance watched him, and then after one more doubtful, puckered stare at the train, whirled his big horse and followed.

The boy rode like an Indian, too, in spite of the high-cantled stock saddle—a loose, lithe but clinging way of riding in which the legs seemed somehow to merge into the pony. Without sadness, any more, because he had later and more searching sadnesses to dull his heart, Lance remembered the first time he had ever seen that brave-eyed and quiet girl who had ridden with him the long boundaries of this upland ranch—who had camped in the starlight and the sage with him and become the mother of the boy.

He had first seen her in the sun-drenched street of a raw, frontier cow town, when he was new and awkward to

the wild range land. Still homesick for his dark, time-haunted hills of Tennessee, still grim and silent-lipped from the deadly border raids of his hell-riding ragged column of Confederate cavalry and sullen from the corrupt horrors—the carpetbaggers, the hunger and the ravaged fields, the looted houses—of the Reconstruction, he had ridden into town to drink alone and to wait for the weekly mail stage.

When the stagecoach came careening in, its wheels muffled by the deep dust, he stood a little apart from the others in front of the saloon-express office, watching the driver saw back on his reins and then climb stiffly down from his high seat to throw open the door. The second person he helped step down to the plank sidewalk was a slim, panther-lithe girl in a flounced white organdy dress. As she moved a little to one side, waiting for her baggage to be tossed down from the railed top of the stagecoach into the waiting hands of men below, she turned incuriously to glance around—and was looking up into the impassive face of the tall Southerner who was standing indifferently there.

For a long, strange minute their eyes held, widening a little with something like surprise, something almost like a queer, indefinable recognition. He would remember her forever as she was in that first instant: her parted lips, her vividly living, delicate face in the shadow of her bonnet against a sifting radiance of dust in the sun. . . .

They were married the next year, in the early spring. And as they left the wind-battered little frame church, with the words of the preacher still in their ears, she laid her finger tips very lightly upon his arm, and in a voice almost a whisper said something in the Shoshone tongue: a little fumblingly, with uncertain pauses, as if she had once known the words by heart and was trying to remember them now. Looking down at her bowed head, he asked, "What is it, my dear?"

"It's something my grandmother said. She told it to me—her own grandmother had told it to her—so that I too could say it on the day I was married. It's something like: 'I will go with thee, and my feet will follow thy trail upon the mountains. And the fire in thy lodge will never go out, for I will carry a little of our lodge-fire with me wheresoever far we travel, and I will tend it with my love upon the trail, and blow it into light again with the breaths of my heart wheresoever a stopping place is our home.'"

They rode in comradeship over the hills to the valley they had chosen for their home, and, when their son was born—on a night when the maniacal ghosts of blizzard howled and battered at the doors for her—she died. . . .

Toiling up the hill on his tired horse, Lance thought—with that puzzled heaviness of heart which is familiar, sooner or later, to every man who has been married to two women—about the tall red-haired girl he had brought home on the train from Boston last year.

She was the sister of his banker in Chicago, and he had met her in the big new

Lance was watching the slim little ghostlike figure that had just reached the head of the stairs. He started for the door but Joanna stopped him with a word: "Lancelot?"

# The Black Road

BY HAROLD LAMB

ILLUSTRATED BY FRANK STREET

A man and a woman of the Middle Ages take their stand and make their fight against the tide of Mongol conquest in Europe

WHEN he saw the first stars over the mountains, Mark pulled in his racing horse and laughed. It was dark and he was safe. "Faith," he said to the roan mare, "we are still alive on our skins." But he spoke between his teeth; he made little sound. Even though he now felt himself to be safe from the danger that followed on his heels he kept moving along the path. Mark, late Sieur de Kerak, believed in taking no chances. He reined his horse to the side of the roadway where he could not be seen under the trees. His long body was covered with fine steel mesh, darkened so that it did not gleam, and oiled so that it did not squeak when he moved. Over this he

pulled the black mantle that he had picked up when he began his long ride, months before. No ponderous helm of steel showed the outline of his head; he wore only a round steel cap. No long unwieldy sword clanked at his hip. Mark had left the family swords behind him.

Instead he carried, loosely thrust into his belt, the most deadly and efficient of weapons, a morning star. This morning star had a two-foot shaft of wood, strengthened by iron, with three slender chains hanging from it and, at the ends of the chains, three spiked metal balls. A swinging blow from this morning star—as Mark's arm swung it—could crush in the armor or the head of a man.

Mark knew weapons as well as he

knew war. His hard body had scars in it that ached when he felt the night's cold. Only a sure instinct had kept him alive, and Mark trusted his instinct more than any talisman or prayer.

Now, that instinct told him to keep on going. Behind him, witless people were dying each day by the thousand under the hoofs of that strange horde emerging from the steppes of Asia. It was like a whirlwind, that tide of horsemen.

Mark listened, as he rode, to the heaving breaths of his horse and the stir of the wind in the forest mesh. He put his hand into the small sack of barley tied carefully to the saddle horn. Beneath the barley, his fingers touched objects like sharp stones; only these were precious stones, carefully selected—pigeon-blood rubies, emeralds of India and glorious amethysts, a treasure of them, enough to ransom a king.

His father, the first lord of Kerak, had voyaged out of England with the heedless Richard the Lion Heart, and his father had left his bones in Kerak overlooking the barren ridges beyond the Dead Sea. Mark, born in that waste borderland, had wrested wealth from it

The wall came alive. Men rose between the crenels, and battle-axes smashed the climbers. Giant Poles swung flails as if threshing wheat

and he meant to return to England with that wealth, to make the acquaintance of the homeland he had never seen. He had grown very tired of his castle above the greenish-blue of the Dead Sea, and its sour wine and olive trees.

"The crusades," he told himself, "are running out, like the sands of an hourglass. Ay, they are done!"

Suddenly he checked his horse. A gleam of light showed above the trees. So high up, it must come from a tower. A tower, by the same token, meant a good large seignior, and that meant food. He ached with hunger, and the mare would be the better for an hour's rest.

Seeking along the edge of the trees he found the break that marked a road going up, and up this he made his way, alert for a challenge. It came when he saw the loom of a wall and the light overhead.

"Stoy!"

"Slava bohu!" he shouted. "Glory to God!"

A torch flickered in a doorway, and three bearded men looked him over, (Continued on page 54)

## Why the Japs Hate the Nazis

Continued from page 19

"Japan really has no allies," he told me two years ago in Shanghai. "She can have none. In the first World War we ousted Germany from the Pacific. It would not only be folly for us to permit her to rebuild her empire out here, but it would be to forget our holy mission in the world. Under our pressure, America and Britain have been backing out of the Orient without a real struggle. It is Germany that will worry us most. We feel they are not only more determined to hold what they have, but they plan to overrun the world."

A year later, the Nazi menace suddenly loomed larger for Japan. France had collapsed. Japan was waiting for Germany to deliver to Britain the death blow which would topple Britain's Far Eastern possessions into Japan's lap, like ripe apples. But Hitler turned away from Britain to invade Soviet Russia.

As the Nazi legions swept eastward toward Moscow, the Japanese realized that this ambitious partner they hated and feared might soon be their neighbor in Siberia—within bombing distance of Tokyo.

American-educated Yosuke Matsuoka, Japan's jingoistic foreign minister of the time, with remarkable hindsight told his friends, "Here is our enemy. We can handle the Americans and British. They are predictable. Hitler is the greatest threat to our holy mission."

Matsuoka had reason to be bitter at the Nazis. He had just returned from a "triumphant" visit to Berlin where "Hitler promised me that Britain would be conquered in three months." At Hitler's suggestion, Matsuoka had negotiated a nonaggression pact with Josef Stalin while en route back to Tokyo.

### The Bitter Lesson

"Hitler made a fool of me," Matsuoka confessed privately. "He was using me as a shield for his plans to attack Russia. But we will not let the Nazis use us again. We will not forget this lesson."

The army soon forgot Matsuoka, who went into retirement "to give my overworked brain a rest." But the lesson his blunders had taught was not forgotten.

When the Nazis bogged down for their first terrible winter in Russia, Tokyo suddenly awakened as if from a terrible nightmare.

Japanese newspapers carried huge headlines announcing, in great jubilation, the Nazi defeat. Japanese diplomats in Berlin were ordered to aid Japanese newspaper correspondents in evading Nazi censorship, so that all possible details of the German disaster could be enjoyed by the Japanese public. Here were the two most powerful nations of Europe obligingly blowing each other to pieces. The longer they fought, the easier would be Japan's path to world conquest.

The Japanese do not have the same hatred for the Italians they have for the Nazis. In Japan, the Italians have become the same standing joke they have become elsewhere in the world because they have permitted Hitler to dominate them.

Italian diplomats in Japan two years ago protested to the Japanese Foreign Office against "undignified" jokes which Japanese stage comedians were telling about Italy.

In one of these jokes, Mussolini, in great excitement, calls Hitler on the telephone.

"Adolf, this is going too far," Mussolini explodes. "The Gestapo has just ar-

rested a hundred Italian policemen here in Rome."

"Don't get excited," Hitler reassures him. "I'm sending two hundred Berlin policemen to take their places. That's more than fair, isn't it?"

But the Italians are more than standing jokes to the Japs. Italy is the pitiful object lesson which all Japanese regard as an eternal warning against too close relations with Hitler.

The Japanese know, of course, that Hitler sent his agents pouring into Japan just as he sent them into Italy. But the Japs are determined that these Nazi agents shall wield no real influence.

More than 2,000 Tokyo police are assigned to shadow the staff of the German embassy, which alone numbers over three hundred persons. Many of these German diplomats call themselves "advisers" to the Japanese government, but they are nothing more than teachers.

Their influence on the government of Japan has been greatly exaggerated.

"You Americans taught us to eat ice cream," Japan's foreign minister, Masayuki Tani, once told me. "We thank you for that. But you cannot tell us when or where to eat it. In the same way, the Germans taught us the art of blitz warfare. They have given us the blueprints for the Messerschmitt planes. But where and when we use them, is something Japan will decide for herself. We will tolerate no interference with the administration of our government which has the wisdom of the gods to guide it. I fear Mr. Hitler has yet to understand this."

The classic case which brought about the eventual arrest of the dozen Nazi agents in Japan last spring was the Nazi attempt in 1941 to assassinate elderly Baron Hiranuma, then Japanese Home Minister. Hiranuma, as head of all the

country's police, had been conducting a cleanup of German-subsidized secret societies in Japan. He had not ordered arrest of Nazi agents, but he had thrown into jail several hundred Japanese who had been accepting money from Nazis.

Investigation of the attack on Hiranuma revealed that twenty-four hours before he was shot, the Tokyo correspondent for Stefani, the official Italian propaganda agency, had telephoned Home Office to inquire about the bare "condition." Home Office officials did not realize the significance of the call at the time, but they did twenty-four hours later, when Hiranuma was hovering between life and death with several bullets in his head and his tongue shot away.

The Stefani correspondent, when questioned by the enraged police, could only say that a German diplomat had told him the previous day that Hiranuma had been shot. The German apparently lied his dates wrong. The would-be assassin later confessed to being a member of one of the Nazi-subsidized secret societies which Hiranuma was attempting to liquidate.

### Curbs on the Nazis

Japanese short-wave broadcasts are not mentioning the dozen Nazi prisoners who were taken in Tokyo while Ottavio was worshipping the Kyoto war dead. Perhaps their fate will remain unknown until after the war. But other Germans with whom I was able to establish occasional fairly direct contact after Pearl Harbor were complaining bitterly against curbs on their freedom in Japan.

Germans frequently were confined to their homes for hours during air raids and regular army maneuvers. Germans no longer were being permitted inside Japanese factories where they formerly had acted as advisers. German homes frequently were raided by Japanese police who no longer even apologized. Germans were not permitted to travel between Japanese cities without special permits for each trip. Few such permits were being issued. Germans were finding that many Jap shopkeepers refused to sell food to them—or anyone else of the white race.

In addition, Japan recently announced her official policy toward all non-Japanese business interests, including German, in all newly occupied areas of the Pacific.

As one German commented, "The policy places us in exactly the same position as business interests of countries with which Japan is openly at war."

The Japanese announcement of policy said: "Business interests of non-Japanese ownership may operate freely in the areas, provided they accept complete Japanese direction as to policy and operations. Any non-Japanese interest which refuse to accept Japanese direction will be regarded as enemy property and confiscated. Persons responsible for such lack of co-operation will be regarded as enemies and punished accordingly."

Much of Japan's hatred for Germany obviously has come from Hitler's effort to control Japan as he controls Italy but most basic is Japan's consuming hatred and contempt for all the white race and for all of what Japan considers the human race. For theirs is the wrath of the gods.

THE END

# Some good news about Tin we think you should know

IT'S NO SECRET that the Japs are camped on 80% of the world's tin supply and that America is facing a critical tin shortage.

You have been asked to salvage every single tin can you use—to save every possible ounce of this vital war material. But, today, there is *good* news about the tin you salvage—and we believe you should know that news.

**This is it: A new electrical process makes the tin used in tin cans go 3 times farther than it did before.**

Tin plate was formerly made by dipping thin steel sheets in molten tin. It produced a satisfactory coating, but used more tin than was really necessary.

American engineers devised a new method—*electroplating* the steel with pure tin—and the result was a coating that required only *one third as much tin*.

But the new tin plate had disadvantages. It was porous and did not provide complete protection against the acids in certain kinds of food.

*Then Westinghouse stepped in.*

Our research men and engineers, in co-operation with engineers of the steel industry, found a way of using *radio waves* to *heat* the dull, imperfect surface so that the tin fused almost instantly into a smooth protective coating.

**And the process is fast. A single machine can turn out enough tin plate in 18 minutes to cover an area the size of a football field!**

This new device is a typical example of

*electronics at work*—a result of Westinghouse electrical research and “know-how”. Already it is being installed in mills that turn out tin plate for a third of all the nation's food cans.

Naturally, this does not mean that there is less need for you to salvage your old tin cans. On the contrary—*more than ever*, tin is needed to protect the food supplied to our fighting men all over the world.

Westinghouse Electric and Manufacturing Company, Pittsburgh, Pa.

## Westinghouse

PLANTS IN 25 CITIES—OFFICES EVERYWHERE

## THIS SIGN HAS A STRANGE EFFECT IN YOUR MOTOR

Today's restrictions make your choice of motor oil vitally important in the care of your car.

You make only short runs. You travel at low speed. Your motor doesn't warm up sufficiently, or stay warm long enough, to drive off the acids of combustion and other crankcase impurities. Your car stands idle longer; that means danger of corrosion.

These ration days, 100% Pure Pennsylvania Motor Oils are doubly dependable. They are least subject to change whether your motor is idle or in use. They are sludge-fighting oils which lubricate efficiently under the toughest conditions. They let your motor start easily at low temperature. They help to seal worn rings. They stay reliably on the job.

Safe lubrication has never been as vital as it is right now. Your

car, your truck, must outlast Hitler and Hirohito. Use the proper winter grade oil and be sure it is Pennsylvania.

Huge quantities of Pennsylvania have gone to war, but enough Pennsylvania Grade Crude Oil is being produced and refined to keep the home front well supplied. It is worth going to trouble to get Pennsylvania Motor Oils—but you'll have no trouble getting them.

PENNSYLVANIA GRADE CRUDE OIL ASSOCIATION  
DIL CITY, PENNSYLVANIA

For your protection, fine oils made from 100% Pure Pennsylvania Grade Crude are entitled to carry this emblem, the registered badge of source, quality, and membership in our Association.

### Care for Your Car for Your Country

## Any Week

Continued from page 4

fear that hostilities will cease before, as Mrs. Henrietta Cotton Brown of Knoxville, Tennessee, has it, "all our enemies, active and otherwise, are exterminated for good and all." However, there are signs that the citizenry are preparing for postwar business problems. One of these signs was seen on a small but tightly closed lunchroom near Yakima, Washington. Mr. Fred Solice of Portland, Oregon, says that it read: "Closed for the rest of the duration. Owner at home thinking up plans for grand peace reopening." And from Fort Smith, Arkansas, Mr. Edward J. Minsterlein reports that a filling station he saw bears the notice: Proprietor in the Army. That's the tip-off. Stick around." And we have a letter from a young lady who works for the Office of War Information. Increasingly, she says, writers of letters to that enormous agency want to know when "whatever it is that's going on will stop going on." At least one letter of that sort started out thus: "Dear Sir: If you can tip me off within two or three weeks of the date when this war will be over, I will thank you by cutting you in on something nice in a business way. I can't move till I know." However, there are those among us who look forward to peace with a minimum of enthusiasm. Mr. Cathcart Willis of St. Paul, Minnesota, overheard a very young girl saying to another very young girl, both of them hurrying to work in the morning: "And then I said to him, 'It's fine for you when you get out of the Army and back to work again, but I hate to think of us girls going back to just being women again.'"

AMONG our casualties when the American Army landed in Africa was Colonel

Demas T. Crow. He was killed by machine-gun fire while nearing shore, where he hoped to induce the French garrison to capitulate without fighting. He volunteered for the job. It was his one hundred and thirty-seventh time under fire. Collier's for October 3, 1942, he wrote an article: How Anti-British Tales Start. the assignment that brought him death he was an expert. He was an experienced observer for the Army Air Forces, and Lieutenant General Delos C. Emmons has called him "our most valuable foreign observer." He was a brave man, a wise man, a humorous gentleman, grand soldier. And we know too many men we could better afford to lose.

DOUBTLESS you've heard a great deal of highfalutin talk about government national and international, after the war. Anyway we have. But any shining glory propounded by the sweetness-and-light lads will lack the backing of Mr. Ed Mortone of Dallas, Texas. "You quote somebody recently," writes he, "to the effect that we are fighting for the right to continue to elect incompetents to Congress. That's what we want to preserve. I do not propose to stand for having visitors from some half-pint state like New York or Pennsylvania or California coming touring through Texas, stop at a filling station and tell me that their states are worse run than mine or that they send funnier men to Congress. I have pride, have. Also, I have enough trouble figuring out already what my representative in Washington and Austin are doing. I we get some system where guys with ideals and do-good theories take over, won't have any idea what they're talking about and won't know how bad I'm getting gypped." . . .

W. L.

## Wing Talk

Continued from page 8

and the odds are that Captain Sloppy Hat will have a winged insignia on his shoulder and lapels.

Army Air Forces officers, by custom, take the grommet or wire out of their caps when they buy them and never replace it.

Ostensibly, they do this to enable them to wear earphones when piloting a plane. But the nonflying officers of the AAF as well as pilots assigned to desk jobs follow suit.

The real reason, say Army airmen, is that they wanted a distinctive cap of their own, but were turned down by the War Department. Army bigwigs have always discouraged movements to distinguish between the air and ground forces. But the AAF officers weren't to be denied. They got around the brass hats with a logical custom. And besides, that sloppy cap can be worn with a certain air.

At some of the Navy bases, a somewhat similar stunt has been pulled. Either black or tan shoes can be worn with the Navy khaki uniform. So by informal agreement here, naval airmen wear black footgear, and the deep-sea sailors wear tan, or vice versa.

THE roving members of the Army Air Forces Transport Command are as full of stories as the old-time traveling salesman. Some of their tales are on themselves. There is the one about Major Marshall L. M. McCrea, former

American Airlines executive who before the war was manager of the El Paso Airport.

A few months ago, McCrea was stopping off at a town in Brazil, en route to or from Africa. He got some food and something to drink at a little inn and called for the check. It read—28,000 milreis. He protested vigorously. This was a fine way to rob an officer of an Allied country. The waiter just shook his head and called the manager.

"But what is the matter?" the latter exclaimed. "The major's check, it is right. Twenty-eight thousand milreis—eighty-three cents in North American money. That is correct."

REMEMBER when the big B-19 Army bomber was first unveiled? Douglas officials scratched their heads trying to think of a suitable name for the 80 odd-ton monster. Gargantua was considered and dropped. Ditto Mastodon and dozens of others that were in some way symbolic of gigantic size or of ruling the skies.

Finally they decided on Hemisphere Defender. It never went over like Flying Fortress, Airacobra, Spitfire, etc. But now the Army pilots at Wright Field have another name for the B-19—which is doing much valuable work as a flying laboratory for tomorrow's huge bombers.

The biggest airplane ever built in the United States is called Junior! . . . J. G. N.

## The Fire in Thy Lodge

Continued from page 46

townstone home on State Street, but they were married from the ancient narrow family house in Boston. She was wide-eyed with wonder, carefully restrained, all the way out west on the train, and for her first few weeks as new stress of the great ranch house. The lovely pale mask of her face had never shown her feelings very much, her clear cool voice only rarely betrayed her most passionate self, but he had thought she was quietly happy in her own rigidly repressed way—until the night she suddenly burst out sobbing in his arms, in the darkness.

She wouldn't tell him why, only shaking her head and pressing her wet face deeper into the hollow of his shoulder, and he had to guess: that she was lost in the alternate empty loneliness and wild, loose, lusty turmoil that marked the seasons of frontier ranch life; that she was frightened by the wild new land, and hated its enormous primitive stances in contrast with the dim drawing rooms, the narrow streets, the little split hills of Boston.

But she never let him know in words. He just went on, into the next day and the next week and the next month, with her tight self-discipline regained; being even more tender to him, as if she were making herself be tender; being even kinder to the half-wild little boy, until the dutifulness began showing through although once or twice Lance had seen her watching the boy with a sort of mute pain, almost fear.

WHEN he looked back and tried to analyze, Lance had an idea that Joanna's actual mute rebellion dated from the sad business of the flower garden. He had marked out a plot against the south wing of the big log-and-timber house, had it fenced and laid with paths of mountain river gravel, and planted in firm designs a New England garden—mon verbena and phlox and morning-glories. In the evening the cow hands carried pails of water, wobbling back and forth between the corral tank and the flower beds in their high-heeled boots.

The garden was very beautiful in a feminine and delicately formal sort of way which awed them and made them awkward on the paths. And then came the hot winds and the fierce afternoons of the Montana summer, and in a week the garden was a neat design of dried stalks and yellow leaves on baked powdery earth. In a windy sunset, Joanna stood looking at the ruin for a long time, and then she walked away and never went back to that side of the house. . . .

Topping the ridge, Lance looked down into the valley of the ranch house under the mountains. It was all in blue shadow, now, but patterned by corrals and pastures and fields, so that the one great shadow of the range of peaks was, from this height, many broken shadows of varying values of tone and of distance upon the flat floor of the valley. And the silver ribbon of the home river holding the last of the sky's light. With a weary gesture, Lance tossed away his dead cigarette and put his horse on the downward trail.

At the corral, the slouching figure of his foreman materialized out of the dusk and his slow voice asked, "Find everything nicely on the north ridges, boss?"

"Yes. The bunches are pretty well scattered in the draws and the feeding's good," Lance said. "Some Indian sign,

But lots of travois marks traveling west, so all the women and young ones were along. Probably old Limping Bear's bunch going into the mountains for the berry month."

"Yeah, I saw that trail out in the open."

"How is the east range, Cal?"

"Nicely, boss. One yearling wolf killed about eight miles this side of Yellow Horse Creek. Summer pair of wolves, but I couldn't find the den, and no sign of the pups. So I left poison."

Lance walked on. The rambling roof of the ranch house loomed before him against the first stars, and unconsciously he made a long, troubled breath, almost a sigh. Pushing open the massive door, he went into the living room.

JOANNA had not come downstairs yet and it was dark and beginning to be cold because no one had lit the fireplace for the evening. His boot heels echoed emptily in space as he went to the far end of the room. Kneeling, he struck a match to the dry grass and mountain pine-knot kindling under the logs; and sitting back for a moment on his heels, watched the enormous high-ceilinged room emerge waveringly from the darkness as the licking flames took hold and climbed.

The uncertain light was kind to the massive furniture, hand-hewn from native wood, and it was silky on the skins of cougar and bear and mule deer, and it was a primitive and smoky light upon the colors of the Indian rugs and, high above, upon the railing of lodgepole pine which ran along the mezzanine gallery where the bedroom doors stood in a shadowed row. Only in the far corner, under a lofty window, did it find a darkly suave high light—upon the rounded corner of the concert grand piano which he had had shipped out for Joanna and which they had carted across the miles of range from town in the slowly lurching chuck wagon.

He arose suddenly as the door of Joanna's room opened above him, and going to the foot of the stairway, watched her white face, her dim gown, float along the shadow-haunted gallery and down the stairs. He held out his hand.

"How are you, darling?" he said softly.

"Good evening, Lancelot." She kissed him coolly.

"Have you had a pleasant day?" he asked.

She started to nod listlessly—and then suddenly, so suddenly he gasped, she was looking at him with a shaken, a frightening intensity.

"I must talk to you." Her voice shocked him: strained, hoarse, hardly more than a whisper, as if her throat had constricted spasmodically. "I have reached . . . I must . . ."

"W-why, of course," he said.

With a visible effort, she seemed to recover control of her voice. "Has Jefferson come in?" she asked quietly.

"I guess so," Lance said. "He rode ahead of me."

"He is always so quiet. I never know when he is here. . . . I will talk to you after dinner, then," she said. "What I have to say is nothing that a child should hear. . . ." He saw that she was shaking.

IT WAS a silent dinner table. Jeff ate silently, and quickly with hunger, but being careful about the formal manners his father had taught him in the years when they had dined alone. Joanna and Lance, at opposite ends of the long table, with the massive old silver candelabra

HEAD OF THE BOURBON FAMILY

IT'S an illustrious family—this bourbon family—with many distinguished members. But Old Grand-Dad heads it...heads it unmistakably, as one taste will tell you. There's sunny mellowness to Old Grand-Dad, rare fragrance, a delightful taste. You will like it from the first. And you will never stop liking it.

ONE TASTE WILL  
TELL YOU WHY

TAX NOTE: You pay no tax on the quality of a whiskey—only on the quantity. Why not choose the best?

BOTTLED IN BOND, 100 PROOF

National Distillers Products Corporation, New York

**I DIDN'T MEAN TO**, of course. But Dickie had such a dislike for that laxative I used to give him, he would actually fib when he needed relief. The stuff really tasted awful! And it acted even worse. It was just *too strong*!

**SO, I TRIED** giving him another laxative—with no better luck. Dickie would gag on it every time. And, when he did get some down, the medicine only stirred him up inside and failed to give him the relief he needed. It was just *too mild*!

**IT WAS A LUCKY DAY** for Dickie and me when I finally changed to Ex-Lax! He simply loved its fine chocolate taste. And I was delighted to discover how smoothly Ex-Lax works. It's not too strong, not too mild... it's *just right*!

### Treat the children to the "HAPPY MEDIUM" LAXATIVE!

Ex-Lax is effective, all right—but effective in a gentle way. It won't weaken or upset the youngsters. It won't make them feel bad afterwards.

— it's not too strong!

Ex-Lax can be given to children with complete confidence. Although it looks and tastes like fine chocolate, its action is thorough and dependable.

— it's not too mild!

Ex-Lax is one laxative that avoids extremes. It strikes a Happy Medium! In other words:

— it's just right!

### IF YOU HAVE A COLD AND NEED A LAXATIVE—

It's particularly important when you're weakened by a cold *not* to take harsh, upsetting purgatives. Take Ex-Lax! It's thoroughly effective, yet not too strong!

As a precaution, use only as directed.

from Tennessee between them, abandoned dinner-table conversation after a few halfhearted attempts. Even in the haze of candlelight, her face was paler than he had ever seen it, and it looked drawn, with shadows under the cheekbones.

After dinner, Jeff climbed the stairs to his room and closed the door softly. For a long, careful minute, Lance busied himself lighting a cigar at the fireplace. Joanna was wandering up and down the room, at first almost casually, letting her fingers trail absent-mindedly over furs and the backs of books, adjusting a silver vase of mountain wild flowers. But almost at once her stride lengthened, and Lance saw that her hands were beginning to clench and unclench at her sides.

"I can't stand it any more," she said in a dreadful, suppressed voice.

Lance pitched the new cigar into the fireplace and closed his eyes. Joanna said, from the other side of the room, "You know I love you." But she did not come nearer to him, nor even turn toward him.

"Yes," Lance said quietly, "we love each other."

"But this land—this horrible, raw land. Ugly, and empty, and brutal. The people are brutal, their lives are brutal. And empty—I don't suppose you would leave it, and take me home, to the East, where people can live as . . . ?"

"No," Lance said.

He thought: Brutality? Perhaps, a little. As in any new country. It takes tough men to tame wild land. But he had tried to keep her from knowing that phase—that, after all, rather minor phase—of life here. As for ugliness and emptiness, he had tried to make her days here beautiful, and he had thought her life would be as full as his.

"Well, I have to go," she said. "You must understand me. I have to go. Have you ever been afraid of insanity? I think I am partly insane, now. Sometimes. Another winter here—another endless, endless, terrible winter and I . . . I am afraid of the winter. . . . I—"

She broke off on a strangled, dry sob, turned sharply and stood staring out through the black panes of a window, at nothing. From the set of her shoulders he could see that she was fighting for control. After a while she said without looking around, "I suppose you think I am weak."

"No. Not weak," Lance said wearily.

"I don't belong here," she said. "Per-

haps you do—you think you do—but don't. I am not meant for this way of living. I can't cope with it. I've tried but I can't. I'm not a pioneer. I'm not

Looking sadly at her, Lance thought that perhaps she was right. Perhaps she did belong in a dim New England parlor, with a background of family portraits, and curios and jewels and crystals and silks her ancestors had brought ships from the far seas; perhaps she did need the richness and the quietness and the peace of old traditions and old ways of life. But her New England ancestors had been pioneers on a bleak coast, facing the snows, the winter forests of new world. They had built their homes in a wilderness, and they had fought and killed for their homes.

"This country, this frontier life," Joanna said, "has nothing to give me. I am not alive here. I am a stranger in this incredible house, I am an intruder in it—"

For a second he was terrified that she was going to say "in this house that a frontier woman helped you build," but she finished: "—in your way of living. And in Jeff's."

**HE COULD** have said, in sudden anger, that this new country, and this frontier life, and this house had nothing to give her because she had given them nothing. He could have told her that no corner of earth can give you anything of its beauty and its richness until you give yourself to it, a little, at least; that to be a stranger, one must choose to be. But he only bit his lip and finally said hesitantly:

"You know, I—I wish you would ride with me tomorrow. You never have you know, not really, not all day. I'm going along the south ridges tomorrow and it's very beautiful along there. At this time of year. We could . . . could talk this over as we—"

"Lancelot," she said quietly, almost gently.

"Yes?"

"I must go," she said. "I must. Perhaps I will come back. I will if I can, if I can learn to see our life together, here. Because I love you. But I need to—to gather myself. Please understand."

"Yes," he said. "I guess I do. Where will you—"

He paused, listening. A hurried arriving trample of hoofs on the river gravel outside the big front door; deep drawling voices growling curses, questioning, back and forth; a pony, spent with running, blowing with a long wet breath. "It's settled, then,"

"This model is equipped with FM, and also plays request numbers"

COLLIER'S

RODNEY DE SARRO

he said. "Do as you like, my dear. Let me know when you want to go and I will pardon me a minute."

He went toward the front door, to answer the banging knocks. It sounded like somebody banging with a pistol butt. He scowled, and hesitated, thinking, *Dinks, maybe Harvey and his foreman on the way home from town, or maybe people from one of the big new Eastern outfits on the Warbonnet River.* With an apologetic glance at Joanna, he went on and unbolted the door. Joanna was staring in fastidious disdain toward the stairs.

AS THE heavy bolt slid back through its home-forged iron brackets, the door barged open abruptly and slammed against the wall and he jumped back—but not quickly enough. The rim of a gun muzzle was making a steady ring and silver O at his belt buckle, and the dusty dust-and-sweat-streaked front of the man behind the steady, hairy hands was coming into the light, into the room. Lance raised his eyes slowly, feeling the familiar crawling and knotting of a vein in his forehead.

The man had pale, piggy eyes, and a fast-gray black handkerchief tied around his face, over the bridge of his nose. The black handkerchief bulged in front, from his mustache, and it bulged at the side around the jowls.

"Easy, boy," the man said, in a deep, seriously musical and friendly voice.

"Yeah," Lance whispered. His eyes lifted swiftly under slit lids to left and right. Two other men were coming behind the man, one at each shoulder. Ordinary, dusty men, with black handkerchiefs over their faces. They had their guns out, too. On second, swift look, one seemed to be only a punk kid, with scare-widened blue eyes and a wet, blond, dusty curl of hair sticking out over his forehead from under the sweatband of his hat. That was the one to be afraid of, Lance knew; that pistol muzzle was making little, jerky circles with nervous tension. The other one was a man, murderous cadaver of an old-timer, dead but stupid. Lance turned and started running toward the closet under the stairs where he had hung his gun belt.

A gunshot, empty as the slamming of a door in the vast, high room, and a haze of splinters fanned out from the peeled-log stair rail in front of him. The 45 slug left a shattered gash in the oiled wood. Lance stopped, the soles of his shoes skating a little on the floor. Grudgingly, he raised his hands a bit, not quite shoulder high, and turned.

"That's it, boy," the big man said. "You have real handsome hands. Hold them where I can admire 'em."

Joanna, shrinking against the wall, was staring at Lance, too, with eyes like pools of green ink in her white face. As he looked at her, she felt the wall and started walking toward him, and toward the stairs, like a sleepwalker.

"Good idea, ma'am," the big man said. "You stand right with him. Makes it simpler, for us and you, too."

With stiff jaws, frozen lips, Lance said, "What do you want?"

THE three men were coming toward them, walking with tired, wobbling deadliness on the high heels of their boots. The boy was behind Joanna, his nervous gun wavering at her back. The other two guns were steadily on Lance, as they came.

"We don't want nothing but horses, boy," the big man said. "We had a little accident. The kid's horse, here, he got unfortunately shot. Him and the old guy been riding double."

"Ah," Lance said. He knew now why the transcontinental train had been stopped beside the trees of Yellow Horse Creek. These men were train robbers. . . .

"So," the big man said, "the kid, here, will stay with your wife while me and the old-timer goes with you out to your corral. And we will look over your remuda and get us some horses. It won't take long."

"M'mp," Lance said.

"The morning string is in the corral already, ain't they?" the big man said.

"Yeah," Lance said. With agony, he had noticed, in a quick upward glance, that Jeff's door—the last door on the mezzanine gallery, the one above the fireplace, was gaping widely open. Another swift upward flick of his eyes, and he saw a small dim ghost stealing this way along the gallery. "Yeah," he said loudly. "It's all right. Let's go."

"You understand, boy," the big man said, "that if the kid, here, hears any shots or any noise out by the corral, his trigger finger is liable to jerk, even if he is staying here with your lady."

"Yeah," Lance said. "Let's go. Come on."

Joanna was staring at him, almost with disbelief. But Lance, under his lowered brows, was watching the slim little ghost-like figure that had just reached the head of the stairs.

He started toward the door, his hands still half raised unwillingly, but Joanna stopped him with a word:

"Lancelot?"

THE three masked men, moving with him, had slipped around in a moving arc, to keep their guns on them both. So now they stood at the foot of the stairs, a fan of guns. The kid was in the middle.

"Yes, my dear?" Lance said. Silently, silently, the little ghost figure of Jeff was coming down the stairs.

"I—" Joanna said. "P-please, can't we—"

"Come on, you," Lance snarled harshly, but his voice cracked with fear as he saw Jeff, halfway down the stairs, crouch against the wall to size up the strangers, his small intent face, almost thoughtful, turning from one to the other. "Come on, come on, let's get it over. It's all right. It's *all right!*" Lance said. "We won't have any fight over it. Do you hear?"

"Well, boy," the big man said, "that's right handsome of you. We didn't expect you'd be quite so—"

But with a quick, sliding, descending patter of bare feet, Jeff had made his choice and was the rest of the way down the stairs—and had leaped. Like a mountain rattler in a leaping strike from his coil, like an arrow from an Indian bow.

He was on the kid's back, clinging as a cougar clings; killing silently with skinny little hands knotting, digging in and knotting, around a scrawny windpipe. Jeff had picked the dangerous one.

Lance jumped, throwing himself in front of Joanna as the kid's gun made a dirty orange stab of flame, but the stab was knocked downward, toward the floor, and the gun went clattering as Jeff silently twisted his knotted hands, and Lance's right arm felt cracked to the shoulder as his fist slogged into the jowls of the big man. His knuckles felt the black cloth of the handkerchief and the flesh of the jowls and the cutting edge of the jawbone. The big man spraddled grotesquely as he fell and the whole shapeless askew black mask had an expression of extreme surprise.

And then as Lance turned and started for the old-timer, before him and under

"First off, I'm going to ask you where you got that shirt."

After Victory—

# ACE COMBS

Rubber, including Ace Hard Rubber, is critical war material. No more hard rubber combs may be made until Victory. Take good care of Ace Combs you now have.

him darted the figure of Joanna, reaching—no, diving—for the gun the kid had dropped on the floor, and then the old-timer's gun stabbed once with the same dirty orange flame, and a large, lazy blow caught Lance on the left shoulder and spun him around, quite painlessly, a half turn around, and his legs were suddenly pleasantly tired and he had to stagger to make the turn complete so he would still be facing the old-timer.

And as he fell in slow motion, he saw something queer. It was as if an invisible hand were slapping the murderous old-timer on the chest in jovial greeting.

jabbering a speech he did not know. The one with the torch took him by the hand and led him into the hall where logs blazed in a huge fire hearth. Mark took in the place with a glance—the heads of stag and buffalo fastened to the walls, the flax hanging from the rafters, the crude swords and huge embroidered coats of the score of armed men who filled the benches by a long table, the yellow-haired maids carrying wine jugs, the spinning wheels stowed away in the corners. "The hall of a small nobleman," he thought, "who likes hunting. But where is he and what is he?"

**T**HERE was a high seat, empty, at the table near the fire. There were gold dishes and a white cloth at that place; behind it, a shield of arms bearing something like a dragon, obscured by smoke.

It surprised him that these people seemed to be getting ready to dine, rather than flee the place. One of the men bowed to Mark and pointed behind him. Mark did not turn around. He preferred to face these strangers and he chose to keep the sack of barley slung over his arm.

"Panna Marya!" growled the bearded man.

"I hear you, brother," said Mark to himself, "but the devil himself couldn't make me turn my back to twenty swords."

Then he heard a woman laugh softly behind him and he swung around quickly enough.

She had not meant to pose there. Only she looked like a painting, like the stiff dragon on the shield. For pearl strings lay heavy on her young shoulders, and silver tissue made a crown on her dark hair. Such things did not fit her because her lips were quivering with laughter, and her eyes merry and knowing. She was holding a silver tray and on that tray, a dish of salt and a piece of broken bread.

"Chlieb sol," she said, curtsying. She chattered at him, the words meaning nothing to Mark. He had not seen a maid like this in his life's time, because he was newly come out of the East. "Eheu, hospes," she cried at him. "Oh, guest, speak, can't you?"

She was speaking Latin then, and Mark had once been taught that language by a wandering friar. Only this youthful Marya rattled it out like a bird singing: "I greet you, sir. And the bread and salt of my house I offer you."

A side of mutton was what Mark craved. Swearing silently, he took a morsel of bread, dipped it in the salt and chewed it. Then the girl Marya in her queenly garb fetched him a gold cup of spiced wine.

It felt heavy in his hand, and he guessed the gold to be solid and old. As he drank, he thought that this cup,

Every time the invisible hand slapped, the old-timer's shirt jumped a little and a little dust fanned out. And just as Lance hit the floor, he got his head around and saw Joanna, backed against the stairs, the kid's .45 spitting steadily from her calm, white hand.

And pitching forward from his knees to bump his head on the floor, Lance had two fading notions:

"The Puritans aren't dead."

And—

"Any place you defend is, a little, at least, home. Joanna has put in a stake here, now. She belongs. . . ."

## The Black Road

Continued from page 47

slipped into his bag, would pay his way to Venice. "A kiss with the cup is good," he grinned, remembering a verse that the friar had not taught him.

For a second, Panna Marya's eyes searched his. Then they widened, fastening upon something on his shoulder. "A kiss, truly," she whispered, slipping up to him, taking his hand. She still looked into his eyes when his lips touched hers and his arm pressed hard against her slim back.

"Nay, you will spill the wine." She smiled. "I did not know that you were crucifer. An honor it is, so to greet a cross-bearer."

No more had Mark known that he was a crusader. The black mantle he wore had a cross sewn on the shoulder because it had belonged to his father.

But Panna Marya acted as if Michael the Archangel had dismounted in her hall. She clapped her hands, she cried out, the towheaded maids scurried around like hens when grain is scattered, old men climbed into the gallery among the stag heads and began to make music. The men-at-arms clanked around Mark, jabbering, and Marya skipped back to interpret.

The giant Kmita, captain of the men-at-arms, pulled off his iron cap and swept his beard below his belt in a bow.

"My people say it is a good omen that you should come at this hour," cried the girl. "And I say so, too."

She led him to the high seat by the fire and made him sit where the gold service gleamed on the boards, while a flustered maid offered him a silver basin of water to rinse his hands before eating.

Kmita drove the maids back to the hearth and brought the platters of smoking pigeon and pork and venison to Mark himself, bowing each time. It was the custom of her people, Marya explained—the Polish people. Didn't he know? He shook his head, eating fast.

When he got up, taking his bag on his arm, Marya looked at him, dismayed.

"But it is night. You must sleep and rest and break your fast with us, Mark!"

He did not think he had heard aright. "You mean to stay?"

"I? Yes."

"Here, in this castle?"

The girl Marya seemed to be troubled because he did not understand. She had been visiting Kracow, she said, for the Easter festival when she had heard the country was invaded. So she had hurried back to the Dragon—as she called the castle.

"You think you can defend this place?" Mark asked. "With what?"

Hesitating, she pointed at Kmita and the henchmen, chewing tranquilly at their meat.

Mark shook his head impatiently. "Lady, the horsemen who follow after me have laid Cathay in waste. Men say

Toward midnight—long after uproar was over, long after Jeff had gone upstairs to bed, to dream whatever strange, silent dreams he might have under the mountains of his people—Lance lying on the long hand-hewn sofa, strained the bandages of his shoulder, push the sheet and blankets away from his face, and look at Joanna.

She sat, holding out her hands to the fire on the hearth as if they were cold, if to warm them; and her face was very beautiful, and very abiding, in the firelight.

THE END

that they cracked open Kiev like melon, and now they may be venturing into these mountains of yours—"

"True—we know. But I had hope"—her gray eyes appealed to him—"that you, a war wager, might abide with us. How her eyes held him! He could feel the touch of her lips and he did not want to leave her behind.

"Listen"—he was glad the henchmen could not understand him—"it is too late now to evacuate the folks here. But we can drive our horses tonight and with luck get others at Kracow. Change your dress." He glanced at the old-fashioned strings of pearls. "Take your jewels in a bag. Have a fast horse saddled, but hurry!"

The girl Marya gripped tight the carved arms of her chair. "To go away with you? Only we two?"

"It's a chance, a good chance. What did you say about an omen?" Mark was thinking of the road ahead, full of refugees. "In a month we can be in Venice. And if Venice is not safe, then there is the sea and England."

"Eng-land?" She did not seem to understand. She said something about her father the castellan, and her grand father, and the way they had built the castle, and something else about a dragon that watched over it, protecting it.

"Dragons are not what they were," Mark laughed. It was so like the girl to think of a legend at a time like this. "Not in these days."

"But this one is!" She brushed the mass of dark hair from her cheeks and smiled at him. "Come! I want you to see!"

Slinging the bag on his arm, he followed her out of the hall through the massive doorway of the donjon. "Now, look," she said, holding to the door.

**B**EDLAM resounded outside. Torches flared in the courtyard where wild figures pushed through the outer gate—huntsmen with game on their shoulders, peasants pushing long wagons creaking under loads of kegs and sacks of food. Women with babies lashed in shawls behind their backs, and older children herding in steers and sheep.

Mark recognized these people as refugees he had passed on the road.

"My father said the castle was ours in time of peace and it is for them in time of war. They have no other place to go."

"By the eyes of God," Mark muttered, "are you coming?"

"I—they would not know what to do without me."

Her fingers caught at his and then let go. Why had he sat here gossiping like a midwife for two hours?

He jumped down the steps, pushing toward his horse. "Close the gate and knock out those torches!" he shouted,

## "I autographed a bomber—you can, too!"

"I READ THIS AD," she wrote, "and saw for the first time how I — Betty Smith — could declare war on the Axis!"

To judge from our mail, it made many thousands of other people feel that way, too. It was simply an offer to put your name on a North American B-25 bomber.

All you have to do is buy a War Savings Bond and send the serial number to North American Aviation, Dept. M, Inglewood, California. Then your name will ride with a bomber's crew, on a scroll in the pilot's compartment, to show the men who made the war what war with America is like!

From all over the country letters are pouring in like Betty Smith's. From workers in war plants. From Dads and Mothers who have lost sons. From parents whose boys are in strange, far away places. Even from school kids. Letters that no Nazi or Jap could read and laugh off.

From the Midwest comes a list of five bond numbers. A mother asks that the names of her five sons, all in the armed forces, be placed on North American planes.

A southern lady wants a plane autographed for her son, "A prisoner on Bataan, seriously wounded the last we heard."

B-25 bombers are coming off the produc-

tion lines in a steady stream. There's a place on one of them for your name. Why don't you buy a War Savings Bond today, and send us the serial number? It's a pretty satisfactory way to show the enemy that you mean business.

## Quick Relief for THROBBING

When the icy wind cuts through you, does it lay you up with painful, grinding "cold-weather joints"? Absorbine Jr. quickly eases those aching joints—brings speedy, joyful relief from such winter torture!

Normally, little blood vessels feed lubricating fluid into the joints. Extreme cold constricts blood vessels. Slows up the supply of fluid. Makes joints "grind" and ache. Hinders your movements and work!

Rub on Absorbine Jr.! Feel the warmth spread, as it speeds up the blood flow—helps nature quickly counteract the effects of cold. Soon your joints "glow" with relief! You'll feel like singing! At all druggists. \$1.25 a bottle. Write W. F. Young, Inc., 201A Lyman St., Springfield, Mass., for free sample.

**FAMOUS also for relieving Athlete's Foot, Strains, Bruises**

his skin cold with the feel of danger here. Swinging into the saddle of the roan mare he rode through the gate without looking back.

At the main road he stopped, listening. Evidently the Poles were all inside the castle, because he could hear nothing. But down the road the way he had come, a gray patch blacked out and then reappeared. Something was moving there without making any noise.

Wheeling the roan mare he trotted up the road. Drawing the morning star from his belt he held it where the chains would not jangle. He did not see the riders ahead of him until he was close to them.

There were three of them, waiting, silent. Mark dug in his spurs, bent his head and swung up the battle mace. A bow snapped and something jarred against the steel mail above his belt.

He took the middle rider on his right hand and lashed out with the morning star. The spiked balls smashed into metal and flesh, and that man fell from the saddle. Mark spurred through between the others.

He did not see the rope that caught him over the head and shoulder. Since he was bending forward, it tore him from the saddle when it tightened. Hours later he saw that one of the Mongols had a pole tipped with a long rope ending in a noose. If Mark had seen it cast—

But he felt the dirt of the road in his fingers and the soft run of blood in his mouth, and in a moment he felt the sharp wrench of a twisted arm. The rope held him tight, helpless as a trussed pig, with his horse vanished into the night. Leather creaked above him—he caught the stench of wet hides. A figure picked up something from the road, and he heard the clank of the morning-star chains.

The man standing over him groped for Mark's head. "Adam tzeel!" this one demanded. "What—man?"

"Farang," Mark said. A Frank of the West, he was.

The Mongols seemed amazed that he could speak a language some of them knew. One said, "This one truly has a voice. It will be of use to us."

They pulled him to his feet by the rope, to see if he could stand. For a moment, curious as children, they examined the morning star they had taken from him, passing the weapon from hand to hand. Then one of them noticed the light in the tower above the pine trees. At once they covered the blue, painted lantern, and a low command was repeated back through the ranks of the pagan riders.

Turning off the road into the pines they began to climb toward the castle, taking Mark with them . . .

AT SUNRISE, Arslan Khan, the Mongol officer, called Mark up to him. "Our bows are strong, our horses swift, our hearts hard as the mountain rock," he said, smiling. "Do you understand my words, Farang?"

Mark nodded. It was easy enough to understand the words of Arslan Khan, but not so easy to guess what his meaning might be.

With an effort Mark drew closer, dragging the leg on his injured side and holding his wrenched arm carefully.

"Then tell me," demanded Arslan Khan, "why the white-faced men in that stone house do not come out?"

They had climbed to a knoll opposite the massive, iron-studded gate of the castle, over which floated a banner bearing a white eagle. The gate was closed. The round towers, nicely spaced for cross fire, appeared stronger than the Englishman had thought in the night.

But along the battlements no heads showed. This silence puzzled the Mongol.

"How would I know?" Mark said thoughtfully. "Ask them?"

Instead, Arslan Khan sat down on his leopard skin tranquilly. He leaned back against a stone slab on which the outline of a dragon showed. This slab, Mark thought, was the entrance to a tomb overgrown with ivy, set into the knoll. At least, it bore Marya's family crest.

"Nay, you will ask them, Farang, with these words."

Carefully Arslan Khan placed Mark's morning star by his knee. Two other gnomelike horsemen sat impassively behind the prisoner, apparently paying him no attention. Down by the road, a half-dozen Mongol troopers let their horses graze. No others were visible, although Mark felt certain that three or four hundred had come up the road that night. They want those Poles to sally out, Mark reasoned. So far, the Poles were lying low.

"Tell them," the Mongol went on, "we are servants of the great Khan who holds the world between his hands. We have no bad hearts toward the Christians. Tell them to throw their weapons over that wall and open that gate. Then if they give up to us what treasure they have hidden away we will take it with the weapons and go. The living people and their cattle we will not take." His eyes shifted to the silent Englishman. "Make your voice clear. We have no mind to kill those Christians."

"And if I will not?"

"I myself will kill you."

Mark shrugged. "I will do as you wish. Only give me a horse. I am too lame to move."

The Mongol glanced at him impatiently. "A wounded bird has no need of wings," he grunted.

That, Mark reflected, was true enough. Arslan Khan was much too experienced to give his prisoner a chance to ride for it. So Mark began dragging himself painfully down the rise toward the silent gate, a long bowshot away. Close behind him the two guards followed, not troubling to draw their swords.

Midway to the wall he stopped, noticing a movement within the embrasures over the gate. "Panna Marya!" he called.

After a moment her voice answered.

"Listen," he said clearly. "These Mongols who hold me offer you a fair surrender if you open that gate."

"Yes, Sir Mark." Her voice came down to him, muffled.

"Don't do it. Don't hear to their

promise. Belike, they will try old tricks. Keep lights going at night a watch, or you are all dead."

"We hear, O Knight of the Cross," voice quavered as if laughing, "and bow to thy wisdom! It must have served thee well." Then the voice changed. "Only, listen to me now. Kmita has a plan to reach thee. Ay, to go out—"

"Devil take Kmita! Keep him behind the gate."

"But he will not—"

"If he follows his feet a spearcast or side, he will be dead before you can set orisons for him. Let be!"

For a moment the Polish girl kept silent. "What will you do?" she asked.

Mark hesitated. "What can I do? Nay, I go with these pagans and I will keep my hide whole."

Her foolish valor angered him. At least, he thought, now these Poles would trouble no more about him. Being angry he almost forgot to drag his leg as he turned away with the two Mongols.

Painfully he dragged himself up Arslan Khan's observation point. "The Christians," he said bluntly, "will surrender. They ask only for the time until the sun is highest in the sky, to come together and dig up their treasures."

Arslan Khan's eyes narrowed. "Kaithe voice that spoke for them was woman's voice."

"Aya tak. Ay, so. Their commander is a woman, a princess."

STILL the Mongol pondered. "What precious things have they? What treasure?"

"Cups of gold and strings of pearls. Enough to fill the arms of one man." For an instant, Mark remembered his own lost jewels.

The Mongol's eyes glowed green as he struck his hands together. "Now will go over those walls and rip those Christians open like melons."

He shouted an order.

Mark heard, at first, only a stirring and trampling along the ground. Then he knew it to be a rush of hundreds of horses.

The charge came headlong out of the pines, along the road. Lashing their horses, the riders spread to each side. Sharply the speeding mass divided, half of it reining in almost under the shadow of the wall, the riders snatching arrows out of the sheaths at their hips and sending a flight of shafts upward at the summit of the wall. They kept their horses in motion, yelling, "Kiari-ghar!"

The first half of the riders did not rein in until their horses wheeled against the

"Do you want me to tell all I know about Antony and Cleopatra or just what the textbook says?"

COLLIER'S

REARER KELLER

COLLIER'S "By rule of thumb, I'd say it was off about 3/10,000" DAVE GERARD

... of the curtain wall between the ge and a tower. Those pressed against the wall stood up in their saddles, grasping at one another and the rough surface of the stones. Above them lances were thrust up against the wall, and men scrambled up on the shoulders of the first rank, hauling themselves higher on the hooked lances, clutching at the crenels of the top.

In less than a minute they were at the parapet, climbing like monkeys, screaming their, "Ghar-ghar!" Somewhere behind them drums pounded in cadence with the voices.

Mark knew the attack had been blind, in speed, the racket meant to confuse the garrison until the first Mongols could get their footing on the wall itself.

That wall, however, came alive. Men leapt between the crenels, and battleships smashed down on the climbers. Giant Poles swung flails down as if threshing wheat. Two of them heaved heavy beams over the parapet. Kmita's swordsmen, running up from the gate, began to slash with their blades, and the other-clad Mongols were smashed down like fruit from a shaken tree.

FOR the moment, Arslan Khan was paying no attention to his prisoner. Paying on his haunches, he was staring at the wall but not at the spot where his riders still struggled to climb on the bloodstained lances. He was watching the other face of the wall, in deep shadow. Here a half company of his men had piled up to the foot of the wall. They had no horses and they wore gray felt robes that made them look like giant poles crawling up. And the first of them carried pole ladders that they cast up at the parapet. Metal hooks on the ends of the ropes caught over the stones. Men pulled themselves up the ropes bracing their feet against the stones.

Mark swore silently. The racket by the gate drowned out the noise made by the climbers.

Then he saw figures running on the summit of the wall—figures of Polish women. They began to chop at the ropes with axes and to throw blankets over the heads of the climbers, while they worked the ropes. Panna Marya was among them. In a minute the ropes were cut. The Mongols below, enraged, could only loose arrows at the women.

Arslan Khan shouted an order, and the surviving Mongols began to run back clumsily toward the knoll.

From the wall, crossbow bolts flick-

ered. The archers covering them circled desperately to avoid the iron bolts that smashed among them. They will not try that again, Mark thought.

Moving his head slowly, he saw that the two men behind him were intent on the road below. Arslan Khan sat rigid as a statue before the tomb, his breath hissing from his body. For the moment he was not thinking of the prisoner who had deceived him.

Without hurrying, Mark got to his feet, crouching. The leg that had seemed helpless was firm beneath him as he jumped at the Mongol. And Arslan Khan moved with the swiftness of an animal. One hand snatched the long knife from his girdle, stabbing at Mark's throat.

Mark swung down his head, feeling his shoulder strike under the Mongol's arm. They rolled over on the ground. But Mark gripped hard the shaft of the morning star for which he had made his leap. He rolled over in the dust, gathering his feet under him, knowing that the Mongol was quicker than he. "Ghar!" he heard at his back.

He gave himself no second to stand. Crouching, he whirled, lashing behind him. One of the spiked balls of the morning star caught the Mongol's leg and he staggered, off balance. Swinging up the steel flail, Mark brought it down on the Mongol's light helmet; and Arslan Khan whirled to the ground, his skull crushed—even as his dagger arm struck at Mark.

Reaching down to pick up the dead man's shield, Mark thrust his injured arm into it and stepped forward to meet the rush of the two guards, who had drawn their swords.

He took a blow on the shield and struck with the morning star. But the agile Mongols sprang back, having seen how death flashed from the flying spikes.

Facing them Mark backed toward the stone slab of the tomb. Other Mongols were running up from the road with bows. He could not reach a horse now and he tried to put the tomb at his back, to face them, as an arrow whirled by him.

He heard a grinding and a crash beside him. He saw the stone slab fall into the dust, and a giant figure raced from the tomb. "Slava bohu!" it roared. And with flailing sword, it crashed into the nearest Mongol.

It was Kmita, mad with excitement. Behind him the dragon tomb spewed forth clumsy men in mail, racing one an-

other toward the leading Mongols. They struck with heavy battle-axes and they threw long spears.

Those Mongols, startled by the apparition of men pouring out of the hilltop, turned and ran down the hill, dodging among the pines for their horses. Behind them labored the Polish men-at-arms, calling to them to halt and fight.

Mark looked once into the tomb, seeing no grave, but an open passage leading down, crowded with the garrison of the castle pushing out after Kmita. He went with them.

To the Mongols it seemed as if an army, hidden in the ground, had been lying in wait until now. They hurried away with their horses and wounded, down to the road through the mountains. . . .

"It was," said Panna Marya, "a thought of my father, who was castellan of these mountains. He said we should have two gates here—one seen and one unseen. We called it the dragon's lair."

Reflectively, Mark rubbed his lame arm, sitting on the doorstep of the hall beside this girl.

"Now it is clear to me, lady," he said, "that you have met pagan fighters before."

"We have so," she nodded, "for a hundred years." She looked at him, pleased.

Sitting there in her gleaming gown, she thrust the dark hair back from her slender throat. The scent of the hair was in his nostrils, and the light of her in his eyes. She will never be afraid, he thought.

"They come over the road because it is the road through these mountains," she said. "The black road, we call it." And she hesitated, turning her face from him. "You will not be taking to the road now, Sir Mark?" she asked.

HE THOUGHT about that. Through the courtyard he saw Kmita pushing by the cattle and carts, past the peasant women who were milking cows and piling hay for the wounded to lie on. Through all this bedlam of a farmyard with its folk, Kmita was carrying a cloak which Mark recognized as his own.

When Kmita reached the steps he held it out in his great paw. Bowing to the belt he shouted angrily, his eyes gleaming.

"He is saying," Panna Marya explained, "how he wanted to go out and rescue you when the pagans made their surprise attack. He is saying that if harm had come to a knight of the Cross at our gate, it would have been a shame to us forever."

Mark took back the cloak which the Polish captain of men-at-arms had found along the road and he thanked Kmita. He smiled and Kmita grinned.

Here he was, with the Cross again, with his wealth gone galloping off. Here he was, not in a palazzo of Venice but shut up in a frontier castle with hordes of pagans roving the countryside.

Panna Marya looked up at him, troubled, trying to read his mind. "Last night," she whispered, "when you rode away, I was frightened."

"You?"

"Yes—of the night and being left alone. I—I wanted so to go away with you to Venice and to live."

Mark, late lord of Kerak, swore silently at himself, understanding now for the first time how frightened this girl was and how she had made a feast of supper the evening before, thinking it might be her last. He shoved away a bawling calf, put his good arm around her, and laughed.

"Panna Marya, the devil take Venice! This is where we belong, both of us!"

## Oran Overture

Continued from page 13

"Look, doctor," he said to the American surgeon, "if they get me in both legs, shoot me—no, don't." He was grinning and pretty casual about it. He might have been joking. "But if they get me in both eyes, for God's sake put me away—but give me a drink first."

Mike drank a glass of water and wandered out.

When the doctor began laying out his instruments on the mess table I went out, too. The cutter rammed through the blackness of the Mediterranean. The phosphorescent water seemed to hiss against her plates. Somewhere just ahead were the curving black hills of the African coast. Behind us came our sister cutter and the two launches.

My battle station was the bridge. I hobbled over to the ladder, crossing the deck beneath which our men, packed in tense silence, awaited the signal that meant the boom had been broken, that their job was beginning. There were six hundred of us, just as the kid from Kentucky had said. I climbed to the bridge.

## The Black Cliffs of Africa

The skipper was waiting for word that the main invasion forces had begun landing on each side of Oran while we headed for the harbor.

"This is my meat," the captain said. "This is what I've been waiting for. You know, it's only when I get a whiff of battle smoke that I really begin to live."

We stood quietly in the darkness. Then we saw lights—little pin points of light to our right. Abruptly there were the black cliffs of Africa. There was Oran.

A wireless message from headquarters told us the invasion had started elsewhere. An order came: "There has been no shooting so far. Do not start a fight." Metallically the loud-speaker system carried the order to the men packed below decks, lying on their bellies as close together as sardines. There was a nervous little chuckle in response. Then we waited. The Walney surged toward the harbor entrance. The chief engineer had kept his word. We were there.

Something was happening down the coast. A sizzle of brilliance crept across the sky; exploded lazily. A lookout's voice came clearly, "Star shells off starboard, sir." A British warship was creating a fireworks diversion on schedule. Still the shore was black. Then from somewhere a searchlight blinked. It turned idly for a moment, then swung upon us. It snapped off, there was darkness again, and then the angry crash of gunfire.

We turned out to sea; turned again, and headed back toward our goal. We had crossed a thousand miles of the Atlantic from Britain and pitched through two hundred and fifty miles of the Mediterranean, and here, at last, was our goal—a little boom made of chains stretching across the entrance of Oran harbor. We had to break it. We had to get inside the harbor and seize ships and shore batteries. An order was passed to the men below, "Lie flat for crash. We are approaching boom." We braced ourselves against the devilish symphony of machine-gun and artillery fire. Our Tommy guns began talking back.

Shells and bullets crashed into us, and almost as the Walney shuddered with the impact, she snapped the boom. We were through. It had been as easy as that.

But in another moment there was a second grinding crash. We'd struck and

splintered one of our launches. And then shore gunners really got our range. Up in the forward turret Mike died in a quick flash of high explosives. The next shell crashed into our engine room. Our power was gone and we were drifting. For a minute we drifted unmolested in sudden quiet. It was the turn of our sister cutter. She was in a deluge of fire.

Later I learned that at the critical moment of passing the boom her skipper was struck in the eye by shrapnel. The cutter crashed into the breakwater, but most of the personnel got ashore before she blew up.

We drifted slowly past a floating dry-dock. For a second I saw part of the breakwater wall and in the glare could read three painted words, "La Belle

up. My crutches were knocked away in the first crush of falling men. I fell and crawled to the outside wing bridge in an attempt to see. Shell bursts wounded me in both legs. The Walney caught fire below deck. Pimms, the navigator, died on the bridge. I could see only a dull red glare and one man moving on the bridge. It was the skipper. "Who is it?" he shouted. I told him and he shouted something but I never heard, because we got another direct hit. I don't think the captain moved after that, but behind me, dimly, sketchily, I could hear another voice shouting. It was Lieutenant Cole, who had been worried about his wife. He was swaying like a tall, slim wraith on the smoky rear of the bridge.

"Okay!" he was shouting. "Everybody

ship and the pier. My eyes closed. My fingers clawed water. I touched a wall and discovered I was again determined to live. I hauled myself up until I got my elbows over the pier rim. Then the weight of the cast on my leg caught me and I knew I couldn't make it. Slowly and painfully I began losing my grip. Then a single hand groped down and braced me. I swung my good leg up and it caught. Then the hand from above began to pull, and I rolled over the edge with open, gasping mouth pressed against the stone surface of the pier. I could see the man who had pulled me up as a half-unreal figure swaying near me. But I was alone enough. He had used only one hand because the other had been shot away. I never knew his name, never even knew his nationality, because just then a bullet struck my injured foot. Another bullet later hit the wall and bounced into the temple. I was crawling, sprawling in the dirt, crawling again.

## A Tunnel of Agony

An American soldier and I eventually called out to a French patrol and were taken prisoner to a hospital tunnel, cut deep into a cliff and choked with wounded men.

At dawn I was shifted to an open loambulance. Natives gathered around staring curiously, shaking their heads as they saw the gaping wounds, blood and tatters. A British seaman with his almost shot off cursed them in a faint Yorkshire accent. Later, in a long hospital ward, a French nurse stuck a cigarette between my lips and a doctor found a total of twenty-six assorted holes in me. I tried to sleep but the hospital shuddered to the roar of big guns.

In the next bed the American soldier who had helped carry me woke up and grinned. "Ain't it," he asked, "a hellu day?"

Our first meal came in buckets carried by an orderly who left hunks of dark brown bread at each table. Soup and mashed beans were served in tin plates. Black wine came in tin cups. Sometime next day, a man across the aisle died shouting deliriously. A retired French naval officer came into the ward, listened to the sound of guns coming nearer. I said, "Very soon we will be your prisoners."

Sometime in that interval doctor came, leading the soldier who had jumped out of the frying pan into the fire. He didn't have a scratch on him but wouldn't or couldn't talk. Word of the number of casualties was passing around, and survivors learned that the young lieutenant who had worried about his wife was lost, and that the kid from Kentucky had been machine-gunned to death in the water.

Later we could hear machine guns firing beneath the window and tanks rumbling into the streets. Then there was a sudden flurry among the French in the ward.

An American Army sergeant came through the doorway and paused. His head was bandaged, his battle dress covered with mud. He walked unsteadily but his ugly mug was sweetened by a smile of triumph. All over the ward Americans began sitting up excitedly, but one fellow with a busted shoulder was the first to realize what had happened—that it was all over at Oran.

"Hey, Sarge!" he shouted. "Great God, Sarge! Come here!"

THE END

## "FOR EXTRAORDINARY HEROISM"

On November 22d the author, United Press Correspondent Leo S. Disher, was awarded the Purple Heart by Major General Lloyd R. Fredendall of the A.E.F. in Africa. The citation stated, in part, that Disher "distinguished himself by extraordi-

nary heroism and meritorious performance of duty against an armed enemy . . . although several times wounded . . . and displayed great devotion to duty and rendered meritorious public service by recording the details of the attack on Oran."

France." We dropped our Commando troops. Then came the most incredible moment of the whole attack. Our chief of staff was as British as Yorkshire pudding. But he came to the bridge in American coveralls, wearing an American helmet. Amazingly he had two six-shooters strapped to his belt in high Western cowboy holsters, and a Tommy gun under his arm. He was almost a caricature—a musical comedy Englishman's idea of an American. Or perhaps, a Frenchman's idea. And that was his real purpose—to make things look as American as possible at first glance.

## The Skipper Makes a Plea

The skipper turned and said, "All right, let them have it." The guns on shore began to fire again, but our chief of staff took his hands off the butts of his six-shooters, gripped the loud-speaker microphone and began talking to the French on shore in their own language. He even spoke French with an American accent. "Cease firing," he said. "We are your friends. We are Americans. Cease firing." It seemed to me then that hell exploded all around us. We were hit time and again. The chief of staff was a brave man. His voice went on amid the awful noise of battle until he fell against the microphone with his six-shooters still unfired in their holsters.

Everything was happening at once. The officers below decks began directing American assault troops under the command of Lieutenant Colonel George Marshall of Jacksonville, Florida, to midships, where they were partially screened by the superstructure as they went over the side. A shell hit one of our fuel drums, spreading liquid fire along the deck. A destroyer loomed in front of us. We tried to ram but missed, and there was a savage burst of fire from its guns at almost muzzle-end range. The bridge was raked and raked again.

A French cruiser began firing too, and then a submarine on our portside opened

get off! Get ashore!" Somewhere below, our depth charges began exploding. "Everybody ashore!" Our ammunition began blowing up. I never realized until many hours later that he was shouting all the time directly against a blank wall. He has been reported missing in action.

A shell exploded inside the sick bay directly below, killing, among others, an American doctor who was operating on the wounded. The British doctor was dying from a shellburst in the wardroom. He was also hit while operating. I suddenly wondered in a brief flash what had happened to the soldier we had fished from the water and put in the hospital section. Out of the frying pan was right! I began crawling again. I had to crawl over men who had been standing beside me a few minutes earlier. My hands were wet and sticky.

The task-force commander, meanwhile, had been hit in the shoulder by a bullet and knocked from the bridge ladder by a shellburst. He swam ashore. The Walney was lurching and heaving. Remembering the "Get ashore" order I stumbled past the ship's railing which had been torn away by shell fire and fell into the water. The inflated life preserver around my chest had been punctured by shrapnel. The life preserver on my broken ankle held my leg up, but my head was under water until I could rip the preserver off. I swam to a merchant ship's hawser, to which five men were clinging in an apparent trap, with a high wall on one side and French fire behind. They showed wet and ghastly in the glare of the burning cutter, while the water around hissed with the impact of bullets and metal fragments. I looked back at the Walney, expecting to hear the final explosion any moment. She was dying, fearfully, shuddering with explosions. I thought that in one red flash I could see the Stars and Stripes still flying from her stern. She went down that way. She never struck her colors.

With infinite weariness I swam into the blackness between a lurching merchant

the crest of quality since 1890

serve the best  
...for little more!

For 50 years Cresta Blanca "bottle-ripe" California wines have been emblems of taste enjoyment. From this great Cresta Blanca family of medal winning wines, choose your:

#### California white wines

Cresta Blanca Sauterne (fairly sweet)  
Cresta Blanca Haut Sauterne (full, sweet)  
Cresta Blanca Chateau (rich, mellow)  
Cresta Blanca Riesling (superior-dry)  
Cresta Blanca Chablis (crisp and dry)

#### California red wines

Cresta Blanca Claret (Superior (med.-bodied))  
Cresta Blanca Burgundy (robust)

#### California sweet wines

Cresta Blanca Sherry (medium-dry, nutty)  
Cresta Blanca Port (ruby)

tune in! JACK PEARL and Morton Gould's orchestra in Schenley's "Cresta Blanca Wine Carnival." Your Mutual station every week.

California Wines, Cresta Blanca Wine Co., Inc., Livermore, Cal.

contain about twenty-five per cent soy flour, which adds a substantial quantity of high-quality protein to the children's diets. And how do the kids like it? They love it.

If at this point you are ready to grab your hat and dash for the nearest grocery to stock up on this paragon of the kitchen, don't be in a rush. You probably won't find soy flour on your favorite grocer's shelves—not just yet—even though he may have a few new cereal or bakery products that contain it. Before soy flour can become generally available, there is a lot to be done in the way of setting up processing and distribution machinery. You may not get much of it until after the war.

Health-food stores have been carrying soy products in bulk for some time, but not at a nickel a pound. They also have soya in a host of special foods such as meat products, macaroni, cereals, bread and crackers, and they sell the tender vegetable beans in cans. These health-store stocks merely indicate what is going to be seen later in the general groceries.

Until recently, we haven't thought much about soybeans as a food, despite the wholehearted endorsement of the Chinese and certain other less worthy Oriental peoples.

#### Proteins at Bargain Prices

We've been eating soybean oil in shortening, salad dressing and margarine for years, but the strong beany flavor of the soybean itself hasn't appealed to our Occidental palates. Our modern food chemists, however, have taken care of that. They have discovered that, through simple curing processes, the bean loses its objectionable taste and acquires a pleasant, nutty flavor.

With this taste barrier out of the way and with American soybean production now second only to China's, the soybean in one form or another is headed for a permanent corner in our kitchen cupboards. It can't replace eggs, meat or milk in our diet. Even the soybean's most ardent enthusiasts still demand eggs for breakfast, drink their milk conscientiously, and dig as regularly as possible into a T-bone. But the soybean can serve as a supplement to these other highly important foods, and a very valuable one at that. Ready to benefit most, perhaps, will be the six million low-income families who can't afford all the proteins they need in the form of the higher-priced animal products.

Although new to the American kitchen, the soybean is hardly a novelty in American agriculture and industry. The main purpose for growing the soybean in this country up to now has been for its valuable oil. After crushing the bean for the oil, we have fed the meal that is left to our livestock and poultry. Researchers in the Department of Agriculture, state colleges and private industry, however, have looked deeper into the little bean and found countless other important uses. In it, they discovered a highly desirable source of adhesives especially valuable in the big plywood industry, sizing for cloth, paints, soap and plastics. They have even found that the soybean is a fair source of synthetic rubber. Subsequent tests may show it to be better than fair.

Henry Ford, who misses no bets, originally was interested in the soybean from the plastics angle. Now his laboratories are doing all sorts of things with it. Re-

cently he turned up with a suit spun from the wool-like material his scientists had made from soybeans. He thinks it has great possibilities for upholstering his favorite flivvers. A firm in St. Louis is now making a leatherlike pair of ladies' pumps out of soybeans. And so it goes, as our scientists find more and more magic in the soybean.

When America was plunged into this war, Secretary of Agriculture Wickard called on farmers to increase soybean production by about 50 per cent to provide the much-needed oil for our war program. To say that farmers responded is hardly adequate. Soy raisers in Illinois, Iowa, Indiana, Ohio, Missouri and the other producing states answered with an increase of nearly 100 per cent, or double 1941 production, to give us a bonanza crop of about 200 million bushels.

All of which inevitably brings us to Doctor William J. Morse, who two decades ago called the cards that the soybean industry is turning up today. Doctor Morse's office in the Department of Agriculture in Washington for years has been the center of gravity for soybean enthusiasts. Since 1907 when he was graduated from Cornell, Morse has been a champion of the soybean, taking the torch from the hands of the late Doctor C. V. Pier, who likened the soybean to "gold from the soil."

For more than thirty-five years now, Doctor Morse has been preaching the soybean gospel, writing bulletins, making speeches, advising with growers, studying soybeans from all angles. In 1923, he co-authored a textbook, *The Soybean*, as complete a lexicon on the subject as has ever been published.

Spurred by the work of Morse and a handful of plant scientists, processors and farmers who have persisted in pushing the soybean into the limelight in this country, soybean production has shot up

until its graph line resembles the of a climbing P-38. In 1924, U. S. production totaled about 5 million bushels. In 1930 it passed 13 million, and in 1935 it leaped to 107 million. Now at 200 million bushels, the potential is not yet sight.

The Department of Agriculture has its eye on the soybean, contemplating with intense interest these war days, the marketing as well as the production angle. The department is working the soybean industry to make this cost food available to people throughout the nation as soon as possible.

#### Food of the Future

Heading this ambitious campaign the department is a stalwart, blond young soybean devotee named Don Payne, is thoroughly sold on his job of finding new food uses for soybeans and letting the public in on the secret. One of Payne's biggest worries is that interest in soy products may develop so fast the industry won't have time to get the products in retail stores, causing interest to die rapidly.

"Soy products are definitely out of the food fad class," he says. "They are destined for a significant role in our everyday diet."

Payne is on the staff of the Agricultural Marketing Administration, which has as one of its big jobs the purchase of tremendous quantities of American food products to send to our Allies. The billions of pounds of food being sent, a significant portion is soy flour, grits to be used in meat and bakery products, soups and other foods to help war partners stretch their diminished food supplies. The use of these products by the United Nations is furnishing clues as to the best ways to produce them here at home.

THE END

COLLIER'S

"I believe they went that way"

CHAS. CARTWRIGHT

## How *WAAC* OFFICERS ARE SELECTED

The task of directing the work and personnel of the Women's Army Auxiliary Corps as it takes over more and more noncombatant duties for the Army is the responsibility of a select group of women. Much of the success of this pioneering women's organization naturally depends on the wisdom, tact and ability of its leaders. The WAAC is growing rapidly. From its nucleus of a few hundred candidates a few months ago, it is expanding to the 150,000 authorized by Executive Order. This presents many new opportunities for women who might qualify as officers. If you have been thinking of joining the WAAC and believe you have the makings of an able officer, here's the way to proceed. First, enroll as an auxiliary to take your four weeks basic training. Women qualified for Officer Candidate School then receive eight weeks further training

and at the successful completion of the course are commissioned Third Officers (equivalent to Second Lieutenant).

The system of commissioning from the ranks has been set up to give every woman equal opportunity to compete, and to assure the Corps that its leadership will maintain the high caliber necessary to fulfilling the WAAC mission of making it possible for more soldiers to reach the front.

More and more WAAC officers are needed now. This may be a splendid opportunity for you. WAAC pay is equal to Army pay. And valuable experience and training may be useful later. To join you must be 21 to 44, inclusive, a citizen of good repute—regardless of race, color or creed. For further information on WAAC pay, promotion and opportunities, go to your nearest U. S. Army Recruiting and Induction Station.

### WAAC PAY SCALE

Officers	Equiv. Rank	Base Monthly Pay
Director	Colonel	\$333.33
Asst. Director	Lt. Colonel	291.67
Field Director	Major	250.00
1st Officer	Captain	200.00
2nd Officer	1st Lieutenant	166.67
3rd Officer	2nd Lieutenant	150.00
Enrolled Members		
Chief Leader	Master Sergeant	\$138.00
First Leader	First Sergeant	138.00
Technical Leader	Technical Sergeant	114.00
Staff Leader	Staff Sergeant	96.00
Technician, 3rd Grade	Technician, 3rd Grade	96.00
Leader	Sergeant	78.00
Technician, 4th Grade	Technician, 4th Grade	78.00
Jr. Leader	Corporal	66.00
Technician, 5th Grade	Technician, 5th Grade	66.00
Aux., 1st Class	Private, 1st Class	54.00
Auxiliary	Private	50.00

# HATS ARE BACK

By Ruth Carson

After years of nosegays and ribbons and veils in place of hats, the big-brimmed hat, that is a hat, is back and popular once again. This one is made of soft green felt, frames the face becomingly, fits snugly on the head. It is secured besides with a hatpin which is topped with a bouquet of green leaves and war stamps edged with matching delicate pink felt

PHOTOGRAPHS BY IFOR THOMAS

Natural rough straw sailor for girl with long bob and pert face. It isn't going to slide all the way back on the head because it's secured with adjustable clip similar to that on a telephone operator's headgear

Picture hat of lavender blue straw, Watteau style, romantic but practical; anchored with velvet-covered clips that hold better than elastic, and also pinned prettily at the back. Can be worn with hair up or down

The girl with upswept hair can wear this hat without mussing a hair. An adjustable tab of the straw extends down the back for anchorage. She can bend it out while donning the hat, smooth it to the head, and pin

HAT sales have jumped off the boggan and taken to the sky. From a 10 per cent drop in spring, after seasons of downhill fighting, to a 25 per cent rise in the fall, to a 50 per cent rise in the spring, up and better now. Girls who for years have considered a bow or a wisp of hair or nothing at all ample adornment for their lovely locks, are now buying hats. Genuine fit-the-head, frame-the-face hats. The jubilant manufacturers are variously thanking the boys in uniform who frown, they hear, on hats; the times, in which the girls want to look feminine and pretty, to beg the boys while here; and the designers beginning with Lilly, Sally, and John. In the spring, when it looked like the end of the hat business, a committee representing a large group of manufacturers made a final move to stave off their demise. They went to a few designers and said: Will you design some hats to copy? That's what I used to do. So John-Fredericks, Sally Victor and Lilly Daché, whose talent that time had been frittered away in their own exclusive and therefore small establishments, chiefly on \$25.00-and-over items, agreed. Other high-priced designers have since followed suit, endorsing the best design in the country to us, at our own price. The first they formed a combine, called Millin Fashion Inspiration, and now, in addition to their own custom businesses, sign for the wholesale market.

Not that these colorful, temperamental competitors actually sit down together to design hats. They meet to discuss general ideas, and colors. They go into the market together to pick out materials, thereby causing block-making dealers in flowers, ribbons, felts and whatnots, to swoon at the sight of three rivals selecting identical stuff, together. Then they return to their separate salons, and design. The results show up in their own individual collections.

Also twenty hats each, without labels go into a common kitty, ruled by a manufacturers' committee, and only a young lady in charge knows which is John-Fredericks, a Sally Victor or a Lilly Daché creation. The committee puts on a fashion show which the designers do not attend, pretending to a complete lack of human curiosity. Invited buyers attend the show, paying admission. The admission fee entitles them to make handle the hats right there, photographing on their minds the details of construction. They also purchase models to copy. Some of their favorites for spring we show you herewith.

From the look of the future, there will be nothing to stop them, now they've got their public back. Women, no matter how much WPB may simplify the clothes, can always get a lift with a hat even Harry Hopkins admits there will be no shortage. Because you can make a hat out of anything.

# ASSIGNED THEME

BY ROBERT  
CORHAM DAVIS

ILLUSTRATED BY WENDELL KLING

A SHORT SHORT STORY COMPLETE ON THIS PAGE

THEODORE BARRETT, instructor in English composition and tutor in the Division of Modern Languages, pushed his bicycle slowly through the mass of students pouring from the great dining hall of the university. He was a thin, almost haggard man with handsome irregular features, and he was famous among the undergraduates for indolence and a rather cynical wit. But those who learned that he had hopelessly impeded his academic career by marrying too early and having more children than he could afford could see behind his mask of pride.

Now he felt poignantly the youth and freshness of the boys flowing past him. A few more weeks for them, as for him, a normal academic life would be ended. And yet it was the past he was thinking of, recalled to him by the letter that had come that morning.

"Dear Mr. Barrett," it began in a woman's slanting hand. "By the time you read this you will probably have learned that our only son, Richard Farwell, was lost at sea, October 25th, just five months after he received his commission in the United States Navy."

Theodore Barrett had already seen the name in the newspapers; young Farwell as the first of his former students to be listed as a casualty. It took him a little while to separate his memory of the boy from a group impression of several who resembled him.

But then he remembered a conference with Farwell, late in the preceding fall. The boy, who rowed second in the freshman crew, wanted to make his first long theme a history of American crew racing. "I'm afraid that might be on the dullish side," Barrett protested. "The winners in 1886, the winners in 1887, the winners in 1888. Let's get at this some other way." The boy looked as polite and passive as ever. "What about crew?" Barrett asked almost angrily. "Why go out for it? What does it mean to you?" "Granted I'm no sportsman, but tennis or

hockey I can understand. They're fast, there's room for initiative. But crew! It's the Roman galleys all over again."

And then suddenly, Farwell really seemed to want to explain.

"It's a feeling you get, Sir. It's not easy to say, but it comes when the crew's rowing right, the rhythm right, and then a kind of strength comes into you—I don't mean just physically—but you're all eight men and yet you're yourself too, trying to make your own part perfect. It may sound funny but I thought of it when you were talking about the Greek plays, you know, the idea of tragedy purging you because you could feel with the heroes and get your own littleness out of you. You're freed of yourself. I suppose in love it's the same."

AT THIS he stopped, embarrassed and a little breathless. He never talked as freely again, but from then on, Barrett thought there was understanding between them. When Farwell's theme came in, it turned out to be a technical discussion of the different types of racing shell, a thoroughly dull and impersonal paper. But Barrett was still pleased. Despite the theme, he knew that he had brought together crew and Greek drama in the mind of a boy and so his teaching had not entirely failed. He knew now that the mother had noticed, too, but he was disturbed by what she asked.

"What we hope you have," she wrote, "are some samples of Richard's writing. When you have a boy with you, words are not important, but now, when he is gone, his words become very precious. His father and I both felt that in your class Richard's intellectual development came more rapidly, that he was learning to express himself with new freedom. Although we supposed his themes had been returned to him, we did not find them among his things. If we could have some samples of his work they would be invaluable remembrances."

When Barrett reached his home, he

went directly up to his rather disorderly study and began going through the mass of papers on the bottom shelf of the big bookcase. Most of them were themes—themes that should have been returned weeks, months, even years before. Barrett was pretty sure there were two of Farwell's there, and in a little while he found them. He drew them out doubtfully, his thoughts with the mother who had written him so bravely.

The first of the two manuscripts was an assigned exercise in exposition, to be based on summer experience.

Farwell had worked in the stockroom of his uncle's factory, and entitled his theme, *The Organization and Sale of Contract Builders' Hardware*. For two pages and a half there were red-inked corrections against nearly every line; then apparently Barrett had given up marking it, out of sheer boredom. Now he sampled a few sentences at the point where the corrections ceased. Again he could read no more.

The second theme—trite, clumsily written—was more personal, but no more interesting.

Neither of these papers could Barrett possibly send. He drew out a sheet of correspondence paper and began a note to the parents, but what he said sounded stilted and empty. And yet he had a sense of death and youth and courage that filled him with emotion. He remembered how Farwell had talked to him, and now, thinking of the boy's self-dedication and the way the parents had risen to it, he felt lifted above the monotony of his own life.

He sat looking out of his window toward the distant campus and the river beyond. He thought of peacetime and the crews in the late fall afternoons sweeping back toward Holderness as the sunset faded and the lights went on along the esplanade. He thought of the students coming back to college in the fall of 1941, the political groupings that had enlivened the campus in pre-

vious years, lost in the closed, determined ranks.

Months before Pearl Harbor they had known what job they had to do. And yet there was none of the self-glorification, the rhetoric and flag-waving of the themes that Barrett's own class had been writing in 1917. Beneath their calm was great strength, and in their certitude, great wisdom. It was the same spirit that Farwell had felt when he talked of crew and the Greeks, but carried now into the struggle for civilization itself. Tears came to Barrett's eyes as he felt anew the preciousness of what these boys were dying for. He put a sheet of paper in his typewriter.

IT WAS an hour later when he became aware of family noises in the house around him. He drew the last page out of his machine and carefully placed it in order with the others that had grown into a pile beside his typewriter. He walked down the stairs slowly, bending the fresh sheets regularly back and forth in his hands until they were a little dog-eared and worn. Caroline came quickly into the hall.

"I haven't heard you writing like that for years," she said. "What is it?"

"I think it's very good," he said. He began to put it in the envelope he had prepared, but he noticed something was missing. Resting it on the newel post he jotted a brief comment in pencil on the outside of the manuscript and then, after hesitating and smiling a little, he marked a "B—" in the upper corner.

She had been watching, and when he lifted his head he saw her disappointment. "But it's only a theme!" she said.

He reached out and took her hand. "Yes, I was transcribing it."

"But couldn't Miss Burroughs have done that?" She saw the name on it, Richard Farwell, and the date, January 7, 1942.

"No," he said gently. "It was the theme of a boy who is dead."

Edwards for his patients with constipation and sluggish liver bile.

Olive Tablets, being purely vegetable, are wonderful! They not only stimulate bile flow to help digest fatty foods but also help elimination. Get a box TODAY. Follow label directions.

hanging over the path, he would make his way up the hill to find Clota. She would be at the American artist's, for he was painting her. And every evening when Juaquo was through at Meyer's, he would go up to the little white house near the top of the hill and watch Clota sitting very patient and very beautiful while the American artist looked and made a little mark and looked again. It was wonderful to see, the girl so beautiful and the artist with such a talent to repeat what he saw, in paint.

And presently, when he had the things, Juaquo would make a house for Clota and it would be all over—but the happiness.

Outside in the store there was no sign that the excitement would stop.

"The fever," said the German, "is like a hand at the throat. I know, Otto the son here, he had it. And I as well. We were on the edge of dying. And that in a hospital with doctors to care for us."

Someone said, "Can a doctor be sent for?"

Otto nodded. "I have sent word to the capital," he told them, with no encouragement in his voice. "But who can tell when they will act in the capital?"

"What would you do?" someone asked Meyer.

Meyer faced them squarely. "If I had not had the fever, I would get out. I would leave the town to its miseries."

The people were surprised, hesitant.

They looked at one another. Then someone said, "I have a launch that would make the trip to the capital . . ."

"And I . . ." said another.

"There are the fishing boats. Those too . . ."

A voice from the crowd said loudly, the words registered strong and clear on Juaquo's mind, "When the news of the fever reaches the capital the cargo boat will not be allowed here . . ." Assent came. "And even the navy's patrol boats will not be allowed in. . ."

And then the people were agreeing, planning to leave together. And the German was pleased by their decision.

IT ALL began to disturb Juaquo a little. He felt complications might be connected with this. He dreaded anything that might come between him and the things he worked for. True, Meyer had said he was not going but . . .

And Meyer was beckoning to him, "Come here," he ordered.

Juaquo stood in front of him.

"There is fever. You know it?" the German asked.

Juaquo nodded.

"The whole town is leaving tomorrow—for the capital," the German continued. "I'll let you go early if you go up the hill and tell the American about the fever. Do you understand?"

Juaquo nodded again. But there was something he had to find out. "With the people gone, patron, I was wondering if you will keep me working. . ."

"Don't worry," the German said. "I'll keep you busy in the warehouse. You and another man who is coming in tomorrow."

And for a moment Juaquo was glad; he believed there would be no complications.

As he walked slowly up the path he dangled his sandals in his hand, pushed his hat back on his head; he breathed deep, looked out to the familiar brilliance of the sea. Yet somehow he was not at ease. He wondered why. He had been dismissed early. The day was fine. He

was on his way to the artist's. The German had been decent. . .

That was where his uncasiness lay. He knew the German to be a smart man and a hard one. The German served himself and his son, his store and his interests. If eggs were aging or pork were bad, the German was the more anxious to sell them.

The German was like that. And he was not likely to change.

Yet suddenly it seemed he wanted people out of the town. And that would leave no one to buy. And Meyer would suffer—which Juaquo could not think was right when you considered the character of the German.

Usually when Juaquo came into the artist's garden and found him working, he would say nothing. He would take off his hat and sit politely until the artist asked, "What's new in the town?"

And all the while Clota would be sitting very patiently with her hands in her lap. When she heard Juaquo her eyes would flicker for a minute and her mouth would curve a little more fully. Juaquo knew she had to be still for the artist.

But this afternoon it was different. Juaquo went toward the artist and said abruptly, "There's fever in the town."

The artist made a gesture as if he were being annoyed by a fly.

"Señor Meyer sent me to tell you," Juaquo said. "The others in the town are going."

The artist dropped his brush as if something had struck inside him. And he looked intently at Juaquo. "Fever?" he repeated.

"From down the valley," Juaquo confirmed.

"And people are really going?" persisted the artist. And before Juaquo could answer, Clota had dropped her pose.

"Does the German go?" she breathed. "No, he and his son have had the fever."

"Oh . . ." She was relieved. "Then you stay until you have the things." He nodded and her eyes held his. And suddenly working for the German, breaking his back in the heat, stacking bags in the warehouse was as nothing. For presently he would have a house by the way, a patch about it—and Clota. And Juaquo was warmed and immensely cheered.

The American artist did not say anything more. Slowly he put his paints down, picked up his canvas and moved

it toward the house. When he came back for his paints, Juaquo asked "Will you be going too, patron?"

"No," said the artist. "I will stay with you people on the hill will stay."

And Juaquo could not be sure what was glad.

Then the artist went into the house, brought out envelopes and a bottle of white pills. He put the pills into envelopes and handed them to Clota. "Take them along the hill with you. Give them to the neighbors and to Leon father. Tell them to take one each. And tell them to boil water before drink it."

AFTER Clota had gone, Juaquo lingered.

The American eyed him questioningly for this was not the usual procedure.

"The German is your enemy, is not so?" Juaquo asked him. And it was a new subject that had not been talked of, or thought of among the people on the hill.

The American was surprised. "My country is at war with the German country," he said.

"And my country is a friend of America?"

"But not at war," reminded the American.

Juaquo nodded his head slowly. He was not quite sure why he had asked. But somehow he was still uncertain about the German.

He lingered, looking from the artist to the house, before he asked, "Have I permission?"

The artist smiled assent.

Juaquo went into the house, turned the canvas back from the wall and looked at it a minute. Inexplicably his eyes dimmed. "She is beautiful," he said throatily.

The artist agreed.

"And you," said Juaquo, hating to ignore the creator of the masterpiece, "are a very formidable artist." And the American was pleased at his politeness.

The next morning the people in the town left. As Juaquo came down the path he saw the little fleet going round the point, leaving the vibrant blue of the harbor silent and very empty without them. Only the artist's launch and the barges which the German used to load his cargoes remained.

As he approached, Juaquo could hear Meyer's son working the telegraph on the inside of the store. Old man Meyer

COLLIER'S

"I scuttled my navy, Papa!"

ED GRAHAM

"Don't you have a dog that will just lie by the hearth and perhaps wag his tail when he sees me?"

JEFF KEATE

listening to the radio, not to music, to the monotonous drone of a commentator's voice.

When Meyer heard Juaquo he came to the floor. "I want you in the warehouse," he said.

Juaquo followed him without much enthusiasm. Coffee was stored in the warehouse, bags of it were piled high to the roof. And Juaquo swore at the thought of moving it.

"You can begin here," said the German, "from this end. Carry them out and stack them outside. You won't be late. I told Leon to come down from the hill to help you."

Leon was Clota's father. And that was the only remarkable thing about him. He was a wizened fellow, given to contemplating the money he would make when a boat came in. But when hands were needed, Leon would be lame or sick. He had not worked for years.

And Juaquo was not a little surprised when Leon shambled into the warehouse. Without explanation he took his place on the pile, hoisted the first sack onto Juaquo's back.

"Easily . . ." he kept breathing, "easily . . ."

And so the hours went. The pile out-  
growing slowly.

THEY stopped when the sun was high and went around to the front where he was shade. And Juaquo was surprised to see the American coming down the path. The German saw him too, and out to greet him.

"You do not go because of the fever?" the German asked.

"No," said the American, "I think I'll go."

Everyone else has thought it wiser to let the German remind him.

"My neighbors on the hill are all staying."

"Oh, them . . ." The German dismissed the people of the hillside with a shrug. "They are too ignorant to know the meaning of a word like fever. They work for me, these people of yours . . . their talent is for siesta . . ." And the German looked to Leon and Juaquo as if he could not hear.

"My neighbors suit me," said the American.

And the German looked impatiently after him as the artist turned to leave.

Juaquo slipped from the shade. "Patron . . ." He followed the American. "Perhaps now you are here you would care to see something . . ." The American turned, his face curious.

"It is around the back," said Juaquo. Without a word the American followed him.

"This is it," said Juaquo not without excitement. This was the bed—the brass bed from a factory, its shining bars protected by paper and straw. Juaquo fondled it lovingly. This came foremost among the things he was working for. "Is it not elegant?" he demanded.

The American smiled a little, nodded. "It's fine," he said. And he went quickly as if he did not want the German to see him there.

Juaquo stayed to look at the treasure which was already a little his. Had he not worked for two weeks? And when he had finished examining it, he went back to the sheds where he had been working to see how much of the coffee remained to be moved. As he stood on top of the stack he realized they were not as deep as they seemed. Behind were drums. He was surprised. He tapped them and they were full. They were numerous too, more than would be used in the town in a long while.

He went back to the front of the store where Leon was already asleep. Juaquo lay down, closed his eyes and tried to think. The German was moving the coffee to get at the drums . . . the son was bringing the barge around . . . and no ship could come because of the fever.

From the store he could hear the German's radio. Meyer was listening to the voice again. With his eyes closed, Juaquo found himself reaching out to hear. The voice was saying something about submarines . . . Juaquo had seen a picture once in the American's newspapers of a submarine, a boat that went under the waves like a shark . . . because of its strange machinery. Submarines, the voice said, were being illegally refueled in secret places along the coast of the Southern Atlantic. Atlantic . . . it was the name of the ocean Juaquo and his people could see from their hillside. But they simply called it the sea . . . because for them there was no other.

And sharply the click echoed inside Juaquo. Suddenly he knew something, something that left him cold inside, colder than anything he had ever felt.

The German came out. Juaquo got to his feet.

"I have been thinking," said the German, "it's hot work with those bags while the sun is up."

Leon was agreeing emphatically.

"I think you would work better at night. There's a moon. If you start at seven you should have the load finished by daylight. And I want the job finished as soon as possible."

"The load?"

"Yes, you are going to load the barge. A boat may come in tomorrow or the next day. My son got the word. I want the drums in the shed in the center of the barge. I want the coffee piled around the outside. That will keep the drums balancing the load." But his mind, Juaquo knew, was not really concerned with weighting the load in the center. He wanted the drums inside for secrecy—in case there was suspicion among the handful of people who remained in the town—in case a patrol boat happened in, despite the fever.

But Juaquo's expression did not change.

"You had better get your sleep now," said the German. And Juaquo knew better than to ask for permission to go up the hill.

"I think I'll sleep in the warehouse," he said. "It's difficult to rest completely with the sky so bright."

"As you like," Meyer said.

JUAQUO shambled around the building. He banged the door of the warehouse for authenticity, then he made for the hillside, running swiftly. When he came to the American's, Clota and the American were sitting in the garden.

The American looked at him curiously, listened intently as Juaquo illustrated his breathless voice with emphatic gestures. "The German's putting oil on a barge, covering it around with coffee for secrecy. He thinks to convince me a boat will come in. But with the talk of the fever, that is impossible."

"Then you know, too," the American said.

Juaquo nodded. The American's hand tightened on his arm. And he knew they were together in this and was glad.

The American told Clota to go. She left hesitantly, curious to know what they spoke of, hurt that she was not included. When she was gone, Juaquo said, "What will we do?"

"I have been thinking of that," said the American. "I was suspicious when you told me about the fever. This morning I scouted around the harbor. I believe they are going to use the little beach behind the point for the refueling. They will take the supplies out across the harbor in the German's barge—I saw it ready . . ."

That was it . . . that was it . . . Juaquo's heart beat excitedly . . . but what would they do?

"We can't send out a message," said the American. "The German works the telegraph. I have another idea," he said. He went into the house and came out with his revolver. "How many men can we get together from the hillside and from the town?"

Juaquo shook his head. "They are not soldiers . . . patron . . . and you are an artist, not a general. Although," he amended quickly, "you are a formidable artist."

"No, we have to make a stand," argued the artist. "Don't you see that? This is a threat to us. And if we ignore it we have no right to live here any more, we

 t been fast. Juaquo was glad to  
 em over.

sailors took them willingly. And  
 hem Juaquo learned a little news.  
 erman and his son had gone with  
 ge. It was a blow to Juaquo. He  
 orked for Meyer, worked that he  
 get the things and marry Clota.  
 Although the weeks with the Ger-  
 had not been wasted, it was sad in  
 to have missed the things he had  
 d for. No matter how much a  
 oved his country, he thought some-  
 of himself.

The sailor looked at his glum face.  
 s rare business," he confided. "Very  
 e . . ." He looked mystified. "The  
 sers say that the first load the man  
 er brought out was bad oil, bad with  
 and coffee beans. In the dark no  
 oticed the impurities and the top  
 lear . . . it seems like a lie."

s no lie," said Juaquo. "I worked  
 ole night on the load, pumping out  
 utting in sand and coffee. That  
 s two nights that I do not sleep . . .  
 f should like to go now, if I may

ey did not let him go. They talked  
 at deal more, and Juaquo learned  
 that was new to him. It appeared  
 what he had done was not only an  
 f bravery but also a real service to  
 ountry, which was now at war with  
 any, too. They said that the decla-  
 n had come just before the artist's  
 al at the capital in his search for  
 Juaquo was glad to know that  
 yone was pleased with him. But now  
 it was accomplished he did not take  
 uch satisfaction from it and could  
 think of what he had lost.  
 was late afternoon. The artist was

back. He had been working with Clota  
 —in fact he had just put the canvas away  
 when Juaquo came into the garden.

Juaquo was glad to have missed her.  
 He had not yet found the courage to tell  
 her how things were—and how they must  
 wait, and how he had made plans which  
 would interfere with his working again  
 for the things.

But the artist was pleased to see him.  
 "You did a fine job," he said. "I was  
 proud when they told me."

Juaquo shrugged his shoulders. "It  
 was luck," he said.

"And holding the prisoners with an  
 empty gun . . ."

"Luck . . ." said Juaquo. "Without  
 the patrol boat, the plane and the sailors  
 it would have been a defeat."

The artist did not contradict him.

"People cannot trust to luck—or they  
 must be defeated," said Juaquo sullenly.  
 "I have been thinking"—he took a deep  
 sigh—"it would be better to be a  
 sailor. . ."

"Well," said the artist, "it is possible."

Juaquo nodded. "I will be a sailor."

"Fine," said the artist. And then very  
 seriously, "But you are worried."

Juaquo sighed again. He looked to-  
 ward the door of the house. "Have I  
 permission?" he asked.

The artist gave his consent. Juaquo  
 went in, turned back the canvas to gaze  
 at the picture which was nearly finished  
 now. It was like a flower hanging in the  
 depth of the undergrowth. It took his  
 breath away. The artist watched him.

"It might have been different," said  
 Juaquo, "if this had happened a month  
 later. I would have had the things. We  
 could have married . . . it would have  
 been all right."

"Juaquo . . ." said the artist suddenly,  
 "why don't you marry before you go  
 away . . . marry as you planned?"

Juaquo shook his head. "It is not  
 possible," he said, "we planned on the  
 things. Clota talked to the other women  
 —and it is of importance."

"It is the brass bed you want?"

Juaquo nodded bitterly, added the  
 others, "Cloth with flowers on it, chairs,  
 some cups and a dress for Clota from the  
 capital." His voice sank with emotion.

"You shall have them, Juaquo. You  
 worked for them, and you shall have  
 them—tomorrow night if you wish. . ."

Juaquo gazed at him giddily.

"You shall have them," repeated the  
 artist, "a wedding present from me."

"As a present . . ." It was a formidable  
 gift and of value. Juaquo struggled to  
 picture the difference it would make.

"You deserve it, Juaquo. . ."

**T**HERE was no doubt this changed  
 everything. Excitement burst inside  
 him. Explosively he planned out loud,  
 punctuating each discovery with a little  
 burst of laughter. "I can marry before I  
 go with the sailors . . . Leon and the oth-  
 ers will help me with the house . . . I can  
 stay a little . . . then I will be away for a  
 while. . . ." And the laughter was cut  
 short. The thought of leaving so much  
 was a physical pain. He looked ques-  
 tioningly at the artist; desperately he  
 sought assurance. "How long will I be  
 away?"

The artist seemed to know what Jua-  
 quo felt. He did not say anything for a  
 minute. He did not look at Juaquo, in-  
 stead his eyes sought the familiar view,  
 the greens, the blues, the red of the earth.  
 And he answered then, very gently,  
 "Until the hillside is safe. . ."

And Juaquo straightened at that, he  
 took the challenge, he even managed to  
 smile a little. "The patron chose good  
 words," he said. "I would not be a man  
 if I desired to return before that."

They give happy relief and will help the 15 miles of kidney tubes flush out poisonous waste from your blood. Get Doan's Pills.

accidents occur only where they will harm the Germans, not the Hollanders. There are many examples of great courage and ingenuity which one day will be told when the war has come to an end."

It was a snug, comfortable room in which the princess sat—full of sunlight and warmth; yet you saw in her face and heard in her voice that she is not always warm and comfortable even in this gentle room. Her thoughts take her too often to her country and her people; she has learned that it is possible to shiver and starve 4,000 miles away from the hunger and privation.

"I cannot help hoping for speed in winning the victory. I am impatient because I know there is hunger in my country, there is no medicine, no heating, no nourishment except sick potatoes and wet bread. The rates of disease have gone up terribly. Our infant-mortality rate used to be the lowest in the world; now, of course, it is high."

Juliana's favorite contact with her homeland is the Dutch navy and merchant marine. Delegations of them call upon her regularly, and up until a very short time before the scheduled birth date of her newest child, she traveled to Montreal to visit the seamen's home. There she would meet the sailors, admire the photographs of their families and listen to their troubles and adventures.

These are men whose ship is their only home; when that goes down, they lose everything they own, all the priceless small possessions connecting them with Holland—their pictures, their letters, their souvenirs of family.

### Plight of the Homeless

The princess feels keenly this homelessness of the Dutchmen who wander the seas.

"Sailors of the United States and our other allies live in peril of course—but they have some place to come home to when the peril is over," she said. "They can look forward to seeing their wives and children. Our sailors have no dream like that when they are facing death."

The Netherlands troops now stationed in Guelph, Ontario, have also her constant attention. They consist of Dutchmen from all over the world and of those who, after much hardship, managed to escape from Holland. She has visited them often, encouraging them in their fight for freedom.

She receives many visitors in the gray stone house with the slate-blue shutters—ministers of the Netherlands, Hollanders who have escaped by the miracle of the underground, and sailors who journey from New York, Boston, Halifax—wherever a Dutch ship puts in to port—to feast their eyes upon the crown princess as if she were the very earth of their land.

"Yesterday there were six here," she said, speaking of the sailors. "A few are appointed of each ship in port to come and see me in Ottawa."

She sends Christmas cards of her own designing to every member of the Dutch armed forces. She confesses that she has done more sewing for the sailors than for the coming baby which, if a boy, will be the most important Dutchman born in this century.

Whether boy or girl, the name of the child has been decided upon in private by Juliana and Bernhard, but no hint of their choice will be allowed to leak out until after the arrival. However, a good

## Princess in Exile

Continued from page 16

guess is that a boy would be named William, as has been every king of the Netherlands since William the Silent. The prince and princess probably will adhere to that custom, even though the names they chose for their daughters—Beatrix and Irene—are not at all traditional with Dutch royalty (or for that matter anything Dutch) and were considered very "fancy" and quite radical. Should the third baby be another girl, the Dutch are prepared for anything.

The baby will be registered as Dutch as soon as it is born. The consul-general of the Netherlands in Montreal, G. P. Luden, has been appointed registrar for the occasion. Ordinarily, anyone born on Canadian soil, of whatever parentage, would be a subject of the British crown; but the possible awkwardness arising from this law was averted by a decree of the Canadian government, published a fortnight ago, declaring the place where Juliana's child is born to be extraterritorial.

Juliana's decision not to have her husband or mother make a special trip to Canada to be present at the birth of her child is in line with Dutch policy as established at the time of the invasion—which was, in effect, "no special privileges for anyone." Only officials who were deemed absolutely necessary to carrying on the government of the Netherlands were evacuated from Holland or the overseas territories, and in almost one hundred per cent of the cases, their wives and children stayed behind to face whatever the poorer and less important citizens of the country had to face.

The governor of the Dutch East Indies, for example, chose to remain at his post and face the Japs when he could have been evacuated; his staff and their wives and children are still there, sharing the fate of the natives. The effect on the morale of these natives, Juliana says proudly, has been remarkable; she feels it would have been unthinkable if the whites had cleared out and left the bitter fruits of invasion to the native population. The Dutch, seeing that point, were unanimously willing to stay.

Juliana thinks of these heroic people when she prays for the war to end soon. Her home, No. 120 Lansdowne Road,

is set only a few hundred feet back from the street and is surrounded by tall trees bare now except for ribbons of snow along the branches. It is comfortable and has a simple charm, but no glacial chic.

Children's toys are scattered and about in all the places where children's toys might be found in any formal home—on the mantel in the drawing room, under a bench in the dining room, on a chair by the stairway, in the hall. Dolls are all over the house ("They are very dolly, my daughter the princess admits) and some are Dutch costume. None are the elaborate expensive kind that little girls in America must imagine a royal princess would own.

### Royalty—Suburban Style

The drawing room is the size of an average suburban living room, with walls painted Nile green and a Turkey-red carpet. The slip covers on the sofa and chairs are white, plain, clean and worn; the curtains are pale green chintz with pink blossoms in the design. There are fresh flowers—white, pink, yellow and bronze—on every table and desk in the room. The Dutch love flowers, and the princess is totally Dutch.

The tiny room in which Juliana prefers to receive is dusty pink and boxlike and almost always filled with sunshine. Here are books on wall shelves and tables; here is the desk where she writes her letters; here is the little green leather seat where she does her knitting and reads to the children; here are framed photographs, inscribed, of President and Mrs. Roosevelt; here are the businesslike book-shaped cardboard filing boxes which she keeps her correspondence here under the needlepoint stool by the fire is a child's houseboat painted red, white and blue. It is a fine room for conversation and for living.

The only thing about the house to suggest royalty is the presence of some smart Dutch policemen who guard the place day and night and would die for Juliana not only because she will someday be their queen, but because they are genuinely fond of her in their hearts.

The little princesses—Beatrix is a

st five, Irene is three—attend nursery school along with their constant companion, a blond little girl named Renée, who with her mother accompanied the princesses to Canada and has remained with them. Renée's mother is a dear friend of Juliana's and is a widow; her husband was killed by the Nazis as a hostage.

Children learn winter sports very early in Holland, and as many Dutch customs as possible are being duplicated for the exiles in Canada, so they are enjoying winter sports. They have learned to skate ("Not on silver skates," the princess said with a smile. "We don't use silver skates in Holland"). And they are in the process of learning to ski, which at this point consists chiefly of falling down and getting up again. "Mostly," Juliana confessed, "they just lie in the snow."

### The Proud Mother

She put her arm fondly around the children's shoulders as they stood by her, still red-cheeked from the cold outside. "Whom do they resemble? My husband, I think—especially Irene. Irene is the athlete of the family. Beatrix is more motherly."

Beatrix at that moment ran out of the room on sturdy legs and came back in a hurry with a sheaf of crayon drawings she had made at nursery school. She distributed them solemnly to her mother and the visitor.

"She is very generous," Juliana said with some pride. "They are both good children. They quarrel, as all children do, but they are very loyal."

In her artistic leanings, Beatrix appears to resemble her grandmamma. The queen is not only a monarch of exceptional executive ability but an amateur painter of no mean talent.

Juliana spoke proudly of her mother's advanced ideas. "People think my mother is conventional, but actually she is very free from prejudice and I should call her quite unconventional," she said gravely. "She is progressive in every way, and very young at heart."

She cited the queen's flight by clipper

to the United States—her first flight—at the age of 62. "My mother liked it very much," Juliana said.

Does the queen spoil her grandchildren? "Not too badly." The princess smiled. "I can't complain. My mother is sensible."

Sensible is a word that applies well to Juliana too. She has an aura of great calm and no nonsense. She is interested in clothes "as every woman is," but she does not go to any extremes in chic, and nothing she has worn in recent seasons looks as though it had been whipped up by an expensive couturier. On this day, she wore a soft blue wool dress, brown suede high-heeled opera pumps, and several strands of coral-colored beads around her neck. Her jewelry was quite unremarkable; more than anything, it was like the ornaments you might see on an American high-school girl—three little gold rings, set with small stones, on one hand, a plain gold wrist watch, and a chain bracelet hung with varicolored charms.

She is inclined to be plump, but not so much now as before her marriage. The little princesses of course are delightfully plump, as Hans Christian Andersen children should be.

There is an air of pleasant expectancy about the gray stone house, which wears the deep winter silence of places surrounded by snow. Juliana, sitting with her golden-haired daughters at her knee, glows with it; the voices that pass her door are hushed with it. Even the little girls feel it.

Glancing out of her window at the picture-postcard view, the princess said, "The children are looking forward to the new baby. They are quite excited. In fact," she added softly, "they are already making presents for him."

She turned back to the little room and went right on talking, smoothing Irene's hair and straightening Beatrix's collar, now and then speaking a few words to them in Dutch, the language they understand best.

She had not even heard herself say "him."

## YOUTH AND WAR

**W**E'RE as much in favor as anybody else of sensible schemes for somehow counteracting the war-bred wildness of some youngsters. We're as heartily opposed as anybody else to the shooting or beating up of school-teachers by schoolboys, and to girls of thirteen and up having illegitimate babies as one effect of the war excitement.

This interaction of youth and war offers big opportunities, we believe, to churches, city settlement houses, and youth organizations such as the Y.M.C.A., Y.M.H.A., Catholic Youth, Y.W.H.A., Y.W.C.A., and so on.

However, we do hope that everybody who addresses himself or herself to the challenge of youth in wartime will carry into the fracas a liberal load of two qualities which many a youth-saver lacks. These qualities are humor and realism. We don't know which of the two is the more valuable in dealing with youngsters. We're convinced both are indispensable.

Young people like adults who can laugh with them and—occasionally and on a basis of perfect equality—at them. They also like older people who can call their childish bluffs now and then, and deflate their childish pretensions—all in a forthright, noncondescending way.

We hope, too, that the over-all seriousness of the war-youth problem won't become exaggerated in the public mind. Of course it is a serious matter when any young boy or girl begins to curdle. But what percentage of the present younger generation actually will go sour permanently?

We don't know. We do know, though, that the men who are fighting like wildcats on all our fronts, rolling up unsurpassed records for gallantry, and at the same time keeping more nearly free of venereal disease and alcoholism than the men of any previous United States wartime fighting forces, are sons of the boys and girls who careened through the Jazz Age following the first World War. That generation was cursed, be-

wailed and given up for lost by many of its elders and alleged betters. For some reason, it does not appear to have done too badly in its offspring.

### Taxing Old War Dogs

**W**HEN the 5 per cent Victory Tax on gross earnings was decreed by Congress, the veterans' lobbyists were able to win exemptions from this tax for veterans drawing pensions from the Veterans' Administration. Nobody put on any pressure in favor of retired regular officers of the Army and Navy.

These men's retirement pay is pretty slim at best. They have as just a claim for exemption from the 5 per cent Victory Tax, we believe, as anybody who volunteered or was drafted in 1917 or '18 and later managed to establish a pension claim. These retired officers made the Army or Navy their lifework. They took the thick with the thin; and the thin usually predominated in peacetime. They kept in fighting trim the Army and Navy nuclei on which we have been building so rapidly and so effectively since the fall of France in June, 1940.

How about relieving this group of the Victory tax? Or how about refusing any exemptions whatever from this tax? We don't know of any fair compromise between these two courses.

### A Year Ago This Week

**O**NE year ago this week, the President announced American war-production goals for 1942 of 45,000 tanks, 20,000 antiaircraft guns, 60,000 planes, 8,000,000 tons of merchant shipping . . . OPM was in the first stages of the struggle to help the auto industry to convert to all-out arms production . . . Congress adopted year-round daylight-saving time for the nation . . . the Japs invaded Borneo and Celebes . . . the huge job of

moving the West Coast Japanese population back from the Coast was only well begun . . . Manila had fallen to the Japs (January 2, 1942), and MacArthur and his men were holed in on Bataan for a last-ditch fight which the world knew to be hopeless . . . Rommel eluded the British Eighth Army and got away to El Agheila, where he held out and where he prepared the offensive which was to carry him almost to Cairo and Alexandria . . . and only on the Russian front, where Timoshenko's winter offensives were well under way, was there any encouragement for the Allies. We had done some of what we set out to do.

### Speaking of Peonage

**S**OME highly scented revelations have been made from time to time about peonage in various parts of the United States—revelations having to do with poor sharecroppers deliberately kept always in debt by their landlords.

It seems to have occurred to few people up to now, however, that under the present method of federal income-tax collection, the United States government inflicts the same sort of peonage, though more politely, on all its income-tax payers.

Federal income-tax payers never get out of debt to the government. They are forever paying taxes this year on income earned last year. Up to now, the Treasury Department has set its face stonily against the Rumel pay-as-you-go plan or some variation thereof. Under such a plan, we would turn the tax clock ahead and we'd all take to paying taxes this year on this year's income, and when earned. Until we adopt such a plan, we shall all be partial slaves to the government—all of us, that is, who pay any federal income taxes at all.

What can be keeping New Dealers and Old Dealers alike from making common cause to stop this form of peonage and to knock out this threat to the entire federal income-tax structure?

## A little Girl's Dream of Tomorrow Made Richer and Fuller by Music

## And we see her a Woman—Gifted and Gracious and Smiling—with a Smile that owes much to her Lifelong use of Ipana and Massage!

THE THINGS of the spirit as well as of the body and the mind, that is America's plan for her youngsters! No step is left untaken, no stone unturned to prepare them to face the future—confident, reliant and *smiling*.

Yes, *smiling*! For even the smiles of our children receive the best of care. Today all over America—in the classrooms of thousands of schools, boys and girls are learning the importance of firm, healthy gums to bright teeth and sparkling smiles.

They could tell you this vital dental truth—that soft, modern foods so often rob our gums and teeth of needed exercise—the stimulation they must have for health. Even young children, thanks to early training, know why gums tend to become

soft and tender—and often warn of their weakness with a tinge of "pink" on your tooth brush.

*Don't Ignore "Pink Tooth Brush"!*

If your tooth brush ever flashes this warning signal—*see your dentist without delay!* He may simply say that your gums have become sensitive because of today's soft, creamy foods. And like many modern dentists, he may suggest "the helpful stimulation of Ipana and massage."

For Ipana Tooth Paste is designed not only to clean the teeth thoroughly but, with massage, to aid the health of the gums as well. Night and morning—whenever you clean your teeth—massage a little extra Ipana onto your gums. Circula-

tion increases within the gums—helps them to healthier firmness. Start today with Ipana and massage—for firmer gums, brighter teeth, a more attractive, winning smile.

## ANY WEEK

OF COURSE, errors like the one we're about to set down seldom if ever happen in normal times. We met the author of this one in Washington. He had come in from Denver with a large assemblage of things on his mind. However, he had arrived in pretty good temper, although he told us that he was fit to be tied when his train delivered him in Chicago. "I just about made the train in Denver," said he. "Snatched up a copy of your magazine (Collier's) as I was heading for the gate. Had a hard day and thought your magazine would sort of lull me to sleep. Shows you that I wasn't functioning, that's all. Well, I started with the first story, got wider and wider awake, finished it. I got just two hours sleep. In Chicago I bought an armful of magazines including a couple of your rivals. I was going to show you guys that will power would lick you. Your damn' rags weren't going to keep me awake between Chicago and Washington. Well," he concluded, looking at us triumphantly, "I won. Got into my berth, opened the first one, was asleep in fifteen minutes. You guys can't keep me awake." So we just said, "That's fine," and something about being careful about what magazine he read—particularly if he didn't want to be kept awake.

BUT then, even the home front is kicking about this and that. Very good thing, too. We live in almost daily dread lest that day come when our mail fetches us no grouches, no appeals for justice, no wrongs to be righted. Here's one from a gentleman who wants that hard-working and skillful agency, the F.B.I., arrested—all of it. It's going to be difficult and we're for passing the job on to someone else. However, he says that we can have the \$200 reward which, he says, is offered for their arrest and conviction, and what we'd do for \$200 is something scandalous. Yet the gentleman is a trifle vague about the circumstances. We think he'd better not have his name published. As we get it, somebody stole his mailbox with all its contents. The latter, he believes, included several important checks and a letter from a man in Des Moines, Iowa. They can have the checks, but that letter contained the address of a gold mine which is just crying to be exploited.

And our correspondent is the boy to exploit it, too. No manpower will be taken from industry or from our Armed Forces. All the digging will be done by trained dogs. But he's certain that the F.B.I., with the connivance of the county prosecutor, sheriff and coroner, swiped his mailbox. It's a nasty situation.

ANOTHER came from Sgt. Samuel Saretsky, B Company, 806th Engineers. He had read our editorial, "Don't Worry Your Soldier." The sergeant assures us that the soldiers are pretty "worried about a home front that has to be coaxed to buy War Bonds." And after that he warms up to the subject. "We gladly work seven days and nights without overtime pay. With the shortage of war goods (your problem) we have plenty of worries, kid. Why do the industrial worker and the politician insist on the forty-hour week? Most of them are making seventy-five dollars a week and more if they're A. F. of L. or C.I.O. How would you home fronters feel if you read a report from Guadalcanal like this: After eight hours of fighting, our troops held a meeting lasting two hours and they decided that sixty dollars a month was not enough. They agreed that seventy-five dollars wasn't too much. Private Dubb demanded a hundred. The sergeant said he was unable to meet the demand. The troops struck. Unfortunately the Japs struck first. Private Dubb was about to call off the strike when struck by a shell. However, other units will meet today to demand an increase in pay and a decrease in fighting hours, and also working conditions which will make their occupation less hazardous.

ONE gentleman—Colonel Doctor Aaron Dishmon C. Hutchwiss of Buffalo, New York, offers us "a classic of how to recognize, avoid and prevent a cold in any weather, anywhere." The colonel doctor goes on: "For one I am interested in keeping readers in good health, tackling from every angle—physiology, biochemistry, biology, psychology and not more than a dose a day taken through the common sense, a direct contradiction to psych-surgery. It is a positive advice by return postage after a lot of research and hard labor for \$1.75." ... W. D.

Price, \$3.00 a year, two years \$5.00, three years \$7.00 in the United States and Possessions, Argentina, Bolivia, Brazil, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Labrador, Mexico, Newfoundland, Nicaragua, Panama, Paraguay, Peru, Spain and Colonies, Uruguay and Venezuela. Other foreign subscriptions including postage: \$6.50 a year. Remit by postal or express money order or check in United States funds to The Crowell-Collier Publishing Company, Springfield, Ohio. Changes of address should reach us five weeks in advance. Give both old and new addresses.

# Two Important Letters to the American Public

**Metropolitan Life Insurance Company is glad to publish these letters from two prominent government officials**

**PAUL V. McNUTT**  
Chairman, War Manpower Commission

To my fellow Americans:

One of the first duties of our people in wartime is to avoid, so far as possible, sickness and disease. Venereal diseases are such a serious threat to our military and industrial efficiency that their control is especially important. It is largely a community responsibility.

By using their influence to see that existing laws operate effectively, public-spirited citizens can do much to clean up local conditions which favor the spread of these diseases. Other steps to take are the organization of educational programs to acquaint every man and woman with the facts about venereal diseases—how to avoid them, where to go for diagnosis and treatment; and a community program of recreation and leisure-time activities for service men, industrial workers, and others.

Let every American do everything possible to defeat this enemy within our gates.

**THOMAS PARRAN**  
Surgeon General, U. S. Public Health Service

To the People of America:

Every community must organize its health forces against the venereal diseases. They can be controlled like other epidemics.

For the individual, the solution of this problem is a personal matter of basic clean living—of avoiding the sources of infection.

If every person in our country accepts full personal and community responsibility, we shall have tremendously improved national health and greater strength in prosecuting the war.

## KEEP UP WITH THE WORLD

By Freling Foster

That the legal term "false imprisonment" has been given wide interpretation by the courts is illustrated by a New York case of a few years ago. A gentleman, upon failing to purchase a ticket to a ball game, tried to leave the park through an entrance, but was swept backward by the intruding crowds for more than an hour. So he sued the club for false imprisonment and was awarded \$500.—By Walter A. Morris, Jackson Heights, New York.

Of the 50,000 pints of blood collected each week for blood banks, 18,000, or 36%, are collected by 42 mobile units sent out by the Red Cross chapters of 24 cities. Each unit consists of a physician, several nurses and a specially equipped truck, operating in communities where such services are not normally available.

Compared with an all-riveted ship, an all-welded vessel is much stronger because it is in one piece, travels faster because its hull is smoother and has up to thirteen per cent less deadweight tonnage and, therefore, a correspondingly higher cargo capacity, because it does not carry the weight of rivets and overlapping plates.

For every hundred tons of new steel purchased by American railroads today, eighty tons of iron and steel scrap go back to the mills from this industry.—By Albert H. Adolph, New Orleans, Louisiana.

So that American firms and government offices may know where to find all kinds of scientists and various experts, on short notice, a card file of 700,000 of them, quickly classifiable by sorting machines, has been compiled and is known as The National Roster of Scientific and Specialized Personnel.

Flames vary tremendously in temperature, some producing little heat. For example, a flaming piece of cotton that has been soaked in a certain formula of carbon tetrachloride and carbon disulphide can be held in the bare hands without injury or pain.

Age limits for field service in the United States Army are: Second and first lieutenants thirty-six years, captains forty-two, majors forty-seven, lieutenant colonels fifty-two, colonels fifty-five, brigadier and major generals no maximum age.

Under federal inspection, four American companies now slaughter horses and dress the meat for human consumption in this country. Per pound, it retails for fifteen cents when ground, frozen and packaged; twenty-five cents when sold as a roast, and thirty-five cents when cut as a steak. Horses may not be slaughtered nor may their meat be prepared in establishments that butcher and handle cattle, sheep and hogs.

An operation, recently performed on a Londoner injured in an air raid, endangered the surgeon as well as the patient. Several X-rays disclosed that the object embedded in the latter's thigh was a small, unexploded cannon shell. The surgeon extracted it with care and turned it over to a bomb disposal unit.

Most dollar-a-year men working for the government not only continue to draw their salary from their companies back home, but are given \$70 a week for expenses by the government and are also reimbursed for all money spent in traveling.—By Mary Shay, Croton Falls, New York.

In recent years, the United States has used more than 200,000 tons of explosives annually to mine coal and ores, quarry rock, clear tree stumps, open ice jams and build roads and tunnels. In fact, our domestic consumption of dynamite and similar materials from 1936 to 1940 equaled in weight all the explosives used by the Allies in the four-odd years of the first World War.—By Barbara Smith, North Providence, Rhode Island.

Five dollars will be paid for each interesting or unusual fact accepted for this column. Contributions must be accompanied by satisfactory proof. Address Keep Up with the World, Collier's, 250 Park Avenue, New York City. This column is copyrighted by Collier's, The National Weekly. None of the items may be reproduced without express permission of the publisher.

## The little girl who never was sick

She never had a cold, this fortunate little girl. She never had typhoid or diphtheria or influenza. In fact, from the day she was born she never suffered pain or sickness of any sort.

You do not know this little girl. But for a thousand years she has lived as a dream in the minds and hearts of mankind . . . symbol of a time when science shall have won its long battle against disease.

Today that dream has come a step nearer reality with the development of the General Electric electron microscope . . . a super-microscope that "sees" with electrons instead of light. With it man can see things that he has never been able to see through the ordinary kind of microscope.

The new G-E electron microscope is the first of

its kind in that it is simple to operate and can easily be moved about. It can be used with an ordinary electric current supply.

With the electron microscope, scientists can see and study the ultra-minute viruses believed to be the cause of influenza and the common cold. They can see new details of the inner structure of germs.

After the war, General Electric and other manufacturers will produce electron microscopes in quantity. The advantages of simplicity and portability, offered for the first time in the new General Electric instrument, will make the electron microscope available to thousands of doctors, scientists, hospitals and laboratories, instead of to only a few.

The skill and experience which produced the electron microscope are also represented in the General Electric radio. For the radio, too, is an electronic instrument. The radio and television receivers which General Electric will bring you after the war will be finer than ever before because of the knowledge now being gained by General Electric as a leading producer of radio for the armed forces.

The story of electronics is told in a fascinating new 32-page book in full colors: "Electronics—a New Science for a New World." This booklet is free. Write for your copy. *Radio, Television, and Electronics Department, General Electric, Schenectady, New York.*

Listen to the General Electric Radio News Program, with Frazier Hunt, Tuesday, Thursday, Saturday evenings, over C.B.S. and American (FM) networks. See newspapers for time.

## Remember the Man who Built a Boat in his Basement?

*He's using it now from Suez to the Solomons*

**I**T'S an old story—about the man who built a boat in his basement and then couldn't get it out.

Recently our Army and Navy and Marine Corps had a similar problem. But they found the answer, too.

For example, huge invasion barges such as those shown in the picture—veterans now of Algiers and Guadalcanal—would seem too big to travel anywhere except over the broad sea waters which are their final destination. Yet these boats, big enough to carry 50 men and a tank, were built far inland, traveled to sea by rail. The broad, high clearances of railroads such as the Erie made possible the construction of these boats hundreds or thousands of miles from the ocean.

And they make possible the rail handling of all manner of oversize shipments from coast defense guns to tanks—shipments which couldn't be handled speedily in any other way.

By thus adapting themselves quickly and willingly to the wartime needs of the nation, America's railroads have again proved their usefulness and indispensability. Whether the job is moving invasion barges or troop trains, every railroad man is doing his darnedest these days. For we railroaders believe in America, believe it is worth fighting for. And we're going to stay on the job until this war is won, *and after*—to help rebuild the world.

# ERIE RAILROAD

## WING TALK

Judging her hobby of mending china too frivolous in wartime, Helen Tuorila applies her skilled fingers to the welding torch in an airplane plant

**T**HERE is a lot of talk, many discussions and not a few arguments about the part aviation will play in the postwar era. From some leaders come predictions with astounding estimates on the number of persons who will fly and do it in their own little inexpensive plane. The aviation industry is pictured by many as that "last frontier," and they see it as the possible backbone in difficult days ahead when the world again is at peace. Steps are under way now for a planning program for the postwar era.

Some men vision the sky literally filled with private planes. The present small plane manufacturers, now busy with war work, are not sitting back and forgetting the future, of course. They are constantly studying and figuring how the plane of tomorrow can be made to fit the average man's pocketbook and give him the speed and comfort he desires.

But the one thing which can shackle the private plane industry boom is a lot of flying regulations. There will have to be aerial traffic laws, to be sure, but the average businessman will forsake flying if he has to battle a mess of complicated government regulations. All the man has to do, on that future trip home from the office, is fly the plane, operate the radio and navigate. He doesn't want to spend time filling out flight plans and reports. Otherwise he might as well go home on the bus.

**L**IEUTENANTS Harold Comstock and Roger Dyar, who became the first humans to go through the air at a speed greater than that of sound when they dived their Republic P-47 Thunderbolts at 725 miles an hour, described the sensation as like "stepping from a hot shower into a cold one."

They did not reach that unexplored aerodynamic frontier where airflow would theoretically break up and cause a plane to lose its essential flying characteristics and flop around like a drunken pigeon. But the speed was so great that the air pressure on the control surfaces had such tremendous force it caused the "joy stick" to freeze. And when you are moving earthward at more than a thousand feet a second, that is what one of the officers described as "an unsatisfactory condition."

When the control stick of their plane failed to respond, the two pilots resorted to the crank which operates the elevator

trim tabs in order to level off. And so they lived to land and smash the contentions of many psychologists that speed of 500 or 600 miles an hour were suicidal because the pilot's brain would be unable to keep pace with the speed of the plane.

**T**HE Japs are experts when it comes to copying the designs of aircraft equipment they had previously purchased. While their copies are not exact, they do incorporate into their imitations a cylinder from one plane, a carburetor from another, instruments from still another. But they can't seem to employ this practice when it comes to getting a supply of metal. Army and Navy authorities who have studied wrecked Japanese planes find the copied parts; but the workmanship indicates a scarcity of metal. The fact the imitators are machining as few parts as possible points to a lack of machine tools.

**I**T IS strange to see how the hobbies or professions of some women have easily been converted to the war effort. The case of Helen Tuorila, a welder in North American Aviation's Texas plant, is a good example. Her hobby was mending old china, which developed into a unique and lucrative profession. She figured mending chinaware seemed silly with a war going on so she went to work and her nimble fingers now operate the welding torch. And so she might feel she still is mending "China"—and the other Allied Nations, too. . . .

J. D. B.

# PLANT NOW HARVEST LATER!

Everything you hold dear today is based on the security of our Nation.

Your life, your children's futures, your earnings, your savings are worth nothing except as they are protected by our national security.

America is a FREE COUNTRY, unlike the gangster nations, yours does not ORDER you to GIVE YOUR MONEY. It ASKS you to LOAN it temporarily to buy the tools of War that our fighting men must have to smash the hordes of Huns, Japs and Blackshirts who, unless they are smashed, WILL SMASH YOU!

Your country asks you to dig down deep to invest in United States War Savings Bonds that you may redeem or hold after the War, and on which you receive interest for all the time you hold them. After the War, they will provide for your old-age security, your children's educations, and peacetime pleasures such as travel, vacation and rest.

## MAKE YOUR MONEY FIGHT FOR YOU Buy these United States War Savings Bonds

Series "E" denominations: \$25.00, \$50.00, \$100.00, \$500.00 and \$1000.00—prices: \$18.75, \$37.50, \$75.00, \$375.00 and \$750.00. Mature 10 years after the date of issue; not callable by the Government before maturity. Interest rate of 2.9% to maturity. Can be registered to 1 person, or 2 persons as co-owners, or to 1 person with 1 person as beneficiary, redeemable 10 years after date of issue or the first of the month issued or after 60 days at fixed redemption rates, by presentation to Federal Reserve Bank or the Treasury Department.

See your bank, security dealer, broker or savings and loan association—or buy direct from any Federal Reserve Bank or branch, or by mail from the Treasurer of the United States, Washington, D.C.

# U.S. WAR SAVINGS BONDS

## PROTECT YOU! PROTECT OUR NATION!

This advertisement, prepared in cooperation with the Treasury Department, is contributed by the W. A. SHEAFFER PEN COMPANY, Fort Madison, Iowa, makers of Sheaffer's pens, pencils, desk sets, SKRIP.

SHEAFFER'S

FROM THE MAKERS OF AMERICA'S QUALITY TIRE

WAR PRODUCTION BOARD  
WASHINGTON, D. C.

The General Tire & Rubber Co.,  
Akron, Ohio

IN REPLY TO

Gentlemen:

# The GENERAL WAR TIRE

with famous Silent-Grip Tread

- ★ Made by workmen who only know how to build tires General's Quality Way
- ★ General Silent-Grip tread . . . with a reputation for quick-steps and slow, even wear
- ★ Same General Tire cooler running, extra strong cards . . . made in our own mills . . . as always
- ★ Compounded from Government-specified war rubber . . . nat, of course, the Top-Quality virgin crude rubber that formerly gave you General's famous long mileage

## MAKING THE MOST OF WARTIME SPECIFICATIONS

When you buy a War Tire, get the tire that you know has been built by the same engineers and craftsmen who gave you General's long mileage and extra safety in the past. 25 years of Top-Quality leadership in getting *the most* out of rubber are your assurance that the General War Tire will give you the maximum performance it is possible to secure from Government-specified war rubber. Let your General Tire

Dealer explain how you can have the War Tire with the name that you know has *always* stood for the best: *General*.

★ ★ ★

### MAKE ONE STOP FOR INSPECTING . . . REPAIRS . . . RECAPPING

Now that you *must* have your tires inspected, see the tire man who knows how to inspect them *right* . . . your General Tire Dealer. At this *one stop* you'll find not only the *expert knowledge* and trained personnel required, but complete facilities for *repairing* . . . as well as *recapping* by the General Tire Kraft System, under rigid factory controls. Now, more than ever, for *every tire need* . . . see your General Tire Dealer . . . a tire man, first, last and all the time.

# The Non-Bureaucratic Mr. Byrnes

By Walter Davenport

PHOTOGRAPH FOR COLLIER'S BY LAURENCE MONAHAN

James Francis Byrnes controls the purchasing power, prices, rents, wages, salaries, profits and rationing of the world's richest nation. He knows exactly what he's doing, does it quietly and quickly—all of which is very unnerving to the other overstuffed, bureaucratic war agencies

WHEN James Francis Byrnes was twenty-three years old he bought a newspaper. It was the Aiken, South Carolina, Journal and Review, a semiweekly sheet which was achieving a high degree of unpopularity even with the few who worked for it. As editor and publisher of the Journal and Review, Mr. Byrnes accumulated a considerable store of wisdom which supported him well later on as county solicitor (district attorney), as member of the House of Representatives, as United States senator, as Supreme Court Justice and now as Director of Economic Stabilization, the latter a twenty-mule-team job with mules wild.

Mr. Byrnes, who had left school in Charleston at the age of fourteen and had at twenty-three risen to the local eminence of court reporter, had exactly five hundred dollars when he made this topside entrance into journalism. He and an equally ambitious youth named A. K. Lorenz (who seems to have had no money at all but who knew how to set type by hand) managed to borrow \$4,500 from an Aiken bank, and this, with Mr. Byrnes' five hundred, made precisely what the owner of the Journal and Review was demanding.

Along with what the retiring publisher optimistically called "the plant" (a rheumatic press, two fonts of pied type, some ink and even less newsprint), Byrnes and Lorenz took over a printer known as Biz. When occasion demanded (and he was the sole judge of this), Biz would lay down his stick (a composing-room gadget in which type is set) and, without warning, gloomily hire a hack to Charleston. And there in one of the more rugged joints, Biz would proceed to get himself handsomely plastered. The remembered reasons for Biz's detours into escapism are (1) political speeches by

friends of the editor—which the editor wished printed in full and (2) editorials. Biz probably hated what editors wrote more than what politicians said because, said he, politicians just had to say something, no matter how unnecessary, now and then.

Thus it was from Biz that the shrewd, smooth man who is now second in command to Franklin Roosevelt over the economic life of the world's richest nation learned (1) to know both sides before you take either, (2) to know what you're talking about and make it brief, (3) to remember that it is the audience that always pays, and (4) blessed is he who has no shirt, for then it cannot be stuffed. With that, we take reluctant

leave of Biz who later fell into the hands of an itinerant holy man, got religion and dropped dead at a strawberry festival.

Mr. Byrnes presides sauvally over our struggles toward economic stabilization in the new cream-and-mahogany east wing of the White House. It is his stoutly maintained opinion that most men's troubles come from attending conferences. He, for example, will attend no conference which is not limited in attendance to a few men, each of whom has the power and the guts to make decisions and make them stick. It is his provable contention that he can get more done in five minutes on the telephone than any other kind of conference can accomplish in an all-day session.

Mr. Byrnes was telephoning when we dropped in on him. His call had to do with housing the Rubber Administration, which had stretched itself out of its original quarters. In no time, he found living room for the rapidly expanding Rubber Administration in Washington, where many a man of lesser talents is having trouble finding a place to put his coat and hat. But the job did entail installing the Rubber Administrator, Mr. William M. Jeffers, in what was once a church.

"A term in church will not hurt Bill Jeffers a bit," said Mr. Byrnes.

Manning his offices are exactly eight persons. All of them manage to keep exceedingly busy in a calm and quiet which

(Continued on page 28)

# WAVE LENGTH

By Phyllis Duganne

ILLUSTRATED BY WALTER KLETT

A SHORT SHORT STORY COMPLETE ON THIS PAGE

THAT night, there was a log fire blazing in the fireplace. Ophelia, the silver Dane, was asleep with her paws touching the gleaming brass fire rail, and Rufus, the setter, lay close to John's chair. We could hear the storm outside—a genuine Vermont blizzard. It made the house seem like a fortress, solidly built, secure against the onslaught.

John was reading and I was knitting, and we'd have been completely happy, except that we were so terribly in love—and that John was married to Sally.

I didn't believe for one minute that Sally was at her mother's, in spite of the daily letters with the Boston postmark. I didn't believe that her mother was ill. Sally had just barely returned from a two weeks' shopping trip to New York when the telegram came. Mrs. Wendell undoubtedly disapproved of her daughter's conduct, but she undoubtedly was covering up for her. . . .

I don't know when John fell in love with me, but I think it took me about one day to know how I felt about him. He met me at the station when I came to work for him, as his secretary; and even that first moment was like being met by an old, dear friend. That afternoon, he told me about the book he was writing, and my fingers itched to begin setting his library in order.

Sally was completely charming to me; she always has been. Even John's telling her that he loved me and wanted to marry me did not change her attitude in the slightest degree. She said that she loved him, that she would die if he sent her away.

Mrs. Wendell reminded him of Sally's youth—she's ten years younger than John and five years younger than I—and she made grave prophecies for Sally's future, if John turned her out, now. That was nearly a year ago, and God help me, I stayed on. John wanted me to stay. Sally urged me to stay. She may not be intellectually my equal, but she's a thousand times more clever. Subtly, she shifted my relationship with John to a

high platonic plane of utter hopelessness, forced us both to sublimate our emotions, in a very Bostonian, consciously cerebral—and completely false—situation.

Ophelia sighed deeply; John got up and lifted another log onto the fire. "It's a real storm, Peg."

I nodded. The two of us, here on this high Vermont hilltop, and Sally . . . I wondered where she was. A woman doesn't take evening gowns to go and stay with a sick mother. I wasn't snooping when I saw her pack them; she called me into her room to ask me something, and there they were, folded on the bed. It was part of her cleverness not to bother to conceal things from me. She knew that I wouldn't tell John. She knew, instinctively, that I would never put into words all the ugly little suspicions I had, the small signs which showed which way the wind blew.

So he went on believing her lies, not ever thinking enough about them to look at them closely.

"You're very silent, Miss McKenzie," he said.

"I'm thinking," I answered. Thinking about Sally, wondering where she really was. There were those letters that came daily from New York. I knew that there was a man, and knowing Sally, I was pretty sure that she wasn't sublimating any emotions. But I had no proof.

"You look very pretty, thinking, but I wish you'd talk to me," said John. There was something wistful in his expression when he smiled at me.

I made a face at him. "I'm in a foul mood," I admitted. Pretty! Me, in a rust-colored sweater and wool skirt, ankle socks and Maine moccasins. There was no point in my trying to be alluring or feminine. Sally was the pretty one—enchancing, bright and graceful like a coral snake, and just as deadly. Oh, I wonder where she is, I thought, with her husky, breathless voice, and that unmistakable gurgling laughter of hers!

"Let's hear the news," said John.

I was closest to the radio. I turned it

on and twisted the dial. A blast of dance music made us both think of Sally, and John grinned and said, "We can skip that tonight, Peg."

Sally would keep a dance program on for hours, turning the dial to stations farther and farther west until John was nearly crazy with it.

I was in a definitely foul mood, as I'd told him. I felt contrary and perverse and mad. "I like it," I said. The wind was coming in waves across the mountains, hitting the west side of the old house like surf. I bet she's dancing somewhere this minute! I thought furiously.

"The music of Earl Bishop and his orchestra can be heard nightly direct from the floor of the Perroquet in New York City . . ."

I'D BEEN to the Perroquet, with its floor of translucent glass bricks, its flame-colored velvet banquettes, its five-dollar cover charge. Storm over the Green Mountains, and in this firelit room, we could hear the sound of people's feet dancing in New York, the jungle-beat of drums, the thin clarity of a horn, the clapping of people's hands. I closed my eyes and I could almost see it, almost distinguish catches of conversation.

John was laughing at me, and I got up abruptly and left the room. If I stayed there another minute, I'd cry—and then where would we be? In each other's arms, or else saying goodbye forever. It was like taking all your steps on a tight rope, to live like this.

I went into my own room and washed my face and pulled myself together. Then I came meekly back down the wide staircase.

John had turned the radio off. I heard his voice, saying distinctly, "Mrs. John Saunders," and I stopped short. There was no further sound, so I came curiously to the door of the library. He was sitting at his desk, holding the telephone, a cigarette in his free hand. Then he said, "Hello? Sally?" He was smiling. "How's your mother?" he asked pleasantly.

"Don't bother," he said. "You'd be wasting your time." All at once, he withdrew the instrument from his ear and held it about a foot away. I could hear Sally's voice, with music throbbing behind it. I couldn't distinguish any words, but the tone was unmistakable. Sally was mad, and she was out of control. Her voice rose and fell, passionately.

John looked up and saw me. He shrugged, and replaced the phone very gently, with the voice still going on until the click of contact cut it short. "That is that," he told me.

I couldn't speak.

"Come here, Peg," he said. He stood up.

I shook my head, dumbly. "What—I mean why did she phone? What's happened?"

"She didn't," said John. "I called her."

"At her m-mother's?" I stammered.

"Peg McKenzie!" he said. "You aren't as foolish as you look, at the moment."

"At the—the Perroquet?" I asked.

"Of course." His smile was not in the least wistful now; it had gaiety and anticipation and triumph. And, all at once, I knew what had happened. He had heard Sally's laugh. I knew it, even before he said the words. He had called the night club and had her paged. Sally, gay from music and champagne, unsuspecting . . . and cornered. Her surprise and anger had defeated her. She had turned on John. *Snooping!* she had accused him. *I bet Peg put you up to it! I bet she's been reading my mail! How else could you possibly have known?* . . . By her very questions and accusations, she had convicted herself.

It wasn't important. I could see that John was no longer thinking of her. He was looking at me, thinking only of me. The windows rattled, the frozen branches scraped like long fingernails across the glass. Lovely, glorious storm, mounting snowdrifts, howling winds. . . . I hoped that we'd be snowed in for a month, or forever, and John was standing there, smiling, hoping exactly the same thing.

With five of his superior officers shot down, and a sixth fighting fire and floods in the bowels of the ship, thirty-one-year-old Commander Bruce McCandless fought and steered the battered San Francisco safely back to base. For "conspicuous gallantry and exceptionally distinguished service and superb initiative," the young officer received the Congressional Medal of Honor. This is his story

**I**T WILL be months, maybe not until the end of the war, before we know the full story of the action that took place off Guadalcanal in the early morning of November 13th. Fought in pitch-black darkness, lighted only by gunfire, and all over in forty crowded minutes, there wasn't much chance for details. We lost two light cruisers and four destroyers, and the superior Japanese force was driven off with losses of one battleship, two heavy cruisers, a light cruiser and several destroyers. That's certain. Everything else, as in my case, is what each man saw for himself.

Action really began on the afternoon of the 12th. Our force of cruisers and destroyers, under the command of Admiral Daniel J. Callaghan, was screening transports while they unloaded troops and supplies for the reinforcement of Guadalcanal. Suddenly, around 2 o'clock, twenty-one twin-engined Japanese torpedo planes came in from the north, fanning out as they approached. Due to skillful maneuvering and the accuracy of our antiaircraft fire, the Nips did not score a single hit.

Our fighters, occupied elsewhere during the initial stages of the attack, soon joined in, and burning Jap planes started plunging down into the sea. To the best of our belief, twenty were accounted for. One plane, missing the flagship San Francisco with a torpedo at close range, kept coming on. Whether out of control or whether one of the "Bushido boys" purposely crashed us, we'll never know. Our gunners gave him everything that would bear, and the crew of the after machine guns actually poured in steel until cut down by the crashing plane.

#### An Inferno of Destruction

Almost instantly the entire superstructure was turned into a hell by blazing gasoline. Although we finally succeeded in bringing the flames under control, it was at the cost of heavy casualties and the loss of valuable equipment and apparatus. All of the injured personnel were transferred to a transport for better medical attention, with the exception of Commander Mark Crouter, our executive officer, who refused to leave the ship.

About sunset the transports left, their job completed and, now freed from protective duty, Admiral Callaghan led us off on a search for any Japanese forces that might try to sneak down from Truk or Rabaul. With "Admiral Dan" on the flag deck, every man of us was in high gear when we went to battle stations at 7:30. He had been the San Francisco's captain, and no officer was ever followed with greater devotion.

Our first search through Indispensable Strait found nothing, and doubling back, we hunted north and west of Guadalcanal toward Savo Island.

Some time after one o'clock we established contact with a large Japanese

A Jap plane crashes off Guadalcanal after sideswiping the San Francisco (right). At left: a U. S. cargo transport

Back in Frisco—Comm. McCandless (center) with his father Capt. Byron McCandless (right) and Capt. A. F. France

force—between fourteen and nineteen warships, as near as we could make out, advancing on an easterly course in three groups. The right and left flanks, made up of cruisers and destroyers, were about three miles apart, and the center force contained two battleships with destroyer screen. To make it plainer, as they came up we faced an open V.

Our force was in column formation, headed by destroyers and a cruiser, commanded by Admiral Scott, pioneer in night fighting in the American Navy. In line followed the San Francisco and other cruisers followed by more destroyers. Friday the 13th and thirteen ships in our formation.

Agreeing that we could get a better view above, Captain Cassin Young, Commander Rae Arison and I left the armored conning tower on the signal deck, and went up on the unprotected

navigation bridge. Because we were the flagship, and largely responsible for the maneuvering of the entire group, Commander Arison was required exclusively for navigation and I took over as officer of the deck and conning officer, ordering the movement of the ship. Luckily, Captain Young had taken me with him to the last conference with Admiral Callaghan and his staff, so that I had fairly good knowledge of our own organization.

Our force headed at once into the Japanese formation, right between the two flanks, which were approximately a mile and a half away on either side. The leading group of destroyers, followed by a cruiser, hurried off to deliver a torpedo attack and were lost to view.

The leader of the Jap right flank—a heavy cruiser—was the first to receive our attention, and we let go with all of

our nine 8-inch guns, giving her six salvos in rapid succession. Let me say right here that Commander William Wilbourne and Lieutenant Commander James Cone, his assistant gunnery officer, furnished one of the most outstanding exhibitions of marksmanship ever seen in any man's navy. Here at last, in full measure, was our pay-off for long weeks spent in night practice shooting at floating rafts.

Shell after shell went home, setting the cruiser on fire from stern to stern. Leaving her to be taken care of by the ships next in line, we shifted fire to a second ship, either a large destroyer or a light cruiser. Our salvos were going home when suddenly our first target exploded, sending a column of smoke and flame fully a thousand feet into the air, lighting up the whole battle scene.

# TOP BILLING, NO COOLING

By Eddie Forester

ILLUSTRATED BY JAY HYDE BARNUM

She ranked him in the studio and he just couldn't take it. What he really needed was a bigger production to achieve stardom

GET your name in big type and you'll get your salary in big figures is Hollywood's sacred creed—and it's the barrier to happiness that Gordon Dykes and Verna Jason ran smack into. I was the innocent party of the third part, their agent.

They met in my office—those two: a blond boy with a lot of brass that wasn't too offensive; and a quiet little dark-eyed lass from the Middle West who promised to become the heartthrob of every guy who ever dreamed of a cottage for two with chickens in the back yard.

The third sentence Gordon spoke to Verna was an invitation to lunch, and the way her sweeping dark lashes fluttered didn't make me too happy, because I knew her mousy type was a push-over for a fast worker like Dykes.

"Well, Flash Gordon," I said resignedly, "since you're going to feed my favorite client, maybe you ought to know her name."

"It doesn't matter, Tenper," he quipped, never once taking his eyes off Verna, "because I'm going to change her name to Dykes."

I glanced at the girl for a sign of resentment; she was riding along with the gag, and enjoying the journey, so I shooed them out of my office.

Gordon Dykes was a show-wise lad who came up the hard way, via one-night stands in the sticks and one good season with a middling musical, just off Broadway. That's where I found him. He wasn't too solid and he was hard to handle, but the appeal was there—a sort of a Tyrone Power with a Dead End Kid complex, clear, wise eyes that snapped so fast you couldn't study their character, and a nimble set of dancing feet.

Verna Jason came to me with a note from DeMille: "She read two lines for me—very badly—but she had every man on the set wanting to kiss her. Handle her right, and you've got a star." Say, who am I to doubt DeMille!

Gordon Dykes kept his word; he changed the girl's name less than two months after they met. They called me the night before it happened and we met in Verna's apartment in Van Nuys.

I sat opposite them with a highball in my hand and my tongue in my cheek, and watched Verna glow with an ecstatic radiance that illuminated the entire room. The hazel depths of her eyes were full of glorious dreams—dreams I hoped would never turn into nightmares.

But young love has to take a lot of cruel hurdles in Hollywood; and it seemed only fair that I should give them a hint of what was ahead.

"Which one of you," I asked, with cryptic soberness, "is going to give up your career in pictures?"

They sat bolt upright. "Which one?" they asked in astounded unison, then Verna said quickly, "Why, neither of us!"

"Then I'll give you nine months—maybe a year—of wedded bliss."

"Listen to the man!" Gordon scoffed. "Why should it make any difference if we go on working?"

"It shouldn't," I admitted, "but it will. Right now, you're both getting the same salary, the same billing, the same publicity breaks. But what's going to happen when one starts taking a lead over the other?"

"Nothing," Dykes assured me. "Why, Verna hasn't got an envious bone in her body."

"And what about you, Gordy?" I wanted to suggest, but didn't. My role of Dutch uncle had gone far enough. They would have to learn the hard way.

"That's silly, Tenper," Verna objected. "People who are really in love can't be envious of each other's success." She drew his arm tighter about her slim waist and looked up at him with stars in her eyes. I'd seen the boy do a lot of phony things, but there was nothing false about the way he leaned forward and kissed her soft, willing lips. Maybe I'm wrong, I thought to myself; maybe the kids had what it took to put the jinx on the Hollywood (Continued on page 48)

If you saw Varsity Stomp, you know that it was a honey of a picture. You also know that Gordon mugged too much and that Verna stole the show

I looked down at the field lights and thought, "This is it. Hang onto your hats, kids, here we go"

# Civilian Pilot

By H. Vernor Dixon

ILLUSTRATED BY WALTER HERRINGTON

When Jenkins went into the Ferrying Command, he wanted no part of the Army. But the Army changed his mind for him, somewhere between Los Angeles and Seattle

THIS building I was standing in had once been a hangar, but the Ferrying Command had converted it into a gymnasium. Down at the far end was a regulation boxing ring. Two middleweights were in there punching the tar out of each other. But I wasn't interested. I was burning.

The armed guard at my side, the one they had sent with me from the field gate, nudged me with his elbow and nodded toward the ring. "The stocky guy with the headpiece usta be a champ."

"Who cares?"

The guard squinted at me and said, "Look, chum; I ain't enjoyin' chaperonin' you around any more'n you are.

But what the heck you so steamed up about?"

I said, "Sorry, bud. I'm not burnt at you. It's the Army. I'm a pilot. Understand? Seven years out of my twenty-seven, and all on good stuff. I want to do something for my country, so I figured I'd join this outfit. And what happens? I have to wait at the gate for twenty minutes. Then they let me come in with a guard at my side, like I was going to steal something. And who interviews me in the Transition office but a kid lieutenant. I was probably flying before he ever saw an airplane. And what does he say? 'Guard, show Mr. Jenkins around. I'm busy. Come back about nine.' Who wouldn't be burnt?"

A lopsided grin split the guard's face and he said, "What did you want 'em to do, spread the plush carpet for you? But it's nine now. Let's get back."

We walked out of the gym into the burning California sun, and the tar on the hot road stuck to our shoes. On the side of one of the buildings was a door marked TRANSITION. We went

through that into a room jammed with at least forty pilots standing around, through another small office with young girls working at typewriters and into a small room in a corner, the hottest room of all. Even the walls were sweating.

There were only two desks. Lieutenant Leslie, whom I had met for a split second earlier in the morning, was seated behind one of the desks, staring into space. He was a long, lean and lanky kid, with hard eyes, a thin face and hair that stood up at all angles.

He squinted at me until the guard had left, then leaned back in his chair and said, "Name's Burl Jenkins?"

I said, "You oughta know."

"Why?"

That stopped me for a minute, then I had to laugh. "I'm THE Burl Jenkins," I said, "holder of three transcontinental records in '38 and '39, 'cross Atlantic, Bendix Trophy—"

He stopped me with a nod. "I know all that. I just thought maybe Burl was an abbreviation." His feet came down from the desk and he leaned forward, all busi-

ness. "Log books? Birth certificate? References?"

I produced what he wanted from my pockets and tossed them onto the desk. He checked them all over, and looked back up at me.

"Over four thousand hours. That's good. A civilian comes in here with that sort of time and it's like handing the Army a hundred-thousand-dollar gift. Now, this is Transition. We'll send you out with an Army check pilot and see how good you are. You have plenty of twin-engine time, so if you make the grade you'll go right into Operations. But you'll be back in Transition later on, so we can make a four-engine pilot out of you. We run the greatest training school in the world—and they're already trained before we get 'em."

I had to laugh again. "You're going to train me?"

He stared at me and then crisply nodded, the squirt. "You'd be surprised." He shuffled some papers and said, "You come under Civil Service at a base pay

(Continued on page 32)

Robert Pitts, North Carolina criminal, had his fingerprints surgically removed in an attempt to escape detection. Picture above shows Pitts' left side, from which five patches of flesh were grafted to his finger tips. Below, the first three fingers of Pitts' right hand, after the operation performed by Dr. Leopold Brandenburg

# The Man Without Fingerprints

By J. Edgar Hoover  
and Frederick L. Collins

The strange case of Robert Pitts, the only man who ever succeeded in removing his fingerprints to prevent identification. It didn't work; as a result both Pitts and the doctor who did the job are now in jail. Their fantastic plan and how it was discovered makes one of the greatest stories of crime detection in the history of the Federal Bureau of Investigation

**B**ACK in the Dillinger days, there was a lot of talk about altering fingerprints. Most of the bigger gangsters tried it. Dillinger himself spent \$5,000 with one doctor in an attempt to shake his identity. But none succeeded.

The subject was supposed to be closed, but it opened suddenly and with a bang on October 31, 1941, when a tall, blond, intelligent-looking young man of thirty-two, who gave his name as Robert Pitts, was arrested near Austin, Texas, for failure to possess a Selective Service registration card.

Pitts had no fingerprints at all.

Here was a problem unique in the history of modern law enforcement. We have in the identification division of the F.B.I. more than 57,000,000 sets of fingerprints. Additional prints are coming in at the rate of 125,000 a day. This vast collection is so arranged that any one of our several hundred fingerprint experts can identify in less than three minutes incoming prints of any of the 57,000,000 prints already in the files. The expert with his magnifying glass compares the ridges, deltas and cores appearing on the new card with those of the old.

No two sets of fingerprints are alike, even those of identical twins. The prints of the Dionne quintuplets are as dissimilar as President Roosevelt's and Adolf Hitler's. Identification, therefore, is immediate, infallible. In Robert Pitts' case, however, no such identification was possible.

What this meant to a man who had since 1924 been proclaiming the infallibility of the fingerprint system, what it might mean to the whole practice of modern law enforcement built on that system—well, we won't go into that. Something had to be done about the prisoner Pitts.

Who was this man without fingerprints?

Who was the surgeon who had removed them?

The closemouthed, self-possessed man who called himself Robert Pitts wasn't saying. He didn't look especially like a man with a police record. His blue-gray eyes were clear and alert, his ruddy complexion devoid of prison pallor. He had certain distinguishing marks, no-

tably a long jagged scar on one side of his face, running upward from under his chin to his ear. He said this was the result of a burn; but there were unmistakable signs of an attempt to remove a portion of it by facial surgery.

There were, of course, several thousand tall, slim, blond, blue-eyed young men among the 130,000,000 Americans who might conceivably have come into conflict with the law. Nevertheless, every resource of the Federal Bureau of Investigation was immediately mobilized to solve the bureau's most bizarre mystery—what a detective-fiction writer would probably call *The Case of the Man Without Fingerprints*.

The bureau does not put all its eggs in the fingerprint basket. Comparison of prints is the easiest, quickest and surest means of identification but it is not the only means. This is a big country, but the F.B.I., with fifty-six field offices and more than 20,000 miles of teletype equipment, gives it almost microscopic coverage.

It is no unusual experience for us to investigate a thousand suspects in a single case; in one case, we investigated more than 25,000. The effective co-operation of local law-enforcement bodies must be reckoned with too. The man called Pitts was not so secure in his anonymity as he thought.

## One Criminal; Many Aliases

We discovered that, nine years before, a youth corresponding to this individual's appearance and measurements, but without scars of any kind and giving the name of Robert J. Phillips, had been arrested in Roanoke, Virginia, on a charge of auto theft; and in the following months, at Chillicothe, Ohio, a Robert James Phillips had been sentenced to eighteen months for the same offense. The fingerprints of both of these prisoners had been taken and found to be identical. So were those of several "other" persons arrested under various names and for various crimes in various parts of the country during the next eight years.

These included sets belonging to an escaped member of a Georgia chain gang and an inmate of the federal penitentiary at Atlanta, who was transferred to Alcatraz because of his incorrigibility. As recently as March of 1941, the prints had shown up on the fingers of a tall, slim, blond, blue-eyed 32-year-old man charged in Miami, Florida, with failure to register with the police. Also, a person corresponding to Pitts' description was currently wanted for burglarizing a wholesale tobacco warehouse in North Wilkesboro, North Carolina.

Confronted with the evidence which the F.B.I. had painstakingly gathered, the man in the Texas jail, who had confidently thought that his identity could never be discovered, not only admitted that he was identical with Robert Phillips, et al, but admitted to the special

(Continued on page 37)

## Five Who Vanished

By George F. Worts

ILLUSTRATED BY GILBERT DARLING

### The Story Thus Far:

EARLY one morning, a girl makes her way into Jason Amboy's apartment, in San Francisco, knocks him out, takes a packet of letters (from Jason's brother, Wayne) and steals away. Jason's valet, an eccentric person whose name is Flack, at once does some brilliant sleuthing; he learns that the girl is Luana Topping and that she lives in Hawaii.

A short time after the girl incident, Jason is notified that Wayne—who has been working for the powerful Grazzard family in Hawaii—has disappeared. Because the evidence points to murder, Jason takes the first ship he can get and starts for "the islands." He is, quite naturally, amazed when he learns that one of his fellow passengers is—*Luana Topping!*

Miss Topping is a member of a distinguished party composed of old Mrs. Hiram Grazzard ("Queen Bertha"), head of the Grazzard clan; her son, Lorrin, who is Luana's fiancé; Channing Mace, manager of one of the Grazzard plantations, and his attractive wife, Natalie; and one or two others.

Jason (distantly related to the great family) sits at Mrs. Grazzard's table; and in an astonishingly short time, he is in love with Luana. He is in love with her, despite the fact that he suspects *all* the Grazzards—suspects them of having done away with his brother.

His suspicions are confirmed when a stow-away, who has taken refuge in his stateroom, disappears, and he learns (Natalie Mace tells him) that the fellow (the black sheep of the Grazzard family) and Wayne had been trying to blackmail the Grazzards!

Before leaving San Francisco, Jason had ordered Flack to stay behind. He is, therefore, astounded when his valet appears on the scene. Wearing a false mustache and using the name of "Rodney K. Kitchener," the man comes to Jason and tells him that the Grazzards are plotting to kill him. . . .

One night, the ship's commander—Captain Horngold—sends for Jason. Jason goes to his office. The captain is there; also two other men: a naval officer and Jason's room steward, a man named Emil Roth, who had helped to shield the stowaway (for a consideration). The captain tells Jason that a false mustache which "Rodney K. Kitchener" had worn had been found in his, Jason's, stateroom, and that Mr. Kitchener has disappeared. Then: "There are certain circumstances that I consider extremely suspicious. The fact that this mustache was found in your stateroom is one of them. *How did it get there?*"

### VI

"I DON'T KNOW," Jason answered. "Flack had access to my room, of course. But I haven't talked to Flack since last night."

Captain Horngold's face was suddenly quite red, as if he were angry. His eyes were sharp with distrust.

"Mr. Amboy, my suggestion is that, for your own good, you be perfectly open and aboveboard with me."

"It seems to me," Jason said, "Roth has explained what happened to Flack."

The captain shook his head. "Roth hasn't explained anything. Every person on this ship will, if necessary, be questioned. But suppose no one saw him jump overboard?"

Jason glanced at Emil Roth, who had again retreated to a point behind the captain and Lieutenant Commander Matthewson. The room steward repeated his pantomime. He winked grotesquely. He placed the tip of his right forefinger to

his closed mouth and shook his head.

"But I don't know what happened," Jason said.

Lieutenant Commander Matthewson made a sound of impatience in his throat. Captain Horngold gazed at Jason steadily.

"Mr. Amboy, you are making a mistake. You will have to explain these things. Why Flack was wearing a disguise and traveling under a false name—"

"But I explained that."

Captain Horngold shrugged. "Very well, Mr. Amboy." He picked up the blood-smeared envelope and removed the sheet of ship's notepaper it contained. "In this note, you say, 'Meet me at the paddle-tennis court at seven!' What does that mean?"

"Just what it says," Jason answered.

"But why the paddle-tennis court? It was raining."

"It wasn't raining when I wrote it."

"Because it is an out-of-the-way place where no one would see you?" the captain persisted.

"That," said Jason, "hadn't occurred to me."

"Bring those deck hands in here," Captain Horngold said.

The chief officer went out of the room. He returned immediately with the two seamen who had picked Jason up from the deck. They both looked grim.

"All right, Burke," the captain said to the taller one. "Is this the gentleman?"

(Continued on page 22)

"Luana was having hysterics all over her stateroom. I tried to talk to her and she ordered me to get out"

# THIS STRANGE BRIGHT LAND

BY HARRY  
HENDERSON  
AND SAM SHAW

YOU'VE never thought of America as a strange, exotic, foreign land with picturesque Yankee people and quaint, curious ways, but visiting British sailors have. It's quite a picture. Here for only a few weeks while their ships are repaired, the lads of His Majesty's Royal Navy scurry up and down the East Coast to get a tourist's-eye view of this country. They rate it above China and India in interest. Everything from a buffalo nickel to juke boxes and right-hand driving is exciting, new and different to them. Interviewing over a hundred of His Majesty's men, we learned the following:

America is just as the cinema shows it. Everything is bright, streamlined, chromed, in cans and in a hurry. No matter where the natives are going, they always rush.

After three years of total blackouts abroad, the bright glitter of the dimmed-out coastal towns will doubtless make you nervous, but the Yankees feel they are traveling around in the dark.

The skyscrapers are a bit disappointing, for they aren't really as high as pictures have made them seem. However, the traffic is terrifying and enormous, though the natives claim that gas rationing has reduced it by half. Beware especially of crossing streets, for drivers (especially of hacks) are not inclined to slow their reckless speed. Always remember that traffic travels on the right and, to avoid being run down, you must look to the left instead of the right.

America is a land where a man can order a steak and get it. The abundance of food is overwhelming. The natives cook everything in a great variety of ways and always serve several vegetables. It is all very rich and few Britishers like their sweet potatoes and corn on the cob, which are really "cannibal food." The Yankees do not care much for British boiled foods because they are alarmed about vitamins and they believe boiling ruins the vitamins. They add vitamin extracts to most of their baked goods to "fortify" them. Even so, Yankee bread tastes like cake, and their canned food, at which most Britishers have poked fun, is really excellent.

No town has just one pub. Instead, they seem to be filled with them and, unlike our locals, they also serve food. All America runs on a twenty-four-hour day and you can obtain anything you want at any time because none of the natives live on a fixed schedule.

Americans drink very fast and, where we might spend an evening over a pint, they will have several. Yankee drinks are all served ice cold, even in winter. One can become accustomed to it, however, and learn to like it. Their beer is not so strong as ours and generally tastes watery. You cannot purchase it by the pint.

The Yankees are a very friendly and hospitable people. If you cannot find your way, merely dawdle, and they will immediately offer to direct you. Americans speak clearly but rapidly. They are very direct and blunt.

The native women are a bit bewildering at first. They are plumper than Englishwomen, if you know what I mean. They use much more make-up than Englishwomen, but they seem to apply it in a less noticeable fashion. At any rate it is very difficult to judge their ages, and a girl of sixteen and a woman of thirty-six may both seem to be about twenty-six.

However, it is not their beauty that is apt to be so confounding as their attitude toward men and life in general. They are freer, more outspoken, peppier and more aggressive than English womenfolk. They are talkative and opinionated about every subject. Do not be surprised if one of them should walk over and sit down beside you and ask what you think of Yankee girls, or to dance with her, or to have a coke with her. (A coke is a sweet carbonated soft drink, nonintoxicating.)

Seaman Jim Lawler is British Navy and English middleweight champion. While watching American fights, he said, "They're different. More slugging and more boxing." He decided that Brooklyn is the world's toughest place when eight mates were hospitalized following fights. With him shown here are Lightweight Bob Gunter and Trainer Charley Brown

Pleasant, nineteen, and too shy to jitterbug, Seaman Bob Baker of His Majesty's Navy beams approval of Dorothy Green of Brooklyn during a discreet fox trot. Baker found Dorothy "very charming," unlike other American girls who were "forward" and consequently "dreadful." British sailors are always dumfounded when our girls ask them to dance

Food, not girls, interests George Baker, stoker—he's married. He likes hot dogs, which he considers "tasty," but deplores the weakness of our beer. "The trouble with America," he says, "is that there is so much to do"

Whiskered Lieut. Malcolm Harvey, Irish ex-schoolmaster, thinks our women are attractive but outspoken, marvels at our traffic and window displays. Of jitterbugging he says: "It certainly shows the decline of civilization"

Nostalgia overwhelms Seaman Gunner Jim Banks as Kathleen Maloney plays White Christmas. Juke boxes, new to British sailors, make a hit, but they think a nickel per song is too expensive. At right, Actress Jean Inglis

"You give her your number and she really calls you up," exults Telegraphist Frank Philpot. "It gives a lad a bit of a spark." Visiting Britishers, who get no phones in barracks at home, rate this convenience as absolute tops

Ronald Stockwell, able seaman, spends an evening entertaining 2½-year-old Joan Jones, daughter of a friend. He has a 3-year-old daughter and is surprised at American parents' interest in child psychology. He thinks children are "better raised" here

Able Seaman Eric Hatley and Scaman Peter Dobison shop for cosmetics—sure-fire gifts for the girls back home. Dobison is matching a lipstick shade with Salesgirl Constance Reagan's lips. His opinion: "Lips are brighter here but American girls know how to put it on smoothly"

cating, consumed in great quantities by all Yankees.)

However, they pay little attention to housewifery. Unlike our English girls, few know much about cooking until after they are married. If you take a serious liking to a Yankee girl and she seems to reciprocate, do not wait for her to invite you to her home to eat a meal cooked by herself, or otherwise show you she is a capable housewife, as an English girl would do. Instead, she will expect you to invite her out to a restaurant and a show. They are more interested in careers in business, in which they regard themselves on an equal footing with men. In fact, they regard themselves as the equal of men in all subjects, even in sports.

The Yankee standard of living is impressive. Everything will cost you approximately twice what it does at home, and wages are generally more than twice what would be paid at home for the same work. If you visit a home, do not be surprised to find it has an electric refrigerator as well as such labor-saving devices as an electric vacuum cleaner, washing machine and ironer. The natives hate dirt and scrub themselves thoroughly several times a day. Their cities, compared to ours, are much cleaner, and in the summer the streets of cities like New York are washed.

American money is very easy to accustom oneself to handling. The most useful coin seems to be the nickel, of which there are twenty to a dollar. There is nothing like it at home. It is particularly useful in the cities, where it may be dropped in a turnstile to admit you to the tube. However, the tubes are considerably dirtier than London's.

Do not worry about American slang. Most of it you are already acquainted with through the cinema. However, if a native says "Are you kidding?" in a most serious way after you have made some remark, merely smile and keep on with your story. The Yankees have a peculiar sense of humor and the point of saying "Are you kidding?" is to make you repeat your remark again and again. If they are successful in provoking you into several repeats, they will be convulsed with laughter.

And so we leave the land of yellow taxis and neon signs, laughing people and buffalo nickels with the hope that we can return some time when the lights are on. ★★★

Strident note was sounded by Torpedoman W. A. Corby, who hasn't found anything he likes here, yet. He is twenty-two years old and seven years a sailor. Some Sourpuss Corby opinions: Beer: No good, and, anyway, it's always iced. Whisky: It curls your hair. American trains: Inferior. Politics: Graft. Food: Too rich. Hot dogs: Made of wood. Popular Songs: "I can't say I care for them." Andrews Sisters: Censored. American girls: They're no prettier, but more skilled than Englishwomen in using make-up to cover up their defects. Mr. Corby is single

*"It's nautical," giggled Elsie,  
"but it's nice!"*

"BAH," snorted Elmer, the bull. "We've only been here 5 minutes and already you have a Marine on one arm and a Sailor on the other. If you're so crazy about uniforms, why don't you join the WAVES?"

"I'd love to be a WAVE, but I'm much too busy with other important war work to join them," replied Elsie. "Besides," she added with a snicker, "you've always said I was a little WAACy."

"Puns again," sniffed Elmer. "And may I ask what war work you do that's so all-fired important?"

"Come, Elmer," chided Elsie. "Don't tell me you're forgetting my pure wholesome milk and all the grand

things that are made from it. Why, everybody knows the important place that Uncle Sam gives to milk and milk products in his National Nutrition Program."

"If Uncle Sam thinks so much of milk," sneered Elmer, "why aren't they breaking a bottle of your precious milk to launch this destroyer?"

"Oh, my milk is much too good to waste like that," explained Elsie. "If everyone went around breaking bottles of milk over all our new ships, where would we get the milk and cream to make my luscious, satinsmooth Borden's Ice Cream? Ice Cream, you know is a

valuable food as well as real fun to eat."

"Thunderation, woman," bellowed Elmer. "Must you always talk shop?"

"Naturally," said Elsie. "Otherwise how would people learn about Borden's Irradiated Evaporated Milk?"

It's so digestible and rich in Vitamin D that doctors approve it for baby formulas. But it's not just a baby food. Both our army and the armies of our allies use carloads of it..."

"For the last time," groaned Elmer, "did we come here to watch a launching or to open a grocery store?"

"Don't be ridiculous," laughed Elsie: "whoever heard of a grocery store in a shipyard?" "But," she observed thoughtfully, "if I were to open a grocery store, I'd be

sure to feature a fine selection of Borden's Camembert. Creamy Camembert on a cracker

not only makes a delicious dessert, but many people enjoy it for a snack between meals. Camembert is only one of more than a score of Borden's Fine Cheeses, and..."

"Please!!!" shouted Elmer. "Don't you ever talk about anything except good things to eat!"

"Of course I do," answered Elsie. "Sometimes I talk about good things to drink. Take Borden's Hemo, for

instance. It's the new way to drink your vitamins and like 'em, and it tastes better than the best malted milk ever malted."

"There you go again," roared Elmer. "To hear you talk, anyone would think every good food under heaven had milk in it."

"Silly," chuckled Elsie. "There are any number of good foods that my milk has nothing to do with. There's not a drop of my milk in Borden's None Such Mince

Meat. And that's the spiciest, fruitiest mince meat ever, and it makes simply marvelous mince pies."

"I give up," sighed Elmer. "Go ahead and say it. Let's get it over with."

"Say what?" asked Elsie.

"The last word," grunted Elmer. "You know, the way you always wind up a discussion."

"I get it," giggled Elsie. "And I'll say it: If it's Borden's, it's got to be good!"

Elsie says: "This is really a bird of an idea: make the Axis eat crow by buying U.S. WAR BONDS AND STAMPS REGULARLY."

# Five Who Vanished

Continued from page 17

"Yes," the seaman growled, "that's him."

The captain's clear blue eyes returned to Jason's face. "These two men say you were up on the paddle-tennis court at eight forty-five, and that you had a fight with someone who knocked you down the stairs and onto the deck, and that they were coming along and that they picked you up. They say you broke away, ran back up the tennis-court steps and disappeared. Is that it, Burke?"

"Yes, sir," Burke growled, "that's it."

"Well, Mr. Amboy? Does that account for the bump on your forehead?"

"It does," Jason admitted.

"Who was this man who attacked you, Mr. Amboy?"

"I don't know. I didn't see him. It was almost dark and it was raining. He was a big fellow. Before I knew what he was up to, he was swinging at me. I rolled with the punch as well as I could, but I wasn't prepared for it. Next thing I knew, I was in the scuppers and these two men were helping me up."

**CAPTAIN HORNGOLD'S** expression was very skeptical. "And you haven't any idea who this fellow was?"

"There's one passenger I'd like to have brought here. I don't know his name. He's a redheaded man. He's wearing dungarees and a black sweater. Flack spent most of the day talking with this fellow and I suspect—I'm not at all sure—he was the man who jumped me."

"Why?" the chief officer asked.

"Because I thought I saw—for a split second—a gleam of light on wet red hair."

"But you wouldn't swear to it?" the captain said softly.

"No. I wouldn't swear to it. Incidentally, I went up there because I'd just had a phone call from Flack. At least, the man who called said he was Flack. He asked me to meet him topside at once."

"It couldn't have been Flack," the captain said. "Flack hasn't been on this ship since seven. As nearly as we can establish it, Flack went overboard at about seven. Have you any idea who might have made that phone call?"

"No," said Jason.

Lieutenant Commander Matthewson made a clicking sound with his tongue. "A man goes overboard, and two hours later he calls you up, and you go topside and a man you can't see and don't know takes a swing at you. Maybe Flack took a short-wave radio along with him. Maybe the ship is haunted. Who might have made that phone call?"

"I don't know," Jason answered. "His voice was strange. It was thick. I thought Flack had been drinking."

"When did you put that note under his door?" the captain asked.

"About five."

"Get that redheaded fellow," Captain Horngold said.

The chief officer left the room.

"Burke," the captain said, "you told me you didn't see anybody."

"I didn't, sir," Burke growled.

"Did you?" the captain asked the other seaman.

"No, Cap'n. It was raining. We just come along the deck and we saw this gentleman come flyin' down them steps and go sprawlin' on the deck."

Captain Horngold returned his eyes to Jason. He got up. "Mr. Amboy, why didn't you report that attack to me?"

"I was about to," Jason answered. "I went below to change to dry clothes. I was on the point of coming up here to

tell you about it when the cadet officer knocked on my door and told me you wanted me."

The captain said grimly, "You two men can go."

The two seamen went out of the room. Captain Horngold now began to pace up and down beside the long mahogany table.

The door opened again. Lieutenant Commander Matthewson came in with the red-haired man. He still wore the black turtle-neck sweater and the dungarees. His air was defiant. His chest swelled out. He came in with his chin up and his lower lip jutting. His green eyes were wary. He glanced quickly at Roth, then at Jason, and his eyes settled on Captain Horngold and narrowed.

"Is this the fellow?" Matthewson asked.

"That's the fellow," Jason answered.

"Do you know that this man has vanished from this ship?"

The red-haired man glanced swiftly at Lieutenant Commander Matthewson, then at Jason, then back at Captain Horngold.

"Gee!" he said softly. "What happened?"

"What do you know about it?" the captain answered.

**SAM SHAY** seemed genuinely alarmed. His green eyes seemed to glisten. He took a deep breath through dilated nostrils.

"I don't know anything about it, Cap'n. Sure. I talked to the little guy. He was a nice little guy. We talked about rigs. That's my business. I'm an operating engineer. We spent most of the day talking. He went for'ard about six. He said he would see me again in the morning."

"So this is the fellow," Captain Horngold said, "who can explain everything."

The red-haired man folded his powerful arms on his swelling chest. Captain Horngold, while starting toward him, took off his glasses and tossed them on the table. They slid to the end where Flack's mustache and the bloodstained envelope lay.

The captain was fully a head shorter than the red-haired man. With his fists on his hips, he stared up at the red-haired man and the red-haired man stared down at him.

"What's your name?" the captain said softly.

"Sam Shay, sir," the steerage passenger answered.

"Where are you bound?"

"Pearl Harbor or Samoa, sir."

"You spent the day, or most of it," Captain Horngold said, "with a man who called himself Kitchener."

Sam Shay's green eyes became wary again. "Yes, Captain. Was there any harm in it?"

"Did he say anything to you at all in the course of the day about committing suicide?" Jason asked.

The red-haired man looked at him. He ran his eyes from Jason's shoes to his hair. His eyes lingered on the discolored welt on Jason's left temple.

"No, sir."

"Did he seem at all despondent?" Jason asked.

"No, sir. I never saw anybody in better spirits."

Captain Horngold turned to the room steward. "It must have been immediately after he'd been talking with this man that he talked to you—and seemed so despondent."

"Yes, sir," Roth said in a shaky voice.

"It doesn't hold water," the captain said. He turned to Shay. "There seems to be a suspicion," he said grimly, "that you socked this gentleman on the head up on the paddle-tennis court."

Sam Shay turned his wicked green eyes on Jason. "And why," he asked lazily, "should I sock you, mister?"

"That," Captain Horngold answered, "is only one of the questions I'd like to have answered. Get back to your quarters, and stay there. You can go, Roth."

"Okay, Cap'n." Still grinning at Jason, Sam Shay walked out. Roth followed him.

When the door was closed, Matthewson said, "There is a hard case."

"You can check up on him later," the captain said with a trace of irritation.

"They call him Singapore Sam," the lieutenant commander said. "He is nobody to meet on a dark night. And whether Mr. Amboy met him is a big question. I think he was telling the truth."

Captain Horngold gazed at Jason thoughtfully. "Yes," he said, "I think so, too; but check on him, anyway. Well, Mr. Amboy, we're right back where we started from."

"Yes, sir," said Jason.

"Mr. Amboy, there is obviously something going on on board this ship of a suspicious character. It may have nothing to do with the disappearance of this man Flack. Your refusal to talk places you in a serious position. You must realize that this whole case, if it isn't cleared, must come before a military court, and I assure you that military courts are tough places. If you have anything to say, my advice to you is to say it before this case goes into court."

The captain sat down. He clasped his thick square hands in front of him on the table and bent forward without removing his eyes from Jason's.

"I've told you I know nothing about Flack's disappearance," Jason said.

Captain Horngold continued to stare at him. "I have tried, Mr. Amboy, to give you every consideration. I have been much more lenient with you than your case deserves. I think Roth was lying. And I think you could explain a great deal of this if you wanted to." He stopped, then said softly, "Well, Mr. Amboy?"

"I can't explain any of it," said Jason.

The captain got up again. He pressed his hands down on the table. "You leave me no choice, Mr. Amboy," he said crisply. "I am very sorry. I will have to hold you in the brig until we reach Honolulu."

**THE** Tasmania's brig was, if somewhat limited as to space, clean and it was sanitary. It contained a bunk and a chair. A door of heavy latticed steel gave its occupant a glimpse of several dim blue lamp bulbs and the blackout baffle which led onto the deck well.

Jason stretched out on the bunk with his hands behind his head and a cigarette in his mouth. He tried to sort out his thoughts, but he could not think clearly because, each time he tried, he saw Flack. Thinking of him, as the man he had once been and as the man he had overnight become, he was filled with sadness until, presently, a rising resentment drove it away.

He might never learn what had happened to Flack, but he knew that the Grazzards were responsible. He believed that Flack had, for reasons unknown, fallen under the Grazzards' suspicions, that he had been murdered and that his body had been pushed out of his state-room porthole by the same person who had similarly disposed of Winfield Grazzard. He was certain that Mrs. Hiram Grazzard, or her son, or Channing Mace had killed Flack. And he again thought of the excitement he had seen in Luana's

# The bomb that started a revolution

IT USED to be a slow job to make a bomb casing. You had to hollow out a solid piece of steel. You had to spend time machining the outside surface.

But today, in a bomb plant, you see a white hot tube of steel slide into a big machine. The tube spins at a dizzy speed. And before you know it, magic mechanical arms have shaped the tube into a finished bomb shell... ten times faster than it's ever been done before!

All because somebody in a United States Steel plant had an ingenious idea to "spin" a bomb and shape it the way a potter shapes his clay.

The first bomb made this way started a bomb-making revolution. Because United States Steel turned the process over to other bomb makers, too... so that America's growing swarms of bombers wouldn't lack "eggs" to drop on the Axis.

From United States Steel laboratories come other amazing things to help win the war. Tough helmet steel that stops a .45 bullet. Portable airfields. A new faster method of making bullet-core steel.

## After the war... what?

After the war, steel will serve you even better. Everything from washing machines to skyscrapers will share in these better steels inspired by war. In peace, as in war, no other material rivals steel in useful qualities. The U·S·S Label will mean more than ever on the peacetime goods you buy.

AMERICAN BRIDGE COMPANY · AMERICAN STEEL & WIRE COMPANY · BOYLE MANUFACTURING COMPANY · CARNEGIE-ILLINOIS STEEL CORPORATION · COLUMBIA STEEL COMPANY · CYCLONE FENCE DIVISION · FEDERAL SHIPBUILDING & DRY DOCK COMPANY · NATIONAL TUBE COMPANY · OIL WELL SUPPLY COMPANY · TENNESSEE COAL, IRON & RAILROAD COMPANY · TUBULAR ALLOY STEEL CORPORATION · UNITED STATES STEEL EXPORT COMPANY · UNITED STATES STEEL SUPPLY COMPANY · UNIVERSAL ATLAS CEMENT COMPANY · VIRGINIA BRIDGE COMPANY

GIUSTI

eyes when she had come into the dining room.

Recalling Flack's militant suspicions of Natalie Mace, Jason wondered if Flack had been right about her. She had told him on deck that morning that a steward had reported Flack to her as a suspicious character. He did not believe that Natalie was treacherous, yet he was still dubious of her as an ally because of her emotional state—because, if her husband were seriously involved, she might suddenly transfer her loyalty to him.

He recalled how remote, how cool she had been all through dinner. And he wondered if she had repeated to her husband what the steward had told her. If she had, that might well have constituted Flack's death sentence.

There were, of course, many other possibilities. They came boiling to the surface of Jason's mind. Who, he wanted to know, had made that telephone call that had summoned him to the boat deck? Flack had been dead and overboard for some time before that call was made. Whoever had made that call had certainly been familiar with Flack's secrets.

Was the red-haired man, Jason wondered, a member of the Grazzard entourage? If he were, then there was certainly a likelihood that they had instructed him to win Flack's friendship, to make Flack talk.

IF THIS line of reasoning were sound, it was quite possible that Sam Shay had got Flack drunk and that Flack had talked. And from this possibility, it was an easy step to the assumption that Flack had been murdered because he was considered a dangerous obstacle to the Grazzards' plans, and that the red-haired man had then been assigned the job of doing away with Jason.

All of these items dovetailed into a workable design, but not a blueprint. And Jason was dissatisfied, because, although it answered many of his questions, it was not a blueprint. Certainly, Roth's story did not fit into it at all. Actually, the room steward's account of his talk with Flack ran against all of the evidence. It was not only a thing apart, it clashed head-on with every theory that Jason considered.

All that he could safely say was that he and Flack had been watched and there was very little they had done that the Grazzards did not know. And he had learned, once more, that the Grazzards struck with swiftness and deadliness. . . .

There was a tapping at the steel door. When it was repeated, Jason sat up.

A small man in white was standing in the dimly lighted corridor.

"Roth?" Jason exclaimed.

"Yes, sir."

Jason got up and went to the door.

"I had to have a word with you," the room steward said. "It's very important."

"Yes," Jason said. "What was all that winking and shushing about?"

"I didn't want you to talk, Mr. Amboy," Roth said, in a husky whisper. "I wanted you to be very careful."

"Well, I tried to be. What is it, Roth?"

"None of what I said about Flack was true, sir. He didn't talk to me about suicide or anything else. He didn't talk to me at all. I didn't even see him."

"This is very interesting," Jason said. "Why did you say it?"

"Because I'm in this, too," Roth said, in his low, husky whisper, and his mouth was twisted into a snarl. "I'm doing my best to keep you in the clear in order to save myself. If they could prove that you killed this Flack, where would I be?"

"Would you be in trouble?" Jason asked. "I don't see why, Roth."

"I don't know why you killed him,"

said Roth, "and I don't care. I figured it had something to do with that stowaway. And I figured the smart thing for me to do would be to keep the stowaway out of the picture—so I wouldn't be dragged in. How do I know what you might say if they could prove you killed Flack?"

Jason tried to see Roth's face through the latticed steel. But all he saw was one bright, gleaming eye.

"So that's it," Jason murmured. "You cooked up that yarn so you wouldn't be dragged in. You really think I killed Flack and threw him overboard."

"What I think about it isn't important," the room steward said with a touch of waspishness. "The main thing is, I will testify in a military court, or any other court, that Flack talked about suicide. They may hold you for months, but in the end, if I stick to that story, they will have to let you go. And I'll stick to it."

## BUTCH

by CPL. LARRY REYNOLDS

"I'm afraid we owe him an apology. We already frisked him earlier this evening"

"All right, then, Roth, we'll call it a deal. You stick to your story and I won't mention the stowaway. Now, tell me about the mustache."

"It was right after you went down to dinner, sir," his room steward said. "I went in to turn down your bed, and there it was, in front of the bathroom door. It gave me quite a turn, Mr. Amboy. I'll admit frankly that you've impressed me from the beginning as a bad egg, sir, and in my years of going to sea, I've learned to spot a bad egg when I see one. I knew you murdered that stowaway. I got scared. I reported the mustache to the captain after I'd looked into Flack's room and seen that note you wrote."

"But you left it there."

"Yes, sir. And right then and there, I suspected you'd done away with Flack—and how did I know my turn wasn't next?"

"That's very lucid reasoning," Jason murmured.

The eye at the hole in the lattice seemed to gleam more brightly. "I'm only looking out for myself," Emil Roth said stiffly. . . .

Jason's first visitor the next morning

was Natalie Mace. The blond girl was pale, and her smile, when she approached the latticed door, was wan.

She looked in at him. "You poor darling," she said, and she shook her small blond head with affection and despair. "You've certainly done things up brown this time, haven't you? Luana's in her room having hysterics. The Grazzards are chuckling in their beards. And your poor little valet is *lewa*—"

"What does that mean?"

"Gone with the wind."

Her voice was bantering, but her eyes were harder than he had ever seen them.

Before Jason could speak, she said, "The Grazzards have you just where they want you. You're going to be tangled up with the military for months to come. The captain spoke quite freely to Mrs. Grazzard. What he didn't say, I guessed. He questioned all of us and

"We aren't licked," Jason said firmly. "Is Winfield Grazzard *lewa*, too?"

"Yes."

"When did it happen?"

"Night before last. Did you talk to the steward?"

"Of course not! Jason, you've got to trust me now! What happened to Winfield Grazzard? They murdered him didn't they?"

Jason hesitated. It may have been once again, the honesty he saw in her eyes that decided him. "Yes," he said. "He was murdered and pushed out a porthole at the time I was talking to you on B deck. When I went into my room his bed was empty but still warm. A few drops of blood on the floor led to one of the portholes, and there was a little smear of blood on the porthole rim."

Natalie was nodding. She didn't seem surprised. "That's what I guessed. Do you think the same thing happened to Flack?"

"Yes."

"Do you suspect anyone?"

Jason hesitated again. "To be perfectly frank, Natalie, I suspect your husband. Or it might have been Lorrin. Or it might have been Queen Bertha. It was one of the three."

THE blond girl's eyes were suddenly avid. "Were there any other clues?"

He thought of the slip of yellow paper with its typical smear of blood, but he had already decided not to mention it. "No," he said.

"The ship's officers are questioning passengers now," Natalie said, "trying to find someone who saw Flack go overboard. The whole ship's buzzing . . . just what happened last night, Jason?"

He told her. He began with the mysterious telephone call. When he had described the episode of the tennis court, he added, "I thought I saw a gleam of light on wet red hair, but maybe I didn't. The man who took that wallop at me might have been your husband—or Lorrin. Whoever he was, he was a big man. It was almost dark. I could hardly see. And they're both big men."

Jason mentioned the redheaded man's attitude in the captain's office, and his suspicions that Sam Shay might be on the Grazzards' pay roll.

Natalie was shaking her head. "I don't believe it. I think I'd have heard of him. Unintentionally, Channing keeps me rather well posted. The main question is, can you trust that room steward?"

"Roth is afraid," Jason answered, "of his neck."

The blond girl seemed dubious. "You're in very hot water, Jason, and it's going to get hotter. What I said yesterday morning was right. Channing told me last night—in strictest confidence, to use his own words—that your brother had attempted to blackmail Mrs. Grazzard."

"How did it come up?"

"He mentioned you. He said Queen Bertha seemed very concerned about you and your airplane engine. Then he said, 'These Amboys are a smooth bunch.' When I asked him what he meant, he said your brother had dug up a family skeleton and tried to sell it to her. Jason, what's the use? I guessed that. I've been right all along."

"Did he mention what they'd done to my brother?"

"No. I asked him. He said he didn't know."

"Do you remember," Jason asked her, "just what was going on in Kokala the night my brother vanished?"

"Nothing was going on. Channing spent the evening at the mill. There was some trouble with a Japanese machine-shop foreman. Channing didn't come

gave us permission to talk to you. I suspect he wants us to try to break you down. He is anxious to clear this up before we reach Honolulu. He said your valet had evidently committed suicide, but that there were circumstances that had compelled him to clap you in the brig."

HOW did the Grazzards take it?" Jason asked.

"Very bravely. And there are lots of interesting angles, Jason. There is a rumor that you were attacked last night by a red-haired ruffian—a defense worker. What was that about?"

"I don't know," Jason answered.

"That's a lovely welt," Natalie was shaking her head. "Mystery on top of mystery. I've just come from your cabin. The door was open. Your steward was cleaning. Where, Jason, is your stowaway?"

Jason was considering the advisability of telling her.

His hesitation angered her. "You still don't trust me!" she cried. "Could things possibly be any worse? Maybe we're licked, but I refuse to think so."

# The simple facts about a cleaner, finer smoke!

**1. THE TOBACCO.** We resolved to develop the finest cigarette that science, science and art could produce. As the first step, Mr. de Kirk, pictured above, who has purchased more quality tobacco than any other living person, combed the stocks of all tobacco dealers and bought the best—millions of dollars worth of vintage Turkish and domestic tobaccos.

**2. THE BLENDING.** Given these fine vintage tobaccos, the skill with which they are blended is paramount. So, creation of the Fleetwood blend was entrusted to a master of the art, Mr. W. Curtis Bethea, shown above, who has blended more brands of cigarettes, successful on a large scale, than any other tobaccoist.

**3. THE FLAVOR.** A professional jury of tasters guided in the blending until a blend both milder and better tasting than any of the six largest selling brands was achieved. These (above) were tea tasters Mr. E. Edwards and Mr. C. W. Felton; coffee tasters Mr. F. M. Reuss and Mr. A. J. O'Laughlin; wine tasters Mrs. Jeanne Owen and Mr. H. J. Grossman.

**4. THE MOISTURE-RETAINING AGENT.** Acting on the advice of physicians and chemists, we rejected for the Fleetwood the moisture-retaining agent used in other cigarettes, and adopted instead a modern hygroscopic agent which does not produce acrolein, an irritating gas usually present in cigarette smoke.

**5. THE SMOKE CLEANSING.** The Imperial size of Fleetwood gives extra filtration of the smoke. This reduces throat irritants, nicotine, and tars that strain fingers and teeth. The smoke of Fleetwood is filtered through more tobacco—20% more for the first puff and 50% more for the last—provided you do not smoke Fleetwoods farther than you would old-size cigarettes.

**6. THE PACKAGE.** Fleetwoods are packed in better quality, stronger material, to protect the cigarette against being crumpled in the purse or pocket. As a pleasing final touch for what we believe to be the first completely modern cigarette, the eminent art director, Mr. Leland Stanford Briggs, was commissioned to develop a package of artistic merit.

## FLEETWOOD

**7. RESULTS OF TESTS** of the smoke of Fleetwood and four of the large-selling brands which were also included in the famous Reader's Digest test last summer. As tested here all cigarettes were machine-smoked to an average distance of 40 millimeters to simulate natural smoking.

Brand	Milligrams of Tar in the smoke	Milligrams of Nicotine in the smoke
Fleetwood	7.7	1.2
A	8.2	1.8
B	8.3	1.8
C	9.0	2.1
D	10.4	2.4

home until after one o'clock. I'd spent the evening reading."

"Where were the Grazzards?"

"In the main house, I think. But I don't know, Jason."

"When your husband said that my brother was a blackmailer, did he mention Winfield Grazzard?"

"No, Jason."

"Uncle Colton?"

"No. But he was certainly referring to Uncle Colton."

"When did this talk take place?"

"Just before dinner."

"Was that," Jason asked, "why you were so remote all through dinner?"

"Partly. And partly because Channing said he thought that you and I were spending an awful lot of time together. He's a terribly suspicious man—and terribly jealous." The blond girl was looking at Jason speculatively. "Well, my dear, what are we going to do?"

"I'd like to talk to Luana."

Natalie smiled wryly. "Luana is, at this moment, having hysterics all over her stateroom. She can't see anyone. I tried to talk to her and she ordered me to get out."

THE blond girl's mouth had become cynical, an arch, with the corners pulled down. "She told me you'd told her yesterday that you're in love with her. That wasn't very clever of you, Jason. She's in love with you, and there's nothing either of you can do about it, and the last thing she said was that you're just as bad as your brother."

"Will you tell her I want to talk to her?"

Natalie shook her head. "I will not, Jason. You've caused her enough trouble."

"I don't want to make love to her," said Jason. "I want to find out where she was last night. She didn't come into the dining room until dinner was half over. She was very excited about something."

"When she calms down a little," Natalie promised, "I'll talk to her again. Is there anything else?"

Jason nodded. "Yes. Find out if Winfield Grazzard was ever in the Engineers—in the United States Army. Find out what they did to my brother after he tried to blackmail them—"

"Don't we already know that?" Natalie interrupted him.

"Try to make Channing talk about it," Jason persisted. "And find out the date when Luana's father and mother were drowned in Kaieiewaho Passage in their outrigger canoe."

She was looking at him thoughtfully, with her eyes narrowed and a small shadow between them.

"You still won't accept my explanation, will you?"

"Blackmail?" he said. "No, Natalie. Your idea is too easy. They killed my brother because he was a blackmailer. Was Flack a blackmailer, too?"

Her face was growing pink. Her blue eyes were bright and hard. "Flack was a busybody and a snoop!"

"Did your husband know that?"

"He certainly didn't hear it from me!" Natalie snapped. "But if Flack snooped once, he may have snooped again. Did you warn him?"

Jason sighed. "I didn't have a chance, and it wouldn't have done any good. He was out of control. I think he had some sly scheme and they caught him at it. They killed him and tossed him overboard."

"Does that disprove my theory?" the blond girl cried.

"Does it prove it?" Jason answered. "I still say your conclusions are questionable."

Natalie uttered a sharp little gasp of annoyance. "You're so obstinate, Jason."

"... meanwhile two outstanding players will stage an exhibition match. You don't think the idea too novel?"

COLLIER'S

RICHARD TAYLOR

Jason laughed. "No one," he retorted, "would accuse you of being pliable."

"I'm furious at you," Natalie said, "for letting them get you cornered. And I'm furious at you for taking it so cheerfully. They have you just where they want you, and you don't seem to care."

"It's giving me a chance to think things out," Jason said. "I've got some ideas of my own, and if you'll find out what I ask you to, we'll see if they don't add up to a good legible blueprint."

THE blond girl took her hands away from the door and made a gesture of impatience. "Jason, I don't know what this is all about. You've got some mysterious idea. I don't care what it is—because you're off on the wrong track. Your pride won't let you accept the truth—that your brother was a blackmailer."

"Will you get me that information?" Jason said gently.

"Why won't you face the truth?" she wailed.

"I'm on the track of the truth."

"I'll try," she said sulkily. "All you've accomplished is to give me another splitting headache."

The master of the Tasmania had changed to tropical whites. Lieutenant Commander Matthewson, also in whites,

stood behind him, a head taller. His smile was slightly jeering, and his gray eyes were steely.

"I've talked to a number of the passengers," Captain Horngold said crisply, "and Lieutenant Commander Matthewson has been at work on the crew. But we've found no one yet who saw your valet jump overboard."

"How about Singapore Sam?" Jason asked.

"I checked with the crew and the defense workers," Matthewson answered. "No one saw him in his cabin from eight-thirty to nine, and no one saw him go topside. So we're still where we were."

"I've let it be known," the captain said, "that an innocent man is locked up here and may suffer for something he didn't do, unless someone comes forward. If anyone saw your valet jump and is holding back for fear of being involved, that may help. And it occurred to me, Mr. Amboy, that with all this time to think things over, you may have decided to cooperate with me."

Lieutenant Commander Matthewson was smiling compassionately. "It seems a shame to keep you penned up in that little hole," he said.

"I know nothing about Flack's disappearance," Jason said.

There was a glow of elation in Natalie's blue eyes, and a twirk of triumph in her smile. She came to the door, the brig and hooked her fingers into the square holes.

"Well, my pet," she said with a gaiety that wasn't usual with her, "I have some information for you. And I'm afraid you won't like it. My blackmail theory is absolutely correct!"

Jason took it calmly. "How about the information I wanted?"

"Oh, I have a little of that, too. The important thing, though, is something that Channing just said. He was talking to me again about your brother. It's Uncle Colton, darling. Your brother spent all those years in India digging up something in Uncle Colton's past—just as I guessed—and then tried to blackmail the Grazzards."

"What did they do to him?" Jason asked in a dry voice.

"I don't know. Channing won't talk about it. I don't know whether he knows or not. But it's true, Jason. And he killed Winfield Grazzard for the same reason."

"Did he mention Winfield?"

"No. The important thing he mentioned was Uncle Colton."

"Yes," Jason agreed. "Everything comes back to Uncle Colton. All roads lead to Kahuna Island. The other morning on deck, when you first mentioned Uncle Colton, you told me that, until recently, he was called the hermit of Kahuna, and that recently the real truth about him had come out."

"Yes."

"How recently?"

"I don't know, Jason. It was sudden all over the islands."

"As recently as a year?"

THE blond girl looked thoughtful. She shrugged. "Perhaps. Perhaps two years. It suddenly got out."

"You said that he had always been dominated by his sister. You gave me a picture of a terrified little man—who had had a nervous breakdown and had gone into voluntary exile."

"But that wasn't the truth!" Natalie cried.

"Yes, I know. And you said that his one passion was rare old books—first editions. You gave me a very clear impression of a sensitive, frightened man—an unworldly, scholarly sort of person—who had gone to live on a small island to get away from civilization—who preferred that kind of loneliness with no one but the natives for company—and his books."

Natalie said impatiently, "That was only a smoke screen, Jason. I told you he wasn't a hermit by choice. I told you he was virtually a prisoner."

"Yes, I remember. But you said his one passion was rare old books. Is it still?"

"Yes, Jason. Whenever Queen Bertha goes over to Kahuna in her sampan, she usually takes him bundles of them."

"This is very interesting," Jason said. "Do you know what Uncle Colton's financial setup is?"

Natalie shook her head. "No. All I know is that Queen Bertha and Uncle Colton were quite poor before she married Hiram."

"So that Uncle Colton is now very likely a pensioner of hers?"

Natalie nodded. "Maybe. Although Uncle Hiram may have left him something. But is this important, Jason? The important thing is that Uncle Colton, as a young man, did some scandalous thing in Burma and your brother and Winfield Grazzard found out what it was. I guessed that and I was right."

(To be continued next week)

## THE FIVE CROWNS GIVE *TOUGHNESS* THE "KNIFE"!

In murdering *TOUGHNESS*, we smile,  
And ask to be placed upon trial—  
Good judges agree  
That in *FINER "5"*, we  
Have bettered all blends by a mile!

A pretty tall statement, say you,

## The Non-Bureaucratic Mr. Byrnes

Continued from page 11

frequently gives first-time callers, accustomed to the rodeo characteristics of other war agencies, a feeling that the place hasn't got started yet.

Mr. Byrnes' unfashionably small staff consists of Mr. Ben Cohen, general counsel; Mr. Don Russell, associate counsel; Mr. Edwin F. Pritchard, executive secretary and Mr. Sam Lubbell, an aide whose duties are various. On the distaff side, there are Miss Cassie Connor, private secretary, and three clerk-stenographers. Mr. Cohen is the more durable member of the old New Deal team of Corcoran and Cohen. Mr. Russell was Mr. Byrnes' law partner in Spartanburg, South Carolina. Mr. Pritchard is one of Washington's swifter minds and was once secretary to Supreme Court Justice Frankfurter, a job in which he had to think fast. Mr. Lubbell is a journalist who learned his way around wartime Washington as an associate in the late Office of Facts and Figures.

In our innocence, we visualized the powerful Mr. Byrnes following an electric routine, snapping forth directives to the Seven Czars—Nelson of the War Production Board, McNutt of the War Manpower Commission, Wickard of the Food Administration, Henderson of Price Administration, Eastman of Transportation, Landis of Civilian Defense, and Jeffers of Rubber.

### Our Economic Dictator

Admittedly we had some little trouble thus visualizing the mild, sagacious fellow whom we had known as a senator (a senator's senator). By temperament, he is about as blustery as an ideal June afternoon, although, incidentally, he is about that persuasive too. And yet the man gets more done than almost any of the world's current crop of dictators, timorous lot that they are for the most part.

To appreciate the extent of his powers, it is necessary to quote a paragraph from the Presidential executive order creating the Office of Economic Stabilization:

"The Director with the approval of the President shall formulate and develop a comprehensive national economic policy relating to the control of civilian purchasing power, prices, rents, wages, salaries, profits, rationing, subsidies and all related matters—all for the purpose of preventing avoidable increases in the cost of living, co-operating in minimizing the unnecessary migration of labor from one business, industry or region to another, and facilitating the prosecution of the war. To give effect to this comprehensive national economic policy, the Director shall have power to issue directives on policy to the federal departments and agencies concerned."

Unlike the traditional big executive, Mr. Byrnes follows no daily routine. He does not permit himself to be met in the morning by a program of "musts," thus merely keeping abreast. He saunters into his office about nine-thirty, a slim, wiry figure, a trifle cocky. His felt hat is at a jaunty angle. His blue-gray eyes are amused. He seems to know precisely what he is going to do first and do last.

The fact is that he's a lap ahead of his job. Today he is more interested in what he'll be called upon to do tomorrow. When he finds out (which he invariably does) he makes luncheon, dinner and poker dates with the officials he will have to deal with next day. Thus as he enters his office, about nine tenths of the day's work is over the hill.

He has reduced politics to as nearly an

exact science as it is possible to make that opportunistic business.

Far from being a headlong New Dealer, he has nevertheless achieved the almost solemn respect of the President not that he hasn't frequently irritated Mr. Roosevelt.

To illustrate: While he was in the Senate, Mr. Roosevelt had him up to the White House one evening to listen to the reading of a bit of legislation very much desired by the Administration. Mr. Byrnes listened. He listened, too, to the President's reasons for wanting such legislation. He listened to several of Mr. Roosevelt's most eager yes-men, plus experts, plus a couple of Congress scouts who had notified the President that the bill would pass with something to spare. And then Mr. Byrnes shook his head, advised Mr. Roosevelt to hold off until a more auspicious day. The bill would be beaten in the Senate, he said, by two votes. The President went ahead, irritated. The bill was licked by two votes. Mr. Byrnes has done that a number of times. As we've said, the man knows what he's doing.

Over years of intelligent study of men and measures, he has mastered the science of making no enemies while avoiding the too obvious and overeager business of merely making friends.

It is because of these personal and professional qualities that Mr. Byrnes was chosen by Mr. Roosevelt to direct the Office of Economic Stabilization. It's a job of which the best economists might readily make an anguished mess. It is a job for a man who can hitch economists and sentimentalists to the same direction, who can make Republicans listen with the same earnestness as Democrats.

Already Mr. Byrnes has steamed a lot of possible bureaucratic hokum out of his job. Doubtless you've read a lot of directives, involved and mysterious documents written in legal double talk, leaving writer and reader all but permanently gaga. Mr. Byrnes writes directives now and then—simple homely documents which are likely to run something like this: "Dear Ed: Suppose we go ahead along the lines we agreed upon last night at Joe's house. Call me up if you need anything." (This is not what Mr. Byrnes wrote, but it gives you the idea.)

### The Long Way Up

He will be sixty-four years old in May, a fact that concerns him very little. His father, a Colleton County, South Carolina, farmer, died just before he was born, and his mother took to sewing and directing the church choir. The combination failed to produce more than a mere living for herself and her two children. At the age of fourteen, the lad quit high school for a job or rather a series of jobs. He studied stenography at night. This brought him to a court-reporter job, and, having that, he studied law in his spare time. Then came the newspaper. And then he was elected county solicitor (district attorney).

In 1910, he ran for Congress, winning by 57 votes. After seven terms of that, he ran for the Senate against the famous Cole Blease—and got licked. For six years he practiced law in Spartanburg. And then in 1930 he challenged the Honorable Mr. Blease again—and won. He was re-elected in 1936. Then the Supreme Court. And now this. He is an Episcopalian. His wife was the former Miss Maude Busch of Aiken, South

Carolina, whom he married when he was editing the Journal and Review and absorbing wisdom from the lamented Biz.

A devout party man, he was far from being good news to the New Deal program as a whole while he was in the Senate. He was an outstanding member of the so-called Economy Bloc. Unlike the President, he believed that the states should assume a much larger share of the cost of relief. He voted to override the President's veto of the soldiers' bonus and to repeal the Administration's corporate profits tax. He supported his Senate colleague, the Honorable Cotton Ed Smith, when that gentleman was marked for purging by Mr. Roosevelt. But he supported the President's Supreme Court revision bill, even going to the extent of burlesquing the indignant outcries of those senators who accused Mr. Roosevelt of having foul designs upon the cornerstone or equally necessary segment of our republic. It happened on a train shortly after Mr. Byrnes was appointed to the court. Several senators were his audience.

### Tongue in Cheek

"The President was all wrong," cried Mr. Byrnes, his voice trembling with emotion. "It was one of his greatest mistakes. His approach was all wrong. Instead of forcing a man off the court when he reaches the age of seventy, he should not appoint him to the court until he is over seventy."

The order creating his job as Director of Economic Stabilization provides for an advisory board of fourteen. They have no administrative power, merely advisory. But when you've read their names and then learn that such a board can convene every two weeks and adjourn with no casualties, your admiration for the Byrnes system becomes slightly hysterical.

Read them and reflect: Harold D. Smith, Director of the Budget; Henry Morgenthau, Jr., Secretary of the Treasury; Claude R. Wickard, Food Administrator; Jesse Jones, Secretary of Commerce; Frances Perkins, Secretary of Labor; Marriner S. Eccles, chairman of the Federal Reserve; William H. Davis, chairman of the War Labor

Board; and the Director of the Office of Price Administration, whoever he may be at the moment.

In addition to these are two representatives of management: Eric A. Johnston of Spokane, Washington, and Ralph E. Flanders of Springfield, Vermont; and two laborites, Philip Murray, president of the C.I.O. and William Green, president of the A. F. of L. Just to be sure that the argument could be a public affair, the board includes also Edward A. O'Neal, president of the American Farm Bureau, and James G. Patton, president of the National Farmers' Union.

Thus far, no one has been hurt, although several of these gentlemen have complained of "having felt a somewhat rapid drop in the temperature before the meeting adjourned." But all of them say the Byrnes urbanity never wears thin.

In no more than two minutes, Mr. Byrnes thinks, you ought to be able to learn definitely whether a speaker knows what he's talking about or is merely talking. He cites the rule in the House of Representatives which limits to five minutes the remarks of any member speaking on amendments. In two minutes, the member speaking has to sell his audience on the value of listening to him. In those two minutes, the House knows whether to give ear for the remaining three minutes or to go back to reading the newspaper.

We did a bit of inquiring. On Capitol Hill we found no one who ever took to his newspaper two minutes after Mr. Byrnes started talking. However, the general opinion was that he rarely talked for more than two minutes. He is no orator and, better, nobody knows this better than he does.

While we were in his office, he was on the telephone nine times. Among those who called him up were Harry Hopkins, Leon Henderson, Donald Nelson, Senator Barkley and several others, including the President of the United States. The Byrnes brevity was completely un-Washington. To none did he talk more than two minutes. But after talking a minute to the President, he arose, left his office and disappeared into the long well-lighted tunnel which connects his office and Mr. Roosevelt's.

THE END

"Right now it doesn't seem very birdlike, does it?"

CHON DAY

## Food Power for fighting Men!

⤴ Our Armed Forces continue to demand more and more SKINLESS frankfurters, and you workers on the home front also need the nourishing FOOD POWER that SKINLESS frankfurters provide.

⤴ We want you to know that the packers who make SKINLESS frankfurters are straining every production effort to take care of this tremendous two-front increased demand. But our boys in Service must come first—you'd want it that way.

⤴ So, if your dealer can't give you all the SKINLESS frankfurters you want today, please come back tomorrow. Chances are he'll have them for you. Okay with you?

PHOTOGRAPH BY LAURENCE MONAHAN

Not content to be the first woman to stage-manage a musical, Betty Arnold picks the most unmanageable show on Broadway

ONE of the prettiest girls on the pay roll of the wild and ripsnorting musical called *Sons O' Fun*, now reverberating through the Winter Garden Theater in New York, is never once seen by the audience. Her name is Betty Arnold and she's the first female ever to stage-manage a musical show on Broadway.

Musicals are nothing if not tricky, and tops in screwball wackiness is any Olsen and Johnson brain wave. Every night from 8:20 on, the lush-eyed, raven-tressed Betty, wearing practical slacks and wedgies, stands by the flash box in the southeast corner of the stage, her right arm held high. Around her is a crazy whirligig of prop men trundling pink baby carriages, electricians coiling lethal Medusa wires, stagehands setting up ninepins or poop decks, newsboys peddling

their "extree-extrees"—not to mention the on-again, off-again *Sons O' Fun* cast, which totals eighty-five members.

Suddenly someone hurls down a gun on the stage. Suddenly the girl backstage snaps down her arm, yells in a voice that is at once soft and masterful, "Okay, Bumpy." And suddenly the flash box flashes and a violent explosion rocks 1,575 people in their 1,575 respective seats, not including S.R.O.

"Go ahead, Skip," cries Betty. And on goes a phonograph record that whirs like an airplane engine. She counts silently up to eight, then waves her arm like a discus thrower and shouts, "Now there, Uli." And the thunder of cannons ricochets off the four walls of the house, straight to Seventh Avenue and Broadway.

"Things happen too darn' fast around here," complains Betty, laughing. "But I finally learned the ropes and threw out the cue sheet. Now I never use one—by the time I've looked at the sheet, I've missed the cue. I just yell 'Go' from instinct."

When Betty yells "Go," there's a snowstorm at the Winter Garden; or a cow drops out of the sky; or live white homing pigeons fly across the stage; or a trap door yawns; or a white plaster Venus blushes to show the impact of Olsen's kiss; or there's a total blackout and 5,000 dried beans, giving the illusion of spiders tickle the audience's unsuspecting cheeks and jowls.

The 450 cues Betty must memorize are at least twice the number any reasonably sane musical would require, and the show's twenty-eight scenes are cluttered with about five times the usual number of props. In addition, Betty must know the names of the thirty-five stagehands and exactly where each one stands and what each one does at 8:31, 10:20 or 11:16½.

"It's tough sledding," she admits, "cause if we run over the dead line we have to pay every stagehand and musician a buck a minute extra, and it's up to me to count that nightmare out. I used to eat dinner at 7:00. Now I eat a night lunch after the show. Even then I have to sit around unwinding myself until 4:30 A. M. before I can relax enough to go to sleep."

## The Housewife Takes Over

Betty's debut in the strictly male stage-manager field began with a lot of double talk. Until a few months ago, she was keeping house and cooking Hungarian paprikas for her husband, one Milton Stern, then stage manager of *Sons O' Fun*. Faced with the prospect of early induction into the Army, he looked up from a copy of *Variety* one night, with a strange gleam in his eye.

"Uh-huh," he said to Betty. "Well . . . perhaps."

Then he said, "Sure, why not . . . why not?"

"Hey, what's going on here?" asked Betty.

"Sure," continued Milt, "look at all the different jobs women are taking over now that their men are going to war." He stood up. "I'm giving you my cue sheet, sweetheart," he announced, and before she knew it, Betty was getting ten weeks' initiation to madness in a road company of Hellzapoppin.

In one way Betty has it all over male stage managers because, a dancer herself, she can learn the dance routines in a flash and check them by ear.

"Listen, kid," she admonishes the blonde, front line left, "don't you miss that beat again, or else!"

"Oh, I know you're human," she says to another girl. "But couldn't you wait till *after* the clinch to scratch your back?"

"And boy," she laughs, "do they jump when I give them a blast! They know I'll call them in for rehearsal. Rehearsal's the big boogy word around here. I call it at the crack of dawn—around 10 A. M.—and they have to get up on a bare stage and do their stuff."

One of Betty's biggest responsibilities is checking props for safety. The threat of accident is omnipresent. The heat cracks a reflector and splinters it into a million pieces on the head of a chorus girl. A rope splits, and an iron table lands on a principal's shoulder. A gabbing stagehand opens the trap door too late and the wrong actor falls in. Betty must be there, ask questions, soothe nerves, call the doctor.

Not until 11:27 when the final curtain falls is there a letup in the strain and anxiety. Then Betty leans up against the Seventh Avenue door and lights a cigarette. "This show's a madhouse," she says contentedly, "and death on arches." ★★

Betty Arnold, left, talking with a couple of *Sons O' Fun* chorus girls, is responsible for the show's innumerable cues, props, bedlam, split-second timing

# *A Case of* **LESS SCRAP, MORE FIGHT**

**T**HIS sleek and polished example of superfine machining is a propeller shaft for a Buick-built Pratt & Whitney aircraft engine.

It used to be cut by slow and painful whittling from a forging made from a 184-pound bar of steel.

By changing the forging method, Buick found a way to get the same results from a steel bar weighing only 165 pounds.

Nineteen pounds less material to be cut away, 19 pounds less scrap to be sent back for remelting, considerably

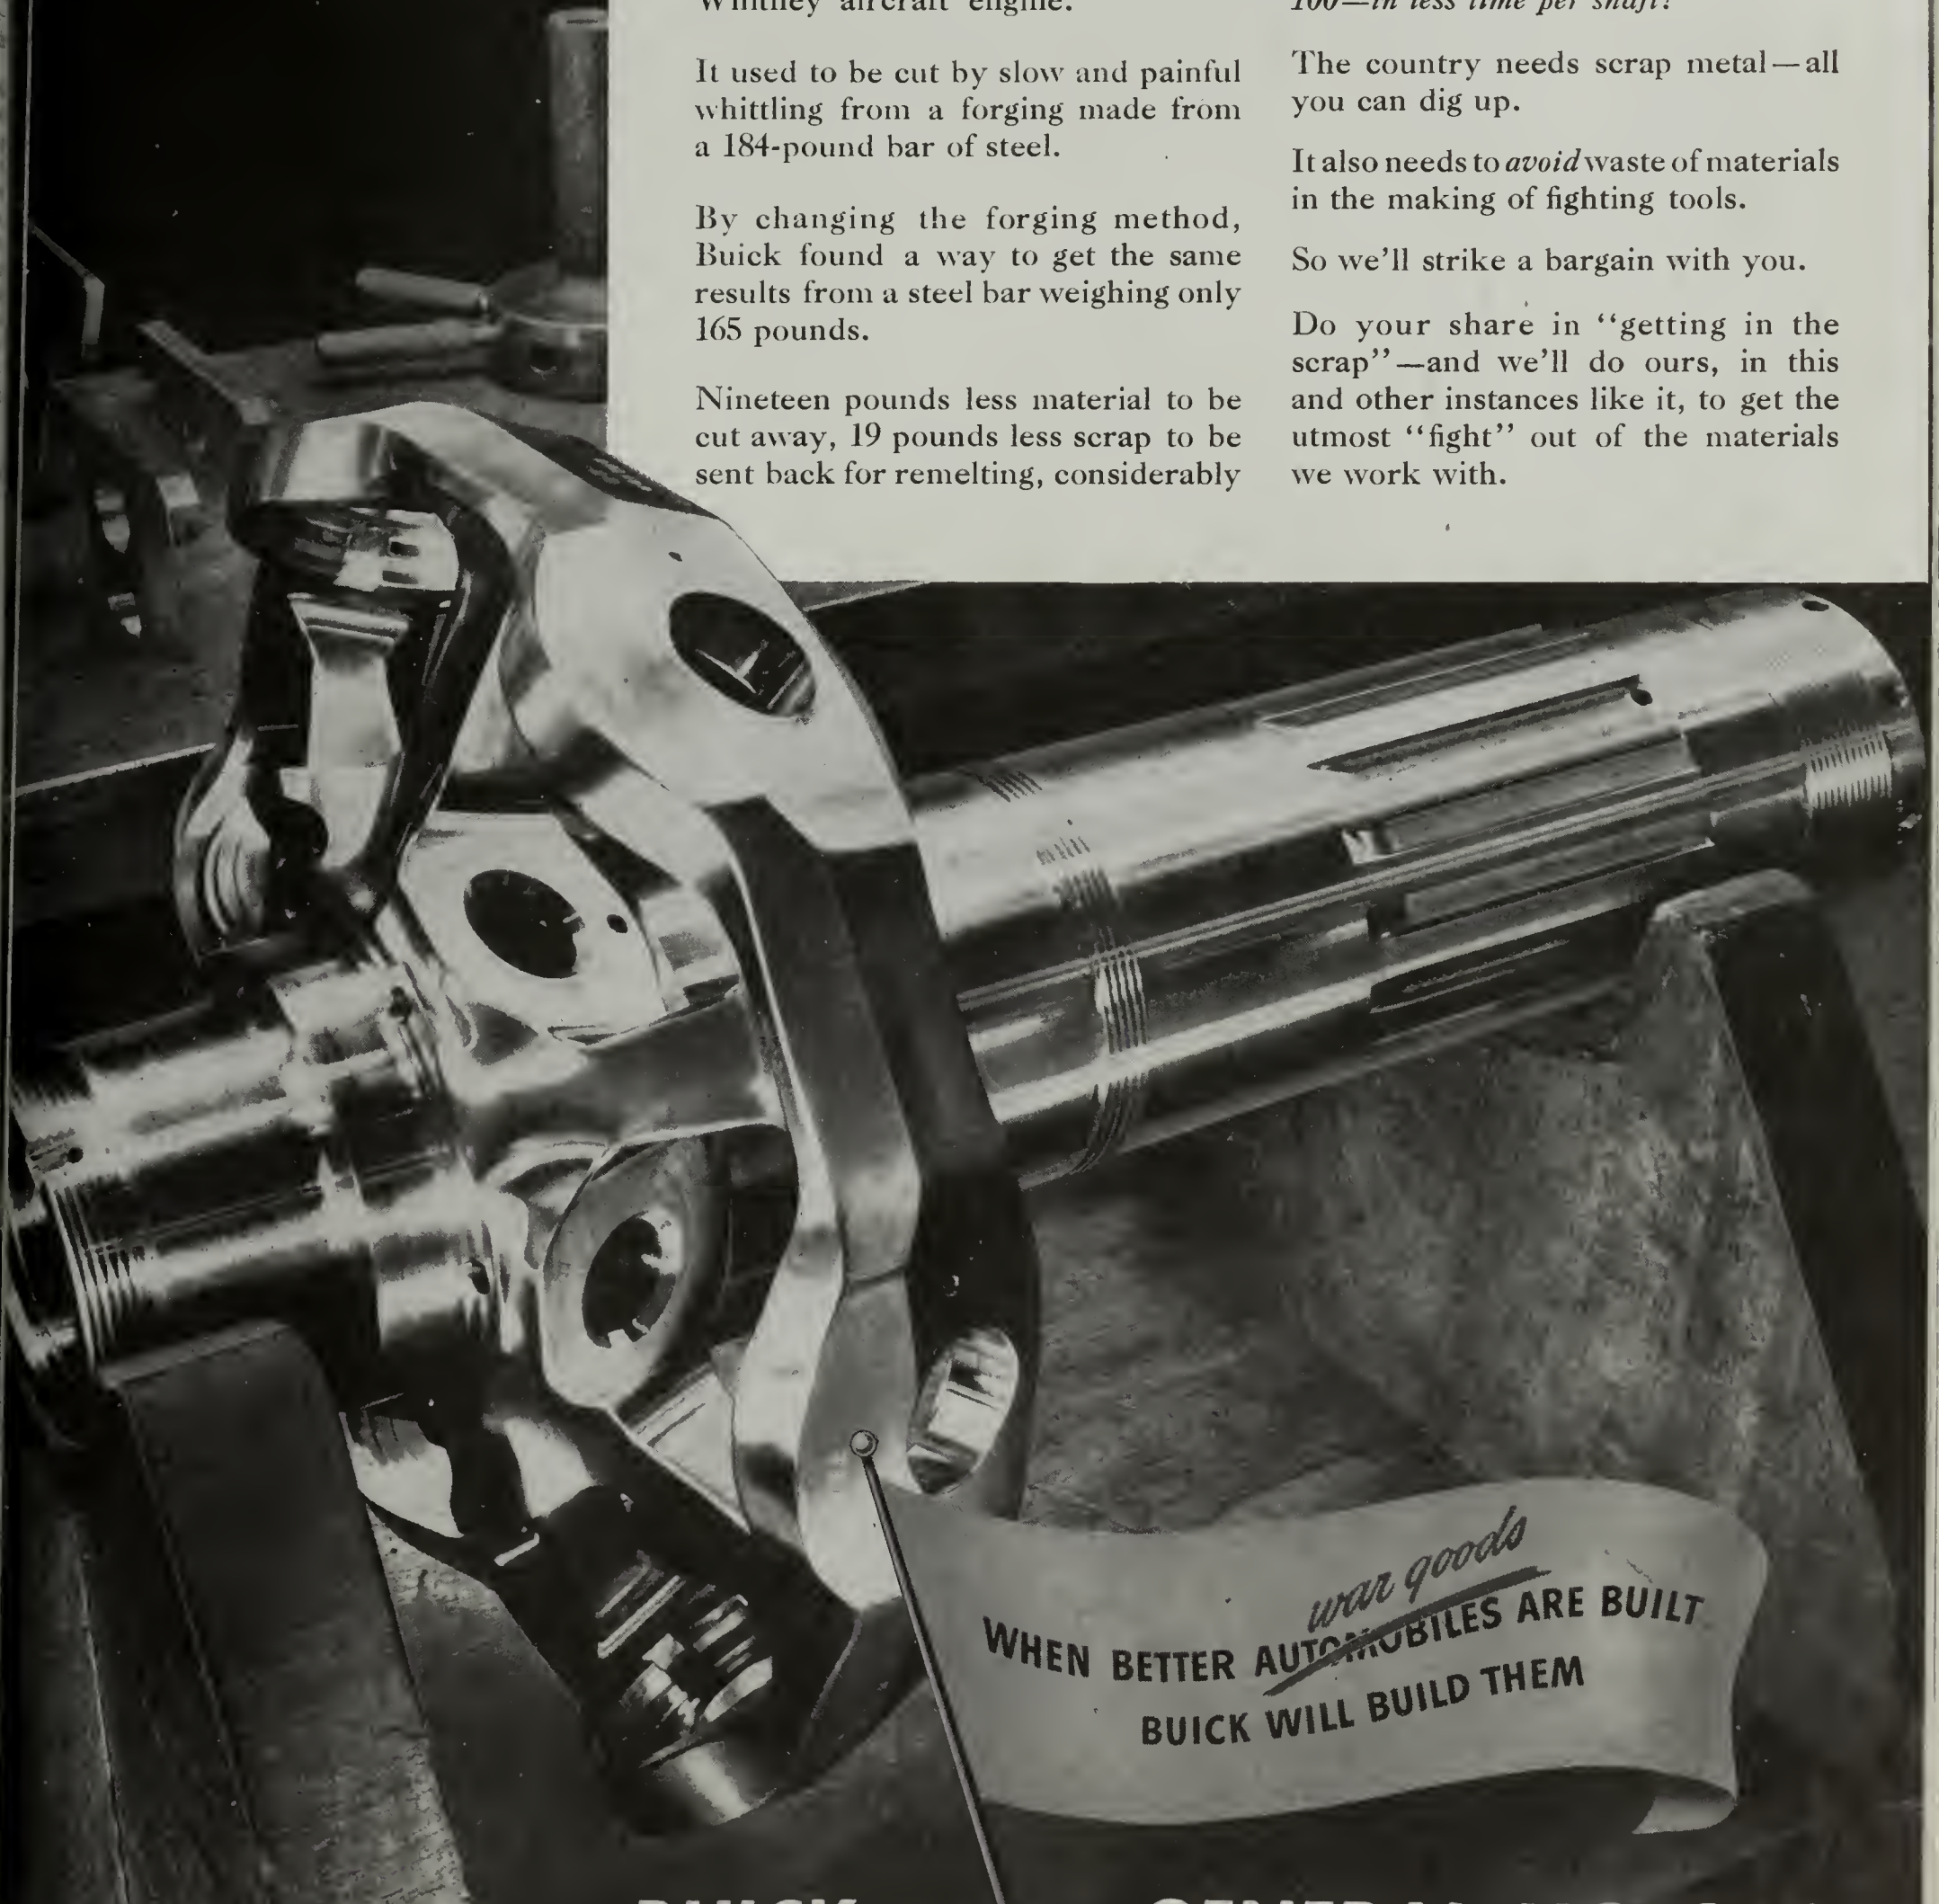

less expenditure of precious machine tools and—*111 propeller shafts from the same material that used to deliver only 100—in less time per shaft!*

The country needs scrap metal—all you can dig up.

It also needs to *avoid* waste of materials in the making of fighting tools.

So we'll strike a bargain with you.

Do your share in "getting in the scrap"—and we'll do ours, in this and other instances like it, to get the utmost "fight" out of the materials we work with.

## Civilian Pilot

Continued from page 15

of three hundred a month. If you make the grade you'll go into the Army Air Forces as a service pilot, if we think you're suitable officer material. Otherwise, you'll remain a civilian pilot. Any objections to a commission as second lieutenant?"

"That's a pretty low rating for a man with my experience."

His head came up and he stared at me again, hard. "Any objections?"

I snapped, "No!"

"Very well."

HE CALLED someone on the telephone and I leaned back against the wall and had a cigarette. The great Ferrying Command. I thought. Nuts! Slicing the whole world into Great Circle bits; hopping the so-called Big Drink practically hanging onto one another's tails, like a parade of circus elephants; setting down Liberators in Australia, cargo in Alaska and in China, night fighters in England and attack bombers in Africa, with tank-busting cannon. Space measured in terms of fuel consumption. Time measured by the ticking r.p.m.'s. The great Ferrying Division of the A.A.F.—a bunch of kids. Infants. Babies.

When the check pilot came in, zipping his flight jumper, I was glaring at the lieutenant and really steaming. I wasn't the biggest shot in the flying world, but I had done a little test pioneering and smashed plenty of records in my time. I wasn't used to being treated like something that had just crawled out from the pages of a log book. The Army, I thought; the same old Army. It never changes.

The check pilot nodded at me and asked, "This the man?"

Lieutenant Leslie winked at him and said, "Right. Mr. Jenkins, Lieutenant Hal Wallace. Take him up in a BT first, and if he checks out okay, try him on twin-engine. See you later."

That was about the first thing I liked that day. They wasted no time. You were either good or bad and they found it out then and there.

We went into another room and I had to sign releases to the government, in case of accident. Then we picked up some chutes, headphones and other paraphernalia and walked out to the line, where there were thirty or forty planes of all types and sizes standing about.

The BT is a low-wing, two-place ship built for basic training, which is what BT stands for. I had never flown one of that type, but was used to similar ships of equal horsepower. It should have been a push-over and it was.

WALLACE dished out instructions over the Gosport for a certain flight pattern, but in ten minutes knew he was wasting time. We came back to the field and walked over to a beautiful twin-engine Lockheed standing on the line. I had about five hundred hours on DC-3s, so Wallace said, "You won't have trouble with this crate."

We climbed in and went through the preliminary check of starting and warm-up, take-off, flight check, prelanding, overshooting procedure, simulated forced landing and after-landing procedure. Then we set her down and taxied back to the line.

Wallace and I had a cigarette while walking back to Transition and he said, "You're in, Jenkins. How do you think you'll like it here?"

I was still nervous about making two

check flights in a row and said, "I don't know. Something funny about the place. I thought you fellows would be tickled still to get experienced pilots."

"We are."

"Then why all the big noise about commissions and that sort of tripe?"

He gave me a funny glance, but made no reply.

We went into Transition and back into the office. Leslie glanced through Wallace's check-flight reports and looked up with a pleased light in his eyes. He reached over the desk and shook hands with me. "You're the kind of man we want, Jenkins. Sit down. We'll try to get you through this Civil Service stuff as quickly as we can."

Wallace went out with a frown and Leslie started shoving papers at me and, brother, I mean papers! We went to other offices and there were other questionnaires to fill out. At the provost marshal's, I was fingerprinted and photographed.

Just before noon I found myself back in Transition, dizzy, reeling with the heat and wondering what had happened to me. But I knew one thing; I was in the Ferrying Division—solid.

Leslie finished bawling out someone on the telephone and got to his feet. "Come on. We'll hop over to Operations and get you started."

Operations was in a California farmhouse type of building on the other side of the road. Behind a smooth desk was another young officer, but with two silver bars on his shoulders. He was talking to a major slouched in a chair across the room.

Leslie introduced me all around and dumped a mass of papers on the captain's desk. While Captain Dunham was studying the reports, the major scratched his head and said, "Burl Jenkins. Why, I remember you." He got up and shook

hands with me again. "You were really a racing fool, sir. Glad to have you with us. How do you like the layout?"

I was still thinking of Wallace's frown and said, "It keeps getting bigger and better—in spite of the Army."

There was dead silence in the room for a moment and they all stared at me. The major's smile disappeared and he said, "It's even bigger than that, Jenkins. Any four-engine time?"

"Never had a chance at it."

"You'll get it now." He turned to Leslie and said, "Put him down for one of the B-17s as soon as you can."

Just like that. For years I had been wanting to fly one of those babies and here it was dumped into my lap as a gift. I began to feel pretty good, but that faded in a hurry. The attitude of the officers toward me was as warm and friendly as a chunk of ice.

DUNHAM finished the reports. He shoved them aside and nodded at me. "Okay," he said. "You work out of this department from now on—Operations. It means what it says. We do the delivering. You are now a civilian pilot in the 69th Ferrying Group, 138th Base Headquarters. If you're officer material we'll have you before a board to commission you as soon as possible."

But there was a light in his eyes that plainly said, "Maybe."

He continued, talking as if he were pressed for time. "We'll show you the ropes in a couple of minutes. But the main thing to know is that your job is to deliver. Every plane you wash out is a victory for the Japs, with no expense to them. To prevent that, we give you the best of everything. A factory turns a plane over to us and they say it's okay. We don't think so. That plane's got to go through our own acceptance before we turn it over to you. When you get it she's

all right. It's your private property. Understand? Just as if you owned it, which you literally do till you turn it over at destination."

The telephone rang and he paused to answer it. "Seven Lockheeds? Okay. Cleared. Okay. Right away."

He looked into the other room, spotted Wallace and called him in. "Will you show Mr. Jenkins through Control, Hal?"

"Sure. Glad to."

I got up and we started through the door and Dunham called, "By the way, Jenkins, you're On Orders. Stand by."

We went into a hangar marked GROUP OPERATIONS and walked down a long hallway. There were weather offices, map rooms, chute counters, radio facilities and, in general, everything for a pilot about to take off on a flight. Wallace stopped behind a counter and handed me a sealed Flight Envelope and a radio facilities chart covering the whole country. He said, "You get a new one each month. We keep up to the minute on everything."

We walked on to the end of the room. On our right was an enormous flight map of the United States and on our left a long counter. That was the control office from where pilots were dispatched to every quarter of the globe. A young lieutenant was just marking down my name on a large blackboard behind the counter.

When he was finished he walked over and Wallace introduced him as Lieutenant Silvers. Wallace said, "Do you mind taking over? I got a flight check. Just show Jenkins the routine."

"Sure. Run along."

Leslie came in munching on a sandwich and joined us. "Well," he said, "I see you're On Orders."

"Yeah. Probably for the next two years."

"Not in this outfit."

"Look; the Army's the Army. I just walked onto this field a few hours ago."

THERE was a flame of anger beginning to show in his eyes and he said, "We've checked you out already, haven't we? You proved you were a capable pilot. That's all we're interested in. Already you're in Operations. You'll be flying even before they have your name in Washington."

While he finished his sandwich, a loud-speaker blared in the room; but I had leaned over to talk with Silvers and wasn't paying attention. Leslie tapped me on the shoulder. He was grinning.

"You're wanted in Operations. That call was for Civilian Pilot Burl Jenkins." Silvers was grinning, too. I walked out of Control and past the Pilots' Loft and went over to Captain Dunham's office. He hung up his telephone as I came in and casually nodded to me.

I sat down and he barked, "On your feet, Jenkins. No time for that. Have you ever flown the route between here and Seattle?"

"Are you kidding? I still hold the speed record from border to border."

Lights danced in his eyes and he said, "Unofficially, Jenkins, we smash your record almost every day, and at less than cruising. But the important thing is that you know the route."

"Every inch of it."

"So we thought from a look at your logs. Okay. Report to Control. Now. And good luck."

He held out his hand and I shook it,

### MR. FALA OF THE WHITE HOUSE

by ALAN FOSTER

"Governors seem to act more like prospective tenants than visitors"

COLLIER'S

PLANES MADE TO FLY FASTER and at greater heights present new problems to lens designers. Kodak's new glass, with much higher refractive index (light-bending ability) than previously available in optical glass of the same dispersion, now being applied to aerial lenses and is partly responsible for the effectiveness of our aerial photography. The new glass now in use has twice the speed of the fastest lens previously used by our Army Air Force.

THE POSITION OF THE PENCIL'S IMAGE shows that Kodak's new glass (below) has greater light-bending power than old-type optical glass (above). These two blocks have the same dispersion.

## Kodak's aerial lenses, made with new rare-element glass, —“first basic discovery in 55 years”

SAND has always been a basic ingredient of optical glass. Now, for the first time, Kodak is making optical glass of “rare elements”—tantalum, tungsten, and lanthanum. No sand—to the optical scientist, it's “almost as revolutionary as discovering how to make steel without iron.”

There would be no point in it, of course, without the result which is obtained: *A lens which gives greater speed without loss of definition and covering power.*

The U. S. flyer equipped with an aerial lens made by Kodak, incorporating the new glass, can carry out his mission from a safer

height—and, as a consequence, with a much better chance of bringing back his pictures.

### *Faster, Farther, Clearer*

Before this, the fastest lens used by U. S. Army flyers was  $f/3.5$ . Now our night flyers are being supplied, as rapidly as possible, with an  $f/2.5$  lens. This is twice as fast, and gets pictures of better quality—with the same size flash bomb—at a greater height.

The greater light-bending ability of the new glass means that the lens can have less curvature—and this also means much better definition at the edges of the picture.

Prior to Kodak's new glass, in 1941, the last basic discovery leading to radical improvement in optical glass was in 1886.

After the original work on the new glass, done by Kodak scientists in collaboration with Dr. G. W. Morey, of the U. S. Geophysical Laboratory, four additional years were spent in perfecting its manufacture—and computing the new formulas necessary for the grinding of lenses.

Fortunately the work was done in time, and the new optical elements are now in many cameras in the service of democracy... Eastman Kodak Company, Rochester, N. Y.

## Serving human progress through Photography

more puzzled than ever. "You mean I'm going on a hop—"

He dropped back to his desk and shuffled some papers. "Control will give you the dope. Better get moving."

"Yeah. Sure."

I stumbled out of the office and made my way to Group Operations. Silvers, behind the counter of Control, was still smiling. He handed me a mass of papers and pointed to a route sheet. "You'll follow the inland route; Bakersfield, Fresno, Sacramento, Medford, Portland and Seattle. Better lay over at Medford this evening. Not much daylight left. Our rules—and these are very strict—are that a pilot must set a ferry plane down one hour before official sunset with not less than forty-five minutes of gas in the tanks. But, as you've been told, you own the airplane."

"What airplane?"

"Lockheed. Deliver it at the Municipal in Seattle. When you get there send us a collect wire advising time of arrival at destination. Send the same sort of wire, too, at the close of your day's flying. Precede all messages with GOVERNMENT MESSAGES—PRIORITY. Okay. Make out your flight plan and turn it over to me."

I said, "You mean I'm to be first pilot on my first run?"

"First! You're the whole crew. Customarily, we'd send along a copilot with you, but the Lockheed's an easy ship to handle, you know the route and, what is more important, we're pressed for time and men."

I WALKED away and picked up a chute at one place, weather reports at another, the latest information on prohibited areas, maps and an aircraft clearance report, for the benefit of the Interceptor Command. It would be no fun being shot down by an American gun crew. Then I made out all the necessary papers and brought them back to Control. Silvers had me sign the route sheet and nodded.

I said, "What now?"

"Now?" he echoed. "Why, you can go out and climb in your ship and get out of here. See you *mañana*."

I walked out to the field and looked at a mess of Lockheeds standing there and found the number of the one I was to take. I climbed in and went through the preliminary stuff, then started the engines and warmed them up. After taxiing to the designated take-off point I tested the brakes again and tried to call the control tower. Someone started cussing the living daylights out of me on the air.

This person finally calmed down and said, "We don't call this the Long Beach tower, you jerk. If we did a Jap submarine could lie offshore, pick up our calls on their radio and know exactly how much traffic is moving at this field. So we continually change the call name. How long have you been here, anyway?"

"About a half-day."

"Oh. Well, get going. You're clear."

It was something to think about, being there only a half-day. I turned it over in my mind and then there was that guy on the air cussing me out again. I gave the proper call, which was Apple Tower, and opened the throttles.

THE great range of the Sierra Nevadas kept pace with me on my right and the lowering sun on my left. The Cascades came into view and then I spotted Medford, Oregon, dead on the nose. There would be a night ahead of me in some dinky hotel and then a hop up to Seattle in the morning. Well, that would be all right. I eased the nose down, located the landing field and swung around for a straight approach.

While still about two miles from the field, I put the gear handle in the "down" position—and nothing happened. The retractable wheels stayed where they were, tucked up in the engine nacelles. I sat there for a moment, not thinking, and ran the handle up and down. There was no reaction. The wheels would not budge. Then I really sat up with a start and checked the engine pumps. There was no pressure and only one answer for that—a leak in the pump lines.

I grabbed a Transition Instructions report that was part of my kit, pulled the ship back to level flight, and read through the emergency wheel-lowering procedure. The part that was of importance to me read: "... have copilot go behind his seat and open small valve on floor to the left of silver emergency hydraulic can, and then pump handle on silver can until pressure builds up. This will move wheels forward approximately 8". During process of landing and taxiing into the line, copilot will continue to maintain pressure on this emergency hydraulic pump. If sufficient pressure is not maintained while taxiing, and until such time as engines are shut off, land-

and there was a pale sunset and the purple-velvet land below. When it got sticky dark I went onto instruments and said to myself, "Let's face it, brother. Those mountains are hard." I climbed up to 16,000 and went onto blowers. I like altitude and plenty of it in a strange ship. You have more time to work out an emergency landing—just in case.

But the flight was smooth enough and nothing else went wrong. Seattle, even in the dim-out, was easily spotted. I came down low, circled and went on the air calling the tower with the proper code. Field lights suddenly blossomed into life under the port wing and I looked down at them and thought, "This is it, brother. Hang onto your hats, kids, here we go."

I dropped back for the longest possible approach and was about to call the tower again for the crash-squad to stand by, when I automatically reached for the gear handle and shoved it into the "down" position. There was a sharp whine in the cabin of the ship, and the plane slowed down another few knots. I blinked at the instrument panel and could hardly believe my eyes. The gear

I felt like smacking that smooth chin of his, but controlled myself and said, "This plane is still my private property, chum. You sign on the release that you'll have the gear checked or you don't get the ship."

He appraised me through narrowed eyes, then shrugged and signed on the release. He said, "By the way, I can't make out your name."

"Burl Jenkins. Means nothing to you? I flew the Atlantic."

"Who hasn't?"

I didn't like that kid. I walked away and sent a wire to the Command, giving time of arrival. I could just about picture the blow-up back at the field. Then I inquired about an airliner back, but there was a bad front closing in, so I checked into a hotel and killed time drinking beer.

That front closed in, all right, with fog and rain and a little hail thrown in for good measure. It lasted for three days. On the fourth morning it cleared and I went out to the field and was placed on the first transport leaving for Los Angeles.

Late that afternoon I stood in Captain Dunham's office, again dripping perspiration from every pore. Lieutenants Leslie, Silvers and Wallace were also there, in addition to the deputy commander, the youngest lieutenant colonel in the Army. All of them were gravely blinking at me, the Army starc. I could already see myself on the way out.

The colonel said soberly, "Your show, Dunham."

"Yes, sir." Dunham fixed me with a glassy stare and said, "Well, Jenkins. I suppose you have some good reason for this. You landed in Seattle one hour and twenty-six minutes after official sunset with about four minutes of gas left in your tanks. You know the rules."

I FELT like I was caught in a trap and that my explanation was altogether too simple, but said doggedly, "If I had set that plane down at Medford it would have been a crash landing with a nice new bomber washed out. To be truthful, I figured the same thing would happen in Seattle, with the difference that they would be able to take care of it better up there. So I went ahead. Something, I don't know what, stopped the leak, pressure built up and I was able to land okay. That's the whole story."

Dunham drawled, "Great day in the morning, man, that alibi's been used a dozen times." He leaned across the desk and his eyes were as cold as ice. "Even so," he said, "we would be inclined to give you the benefit of the doubt, except for one thing—your attitude. You came to us already convinced that the Army Air Forces were no good. You wanted no part of the Army. So you figured that if you broke a couple of rules on your first flight you'd be able to evade a commission and remain with us as a civilian pilot. The whole thing is pretty obvious." He paused a moment, while the hot blood mounted to my head, then said, "You might have lost that plane. Night flying does have certain perils. Have you seen the papers today?"

"No."

He shoved a newspaper across the desk and there in bold type was the story of an AAF raid over the Aleutians, coming out of Alaska. I looked up and said, "That's the kind of news I like to read."

Dunham leaned back and his eyes narrowed still further. "Yes," he said. "You took part in that raid, Mister Jenkins. The plane you delivered was a unit of what's now known as the Nip Project. That plane, the plane you owned when you left here, probably did a heap of

ing gear will fold up under airplane."

I put the paper down and thought, "That's nice. Have the copilot do it. And where the heck am I supposed to get a copilot?" I could see the emergency gear from where I sat, but it was a physical impossibility to reach it and fly the airplane at the same time. A pretty kettle of fish on my first flight, though there was nothing really dangerous about it. I could make a belly landing and smash up a good ship, but I would be able to walk away from it, still sound in wind and limb. Only, of what possible use to the Army could a cracked airplane be on a field in Oregon?

I circled around and around the field and checked over the whole situation as I went. It was about six hours flying time from Long Beach to Seattle. I was supposed to have enough gas for that much flying, with a few minutes over. But, on the other hand, if I went on I would be breaking every regulation in the book, and the Army would not like that. I thought it all over and then decided to go on. There would be better repair facilities in Seattle and the plane would, at least, be at its destination.

As soon as the decision was made I thought, "The devil with it," and headed north for Seattle. I started climbing again to get over the mountains and reached for a lot of altitude. In a short while the sun sank below the horizon

indicator registered Down and each wheel light was shining into my face. The gear was down and locked.

I sat back, let out a great sigh and relaxed. A belly landing is no joke, even if you can walk away from it. But now everything was all right. I got the flaps down, throttled back and came in at ninety knots for a baby-carriage landing and taxied over to the Army hangars.

WHEN I jumped to the ground and shook hands a pink-cheeked lieutenant walked toward me out of the darkness. "I'm taking over," he said. "We had reports on you all the way through, so I waited around. This is to be my ship."

I looked him over, a combat pilot, an infant, and said, "She's all yours. Let's get the paper work over with."

We made out the forms against the side of the plane and he remarked casually, "Aren't you ferry fellows supposed to be nested down before dark?"

"Yeah, we're supposed to be on the ground. But I ran into some trouble. The gear wouldn't come down over Medford. Leak somewhere. Evidently the pressure built up between Medford and here. Better have it checked."

He said, "That's a pretty good alibi. You got some babe you're supposed to meet here tonight?"

# SAILOR'S Sweetheart!

She isn't big as naval guns go. And she isn't particularly pretty, either. But she's won the hearts of sailors wherever the Navy fights . . .

. . . because she does what's got to be done like nothing else in the world—when dive bombers come screaming in to attack, she simply blasts them to bits.

Firing seven explosive shells a *second*, this 20 mm. automatic anti-aircraft cannon is one of the most remarkable defensive weapons known to modern military science. Its rapid rate of fire, its extreme range and the size of its ammunition combine to make it, according to high Naval authorities, the "best defense ever devised against the dive bomber."

No man knows how many Navy vessels and convoy ships have been saved to date by the curtain of steel it blasts into the sky. All we know is that the Navy says, "Keep 'em coming—fast!"

And that's what we're doing—at the highest rate these hard-hitting killers have ever been produced—faster even than when we were awarded the "E" banner, *on which date this important war assignment was 11 months ahead of schedule!*

Yet large as it is, our production of 20 mm. cannon represents only a fraction of what we, as a part of American industry, are doing to supply our soldiers, sailors and marines with the implements of victory made possible by your purchase of War Bonds.

Our additional war assignments include Bofors automatic field guns, aerial torpedoes, major components for 13-ton high-speed tanks, Diesel inner-engine assemblies and vital units for Army trucks. Combined, they represent a project of already vast proportions—which is growing vaster every day . . . and which is being kept on or ahead of schedule not only by our own thousands of employees but also those of the 1500 *subcontracting companies* who are presently working with us.

damage. That's why we like them delivered—with caution."

I looked out the window. That kid, I thought, that infant; the pink-cheeked babe. Why, while I was drinking beer in Seattle he was bombing the living day-lights out of the Japs and, with that particular type of plane, strafing their bases as well. My ship. Who was it said the Army blundered about? Me? I said that? But that kid, over Jap bases—

I glanced back at Dunham and that trapped feeling was closing in like a steel band. There was nothing to say and I could hardly blame them for not believing what I had already said. It did seem pretty thin, even to me.

Dunham said, "You disobeyed orders. That's hardly what we're looking for in our pilots, is it?"

HE WAS about to say something more, but Lieutenant Wallace suddenly stepped forward and said, "Begging your pardon, sir, I am partly responsible for that. I could have done something to help correct Mr. Jenkins' attitude. It was my duty to do so, but I kept my mouth shut. I thought I'd let him find out the hard way."

Leslie also stepped forward and said, "I might add, sir, that Mr. Jenkins had a completely misinformed understanding of the Army Air Forces. I should have explained things to him, particularly the rapidity with which we get things done in this new Army. I, too, am partly to blame."

Silvers mumbled, "Me, too, Captain. He made some cracks I didn't like, but I just let them go. I think I can safely say that Mr. Jenkins honestly wants to do a bang-up job."

The others nodded with him and I stared at them. They actually believed me to be guilty, but were trying to help me out, anyway. I didn't get it.

The colonel leaned forward and said, "You seem to have made some good friends, Jenkins, for being with us such a short time. It surprises me." He sharply glanced at Wallace and asked, "Why are you going to bat for this man?"

"Well, sir," Wallace grinned. "I kind of felt the same way he did when I first went in the Army. But the main thing is that he's a pilot and a darned good one."

The colonel ran his hand over his mouth to hide a smile and said, "We have other good pilots."

"We can always use another one, sir."

"H'mmmmm. So we can. Yes, in-

deed." Then he turned to me. "Jenkins."

"Yes, sir!"

"Uh—well—do you think a thing like this could happen again?"

He was going to drop it. I could see that. All I had to do was to admit that I had made a mistake and assure them it wouldn't happen again. God knows, I am no Pollyanna, but suddenly those two words, "officer material," had taken on a meaning that had never been in my mind before. What to say was a tough problem, the toughest I have ever had to face. If I stuck by my guns I would go out on my ear. But on the other hand, if I lied about it—

A stenographer came in and placed a telegram on Dunham's desk. He read it through, then sat there for a long time staring at me. Then finally he cleared his throat and said, "This is from the combat unit now in Alaska. It reads, 'EXTEND THANKS CIVILIAN PILOT BURL JENKINS FOR INDICATING FAULTY GEAR PUMP STOP UNDOUBTEDLY AVERTED LATER CRASH STOP GREETINGS TO MEMBERS YOUR STAFF FOR SPLENDID CO-OPERATION NIP PROJECT.'"

Dunham spread the telegram on his desk and smoothed it out with his hands. He cleared his throat a few times, glanced sidewise at the colonel, who was carefully studying some detail about the floor, then got to his feet with a hasty glance at his watch. "Well, what do you know about that? It's almost time for dinner."

"Really?" the colonel said, looking up very surprised. "Y' know, the officers' club bar should be open about now. I—uh—could do with a little beer, or something. How about the rest of you gentlemen?"

All of us left the office together, glad to get out of there. We started down the road toward the club and on the way the colonel said, "Jenkins, about a commission in the Army Air Forces—I—uh—would personally like to send in the recommendation, if you don't mind."

Mind? What did he think he was talking about?

You say you want a Liberator in Bombay? A Fortress in Australia? A Lockheed in London? A Mustang in Egypt? You've come to the right man, brother. Second Lieutenant Burl Jenkins, that's me. A shavetail. And tickled silly about it.

THE END

## The Man Without Fingerprints

Continued from page 16

agent in charge of the El Paso field office of the F.B.I. what we all, of course, knew: that his unidentifiable fingerprints were not a freak of nature but the result of someone's wholly inexplicable manipulation. But neither this admission nor anything else the prisoner could be persuaded to say revealed the identity of the renegade surgeon who had performed this sinister miracle.

All we had to go on in the more important search which now began was that the operation, however it was performed, must have occurred between March 28, 1941, when Pitts was arrested in Miami, Florida, with his fingerprints intact, and October 30, 1941, when he was arrested near Austin, Texas, with his fingerprints completely nonexistent.

We were obviously dealing with some furtive figure whose alliance with the criminal world had so far been successfully concealed. To find him among the more than 160,000 doctors in the United States was, we had to admit, a large order. For that matter, the operator might not have been a physician.

### The F.B.I. Gets a Clue

Pitts himself, as a source of information, remained stubbornly unpromising. The man's past associates, therefore, seemed to be our one best bet. With this idea in mind, we sought out and interrogated hoodlums known to have been implicated in the long list of crimes in which the prisoner Pitts had participated, also the known cellmates with whom he had been thrown into contact during his frequent periods of incarceration. Finally one of the latter broke down and admitted that Pitts had mentioned a name to him in connection with his operation and that the name sounded like Brandenburg.

With this much to go on, special agents of the Charlotte, North Carolina, field office of the F.B.I. (Charlotte was the Pitts family's home town) put the identity question up to Ted Pitts, Robert's brother, an inmate of the city jail. Ted proved a tough customer, too, so far as

giving up information was concerned, but finally he did admit that Robert had said that he had had an operation performed somewhere "up North"—he thought, in New Jersey.

Name: Brandenburg.

Place: New Jersey.

Time: Between March 28 and October 30, 1941.

We were getting somewhere. Word was immediately flashed to the Newark office of the bureau, and a Doctor Leopold William August Brandenburg, Jr., was located at an address on Hudson Boulevard in Union City, New Jersey.

He was the big, gusty type of medical man, an obese individual nearly six feet in height and broad quite out of proportion. His huge, fatted body lumbered as he walked, his clumsiness accentuated by a pronounced limp, due, it was said, to an attack of infantile paralysis. Brown, buttony eyes peered out of deep indentations in the flesh of his face, which elsewhere hung in heavy folds from wholly invisible cheek- and jaw-bones. He wore small rimless glasses, the bowed kind for ordinary occasions and the pince-nez for show. One would hardly say that his manner, bedside or otherwise, inspired confidence. He seemed to lean too heavily on the old theory that all the world loves a fat man. Nevertheless, there was nothing the least bit sinister in his genial, smiling face.

Obviously, we had no case against this apparently respectable physician. We couldn't just barge in and say, "Look here, you performed some kind of illegal operation, we know not what, on a man named Pitts."

Pitts himself undoubtedly would swear that we were lying, and the two crooks who had given us the fragmentary information on which we were acting would most likely change their testimony when the case came to trial.

The Federal Bureau of Investigation seeks to avoid such contingencies. We want every charge we make to stick, and we are proud of the fact that more than 97 per cent of our cases, when they do get into court, result in convictions. So

# DON'T RUIN FALSE TEETH BY BRUSHING WITH MAKESHIFT CLEANERS

## DON'T DO THIS

TOOTHPASTES, TOOTH POWDERS, soap and household cleansers are not intended for dental plates, which are much softer than natural teeth. Many of these makeshift cleaners scratch, wear down, ruin dentures.

## PLAY SAFE...SOAK THEM CLEAN IN POLIDENT

Soaking plates and bridges in Polident dissolves the daily accumulation of cloudy film and ugly stains... cleans those hard-to-reach corners without the dangers of brushing; maintains the original natural appearance of dentures.

## DO THIS EVERY DAY!

Put one capful of POLIDENT in 1/2 glass of luke warm water. Stir briskly. Place plate or bridge in this solution for 15 minutes, or over night if convenient. Rinse well—and it's ready to use!

No Brushing — No Scouring

## Plate Wearers Often Worst Breath Offenders

The film that collects on plates, bridges, soaks up odors and impurities. This often causes offensive "Denture Breath." You won't know you have it—but others will! Yet POLIDENT, used regularly, dissolves film—leaves plates odor-free, sweet. Millions call Polident a blessing.

Soaking in Polident cleans plates better—and it is safer than brushing. Less handling, less chance of dropping. Soaking in Polident avoids the danger of brushing away the important "fitting ridges" of your plate—avoids brushing invisible scratches into the plate, causing stains to collect faster, cling tighter.

Polident is recommended by many leading dentists and approved by the leading makers of modern denture materials.

## LESS THAN A PENNY A DAY

Generous 3 oz. size—30¢. Economy size, 7 oz.—60¢. At all drug, dept., variety stores. Less than 1¢ a day for safe cleaning of dentures. Today—get Polident.

# POLIDENT

The Safe Modern Way to Clean Plates and Bridges

"We're having a little difficulty getting the Elite Trick and Novelty Company converted for war production"

COLLIER'S

IRVING PHILLIPS

**CONSOLIDATED**

# TO AMERICA'S FIRST PLANE SPOTTER

We don't know who you were.

But the night you went on duty marked the end of the world, as most Americans had always known it.

You were a symbol of the realization that oceans are merely hours across by air. You were an admission that the barriers of land and water had been lifted. You were our first bow to the new global geography where distance is reckoned by the skyways as well as by nautical miles.

We are fighting the war today on that new global geography. We're fighting for remote pin-point islands in the Pacific because they can be potent air bases. We're fighting in the Aleutian fogs because from Kiska a bomber could strike at Detroit almost as easily as at San Diego.

lines never let you forget it. And as you read them, remember that we must remain equally air-minded in victory.

The countries of this new, sky-linked world will be bound together more closely, geographically and physically, than our own states

The sea route from New York to Bombay is about 9400 miles. It is a 3-week voyage.

Today's skyward route from New York to Bombay is about 7790 miles. Flying time: 39 hours.

New York is closer to Moscow, by plane, than it is to our South American neighbor, Buenos Aires.

There is no need to labor the point that this is an air-minded war. The newspaper head-

were at the turn of the century. Today, wherever you may live, no spot on the once-wide globe is farther than 60 hours away from your local airport.

Realization of how the plane has shrunk our world is vital to straight thinking about the

kind of peace that *can* last. With this new conception of global geography, you see the world as it is—a clustering of nations whose nearness makes them inter-dependent and inter-related. Without this new conception, you are looking at a world that used to be—a world where nations lived in the safety of remoteness, protected by distances that no longer exist and seas that have been narrowed to millponds.

FROM	TO	SURFACE TIME		AIR TIME	
New York	Chungking, China	11,300 M	31 days	7500 M	38 hrs.
New York	Moscow, Russia	5700 M	8 days	4525 M	23 hrs.
New York	London, England	3700 M	5 days	3462 M	17 hrs.
San Francisco	Brisbane, Australia	8200 M	21 days	7050 M	35 hrs.
Chicago	Fairbanks, Alaska	4090 M	8 days	2730 M	14 hrs.

Approximate traveling time and distances as you have known them in the past and as you will come to know them in the Air Age.

But understanding alone isn't enough. If the global community is to live together in freedom and enduring peace after the war, the nations which deeply believe in freedom and peace must possess air supremacy.

To bring this supremacy about, first in war and then in peace, is the aim of the tens of thousands of men and women who make up America's aircraft industry:

• • •

## Consolidated Aircraft Corporation

San Diego, California • Fort Worth, Texas

Member, Aircraft War Production Council

### QUICK FACTS FOR AIR-MINDED READERS

In 1929, Consolidated was already building America's biggest planes. The company is 20 years old this year.

• • •

Today Consolidated is building: the B-24 Liberator, (4-engine, long-range, land-based bomber)—PB2Y Coronado patrol bomber, (4-engine long-range flying boat)—PBV Catalina patrol bomber, (twin-motored, long-range flying boat)—the C-87 Liberator Transport, (cargo-plane version of the Liberator bomber).

In Fort Worth, Texas, where nothing but grazing land stood a year and a half ago, one of the world's longest aircraft assembly lines is now delivering a steady flow of 28-ton C-87 Liberator Transports. These planes are daily spanning both oceans with military supplies and personnel for our global fighting fronts.

Consolidated was one of the first aircraft manufacturers to establish a training school for Army Air Forces mechanics and ground crew. "Camp Consoir"—complete with barracks, officers' quarters, mess halls, laboratories, classroom buildings, and hospital—adjoins the Consolidated plant at San Diego.

Winston Churchill used a Liberator for his flight to Moscow. General H. H. Arnold flew in a Liberator from Brisbane, Australia, to San Francisco in the record time of 35 hours and 53 minutes.

It was a Consolidated Liberator, dubbed the "Gulliver," which carried Wendell Willkie on his round-the-world flight. The "Gulliver" was the first plane in history to span Siberia and cut across the Gobi Desert and Mongolia, the first to fly from China to the U.S. via Alaska.

The 31,000-mile route blazed by this globe-girdling Liberator will probably become one of the regular skyways of

post-war aerial travel and commerce:

• • •

Ford and North American are also building the B-24 Liberator under license from Consolidated. Similarly, in Canada, Boeing and Vickers are building the Consolidated Catalina patrol bomber.

• • •

Turning out great numbers of long-range bombers like the Liberator, is Consolidated's major wartime job. But we are not doing this job single-handed. More than 2000 sub-contractors and suppliers, in many parts of the U. S., are working round the clock to provide many of the materials and parts for this giant bomber.

# DAIRCRAFT DESIGNERS AND BUILDERS OF THE LIBERATOR, CORONADO, CATALINA, C-87 TRANSPORT

we resolved to leave our rotund doctor in the full enjoyment of his obviously complete sense of security while we conducted a thorough investigation into his professional and personal life.

There had, it seems, been two arrests on charges of criminal abortion, one in 1928 and one as late as March, 1942, but the community had apparently accepted the nol-prossing of the first charge and the failure of the grand jury to indict on the second as sufficient evidences of the physician's innocence. We also discovered that Brandenburg had been arrested in 1934 for writing prescriptions for narcotics without having registered under the Harrison Act, but since this was a first offense, he was let off with a nominal fine.

The real Mr. Hyde under the mountainous flesh of this oversize Dr. Jekyll did not begin to emerge until we found that he had been arrested and convicted in 1934 as an accessory in a \$100,000 mail robbery which occurred—of all places—at Charlotte, North Carolina. (This is not to be confused with the recent warehouse robbery for which the prisoner Pitts was wanted by the North Carolina authorities.) The rough work was left to four notorious hoodlums—like Kostner, Ludwig "Dutch" Schmidt, Basil Banghart and "Ice Wagon" Connors. Brandenburg's own reported role was strictly financial.

Five days after the robbery, using the name of George A. Scofield, he deposited \$10,000 in new five-dollar bills in the Rutherford Bank of Rutherford, New Jersey. Subsequently he claimed that he had deposited the money under an alias because there were outstanding judgments against him. The authorities, however, had little difficulty in proving that these bills were part of the loot taken from the mail shipment of newly issued money from the United States Treasury, and the doctor escaped the fate of his fellow defendants—a long stretch on the Rock at Alcatraz—only when his conviction was reversed on appeal, on the claim that the government had not proved Brandenburg knew the money he handled was stolen from the mails.

All of which tended to show that Leo Brandenburg had been a bad boy but did not prove that he had made Robert Pitts' fingerprints disappear or indicate how he had done it.

### Trail of a Criminal

Meanwhile, our nation-wide hunt for associates of Pitts had reached the Rock at Alcatraz. Officials remembered the man very well. He was normal enough then as to finger tips; they couldn't help on that; but they recalled that he seemed to be on chummy terms with some of the prison's most notorious inmates, including Carl Rettich, boss of the so-called Rhode Island mob, the latter's associates, Tommy Dugan, Charley Harrington and Sonny McClone, and likewise three hoodlums allegedly associated with Brandenburg as a result of the North Carolina mail robbery, especially Dutch Schmidt.

Here was the first definite link, and the special agents tried their best to forge it into the chain which would lead to the doctor's arrest and the discovery of his method. Dutch Schmidt, leader of the North Carolina mail-robbery gang, we learned, had told Pitts that if he ever got into trouble, Doc Brandenburg was the man to see, but Dutch professed to know nothing of the latter's adventures in criminal surgery. Once more, the evidence against Brandenburg was not sufficiently conclusive to assure a conviction, especially since it came, as before, out of the mouth of a known crook.

### ALFRED

by FOSTER HUMFREVILLE

One thing, however, the investigation had accomplished: The conviction of Pitts for his part in the North Wilkesboro warehouse robbery and the imposition of such a severe sentence—sixteen to twenty years—that this hardened criminal was induced to take the step which led indirectly to the unmasking of Brandenburg and the divulging of the fingerprint secret.

Pitts might have taken a shorter stretch in his stride—he had done it many times before—but sixteen years as a minimum was too much for the 32-year-old man to accept without a struggle. He must have money to hire lawyers to get his conviction reversed or his sentence reduced. For the second time he recalled Dutch Schmidt's advice: When in trouble, try Brandenburg.

From the Raleigh State Prison, Pitts

dispatched a typewritten communication addressed to "Mr. Bob Everett, Beach Haven, New Jersey," which fell by mistake into the hands of a woman who opened it and found, inside the outer envelope, another on which was typed:

"Bob, please rush this letter to Doc Brandenburg as it is important and don't send it by mail. . . . Bob."

"Rush rush rush rush rush rush!" The letter demanded that Brandenburg send \$800 at once in \$100 bills to a woman in Charlotte, North Carolina, told the purpose for which the writer wanted the money, stated that the F.B.I. had been to see him, and concluded with the rather pointed suggestion that the authorities would give a great deal to have him identify the doctor who had tampered with his finger tips.

Inquiry revealed that there had been

frequent contacts between Brandenburg and one Robert Everett in Beach Haven. Meanwhile, the technical laboratory of the F.B.I. made the necessary examinations to make sure that the typing on the letters and envelopes were identical with the type of the machine Pitts had had access to in the Raleigh prison.

The evidence linking Brandenburg and Pitts and identifying the former as the surgeon who operated on the latter's fingers was now complete—and, at last, in indisputable documentary form. Confronted with it and the realization that he could no longer hope for aid from his doctor accomplice, the prisoner agreed to tell the whole story.

Following the North Carolina warehouse robbery in May, 1941, Pitts fled north and obeyed Dutch Schmidt's instructions to place himself in the hands of Doc Brandenburg. The latter took him to another physician, the head of a Union City hospital, introduced him under the name of Jack Cline and told him that Cline would like to have the scar on his face removed. The doctor admitted performing the facial operation without charge as a professional courtesy to Brandenburg.

Then followed the more serious operation on the finger tips, which Doctor Brandenburg performed at his own residence. Pitts, having made up his mind to talk, did so in all the gruesome detail that most people employ in telling about their operations. For readers with weak stomachs we will make the explanation as brief as possible.

### The Agonizing Operation

First, the flesh at the ends of the fingers of his left hand was cut away right down to the bone, a procedure which he described with indubitable veracity as "extremely painful." Then, he said, his left hand was taped to the right side of his chest and allowed to remain in that position for three weeks, with his mangled fingers digging into the flesh of his body.

Later, the same procedure was adopted with his right hand and the left side of his chest. In each case, when permanent physical adherence had been achieved, a scalpel was used to cut his fingers loose, with a portion of the flesh of his body clinging to the tips, or, more accurately, forming new tips entirely devoid of fingerprints.

Five hitherto unexplained scars on each side of the prisoner's torso attested to the accuracy of this statement. So did the careful check made on the individuals with whom Pitts had boarded throughout the nearly seven weeks occupied by the operations and convalescences.

As a result, Doctor Brandenburg was convicted on August 4, 1942, in the United States District Court at Newark, New Jersey, before Judge William Barker, who denied a motion to set aside the verdict and immediately sentenced Brandenburg to serve three years in a federal penitentiary. Counsel for Brandenburg have made the usual appeal, but it can be stated that his career as a crime doctor is definitely ended. Even if he survives all threats to his liberty, he will be a marked man whose opportunities for evil deeds will be strictly limited.

Likewise, the demonstrated futility of either performing or suffering an operation, which, from its very nature, makes the patient for the rest of his life an object of the gravest suspicion, will probably prevent any other apostate surgeon from attempting to walk in the Jersey doctor's footsteps—which led, we have seen, to speedy and certain retribution.

THE END

★  
*Ask Your*  
**DELCO  
BATTERY  
DEALER**

*to***CHECK WITH  
HYDROMETER**

to determine if battery is in the proper state of charge. Should be checked at least once a month.

**ADD WATER**

to prevent damage to plates and separators, thereby prolonging life of battery. Electrolyte level should be checked every month.

**CLEAN TERMINALS**

to prevent corrosion and to secure good electrical connections. Insures full power from battery for cranking, winter or summer.

**CHECK FOR WORN AND  
CORRODED CABLES**

to guard against electrical failures due to short circuits and high resistance. Damaged cables should be replaced when needed.

**CHECK GENERATOR  
CHARGING RATE**

to prevent overcharging or undercharging of battery. Either shortens battery life. Overcharging is indicated by excessive need for water.

**RECHARGE BATTERY**

(if needed) to prolong life of battery. Dealer will determine and correct the cause of the run-down condition.

★

Delco batteries are available for every make and model automobile, as well as for trucks, buses, tractors and commercial vehicles. They are sold by 34,000 dealers under the direction of United Motors Service.

# *The Miles You DON'T Drive Are Tough on Your Battery*

This winter, under wartime mileage rationing, your battery is "up against it!" Those short trips at low speeds probably won't put as much charge back *in* as you take *out* for starting, lights, heater, radio and other electrical equipment. On top of that, starting will be harder, since engine and engine oils will become cold and stiff during the stretches when your car is not in use. To help protect your battery against these conditions, have it checked once a month, and recharged when necessary. See your local Delco battery dealer, whatever the make of your battery.

## IT PAYS TO LISTEN

—By Helena Huntington Smith

They're known as the Screwball Division, these 60-odd linguists who listen to all the world's radios for Uncle Sam. But there's nothing screwy about the job they're doing. Information they pick up from our loquacious enemies is helping to win the war

**Q**UITE a long time before last November 7th—the exact date has not been disclosed—a man in the Office of War Information had a phone call from an Army officer. Did he happen to know of anybody, the officer asked, who knew Arabic? No reason was given for the request, and you don't ask questions of the Army these days.

"We haven't got anybody around here," said the OWI man. "But why don't you call Harold Graves at the FBIS? They've got all kinds of people over there who talk all kinds of languages."

The FBIS—short for Foreign Broadcast Intelligence Service—is the organization that listens to the world's radios

for Uncle Sam. Its monitoring station in Washington has, besides editors and analysts, some sixty fantastic linguists on its staff—people who are fluently at home in anywhere from three or four up to a couple of dozen languages apiece. Their job is to intercept and translate the short-wave broadcasts of Rome, Berlin, Vichy and a score of lesser stations, which daily pour out Axis propaganda in more languages than were ever spoken in the Tower of Babel.

Among the monitors is Dr. Habib J. Awad, an Oriental savant who was born in the republic of Lebanon, near Syria. Dr. Awad holds Ph.D.'s from institutions of learning in Brooklyn, in Beirut, in Buffalo, N. Y., in Rome and quite a few other places, and he speaks twenty-five languages, most of which are Arabic when they are not Turkish or Persian or Hindustani or something else. His ordinary task is listening to propaganda broadcast daily by the Axis to the peoples of the Near East. He and the Army officer were duly introduced to each other.

Then, curtain. Until, on the night of November 7th, American forces landed in Africa and the little affair of Dr. Awad became one more "Now it can be told."

At the Army's request he had made recordings in seven Arabic dialects, spoken in as many parts of Africa. As a result, on the morning of November 8th, London heard a voice coming from Radio Rabat in Morocco. "*Habitants du Maroc*," it said. "*Ici le poste Américain, Secteur du Maroc*"—which was a queer way for the American Army to talk and which, freely translated, meant: "People of Morocco: You are listening to a U. S. Forces transmitter in the Moroccan sector." Then followed the Roosevelt and Eisenhower messages to the Moroccan people.

As another result, American troops are now able to address to the people of Morocco, Algeria and other countries, such useful and touching phrases as "How are you?" "Speak more slowly, please," and "Where is the movie?"

This modest contribution to the second front was a little off the usual FBIS line, which is radio intelligence. The shabby old building in Washington—it's a converted apartment house—is part of a listening network that covers the world. The United States has monitoring stations in San Francisco; in Portland, Oregon; in Kingsville, Texas; and in Puerto Rico. San Francisco and Portland listen to Russia and the Far East,

Here at the State desk of the FBIS David Goodman checks latest Nazi radio claims on a map. The desk monitors, edits foreign broadcasts for State and other government departments

with particular attention to Japanese Empire broadcasts. Kingsville listens to Latin America. Puerto Rico picks up medium- and long-wave broadcasts in the Caribbean area, which would not otherwise be heard here, and gets a few from Africa besides. Washington, of course, hears London, as well as Hitler's Europe. Much of our effort, in fact, is directed toward catching the broadcasts of our allies.

But whether we are listening directly to Berlin and Tokyo, or to what comes over from Moscow or Mexico City or London, the fundamental object is the same: to catch every scrap of information which may be flying through the air in any part of the world, about the enemy.

The real receiving station in Washington is outside the city and is connected by telephone with the old building. Twenty monitors listen in relays around the clock, and as they listen they type out summaries, which are put on the tele-

type for the Army, the Navy, the State Department, the White House and other interested customers in the government.

The monitor's job is to catch the possibly epoch-making words of Hitler or Laval through the shrieks, crackles, sputters, whistles and roars of static. At the same time he must type, translate and summarize, and his summary must hit the high spots. As a trick it is rather like the one you tried as a child rotating one hand on your tummy while patting your head with the other. Forty translators work along with the monitors, turning out complete texts of important broadcasts.

The translator can take his time, relatively speaking, but he has to work from a record playing it over and over to catch doubtful phrases. Berlin puts out a program called, in English, "Hot Shots from the Front," which is the particular *bête noire* of translators. It purports to be a genuine program of close-ups of the front and it probably is, in most cases. What with the announcer yelling, planes roaring, shells and bombs exploding, and the static, every translator who hears it for the first time has nightmares.

The enemy is not quite so smart as we have been led to believe him. Nor are we ourselves so dumb. We labor under the delusion that the democracies do all the talking. Actually, the enemy talks plenty, trying to sell his "glorious New Order" to the world. And when he talks he gives himself away. Day in and day out a careful check of his utterances, comparing them with what he said a month, a year, two years ago, gives a clue to his weaknesses and his intentions. This checking is done by the Analysis Division, composed largely of transplanted college professors. In fact, the whole FBIS organization is rife with Ph.D.'s, one of whom, Robert Devore Leigh, is the head of it. He is an ex-president of two colleges, Bennington in Vermont and Bard College on the Hudson.

The job of the Analysis Division is to point to such things as the gradual deflation of Hitler in his three October speeches, from the high of 1940 to the low of 1942. There is also the matter of inadvertencies. Most of the story of these "slips" can't be told until after the war, because most of it is military, but a few hints have been dropped. Once, an item picked out of the air in the morning had by midafternoon saved military equipment of more value than the maintenance cost of the listening post for a year—to say nothing of lives.

#### A Slip of the Tongue

Another time, quite recently, the Berlin radio was heard to say that the Luftwaffe had bombed Schlueselburg, a fort on the outskirts of Leningrad. A routine item, apparently—unless you recalled that a year ago the Nazis claimed the capture of Schlueselburg. Those closemouthed Russians have evidently taken it back.

The monitors could, if they wanted to, get out a column of news and gossip about the enemy. For instance: "Here is Hans Fritzche back on the air in Berlin. He is the slickest propagandist of all the Berlin commentators: a while back they moved him out to bolster the sagging spirits of the soldiers on the Russian front. But now they need him to do some explaining to South America. . . . Fred Kaltenbach, the Iowa Lord Hee-Haw, seems to be doing right well for himself over there. He's used for important stuff lately, could almost be called a mouthpiece of Goebbels. . . . On the other hand Robert Best, the renegade American newspaperman, is slipping, his Southern voice has been recognized in English broadcasts to North America, reading routine station news announcements *anonymously*—which is pretty clear evidence that they don't think much of him.

"And what in the world has come over Impertinax, vice commentator of the Rome Radio? Since the landings in Africa he has let slip the queerest things: that the Italians must be ready, in their time of trial, to show the fortitude of the British after Dunkirk; that Churchill is 'not without greatness.' It almost looks as though the Italians had some regrets."

London has been monitoring foreign broadcasts since near the close of the last war, but the idea of an official U. S. monitoring service, to give greater coverage and more detailed service than was possible through private radio chains or the newspapers, was not born until early in 1941. Its godfather was Breckinridge Long of the State Department, who foresaw that we might one day be cut off from accustomed sources of news in foreign countries. He took it up with Chairman Fly of the FCC, who set to work to

Glorina Paniagua, of Caracas, translates broadcasts beamed from Europe to Latin America. Her father was in the consular service and she has lived most of her life in various foreign capitals

Jacques Davidson, son of the sculptor Jo Davidson, heads the French translators in the FBIS. Right now he is translating a speech by stooge Laval which you can bet follows the directives of Berlin

An Oriental scholar who has studied from Beirut to Brooklyn, Dr. Habib Awvad speaks twenty-five languages. Prior to invasion of North Africa, he made recordings to teach our men common Arab phrases

Raiko Ruzic, Ph.D., is a Serb who has mastered the philology of the Balkans. He has just been listening to a report of the murder of 200 of his countrymen. In his way he's fighting too

Jerry McWilliams in the late hours has a cup of coffee at desk where he edits foreign broadcasts for the Office of War Information. His leads are valuable in preparing our answer to the enemy

Frances Lane monitors French broadcasts, has lived half her life in France, only escaped from Paris as the Nazi hordes occupied the city. Because her husband is still there she uses an assumed name

organize a unit. Right away there was the problem of finding a staff.

The Civil Service rolls were chockablock with translators so-called—cold linguists who could read and write a foreign language immaculately, but were hopelessly swamped when it came to catching the spoken word on the fly amid the difficulties previously mentioned. When a staff was finally assembled it was the greatest collection of individualists, international rolling stones and slightly batty geniuses ever gathered together in one organization. To the rest of the FBIS the foreign-language contingent is referred to, with sweet simplicity, as the Screwball Division.

One of its leading spirits is a black-eyed Serbian who holds a Ph.D., wears a beret and was, until recently, professor of Sanskrit, Indo-European philology and Slavic languages in the University of California. He also edited Serbian and Croat language newspapers in San Francisco, and in his odd moments he did anthropological field work among the Indians of the Southwest. He had arrived in this country in 1929 and had surprised the first girls he met by referring to them as "wenches." They didn't know he had learned his English from Shakespeare. He says: "I do not know any languages. But I have studied twenty-five."

One of his co-workers questioned the first part of this statement and said that anyhow he was wrong in his count. It should have been higher.

His main job is to listen to the Nazi-dominated Croat and Hungarian stations enlightening conquered Balkan peoples about the New Order. A Chetnik himself, he would like to listen to the hidden freedom station that broadcasts to Mikhailovitch's followers from somewhere in the Serbian mountains. But the Chetnik radio station doesn't reach this country. Instead he hears, over and over again, the Nazified stations promising to exterminate his people, the Serbs.

All of the monitors, and there are several, who left ties in occupied countries have had some bad listening to do, but none has had worse than Ruzic, who came from a city called Novi Sad. Once he heard the Nazi-Croat announcer boasting that ten thousand inhabitants of Novi Sad had been massacred and thrown into the Danube.

#### Our International Monitors

Some of the listeners are foreign. Others are much-traveled Americans, or girls who as children lived with their families in far places. One of them is Reuben Fine, seven times American chess champion, who learned German and Dutch and French abroad. One girl is half English and half French, and was brought up in China by a Russian nurse. The Portland, Oregon, station has a monitor named Bill Pollock who listens to Russian broadcasts, and to the French and German put out by Tokyo. He was born in this country of Russian parentage and spent most of his life in China, where he was correspondent for a French news agency.

For the most part, the background of the listeners is international. But there are exceptions. Leon Litvin, in the San Francisco station, knows six languages and learned them all in Brooklyn. And in Washington one of the ace monitors of the German section is David Goodman, who was a schoolteacher in Philadelphia, and has never been in Germany in his life. He listens to the Chief.

The Chief is the mysterious voice of one of the very few German clandestine stations heard since the war began. He

seems to be an old-line army man, apparently of high rank; whoever he is, he hates the Nazi political gang almost as much as he hates the Russians, the British, and the Italians; though he walks warily around the subject of the Fuehrer himself. The Chief is a hobby with Goodman, who never misses one of his short, pungent broadcasts. He certainly has access to some inside information.

#### Tip-off on Nazidom

News of promotions, demotions and intrigues in the Hitlerian high command often leaks out first through the Chief; he was the first to break the news of the typhus epidemic in the German army in Russia last winter; and he mentioned a revolt among German submarine crews landing in Portugal that was not only interesting as to the submarine crews but revealed for the first time that submarines were basing in Portugal.

So he's very important. But also his language is very obscene, and this has caused complications in the FBIS office.

Mothers of sweet young translators have called up, protesting because their daughters had read the transcripts; and a chivalrous editor has been known to sit down and peck out some of the Chief's more flavorful broadcasts himself, to spare the blushes of the teletype girl.

It was Goodman, fiddling around with an engineer one night on a hint dropped by the Chief, who discovered the second German clandestine station, Army Transmitter North. ATN purports to be a regular army station in Norway, broadcasting to the German army of occupation there. It goes through the motions of being a loyal, official army station giving news and greetings to soldiers; but every so often it jabs in with some item of heavy losses in the Luftwaffe—industrial accidents—scandalous expenditures by prominent Nazis; which makes it the radio discovery of the year.

Monitoring is all right when your own side is winning, but when it isn't, the most hardened listener will hear something occasionally that gets under his skin. There are individual ways of react-

ing to this. Big Victor Volmar, who was born in Germany but hates everything German, takes both hands off his typewriter and shakes his fists above his head, exclaiming, "It's a lie!" Ruzic swears in Serbian. One of the French monitors is an American girl who lived half of her life in France, and left a dearly loved home in Paris just one jump before the Nazi army came in.

When she heard the shame of Laval's speech, telling Frenchwomen that they could go to their husbands who were prisoners in Germany if they would work for Hitler, she went out for a long walk by herself in the night.

#### The Enemy Listens, Too

One night last fall, the monitor taking Berlin was a little surprised to hear the announcer on the other side make a sarcastic reference to the "highly paid monitors of the Foreign Intelligence Service, in their building on K Street in Washington." There followed a fairly good description of the building. Information of all kinds gets over there. An article in an American newspaper will often come back over the air waves, in the shape of quotation or comment, within twenty-four hours. If the American public could only realize how much does get over there, and how quickly, it would be more careful.

The Washington monitoring station is organized like a newspaper office. For its "customers" in the government, it operates three wire services and a daily publication, containing news of the air wherever monitored in the United States. The staff is made up of old newspapermen with foreign experience; young ones, too. Maybe it's the unique combination of newspapermen and Ph.D.'s that gives the listening post its color and its crackle. Maybe it's other things, too—the banging of teletypes, the global maps on every wall, the casual kidding in seventeen foreign languages; the feeling that something big may come over at any minute.

On November 7th it did.

The opening of the second front, as Washington heard it on the air, was a drama of Europe's radios—little stations, many of them, that had seldom if ever made the front pages of history before. This country, out of reach of Europe's long-wave, got the story flash by flash from London.

It began before the invasion itself. For days Axis-influenced radios over there had been buzzing like angry hornets, with reports of big convoys: with wild stories of Allied landings here, there and everywhere. Nobody here became much excited. It was thought that another convoy was going to Malta.

By a few minutes after 9 on November 7th, the official news was all over the world. Thereafter and for the next forty-eight hours, the monitoring rooms became a seething madhouse: but everybody had time to cheer when the flash came that the guns of Casablanca had ceased firing. Before that, for a few moments on the morning of the 8th, the radio drama and the drama of the African beaches came together. At 1:48 A.M., Eastern United States time, London heard the American voices previously referred to, coming from Radio Rabat, in Morocco.

At 2:15 London flashed the news over here. Five hours after the official announcement of the landings, this was the first direct word received from the invasion forces themselves.

A monitor's life has few dull moments, but even a monitor's life has few moments like that.

THE END

# PEACE OF MIND...

## *in time of war?*

Today no one can buy *complete* peace of mind for love or money. That must wait until the price of Victory is paid—in the mortal currency of blood and sweat and tears.

But every one of you who longs for present and future security—for your family, your country, your business—can and should do two things to help achieve that security. And to lessen today's worries.

### *With an eye to tomorrow...*

Invest every dollar you can in War Bonds. Not simply for the immediate purpose of helping to pay for fighting tools—but because you can not make a

better investment for your own future protection. After they've helped Uncle Sam to win the war, your Bonds will help *you* to educate the children, or remodel your house, or do whatever is nearest your heart.

### *With an eye to today...*

Insure yourself against all risks of potentially serious financial loss through fire, accident or someone's dishonesty.

You probably have fire insurance on your home—an automobile policy for your car. But is that *enough* protection in these extraordinary times?

Naturally you don't need *all* the kinds

of insurance offered by the Two Hartfords—there are more than 70 of them. But if you have a family—property—a job—a business of your own—useful eyes and hands—you almost surely need *some* forms of protection that you do not have now!

### *Get expert advice*

Only a qualified insurance man can tell you *which* forms of protection you need—*why* you need them—*how much* you ought to have. Talk it over with your local Hartford agent\* or your insurance broker. Two or three additional premiums are a lot easier to pay than one serious loss!

*\*We'll gladly send you his name.*

Children play with colored blocks, make friends at day nursery in New Haven. Their mothers are war workers

## Minding the Children

By Ruth Carson

**Who'll take care of Sister and Junior when Mother goes to work in a war plant? Foster homes and day nurseries have provided the answer, but thousands more are needed**

SCHOOL hours are long in the Scranton district of New Haven, Connecticut, but that's no punishment. Mothers can go about their business with free minds—operating machines in some of the war plants of New Haven. They know their children will have a good hot lunch in the middle of the day, and after school will be kept too busy for mischief. They will call for the youngsters at 5:30, and no back talk about early supper and early to bed after such a day.

That goes for the six- to twelve-year-olds. They used to bring their kid brothers and sisters along, too, for Teacher to mind, until a nursery opened in the neighborhood. Now there's room for forty-five children, ages two to five, in

the nursery. Their mothers deposit them at 6:30 in the morning, pick them up at any time up to 6:30 in the evening. In the twelve hours between, the children play in the big, sunny room that was the living room, and outdoors in the back garden. They have a quiet time in the former library with crayons, picture books and storytelling, have naps on canvas cots in the big upper room, have their midmorning fruit juice or milk, eat noon dinner off gay pottery dishes in the dining room. A nurse is on the lookout for colds and such, and there's an isolation room upstairs for sick children.

Twenty kindergarten children from the Scranton School, besides, are brought over each day after their school for lunch and naps and play. Between the school and the nursery, it's a perfect setup for over a hundred children and their working mothers. The cost to them is an average \$1.35 a child for play school, \$3.25 for the nursery, for a five-day week. The rest of the money comes out of federal

funds, with volunteer work cutting costs.

This is a pleasant and popular answer to the plaint rising louder and more widespread: that something must be done about it—the delinquency, the crowded nurseries and not enough of them—now that mothers have had to go to work.

It will be repeated as often and as fast as defense-area communities can make the necessary arrangements. They need to apply through their local boards of education for the money, already voted under the Lanham Act. When they prove themselves eligible, they'll get enough to cover the cost of teachers, helpers and materials, except food. Fees from parents take care of that. Many of the 1,500 former WPA nurseries will carry on this way. Besides, established nurseries in war-crowded towns are already filled beyond capacity, and more are being opened whenever mothers themselves or communities can swing them.

There is too much confusion, rapid change and makeshift arrangement for

any accurate figure on national need, but there are plenty of indications. Seattle alone has 1,431 children registered and waiting for care by the day, and at least 10,000 more need it. San Diego, packed to its roofs with war workers, wants one day-care center within a radius of every three blocks. It has eleven former WPA nursery schools and expects to open more nurseries at the rate of one a week—as long as the facilities and trained personnel hold out. They have 430 foster homes registered, where 1,200 children are cared for by the day or full time, and the number mounts each day as pleas go out via press, radio, church and labor unions. And they want to treble it at that.

Washington has three recommendations to make besides urging mothers of small children to stay home if possible. One is nurseries. Second, play schools. Third, foster homes by the day, which means something like leaving the children with the neighbors, only under an organized, supervised scheme that can make the system work on a big scale, among strangers.

"What we need," says Mr. Howard

PHOTOGRAPH BY LARRY MONAHAN

....."I helped cook 'em in my kitchen!"

"This is more of a woman's war than any war that has ever been fought!

"From the heroic nurses of Bataan . . . to the women at home faced with the problem of preparing nutritious war-time meals for their families . . . we're all playing a vital part in helping to win this war.

"But there's another way we can show our patriotism that many of us have probably never considered . . . and that is by avoiding wasteful use of Gas . . . in cooking and especially in house heating and water heating.

"Most people think of Gas only as a household fuel . . . the truth is, it's also used in making nearly every kind of fighting weapon that goes to our men . . . planes, ships, tanks, guns, bombs!

"Gas makes them faster . . . and that means lives saved! It's much more economical . . . and that affects all our pocket-books. It's easier to control . . . and that means finer planes, better equipment for our husbands and sons!"

### MEETING WARTIME NEEDS

**1. For Gas fuel.** Today the Gas industry is producing more Gas than at any time in history. Yet because of the difficulty in transporting fuel oil and coal to make manufactured Gas—and because of the shortage of materials with which to enlarge plants or build new natural gas pipe lines—there may be times in some sections when the demands of war production will reduce the amount of Gas normally available for household use. It is for these reasons you are urged to use Gas wisely—don't waste it!

**2. For nutrition information.** If you are one of the 85 million who depend on Gas for cooking, feel free to ask your Gas Company for the latest information on preparing nutritious wartime meals.

Hopkirk, director of the Child Welfare League of America, which heads up much of the privately organized child care in the country, "is to crack the tradition that schools should stay closed all summer and dark after hours. Communities need to learn new ways to organize play schools and foster home care."

Some of them have. In Seattle, the public schools now supervise two after-school play programs till six each day. A church runs and finances another. In half a dozen cities, including Boston, New Orleans and New York, the Play Schools Association has for years supported day-long summer play schools, using public-school buildings and grounds, hiring its own teachers out of privately contributed funds. Now Public School 169 in New York, for one, stays open after hours each day. At five, block mothers, taking turns, call for the children.

It's a help to have an association to foot the bills, but it isn't essential. At the Scranton School in New Haven, for example, the \$1.35 which is charged the parents by the week covers only the cost of lunches and one paid director. The school donates the use of its building, and students from New Haven State Teachers' College make up the rest of the staff, free.

One of the most important jobs that trained social workers can be spared for is the finding and supervising of foster homes. Three quarters of the children of war-working mothers, if they get care at all, probably will get it in private homes. This is the system most mothers have always depended on, hit or miss, leaving the children with relatives or neighbors. But now, under the present pressure, it's bogging down. You find mothers reluctant to leave their children in someone else's home.

They need a check on homes where they might leave their children. Some states give it to them by licensing. The homes need careful local supervision as

well. That foster day care can work with such supervision, the First and Sunnyside Day Nursery in Philadelphia, acting as a foster home agency, has been proving for years. They put up safeguards like these: Foster families must furnish references and certificates of health, be congenial, have their own income, so that profit is not the main aim, and be willing to take supervision. Only families with similar enough backgrounds, even to grammar, are combined. All arrangements about fees, hours, diets, etc., are made through the nursery's social worker. Complaints, suggestions and questions come to her.

To rally all its possible foster mothers, its schools, its possible nurseries, to discover exactly what needs doing, Wash-

ington recommends that each community organize, combining the forces of all the local social agencies, boards of education, O.C.D. etc., etc., so that there is no overlapping, and each has its special job to do.

More than thirty states now have their state Child Care Committees, to give supervision and advice. The Children's Bureau is ready with help on standards and specific advice on what to do. It's under way—the big job of taking care of the children of working mothers. But how well it is finally done comes back to each community, and how much it matters to everyone there. A lot must be done about it, and a lot of people must do it.

THE END

*"Yours is far from being a simple task, Nogo. You're to find some excuse to negotiate with the United States for more scrap metals"*

## Top Billing, No Cooining

Continued from page 14

curse. Verna went on proudly. "Gordy's going to be a star some day—a really big star—and the happiest person on earth will be his wife."

So, they were married in Yuma the following morning. They bought a home in the valley, and everything was peaches and cream for about seven months.

Varsity Stomp hit theater screens about a month before the Japs hit Pearl Harbor. It was the first feature in which Gordon and Verna had been co-featured, and if you saw it, you know it was a honey of a picture. You also know that Gordon mugged too much and that Verna stole the show.

Carl Denman, the producer, invited the three of us to a private screening before the picture was ready for release. When it ended, Denman gave Verna a pleased smile, then said to me, "Mr. High, it looks like we've got a hit on our hands, and if I'm any judge, you've got a star in your vest pocket."

Verna Jason's eyes sparkled. "Oh, Mr. Denman, wasn't he marvelous?"

Denman chuckled, glanced my way to see if I was making the same mistake. I wasn't and he knew it, so he said no more.

I didn't sleep well that night. Both of their contracts expired with Varsity Stomp, and Denman had agreed to generous terms for the renewals, even before the picture was out of the cutting room. But telling the kids was going to be an ordeal I didn't relish.

It was late afternoon the following day when they came into my office.

"Hello, Tenper," Gordon greeted me with a brash self-confidence that made him swagger. "What gives?"

"I've got your new contracts," I announced. A sly appraisal of their expressions gave me a hint of what they expected. Verna settled in a big leather chair and crossed her pretty legs: her soft smile told me that anything I had arranged was okay with her. Gordon's cocky manner was a curious mixture of bluff and apprehension. He was expecting the moon, done up like an Edam cheese, and he was going to be sore if he didn't get it.

I CAME right to the painful point: "Denman is pleased with both of you, and he wasn't hard to do business with." I looked at Verna. "Honey, you get a five-year contract, starting at seven-fifty a week, with increases every six months."

Gordon whistled an exclamation point.

I continued to Verna, "You get top billing, except when you're cast with one of the studio's ranking stars, and you get your name above the title in one 'A' picture the first year." I paused to watch the happy mist come in her eyes, then went on, "Sweetheart, for a little Iowa girl who has hardly got the straw out of her ears, that ain't hay."

With a squeal of delight, she flew out

of the chair and threw her arms around my neck, kissed me on the top of my bald head. "Tenper," she cried, "you're an old darling."

"DeMille was right," I said, taking her soft, warm hands in both of mine. "You got no more than you deserve."

Gordon Dykes broke in. "Didn't I always tell you she had it in her?" He stammered a little, working up his courage to ask, "And what juicy plums have you got for the man of the house?"

"You're coming up in the world, too, Gordy," I said as brightly as I knew how. "Denman has given you a hundred-dollar-a-week raise, and he wants you to play the lead opposite Verna in her big picture. It'll be a musical and your part will be a stand-out."

It was a deathly silence that engulfed us. Gordon drew in a deep breath, expelled it quaveringly. "Well, now," he finally managed to say in a hoarse voice with a sarcastic edge, "isn't that just dandy!"

"But, Tenper," Verna said bewilderedly, "that can't be right. Gordy will be getting four hundred to my seven-fifty."

Dykes wheeled on me fiercely. "And what about my billing in Verna's picture? Are we co-starred—with both names above the title?"

I slowly shook my head. "No, it's Verna's picture, but you get top billing above the rest of the cast."

The corner of his lip curled. "And I suppose I'll be billed Mr. Gordon Jason."

It was a cruel thrust that made Verna cry out, "Please—Gordon—don't be so sarcastic. It isn't Tenper's fault."

He ignored her plea, shot out an exasperated hand. "So this is what Denman wants to hand me after the performance I gave him in Varsity Stomp."

"Wait a minute, kid," I reminded him. "Verna was good in that picture, too."

"But it was my hoofing that made it a hit."

"Let me show you something," I said. I had my secretary bring me a sheaf of tear sheets from the key newspapers around the country, showed him ads the exhibitors had run on Varsity Stomp. "There's your answer," I said. "The studio advertising department gave you top billing in the press sheet—but do you see what the theater managers have done? They've lifted Verna's name out of the cast and put it above the title—'VERNA JASON—Sensational new star in Varsity Stomp.' The managers know better than the producers, what the fans want." I showed him some clippings. "Read those reviews. They say you're okay—but they rave about Verna."

VERNA'S hand quivered as she touched my arm. "Please—Tenper—" she almost whispered. Deep hurt in her eyes begged me to say no more. Then she asked, "Where is my contract?"

"In my files," I said.

"Get it for me," she demanded.

"Why?"

"So I can tear it up, of course," she said with finality.

"I can't let you do that, Verna," I said. "This is the big chance you've been working for."

"Please—" she insisted impatiently.

Then Gordon Dykes showed his nasty streak and threw the fat in the fire. He swung around and faced her.

"Don't be so noble!" he snapped. "You've made a fool out of me, now take your reward. All the time we were shooting Varsity you used every trick in the book to steal scenes from me, but because you were my wife, I let you get away with it."

Shocked and hurt, Verna could only stare at him in amazement. I half rose out of my chair, wanting to bust him in the mouth, but caught myself in time. This wasn't Gordon Dykes talking to the girl he loved; this was the hardened veteran of one-night stands, slugging it out for bows. Get those bows!—no matter how many dead bodies you must climb over to get them.

"Gordy—" Verna said pitifully, "you didn't mean that, did you?"

No sign of repentance tempered his anger.

When he didn't answer her, I said, "Your day is coming, Gordon. Stop trying to four-flush your way to the top and the sky's the limit of what you can get. You've got looks, you can act, and Astaire hasn't got a thing on you as a dancer; but the close-ups give you away. You smirk and you swagger too much—like a drugstore cowboy trying to pick up a chorus girl." I hadn't intended to give him both barrels, but somehow it came out of me.

For a second I thought I'd driven home my point; he was jarred a little and fear dulled the bitterness in his eyes, but a moment later he was back in character again.

There was violence in his voice as he said, "Under the circumstances, you won't try to hold me to my contract with you, will you?"

Further discussion was useless. "No, Gordon, I don't want any unwilling clients."

Verna ran to him, threw her arms around him, pleaded, "Gordy—darling—"

He roughly tore her loose, a moment later the door slammed behind him.

Verna broke down and cried as if her heart would break. She was like a brutally beaten child as I took her in my arms and silently cursed the guy who invented the star system.

"Don't cry, honey," I begged. "He'll get over it."

She tried to rally her composure. "No, Tenper," she sobbed, "he won't." Her eyes accused me. "You've hurt his pride too deeply."

"But somebody had to put the boy wise to himself," I defended myself.

She pulled away from me and dabbed

her tear-smear face. "Did you have to be so brutal about it?"

That gave me the cue! So help me, they'll do it every time! I was going to end up being the villain!

"You can't be subtle with a guy like Gordon," I insisted. "You've got to hit him with a pile driver."

"Well, you did it, all right! And you've smashed my life in the bargain." She started to cry again.

Now, she had me hanging on the ropes! Of all the nice, reasonable people there are in the world, I picked actors for clients!

"Okay, honey," I admitted grudgingly, "so I'm a heel! But I thought it was for his own good. And I don't think it will make any real difference between you two. I don't want to see you split up, so why don't you go on home, the two of you get good and mad at me, then kiss and make up and call me and say you want to sign your contracts?"

I never was any good at being facetious. Without another word, Verna Jason walked out of my office.

Later that afternoon, I called her, but she wouldn't talk to me. Two days later I received a note which read:

"Dear Tenper:

"I've lost all heart for the picture business and I'm going home—as soon as I've completed an unpleasant little chore in Reno. Please be a good egg and tear up my contract. Verna.

"P.S. No hard feeling."

**MY CONSCIENCE** was soothed a little, but the consolation was as phony as the whole Hollywood racket. Her forgiveness didn't change things any. They hadn't kissed and made up; she was divorcing him—and all because of a crazy worship of big type, and high salaries—most of which goes to the government, anyway.

Ordinarily, the kids' bust-up would have rated quite some recognition in the public press, but it only got a few lines in a couple of columns. Newspapers were concerned with something of far more importance: The Japs!

Carl Denman almost wept when I told him he had lost Verna Jason. About Dykes, he was indifferent; but for a long time he thought I was giving him the run-around with Verna.

Three weeks later, Skolsky's column gave me my first news concerning new developments. The paragraph read: "Gordon Dykes has signed a new contract—with Uncle Sam. Being a morbid little character at heart, we informed his mate by long distance. She is in Reno on a melting mission. Our scouts tell us that two hours later, she checked out of her hotel and took a plane for L. A., but the lady was too late. The Army had poured Dykes on a train half an hour earlier, and he was on his way to Miami for training in the Air Corps. Prediction: The Air Corps will wash him out quicker than filmidom did; they want their struts on planes, not in them."

After searching for half a day, I located Verna in a small Glendale hotel. Denman's contract burned in my inside coat pocket—just in case. We had dinner together and she told me everything that had happened.

"Oh, he wasn't nasty about it, Tenper," she said wistfully. "He just said he couldn't play second fiddle to his wife. I offered to give up pictures entirely, but he wouldn't agree to that, either. He said he'd feel like a dog in the manger every time he looked at me. I asked him if our love wasn't bigger than his pride, and—" her voice broke a little, "he said a man who couldn't keep up with his wife, was not entitled to her in the first place. He asked me—insisted that I go to Reno at once."

"Why didn't you go through with it?" I asked.

Her eyes took on a bright glow—like any proud wife whose man has gone off to fight for his country.

"I—I thought his going into the Air Corps might make a difference. He's out of pictures, now, for the duration. No matter how great a star I might become, I could never have a chance at a real hero's role." She sighed as if the stanch heart inside of her had lost its hope. But—well—judging from what I hear

"I must be bad for his morale. Every time we have a date he hates to go back to camp" LOUIS PRISCILLA

about his conduct the week before he left, I guess we think differently about that, too."

"What are you going to do, now?" I asked, as casually as I knew how. It wasn't casual enough.

She reached over, patted my hand, smiled. "Well, one thing I'm not going to do, darling," she said, "is sign that contract you've got in your pocket."

I laughed. "You and Superman—with your X-ray eyes!"

It did my heart good to hear her laugh a little.

"I'm going home to the folks," she announced, as if the decision eased her mind, put things straight.

"Not going back to Reno?"

"Not for a while at least."

"Still hoping?"

She nodded. "I love him, Tenper—desperately."

**M**ONTHS followed with very little news from either of them. Verna wrote once or twice, but said very little. The columnists had an item or two about Gordon Dykes—all bad. Shortly after he landed at the Miami training camp, some Air Corps wag hung a sign over the mess hall entrance: "HOLLYWOOD'S FINEST UNCURED HAM IS SERVED HERE THREE TIMES A DAY!" Any day, I expected to read that he had been washed out, decided finally that I had just missed the item.

It was late in September that I ran into them again. I got a long-distance call from Phoenix, Arizona. It was Gordon Dykes! Pardon me, it was Second Lieutenant Gordon Dykes, U. S. Army Air Corps.

"Hello, Tenper," he said. "I'll have three days' leave in L. A. starting the twenty-third, and I'd sure like to see you. Suppose you could let bygones be bygones and have dinner with me some night?"

"Why, you're darned betcha," I said, and I felt like a sentimental old fool.

"And—Tenper—well—" he stammered.

"Yes?"

"Uh—by any chance—uh—do you know where Verna is? I've got to see her, too—I've got to."

I promised to do what I could; ten minutes later I was typing out a telegram to Verna in care of her folks. She wasn't at home after all, but they forwarded it to her, and I got an answer the next morning, saying she would be in Los Angeles the evening of the twenty-third—and the wire came from Des Moines. That should have tipped me off, but it didn't.

Gordon came right to my office as soon as he arrived. It was late in the afternoon, and he was a sight to see.

Hollywood's make-up boys can perform some rare miracles of transformation, but they're a lot of amateurs compared to Uncle Sam. The handsome, straight-backed young officer who stood for a moment in my doorway before he entered was no more the fresh punk I'd known as Gordon Dykes than Hitler is an angel. His loose, swaggering frame had been knit into a uniformed figure that had smartness and dignity. The hammy haircut was gone, his face was lean and brown, and—well, he truly had the look of an officer and a gentleman. I'd have been proud to be his dad.

He allowed a bare five minutes for conventional greetings, then an eager gleam came into his eyes. "Tenper—did you—Verna—?"

I smiled, nodded slowly. "She'll be here at 7:40 tonight."

The grip of his strong fingers pushed together all of the bones in my hand.

He insisted that we go to the depot

half an hour earlier than the train was scheduled to arrive. Then twenty minutes late, the train arrived and passengers began to stream through the doors.

"Watch all of the funny hats," Gordon said nervously. "Verna goes in for crazy hats."

We were still watching the door when a familiar feminine voice spoke at Gordon's elbow. "Good evening, Lieutenant."

The voice was wearing a funny hat—sort of like a coffee can with a bill like a Ubangi's lip. But on Verna, it looked wonderful!

Gordon swung around, a little annoyed that he had to take his eyes off the crowd. Seeing vaguely the trim figure of a girl in uniform, heels clicked together and right hand snapped upward in a crisp salute, he remembered his military manners well enough to start his own arm upward in answer.

His hand never reached his forehead. "Verna!" he cried. "You—a Waac?"

The next instant, a couple of soldiers were in each other's arms. Well, the clinch is old stuff in Hollywood, but not the way that one was handled. Doug Shearer would give his eyeteeth to shoot a scene like it—then Will Hays would throw out the whole sequence because it was too long and fervent.

Lying in bed that night, I got to thinking about all of the things that had happened to those two kids. Why, it was like a tale by Ripley. Then I snorted and turned out the light. What was odd or different about their story? Why, Hollywood has been making that same yarn over and over again for years. Boy meets girl, boy loses girl, boy gets girl! Nuts! It didn't even have a good sock finish!

But then, those thoughts came to me before I accompanied Gordon and Verna to the depot three days later. Gordon was on his way to a destination which the censors wouldn't let me tell, even if I knew.

The lieutenant was carrying a small handbag and a roll of magazines. Verna clung to his arm proudly as if she knew he was off to win the war singlehanded. As for her personal happiness, I could see it was complete; their three days together had been heaven—and she had a memory tucked away in her heart that would last for the duration—or forever.

**T**HEIR farewell kiss was fond, but not mushy. Then, just as Gordon was about to go to his train, he faced Verna, clicked his heels together, his frame went rigid, and he gave her the snappiest salute she'll ever get.

"Goodby, Captain," he said.

For a split second, Verna's face paled and fear gave her eyes a startled look. Gordon was grinning broadly.

He said, "Still getting top billing over me, aren't you, darling?" Then he laughed as he folded her in his arms again.

Relieved but bewildered, Verna asked, "How did you find out I'm a first officer?"

He handed her a national picture magazine from his collection.

"I skimmed through this while I was at the newsstand. There's four pages in it devoted to the Waacs. One of the pictures shows you with double bars on your shoulders. Put them back on, my sweet, and don't ever again take them off."

"I hoped you wouldn't find out," Verna said, guiltily.

"And why not?" he asked. "You always were a better man than I am." Then he kissed her again—and in a way that told her, as far as he was concerned, she could be his superior officer for life.

# The Jean Bart Hoists the White Flag

By Kurt Juhn

ILLUSTRATED BY  
HARDIE GRAMATKY

THE battle for Casablanca was raging. Like thunder, the powerful voice of American guns spoke to the town. French guns answered back, but the guns of the huge battleship Jean Bart, which lay majestically in the harbor, roared the loudest.

The discharge of the French and American guns shook the air and rattled the windows of the beautiful houses on the Boulevard des Quatre Zouaves, nine of which belonged to the wealthiest resident of the city, Abd-el-Malek. He himself dwelt in a palace, the most magnificent of the lot.

But Abd-el-Malek had not always led

such a sedentary life. In his youth he had been chief of a tribe of Berbers, the most predatory in the Atlas Mountains.

The story of his assuming respectability was common gossip. Twenty-eight years ago, when the French were putting on a great fair in Casablanca, which then was called Dar-el-Beida, the Berber chief rode into town at the head of sixty horsemen. He had expected to spend a few days in seeing the sights but he never returned to his mountains.

Strangely enough, it was not the fair that caught his fancy, but the great cranes at work on a near-by building project.

Riding over to the man who com-

manded an army of laborers, the Berber questioned him. They were erecting a building of many stories, the man said, each story to house a separate family.

Abd-el-Malek inquired how much rent each family would pay and then he did a little mental arithmetic, at which he was an expert. The result immediately revealed to him that it was much more profitable to be a landlord in Dar-el-Beida than a brigand chief in the Atlas Mountains. A man of quick decisions, he immediately changed professions.

But it was now November, 1942, and Abd-el-Malek was sixty-seven years of age. A white turban on his head,

The Berber peered out at the harbor. Without turning, he said, "Your destination won't be Marrakech or Tetuán, or even Rabat. You'll stay in Casablanca

wrapped in a white burnoose, he sat—as was the custom of his fathers—on a rug on the floor of his Moorish hall.

Across from him in a soft leather armchair sat Mr. Heinrich Hoff, who held in his trembling hand a small porcelain cup of steaming Mocha. With folded arms, three huge Arabian servants stood on guard before the three French doors, their watchful eyes on Mr. Hoff.

The Berber listened intently to the dispute of the guns and stroked his well-groomed beard which still was raven black.

"Allah is the Lord of all battles," he said at last. He rose and walked to the window, and at that moment an American bomb scored a direct hit on a French battleship. Fire broke out at once, and smoke enveloped it.

"Allah has spoken!" Abd-el-Malek smiled serenely and resumed his place upon the rug. "Did you see that, Monsieur Hoff?"

"Such successes are but temporary!" retorted the clean-shaven German with the long, avid face. "I warn you of hasty actions, Abd-el-Malek." Then in a shaking voice he added, "When the German fliers arrive, the whole spectacle will be over. The arm of our Fuehrer is more powerful than you realize!"

"NO SULTAN is more powerful than Allah," the Berber said. "But it was not for the purpose of argument that I invited you here, monsieur."

"Invited!" Mr. Hoff said indignantly. "Your three servants forced their way into my residence and brought me here against my will! But you'll regret this action, Abd-el-Malek, for, as a member of the German Armistice Commission, I am inviolable!"

Abd-el-Malek raised his eyebrows. "Why, then, is your car waiting before your house fully packed and ready for flight, Monsieur Hoff?"

"Flight?" the German scoffed. "Ridiculous! I'm off on an inspection trip to Marrakech, that's all!"

Abd-el-Malek smiled indulgently. "Then Allah—praised be His name—has afflicted your chauffeur either with madness or with deafness. He reports that he is to take you to Tetuán. And Tetuán is in Spanish Morocco, monsieur."

"That idiot!" Mr. Hoff paled with anger. "Marrakech, I said, not Tetuán!"

"Marrakech or Tetuán—Allah will decide your destination," Abd-el-Malek asserted calmly. "Anyway, it has no bearing on our present dealings."

Mr. Hoff was about to interrupt, but the Berber silenced him with an imperative gesture. "Today, Monsieur Hoff, I shall talk. For, ever since it pleased Allah to send your elegant figure into the field of my vision and your prudent words into the range of my hearing, you have talked to me, and I have said very little. When you first appeared in Casablanca six years ago, your occupation was to trade in the little pictures with toothlike edges, which give wings to the letters."

"Yes, yes." Mr. Hoff nodded impatiently. "I was then a dealer in stamps."

"It was in this capacity," Abd-el-Malek continued calmly, "that I made your acquaintance. For I myself—grown childish according to the will of Allah—collect these little pictures with the toothlike edges. And each time you visited my humble house, you told me of your

(Continued on page 61)

# THE HUNTERS

By Mary Hastings Bradley

ILLUSTRATED BY ELMORE BROWN

## The Story Thus Far:

WHILE living in Africa, Michael Garrick is jilted by the girl he loves—Claire Alloway—who marries John Winston, in England. A few years later, Garrick marries and settles down on a Uganda coffee plantation.

The Garricks have an attractive young neighbor: Robert ("Bob") McNare. Mrs. Garrick—"Tommy"—and he fall in love; and when he goes to England to take over a baronetcy he has inherited, he tells Tommy that, some day, he will marry her. When he finally returns, however, he is accompanied by a beautiful blond widow whom he had met on the boat coming out; and it is obvious that he is infatuated with her. The widow is—Mrs. John Winston!

When they meet, Michael and Claire pretend that they have never before seen each other. . . . At Bob's suggestion, the four—Claire, Tommy, Michael and Bob—go to the Congo for a long lion hunt. Alone with Claire, at times, Michael learns that she is a conscienceless flirt—and worse—who is hoping to get a title by marrying young McNare.

One night, Tommy and Bob start out on an all-night lion hunt. Realizing that he will be alone with Claire for several hours, Michael (who is desperately unhappy) decides to give the scheming widow a much needed lesson—and incidentally save Bob. He goes to her tent (where she welcomes him) with some whisky. It is his intention to commit suicide by taking poison (he has a very bad heart, and no one will know he has killed himself), and leave two empty glasses near Claire's cot—evidence that may convince Bob of the woman's faithlessness. . . .

A Belgian trader informs Tommy and Bob that war has been declared. They give up their lion hunt and return to the camp. There they find Michael and Claire together, in Claire's tent. Taken by surprise, Michael has no chance to "die of heart failure"; and he and Claire convince Bob that Claire, suffering from a chill, had called Michael in to help pull her through it!

Both men decide to return to Uganda, at once, and join the British army. On the way back, Claire and Bob (in the same car) stop near beautiful Lake Bunyoni. They chat for a few minutes. Then Bob says, "Shall we get on? There's a mist coming up." "Wait," Claire replies, "till I light this cigarette."

## Conclusion

FOR a few moments Claire smoked silently. Then she began to talk about the return. She said, "I expect my uncle is pacing the floor, wanting to get off. He'll want to get into it and there isn't a thing he can do, poor dear, at his age. . . ." And then, very casually, "How soon do you think you'll be going back?" and her eyes, luminous, expectant as a child's, held their quiet gaze on Bob.

He said slowly, "I don't know. . . . Have to see how things are here."

"But your plans—? Your plans for England—?"

They had been her plans but he did not contradict her. He told her, curt in his discomfort, "I couldn't go in for politics now."

"Oh, not for politics, perhaps. I grant you. But you'll want to do something—get into some war work. If you're there, on the spot, you can get some position now."

He drove on slowly, braking against the steepness of the descent. She waited, her eyes still on his face. It was a stronger face, she thought, seen in profile than straight on. His mouth was clear cut and his chin was blunt. Michael had said Bob could be stubborn.

She threw all her charm into her smile—but he could not see that—and into her voice, making it soft and caressing.

"You aren't going to disappoint me? About coming back?"

"Would it disappoint you?"

"Rather badly."

That stirred him. His eyes flashed toward her then back toward the road. There was so much fire and feeling in the glance that she was astonished he said nothing. She looked down at her hands. Distressingly brown, she thought. But it was wise not to wear gloves in the car. Her hands were ready to slip into his, if he took one off the wheel.

Still he was silent. Then he said in a troubled voice, "Don't you understand how a man might feel at running away from his own place? With a war on?"

His own place! Some slipshod coffee farm, high on a Uganda hill! Sarcastic retorts trembled in her but did not pass her lips. She said gently, "England is your place."

"But if I'm needed here?"

"How can you be needed?" Her impatience showed now, but she could not help it. The man was infuriating, she thought, with his stupid hesitation.

"I imagine there'll be a lot to do. Depends on Italy," he said thoughtfully. "I don't trust Italy. She'll swing toward Hitler. And with Italy in Abyssinia—"

"Abyssinia doesn't matter!"

"Ah, but she does! To Africa."

"Oh, Africa!" (Continued on page 57)

Michael was standing by Claire Winston. Tommy wanted to cry out to him but the time for that was gone, and there was nothing to do but keep the tears back and smile up at him

They were motionless for a moment. It was Chapman, always quick with a gun, who fired first

## The Face of Danger

By Harry Sylvester

ILLUSTRATED BY WARREN BAUMGARTNER

War itself never devised a grimmer test than met these three — young, unthinking and arrogant with a self-confidence they had not earned

THE light hurt their eyes. It had become gradually stronger as their car traveled the road that here passed the bluffs of the Staked Plain, and now that it was full morning, Joe Darrell could see streaks of tenuous blue and pink where the plain rolled a long way ahead of them.

They had passed through Las Vegas in the dawn and now were going into the mountains. They could see them ahead, where the road wound, the east slope of the Sangre de Cristos, and they thought that was an odd name for mountains. They were all young and when they finished college in the spring they were going to be ensigns in the Navy. But now they were driving a fast car into mountains they knew nothing about, and going to a mountain village whose picture

they had never even seen, to hunt bear with high-powered rifles they had never handled very much.

The rifles were in the back of the car, carefully packed by someone else in oil and sheepskin, lying there with other, more useless items such as maps, binoculars and vacuum bottles.

It was Mike Chapman, driving the car, who first noticed that the light was making his eyes smart. When he mentioned it to the other two, they noticed it in their own eyes, and Joe Darrell said something indistinctly about it being a strange country.

Eddie Bonham, the third one of the hunters, said, "I bet we get one the first day. I feel lucky."

"I'd like to meet some of these mountain girls," Chapman said.

"It was bears we came here to hunt," Joe Darrell said.

"But I'm not that particular," Chapman said.

"None of us are that particular," Bonham said. "Except maybe Joe. You're that particular, aren't you, Joe? You come to a place to hunt a bear and you'll hunt the bear, won't you? Come blondes

or hard liquor." Joe Darrell smiled only thinly.

Climbing, the motor began to knock, and Chapman stopped the car where the road forked and they looked at the small, white wood markers, with the names almost weathered off them. Strange names that meant little or nothing to the hunters. El Valle, Trampas, Vadito and Penasco. They took the road to Trampas. This road was even narrower, and, in shade, patches of fresh snow still lay although the sun was white and strong in the clearings. Big pines rose above them, and against the pines, the now almost leafless aspens were pale like the birches of their Eastern country.

They came on the village suddenly, winding down a little now through a pass, and seeing first the few outlying houses along the road and the empty corrals. Then they were in the village with its mud houses grouped roughly around a shapeless plaza and the surprisingly big, square, mud church rising over them, grave and somehow sullen. The plaza was deserted except for a horse and buggy tethered to a hitching rail, and they could see only one store

with the post-office sign out and some beer advertisements on the outside.

They went into the store and a grave-faced woman of thirty looked at them without curiosity from behind the counter. Mike Chapman tried out his Spanish on her: "*Como esta, Señorita?*"

"*Buenos días, Señores,*" she said, and added, in English, coloring slightly, "am a *señora*."

"We are looking for Estevan Mirabal," Chapman said. "The bear hunter."

"Estevan is away," the woman said.

"Will he be back soon?" Bonham asked. "We have only a few days and we'd like to shoot a bear."

The woman spread her hands slightly. "Perhaps tonight, perhaps tomorrow. There has been bad trouble here. And the men are mostly out with Estevan Mirabal, who is also the sheriff."

"What kind of trouble?" Joe Darrell said.

The woman looked at him, appraising him quite thoroughly in a brief glance and liking, or at least trusting him as she did not trust the other two. "The night riders," she said. "It is not a thing we

(Continued on page 66)

## *Spirit of 1943!*

Modern methods, modern efficiency—but the same old flaming spirit of 1776. What else could give men the *vitality* to produce tanks, guns, planes, armaments in such enormous quantities? What else could enable the railroads of America to handle millions of troops with such precision and smoothness...to haul *twice* the tonnage of war materials pre-war

experts estimated them capable of...to take over the great oil and miscellaneous cargoes of coastwise shipping, and yet keep war transportation rolling smoothly? That spirit, as much as mechanical excellence and natural resources, is America's tower of strength. Its "secret weapon." Pennsylvania Railroad is proud to pay tribute to it, and to be a part of it.

## The Hunters

Continued from page 53

"You don't think Africa matters?"

She was sweet-spoken again: "Of course. So does India. And Australia. And all the Empire. But London's the place to be. That's the heart of everything. You could help direct things there. Get some appointment. Something that will give you a commission."

"I don't need a commission to fight."

"Sir Robert' would be quaint in the ranks!"

He grinned, a little ruefully. "Dare say you're right. But I can get a commission out here."

"And do what—?"

He did not answer for a moment. Then he said, quite detachedly, "You don't think much of the life here, do you?"

"Oh, I do, but—"

"I mean—you wouldn't want to live it?"

"I?"

The amusement in her voice was like a mirror held up to him, a mirror in which he could see her beauty and her uniqueness and her delicate, luxurious requirements.

He said hastily, "No, of course not."

"I couldn't—really," she said gently.

Well, that was that. He thought, "Now I know where I stand." At least where she stood. No Africa. He had hoped the war might make a difference. . . . No, he had not really hoped; he had realized, ever since their talk, what her feeling was, and he had been ready, against the grain to be sure, to yield to her—at least, he thought he had been going to yield.

He would have told her so, when he returned from the boma, if he had not come back to that scene in her tent which still gave him a disagreeable feeling to remember. That had put him off, that, and the hurry and work of the trip.

Claire was talking again, very earnestly and eloquently, but he was not going to be rushed. He was surprised at his reluctance to be rushed; out on the plain he had rather wanted to be swept off his feet and have the thing decided. He had felt it was decided the day that Michael had blackguarded her so foully, and all the time in the boma he had been wondering whether to tell Tommy in advance or not.

IT WAS a good thing he had to watch the road, for then he could not look at her; he had only to resist the things her voice was saying, and that was not so hard, for he did not like those things. He did not want a desk job; he didn't see himself as a bureaucrat. He wasn't looking for a chance up the ladder. This wasn't what this war meant to him. It was chilling to romantic feeling to find this ambition in her—

She broke off. She had said, "There are bound to be shake-ups. And a new man—" In a different voice she said, "Perhaps I'm prejudiced." She paused and then, deliberately, "Because I'd like so much to have you in London."

The car gave a little jump as his foot pressed harder on the accelerator. He said, impulsively, "I'd like to be there with you." Then his shoulders squared to the antagonism that moved in him, and he reiterated, "But I'll have to see how things are—whether I'm needed, out here."

"And if you're not—?"

She said that lightly, laughingly almost, because, for the first time, she was unsure of her hold over him.

"If I'm not—"

He left that unfinished. "I'll have to see," he soberly repeated.

There is always something triumphant about a safari which returns intact, without injury or disunion, and to have this particular safari, with its elements of antagonism, return in outward accord was an achievement. Michael Garrick thought ironically. The war had done that; concern about the war had bottled up the animosities so near explosion those last days in camp.

Then, too, the motoring had kept them separate. He had felt rather done in, for a couple of days, and he had saved himself exertion by riding with his wife. But he felt all right by the time the cars swept into Kampala and Mrs. Winston and her luggage and her lion skin had been given into the care of her uncle who was again at the Imperial.

THE lion skin, as Claire Winston had foreseen, created little interest now; the world of Kampala had graver things to think about than the shooting of a lion even by so beautiful a woman as this visitor from London. Kampala surged with excitement, with reports from the radio—all disheartening—with talk of enemy aliens and internment, with conjectures about Italy and Somaliland and Abyssinia and border patrol.

The Garricks and Bob McNare stayed only one night, to gather up the news, the talk, the latest papers and radiograms, and then with last drinks, farewells, promises of return, they headed for Masaka.

The safari was over. It was merely one more of the fantastic things that had happened in his life, Michael reflected. It had held, perhaps, the deepest disillusionment of all, but he was not of an age when disillusionment can cut deep—or, if deep, can agonize. The quick in him had atrophied. His last look at Claire Winston had been tinged with knowing laughter.

And—wonder of wonders!—the amenities had been preserved. Bob had not started a brawl in camp. No dismal death scene had taken place in Claire Winston's tent. No accusations had rung out. No recriminations. Bob had batted down his hatches.

To see Bob saying goodbye to Mrs. Winston, thanking her for the pleasure of her company on safari, promising to see her again before she left, no one would have dreamed he was a man suffering from sharp enlightenment about her. So thought Michael, sitting on the veranda of his bungalow, in the cool evening dark after dinner, and then, abruptly, he began to think something else.

It wasn't possible—or was it? Claire was touchingly persuasive. There had been all those hours together in the car. . . . By the Lord Harry, that would be a joke on Bob! To see with his own eyes yet not believe—

Perhaps Tommy did not believe, either. Perhaps she actually thought Claire Winston was an innocent invalid and Michael just a helpful aid. Michael glanced down, amusedly, at his wife, sitting beside him.

She was sitting there silently, tiredness in her small figure.

It probably did not matter to her very much, Michael reflected, whether her husband was unfaithful to her or not. What mattered to her was whether Bob McNare was going to marry Claire Winston. . . . That old threat again! Michael

## Kidneys Must Clean Out Acids

Excess acids, poisons and wastes in your blood are removed chiefly by your kidneys. Getting up Nights, Burning Passages, Backache, Swollen Ankles, Nervousness, Rheumatic Pains, Dizziness, Circles Under Eyes, and feeling worn out, often are caused by non-organic and non-systemic Kidney and Bladder troubles. Usually in such cases, the very first dose of Cystex goes right to work helping the Kidneys flush out excess acids and wastes. And this cleansing, purifying Kidney action, in just a day or so, may easily make you feel younger, stronger and better than in years. An iron clad guarantee insures an immediate refund of the full cost unless you are completely satisfied. You have everything to gain and nothing to lose under the money back guarantee so get Cystex from your druggist today for only 35¢.

thought that that had been scotched. "Look, Tommy," he said gently. "About Bob—" Her head lifted alertly. "You don't think he holds any—rancor—do you, for that night? That night you came back from the boma?"

Tommy did not answer for a moment. Then she said, "Why, no."

"Oh, Lord!" said Michael, with almost comical dismay.

"He told me," said Tommy, with a queer, passionless enunciation, "that I mustn't think it was—odd. He said that Mrs. Winston had explained that she had called out and that you had been really kind and helpful. He said he would have come running, himself, so I mustn't misjudge you."

AFTER a long moment Michael murmured, "The bloody fool!"

Tommy said nothing. He looked down on her uncertainly. Her face was a glimmer of whiteness in the darkness, its expression hidden, but he could imagine it. A lock of her long bob hung forward against her cheek and he put out his hand and touched it gently.

"I like you, Tommy. I'd have loved you, as I ought, if there had been a heart in me."

She did not speak.

"I'd given it away, long ago. To a girl in England. And she flung me over. . . . That's the way it was. I couldn't stand up to it. . . . She was Claire Alloway. She married a chap called John Howard Winston."

Finally Tommy spoke: "You mean—she was the same one?"

"The very same. She's done you in twice, Thomasina."

Neither of them said anything for quite a while. He could feel Tommy taking it in.

He explained, "She hadn't expected to run into me. She thought I'd stayed in Tanganyika."

"Why do you tell me now?" Her voice was hard and tight.

"I wonder! . . . So you won't think too badly of me, perhaps . . . for that night in the tent. . . . And to put a stone in your hand. One I can't throw."

She did not pretend to misunderstand. She turned it over in her mind.

She brought out painfully, "You mean—tell Bob?"

"Something like that."

"It wouldn't do any good. He wouldn't believe me, would he? And it wouldn't be very—decent—would it?"

"If you told him I had told you—"

She made a little movement of repugnance. He could fancy her feeling of rejection. What was she to say? "Please, Bob, come back to me! I'm the better woman. Michael and Claire were lovers."

BOB would tell her to go to hell. He'd never want to see her again. Because, of course, Tommy would have to do it directly. A clever woman would know how to inject the poison drop by drop, awaking pity for herself in making the revelation. Claire—the baggage!—would know how.

Michael asked, casually, "Do you think he's going back? To enlist? He was dashed mum about his plans."

"He doesn't know. . . . I think he'd like to stay. . . . But he may go."

"I'm going, you know."

"I'll go with you, Michael."

"No, Tommy. You stay with the farm. You can make out on it."

"I'd rather look after you."

He reached over and took one of her small hands. Its coldness and its work-roughened fingers touched his pity. For a moment it lay passively in his, then curled tightly about it.

He said, "We've a queer feeling, you and I, for each other."

"Yes. We've had that, Michael."

"You're worth a thousand of her. I always knew that."

"Worth!" she said wryly.

He could not blame her wryness. What had worth got her?—the secret bitterness in her was crying. What had courage and loyalty and cheerfulness and endurance brought? The short end of the stick, every time. What were all the sturdy qualities she had, and the sturdy, clean body, and the clear gray, honest eyes and generous heart against the potency of beauty, touched with charm?

He said, "She wouldn't have been one, two, three to Bob, if he'd been married to you."

A queer comfort for a man to give his wife!

She said briefly, "I know."

"I was too long dying."

"Don't, Michael!"

"He may not go."

"It does not matter."

"If he hasn't said already that he'll go—"

"It doesn't matter what he does," she said harshly. "I'm going with you."

"No, you're not."

"We can sell enough cows to pay for it. The farm will be here—afterward."

"It would be gone to pot. No, you're needed here, Tommy. This war may last a long time. . . . And I don't need you."

"Yes, you do. . . . We'll see it through together."

He gave her hand a squeeze, then took his own away. "I want to be on my own."

"But if you're ill—"

"I shan't be," he said curtly. "I shan't last long but I'll get in the show before I'm done for. If the army won't have me the mine sweepers will. . . . My number's up, anyhow, and that's the way I want to go."

His voice had quickened. Then he said, very casually, "That's all the plans I have. But they're enough. . . . Tomorrow I'll raise the cash. . . . So you be a good girl, Tommy, and run the farm. That's my last word."

"But I want to come," she said, tenaciously. "You're all I have."

"You never had me, my dear. . . . So don't hold to me now. Hold to—what is it the Good Book says: 'Whatsoever things are true, whatsoever things are of good repute, hold ye fast unto them.' Something like that. . . . No, you stay here. You need the farm to live on. It makes me feel I'm leaving you something. . . . That's the way I want it."

That was the way he wanted it, and that was the way it was decided. Tommy would stay and Michael go. He planned to go on the next boat, the one coming from India, and, by luck, he got a berth on it. "First class, by George!" he said. "I'll do the thing in style."

It had to be first class, for Claire Winston and her uncle might be on that boat. There was some doubt of that now, however: when Bob McNare motored over he reported that Colonel Cunningham was trying for a plane up to Cairo, and over to England across France. A plane could make London in seven or eight days.

"Are you going on that?" Michael asked flatly.

"I'm not going at all," said Bob. "I think my job is here. At least till we know what Italy is going to do. Uganda needs all the men she's got. If there's trouble we may have to borrow from South Africa."

Michael nodded gravely. "I think you're right."

EVERYTHING was all right, he thought, in relief. He would go and Claire would go, flying off in space like the exotic creature she was, and Bob and Tommy would stay, and the sore sense of loss in Bob would be forgotten. It seemed half forgotten now, for Bob was more like his old self again, talking things over with Tommy as he used to do. There was a terrible palaver on, at his farm, over some fracas broken out between a Kikuyu and a Bahima when he had been away, and Bob was anxious to keep it from the attention of the district police officer. Particularly since the wife of the Bahima was rumored to be using witchcraft.

Bob talked this over, and he talked over, too, the problem of his own enlistment. Michael heard him when he, himself, was out of the room.

"Do you think I'm right to stay?" Bob was demanding.

Michael listened, his eyes pricked, one hand on the whisky bottle he had gone to find.

"That's for you to say," said Tommy's quiet voice.

"You're staying?"

"Michael wants me to. I wanted to go with him."

"Michael's right. What could you do?"

"I could help on my father's place."

"What would happen to your own?"

"There's that."

Silence a moment, then: "If you stay that's one more reason for my staying."

"I'm waiting for my friend, sir, who's wheeling another gent. We're gonna have a race down the hills!"

in whiskey smoothness!

Please be patient. If your store or tavern is temporarily out of **TEN HIGH** there are two reasons: (1) Since all distilleries are now making war alcohol instead of whiskey, the available supply of **TEN HIGH** is on quota "for the duration." (2) Railways must give war materials and food the right of way, so your dealer's shipment of **TEN HIGH** may sometimes be delayed.

This Straight Bourbon Whiskey is 4 years old. 86 proof. Hiram Walker & Sons Inc., Peoria, Ill.

his smile sharpened, and his brows lifted. Bob McNare was rising to greet them. He had been sitting with his back toward their approach. He had a look of extreme embarrassment as he wrung their hands.

"Came by plane," he told them. "Some people were taking off—room for one more. . . . Had to see you all off, you know."

Michael's smile twisted. "Dashed sporting of you! Looking your last, eh?"

"Won't you sit down?" Claire had taken the chair the draper's boy had vacated, and waved the Garricks to two a steward thrust into the group. She had a look of enjoying this surprise for them extremely. She threw out gaily, "Oh, Sir Robert isn't looking his last at us! I fancy he's changing his mind—we've all been at him. He's coming with us. He knows he's needed."

Her eyes smiled across the table at Bob. He was laughing, confused. "I can hardly do that, you know. I might follow—"

"Why follow? You can buy anything you need on the ship. And there is a place—I just went to see about it. They can put a cot in with my uncle."

"Glad to have you. More the merrier," said the colonel. "Whisky and soda? Champagne?" There was an opened bottle of it by him. "What's yours, Mrs. Garrick?"

Tommy's, "Champagne," was dead sounding. Michael thought, "This is the end for her. If he goes now."

He looked at Claire in a cold fury. Her eyes mocked him. She raised the glass of champagne her uncle poured for her. "To England!"

They drank to that; they began to talk, whether they were listened to or not. Ogilvie told Bob, "Forget your farm, McNare. Come in with us." Africa was safe, he insisted. Italy knew on which side her bread was buttered. England needed men. An army on the Continent. Big enough to finish the job in proper shape this time.

That started the colonel on the other time, and he talked briskly against Corcoran, who was trying to tell about the war in Africa, the capture of Mwanza, and the getting of two motorboats up from the Cape to Lake Tanganyika to clear the water of the Germans.

"Place pitted with shell holes—no cover—"

"Kingani!" said Corcoran triumphantly. "That was the boat we sank. And we salvaged her and rechristened her the H.M.S. Fiji and the Fiji helped sink—"

"Wouldn't have thought men could have stood up to it. But they were magnificent."

"The Hedwig von Wissmann. The Fiji sank that with those two cheeky little motorboats—"

"You, Mr. Garrick, understand that terrain—"

BOB McNARE was silent, in the hub-bub, staring down at the glass in his hand. How much had he been drinking, Michael wondered. Enough to play the devil with his good sense? There comes a time when caution snaps. A man can stand just so much. . . . A glass too much—a smile too much—Claire was too lovely, too enticing. . . . A man doesn't see a woman like that twice. And to feel her pulling at you. . . .

The light from above shone on her; her hair was spun gold, her lashes tipped with light. She was watching Bob, cat at the mouse hole, waiting her chance. Then her voice slipped softly through the confusion:

"Do come, Robert. It would be splendid."

Michael set his empty glass on the table with a bang. He had emptied it three times running. "Never disappoint a lady," he said loudly. "I didn't—did I?"

He leaned challengingly toward Claire Winston. He said insistently, the hint of a grin on his flushed face, "I didn't—did I?"

Her head reared. The long line of her throat had something serpentine in its slow, angry elevation.

"Did you say something to me?"

Her voice was a cold warning.

Michael laughed. It was overloud, that laugh, with a hint of knowing cunning in its undertones. "Don't you worry! They don't know what I mean."

"I don't either," said Claire haughtily, and turned her head away.

"But Bob does," said Michael, chuckling. "Bob knows I wasn't any 'boy' that night." His tone accented the "boy," played mockingly with it. "Bob wasn't taken in. He only pretended to be. Always the gentleman!"

THEY were all looking at him now. He could feel their eyes on him, and the startledness in them, and the quick memory of those three glasses he had emptied and the conjecture of others emptied before—no one could know those others had been spilled on the deck.

Colonel Cunningham said politely, "I don't quite gather, Garrick—"

"Hot in here, isn't it?" said Mrs. Ogilvie loudly. "Don't you feel it, Tom?" to young Corcoran beside her. "I always say that Mombasa—"

Michael leaned farther toward Claire. "I thought, at first, of going out the back—remember? But those damn' natives. . . . Nothing to do but brazen it out—a chill! Ha ha!"

Claire, white to the lips, said frigidly, "Mr. Garrick is trying to tell the story of a native entanglement he got into. In his early days. He always told that, in camp, when he was—not himself."

That cool lie wouldn't help her with Bob McNare, Michael thought. The cat was out of the bag. . . . But Bob played up quickly. Michael did not know Bob had it in him.

"Yes, that's an old tale of his. I say, Michael, I haven't seen your stateroom yet. Want to show it to me?"

"I know where it is." Tommy stood up. "Let's go, Michael."

Michael got to his feet. He moved very slowly, as Michael always did when he had drunk too much, with careful, graceful precision. He stood a moment, his head flung back, looking down at them; under his narrowed lids his eyes were dark peepholes in a satiric mask. They were all looking at him. Claire was looking. He looked at her.

"Not—tight," he enunciated slowly. He wanted that to be very clear to her. The rest would think it a drunken man's disclaimer. "Not—tight." His eyes and hers exchanged a deep look.

"Come on deck, Michael," said Tommy gently.

"I'll go with you," said Bob. He said, "Cheerio!" to the group, and, "See you later." His face maintained his utter steadiness against the appeal flaming in Claire's dramatic eyes. He walked by Michael to the door, saying evenly, "Watch out for that," when they came to the brass banding in the doorway.

"I say, I'm not tight," Michael protested, as they walked him down the deck. "I didn't give a thing away, did I?" he asked.

"Not to me," said Tommy.

"I'd told you, anyway."

"Michael, hush! You don't know what you're saying." Her face crimsoned, turning from Bob's sharp, questioning

glance. "It's fresh out here. Let's walk up and down."

"Coffee's the thing," said Bob. "Hi! Steward!"

"I'm not tight, I tell you. . . . They didn't twig. . . . No gentleman ever gives a lady away. . . . She had a chill, I tell you. Always a chill after a headache. . . . Always a headache after a chill. . . . Why the devil did you come back so soon?"

"Don't talk, Michael," said Tommy. "Bob, get the coffee—that steward won't. The boat's sailing soon."

Michael drank the coffee. He said, "Bet it's that lot they did us down on, Bob." They walked him up and down, through the talking, inattentive groups.

"Why are we doing all this?" he said suddenly. "I'm all right—really." His voice was crisp and rational again. He said lightly, "I didn't make an ass of myself, did I?"

He felt Tommy's hand tighten on his arm. "You had a bit too much."

"Sorry! I won't again. Never more than one peg a night. You can sleep on that, Thomasina."

"All right, Michael."

A GONG was sounding. Saloons and smoking room and barroom began to empty. People jammed the doorways, grouped again upon the decks. The sailor with the gong promenaded, beating loudly, and officers reiterated commands. Visitors began, reluctantly, to file down the gangways.

Colonel Cunningham and his niece were on deck with their group and made their way toward the Garricks and McNare.

Claire said to Tommy softly: "I hope that Mr. Garrick is better now."

"Quite all right," Michael answered her. "Temporary seizure."

"Understandable, quite!" said the colonel. He looked sharply about to rebuke any criticism of a man who was going home to fight for his country, a man who understood the terrain of 1917.

"Goodbye," said Bob.

"You're not coming?" The colonel looked surprised, but Mrs. Winston was smiling indifferently before Bob answered.

"I owe a duty here, I think."

Michael said, "There'll be others!" under his breath to Claire. He was laughing at her, at himself, at the absurdity of attaching too much importance to a Sir Robert McNare when she was so lovely and desirable, going back to a world that would have forgotten idle rumors, a world rife with personable young men in uniform. His dancing eyes defied hers to maintain their chill animosity.

Last things were said, hands were

wrung. Mrs. Rundell suddenly pulled her boys' faces down to her and kissed them openly. Major Corcoran smacked his brother on the back and said, "Give a good account of yourself, fella!" Mrs. Ogilvie held Tommy's hand in hers and told her, "We'll take care of him for you, Mrs. Garrick."

Michael said to Tommy, "All the best!"

Then she was ashore, on the edge of the crowd, that was beginning to sing, "Should auld acquaintance be forgot," and the band on the ship played Rule Britannia. And the passengers thronged against the rail.

MICHAEL was standing by Claire Winston. He had an utterly gay look, Tommy thought, her heart twisting, an unbelievably gay look for a man with so little chance ahead of him. She wanted to cry out to him, to say some last word, but the time for that was gone, and there was nothing she could do but keep the tears back and smile up at him, to keep unshadowed his laughter and elation.

He was going home to die, as he would surely die, whether he lasted to fight or not, but it was the way he wanted to go and he was going with that lovely faithless creature beside him for the next days, at least—in that going the elements of the fortuitous and the touch of the predestined were strangely mingled.

The ship drew away. Handkerchiefs fluttered. Tommy waved steadily at the blur of faces. Then she felt the touch of Bob's hands on her arm.

"They're gone, Tommy. Let me take you back."

## The Jean Bart Hoists the White Flag

Continued from page 52

wonderful new German sultan with the powerful voice that sounded louder than the howl of a hundred jackals.

"But, in 1939, when war broke out, you vanished as though the earth had swallowed you. A year later, however, when Allah allowed the new German sultan to crush the armies of France to dust, you were back once more, a member of the German Armistice Commission.

"My little furnished villa on the Boulevard du Général Monnier seemed to please you, and I was glad when we decided upon a monthly payment of eight hundred and fifty francs. The money, you said, would be paid to me directly by the French state, as France was committed to pay huge war indemnities to your German sultan. This was in November, 1940. Until today, monsieur, you have lived in my house. But month after month, when I went to the French authorities and asked for my money, they said that Vichy had given no such order."

"Is that my fault?" Mr. Hoff cried bitterly. "French negligence—that's what it is!"

Abd-el-Malek raised his hand, and Mr. Hoff fell silent.

"From November, 1940, till November, 1942, is two years. And twenty-four times eight hundred and fifty francs are twenty thousand, four hundred francs," explained Abd-el-Malek, who was an expert at mental arithmetic. "However, monsieur, you generously considered that the price for my exquisite little house was quite inadequate."

"I never said any such thing!" Mr. Hoff declared angrily.

"Said? No, you never said so, mon-

sieur!" Abd-el-Malek smiled blandly. "But it has pleased Allah to put these interesting documents into my hands." He reached into the folds of his white garment and brought forth a bundle of papers. "Twenty-four of your monthly statements to Paris, monsieur. These are the copies from your files. Your rent was stated monthly at seventeen hundred francs, and the receipt is signed each time—but not by me."

"Doudja!" Mr. Hoff mumbled in anguish. "Doudja has stolen the papers—that brown she-devil!"

"Yes," Abd-el-Malek sighed. "Doudja, the dancer from the tribe of the Ouled Nail."

HOFF'S tortured eyes wandered from the Berber to the windows and then to the guarded doors. With a strangled voice he finally said, "All right, I'll pay you twenty—" Abd-el-Malek frowned. "I mean the forty thousand francs," Hoff corrected himself.

"Sixty thousand," Abd-el-Malek said amiably. "Allah would not wish us to forget the interest!"

Mr. Hoff thought an instant. "You win," he said. Then he took a well-stuffed wallet from his breast pocket and began to count out bills. "Five thousand, ten thousand, fifteen—"

Abd-el-Malek raised his hand again. "Only ten thousand, monsieur, the ten thousand for Doudja, the dancer. For the other fifty thousand I have another arrangement in mind. About a year ago you paid a visit to my particular friend, Maurice Lévy, the distinguished art collector. He was the owner of three magnificent paintings by Goya, for which I had offered him seven hundred thousand

francs. But he had refused to part with them. Yet he gave them to you for only fifty thousand francs. It seems that Allah has blessed you with a most wonderful power of persuasion. Well, now I want those three paintings—and we shall be even. Agreed, monsieur?"

"No!" Mr. Hoff cried. "No!" But his voice faded away as he heard again the angry roar of cannons. "Yes, agreed," he said faintly.

Once more Abd-el-Malek reached into the folds of his burnoose and took out a carefully prepared document, to which Mr. Hoff put his signature.

"Here," the German said hurriedly, "the three paintings are yours. You remember where they are hanging, in the music room, to the right and to the left of the piano, and above it."

"Indeed they do!" Abd-el-Malek nodded. "That is where they are hanging now—with Allah's consent. I had them taken from your car, monsieur."

"From the car?" Mr. Hoff cried.

"Yes, my friend," said Abd-el-Malek affably. He turned his head toward the windows and listened. "Bad news for the subjects of the German sultan," he announced. "I cannot hear the French guns any more and the Jean Bart has ceased firing."

Mr. Hoff leaped to his feet. "We have finished our business. So now may I go?"

Abd-el-Malek smiled.

"Happy journey! Wherever it may lead you—to Marrakech, to Tetuán, or to Rabat!"

Hoff wheeled around on the threshold. "What's that? You say Rabat, when you well know that I'm headed for Tetuán?"

"For Tetuán, if Allah wills it so," Abd-el-Malek said suavely. "Allah always

has His way. For Allah is more powerful than I or you, or your chauffeur, Ibrahim."

"What has Ibrahim to do with this?" the German asked swiftly.

"Nothing," asserted Abd-el-Malek, "except that, as a follower of General De Gaulle, he intends to take you to Rabat, the headquarters of the Fighting French."

Mr. Hoff stared at his host, but the Berber stepped to the windows and peered out at the harbor. Then, without turning around, he said, "But Allah in His eternal wisdom has decided differently. Your destination won't be Marrakech, or Tetuán, or even Rabat. You'll stay in Casablanca, Monsieur Hoff, for on the Jean Bart the white flag flies!"

HOFF stumbled toward the window and Abd-el-Malek clapped his hands three times. Through one of the doors, Doudja slipped in—brown, beautiful, slender Doudja, the dancer from the tribe of the Ouled Nail.

"Monsieur Hoff will not be able to make his trip," Abd-el-Malek explained. "Take Youssef and go down to monsieur's car, and fetch the three fat books with the little pictures—"

"My stamps!" Mr. Hoff groaned. "My precious stamps—you bandit, you thief, you brigand!"

"Indeed!" said Abd-el-Malek, smiling serenely. "Today, the smell of gunpowder enchants my nostrils, and I feel young once more. Once more I am Abd-el-Malek, the brigand, superior to all the bandits in the land of Atlas, perhaps even a match for a member of the German Armistice Commission, if Allah wills it so. What is written is written. Mek-toub."

THE END

# Men Without Weapons

By Henry Meade Williams

ILLUSTRATED BY WILLIAM REUSSWIG

They are not without defense, who have only courage

THIS cove was small, almost landlocked, and the fog filled it, and sifted through the tops of the spruce. Silence rested on the water's calm surface, but the echo of the motorboat's engine still quivered in the air.

Roy Pierce sat on the stern thwart of the skiff, and looked beyond the old man who was rowing him ashore—looked at this land, the gentle hill and the scattered white houses, at the dock and its sheds, and the white shell road curving away into the cluster of the town. He heard a crow call, smelled the wet earth spiced with yesterday's sun, and he said to himself, "It's solid land."

But he didn't move. Hunger had weakened him, and the cold had seeped inside to the very center of his body.

"Well," said the old man, "this is Wyman."

Pierce said, "Whatever you call it, it looks good to me."

There had been a moment back there

in time, when this moment of being alive had been no more than a sweet thought, never to hold reality. For five days he had heard nothing but the lapping of an easy, fog-softened sea against the boards of the makeshift raft. And then from the fog had come the purr of a motorboat's engine, and he had stood up, listening with doubt. Even the sight of the boat held little more than fantasy. This old man, Adam Lloyd, had peered at him, from under a yellow sou'wester, and Pierce had said sanely, "Now listen, buddy, go away. Don't kid me."

"Take it easy, son," Lloyd had said, "come aboard."

The old man had been facetiously peevish about the time spent in picking him up, complaining that he was a lobster fisherman, not a Coast Guard handy man. And there had been a sly humor in his eyes when he said, "If you fellows refused to run them ships—there'd be no more sinkings—ever think of that?"

Pierce had thought of that five days ago, when he found himself in this cold northern water, watching lifeboat No. the only boat afloat, sliding away from him into the dark beyond the light of the flames of the burning Cyrus P. Conner. There had been no humor in his answer when he said to Adam Lloyd, "Once enough for me, brother. I'm through."

On the dock a group of people watched with silent interest the approach of the skiff.

"News spreads fast," Lloyd said. "Folks on the point must have seen the stranger with me. You've got a reception committee."

"I can take it."

Three kids had piled into a beach dory and were staring with shy, curious eyes at Pierce. A girl left the group on the dock and climbed down the ladder to the low-tide landing. She stood there waiting for the skiff. She was a small girl, with soft blond hair.

"That's my daughter," Adam Lloyd said.

He brought the skiff alongside the landing. The girl held it in with the heel of her shoe hooked over the gunwale. She had on a pink skirt and her legs were bare. "We worried," she said to her father.

"I lost a trap," he said, "but I found Mr. Pierce here, sitting on a raft out over Newberry Shoals—singing. His ship was torpedoed."

The crowd on the dock above them murmured.

Lloyd spoke again to the girl: "Take him up to the house, Amy. He's probably got an appetite. See what you can do to that arm—it don't look so good. I'll come along as soon as I get done here."

She looked at Pierce. Slow color had darkened her throat and cheeks. "You have to forgive the house. I didn't expect company."

She had a gentle, low voice, and there was something that pleased him in the way she pronounced her words.

OTHERS began coming down the ladder and formed a group around Pierce. Someone slapped him on the back, and he saw an elderly man in a gray business suit and tall rubber boots smiling at him.

"I just want you to know that you're welcome to Wyman. We're proud to have you and will take good care of you. You want to telephone?"

Pierce shook his head.

"Your folks might want to know you're safe."

Pierce said gruffly, "There's no one to notify." He felt the dock swing, and closed his eyes for a moment. "I don't want to talk," he muttered.

The girl came to his aid: "Let him be. I'll take care of him."

The crowd moved back and Pierce let her lead him off the landing. The feel of the hard shell road gave him back some strength. He tapped the ground with his shoe. He looked at the girl and smiled. "Genuine?"

"Guaranteed," she said. "Under it is Maine's solid granite."

Pierce smiled. "I appreciate it." Then he said, "What was all the fuss about down on the dock?"

She was walking beside him now and there was a faint smile on her lips. She said quietly, "We don't often have"

(Continued on page 70)

"I lost a trap," said Adam Lloyd, "but I found Mr. Pierce here, sitting on a raft out over Newberry Shoals—singing. His ship was torpedoed"

*How American it is... to want something better!*

MAYBE MOTHER'S NEW MIXER will be one of the few remaining or maybe she'll have to wait for it till after the war. But whenever it comes, you can bet she'll exclaim "Now this is something better!"

And how American to want "something better"—in kitchen equipment or airplanes or threshing machines or what-have-you.

Why, we're even fighting a war on the promise of a better tomorrow!

THIS FINE AMERICAN TRAIT goes right through our lives—helps us decide what we will wear or eat or drink. There is an ale—one with a 3-ring trade mark like the dewy rings your glass leaves on the table. "Purity," "Body," "Flavor," say the words in the rings. "Something better," say millions of Americans when they try this moderate beverage. And so many say it that this has become...America's largest selling ale.

*America's largest selling Ale*

*To speed the day when we can have more "better things" buy war bonds and stamps*

P. Ballantine & Sons, Newark, N. J.

## Mr. McCandless Takes Over

Continued from page 13

Firing on both sides stopped momentarily, not so much to watch a ship die as for purposes of identification. Distinguishing targets was a difficult job, for every time our forward turrets fired, the blast and glare of the guns blanked out everything. Now the flames of the burning cruiser showed a Jap battleship off our starboard bow at a range of about 2,500 yards. "Get the big ones first," was Admiral Dan's battle order, and we lost no time obeying. There can be no question about the hits we scored, for the next day she was found still wallowing, and was finished off by torpedoes from our planes.

Not that the Jap was idle. Her first salvo, however, fell short. The second was still short, but a third hit us squarely in the bridge structure on the starboard side. I think it was one of these shells that struck down Captain Young and Commander Arison.

I was on the portside at the time, and while a small fragment went through my right ear, embedding itself in my head, the worst damage was a ringing in my ears that never left. Just as I moved over to starboard, several shells, probably from another ship, struck the portside of the navigation bridge, undoubtedly killing everybody there. Anyway, I found myself alone except for the helmsman, Harry Higdon, quartermaster third class, who came up to tell me that we had lost steering and engine control.

### Navigation Bridge a Shambles

We had been turning left to keep from running head on into the Jap, and getting the ship back to a steady course was something that had to be done at once. Thank the Lord, we found things okay in the conning tower on the deck below. After giving the helmsman his instructions, I hurried back to the navigation bridge to see if I could find Captain Young. Evidently more shells had struck in my absence, for the place was a shambles. Bodies were lying everywhere. Any attempt at identification was impossible, for in battle all of us, from the captain down, wore the same plain khaki. All dead, as far as I could feel and see, and it was not until later that we found Commander Arison draped over a 5-inch gun, blown ten or fifteen feet, and badly wounded but still alive.

I made a quick trip back to the signal bridge, falling through a jagged shell hole that gashed my legs. Picking myself up I looked around for Admiral Callaghan or some member of his staff, but again I found only dead bodies. All this happened in about twelve minutes, although it seemed like years to me. Back in the conning tower, word came over the telephone circuit that the after control station had been hit, killing Commander Hubbard. By now the San Francisco was receiving major attention from the Japs.

As I stood looking out through a slit in the conning tower, a shell hit two feet over my head, knocking me cold and spraying my face with fragments. My binoculars saved my eyes or I would have been in a bad fix. That shell ended any engine and steering control from the conning tower, and as the after station was also out, that left only the central station way down under. The men there could see nothing, of course, but the telephone circuit kept intact, so I acted as their eyes, continuing to give orders from the conning tower.

With Admiral Callaghan, Captain Young, Commander Arison and Com-

mander Hubbard gone, the next in command was Commander Crouter, but I knew that he was lying all bandaged up in his bunk. What I didn't know until later was that a shell had got him. He was a gallant, capable officer, well deserving of the Navy Cross for heroism that was awarded him posthumously. Getting Lieutenant Commander Schonland on the phone, I informed him that he was apparently the surviving senior officer. Down below at the time, in charge of damage control, he broke in before I could finish, telling me to go ahead and conn the ship as he had all hell on his hands.

I'll say he had! Fires were going all over the place, magazines were flooding, and shell holes made a sieve of the sides. Sloshing around in water up to their armpits, and with only hand lanterns for light, how "Rocky" Schonland, Ensign

a lot of punishment, but finally one of our shots went home. Evidently it struck the destroyer's load of depth charges, for her entire after half blew up with a bang.

At this time in the action, it appeared that we were between two Japanese columns, getting fire from both sides. With no compass and the rudder all cockeyed, it looked like a good time to leave, and I decided to go straight ahead and try for a way out between Savo Island and Cape Esperance, the tip end of Guadalcanal. As if to help me, all firing stopped again, just why I don't know. Probably the Japs were all balled up, and so were we, for that matter.

On we crept, but just as I was congratulating myself on getting out of a tight spot, one of our 5-inch guns went off for some reason or other, and hell broke loose all over. "Willie" Wilbourne and "Red" Cone fired several salvos at

eye before deciding that we were American.

There will always be a sneaking doubt in my mind as to whether we could have pulled through, but by another piece of the San Francisco's good luck, a cruiser came up behind us out of the dark. At that, we didn't know her a first, and she didn't know us, but Captain Gilbert Hoover, may he live forever took a second look before letting us have it. In that split second I recognized the cruiser, and managing to dig up a blinker gun, let her know who we were. Now for the first time I was able to report to a surviving senior officer, telling about Admiral Callaghan and Captain Young. Assuming command, Captain Hoover sent out radio messages appointing a rendezvous for all American ships at daybreak. Following the cruiser through Sealark Channel, although our rudder was still cockeyed, we joined up with other units at dawn, at the rendezvous, from which point we proceeded to our base.

All through the night I had been praying for dawn, but when it came I felt myself wishing for the dark again. Dead members of the crew were everywhere, and all men that we had known and loved. Utter exhaustion robbed everybody of strength to steel himself against the shock of what he saw, for we had been at battle station since 7:30 the night before. Many of the sailors, boys of seventeen and eighteen, had never seen death in violent form, and wandered the decks in a daze, doing and saying idiotic things. The medical department, with only three doctors and a few Hospital Corps men fit for duty, worked thirty-six hours at a stretch.

### A Battle-Torn Warship

Submarines were all around us, but our luck still held, and on the afternoon of the 14th we dropped anchor, right side up but about as badly mauled a ship as ever managed to stay afloat. At the base we received a new commanding officer, Captain Albert F. France, Jr., and while it was a somewhat slap-happy crew that he took over, every man was soon ready and eager to fight again. Matching our own losses against enemy losses, we knew that we had beaten the living hell out of the Japs, and could hardly wait to do it again.

Repaired and reorganized, we steamed away for California under our own power, a voyage without incident. And did San Francisco give a welcome to the cruiser that bore her name! What pleased us most, of course, was when Admiral Greenslade put our good ship in the Navy's Hall of Fame along with the Constitution and the Oregon, and what touched us most deeply was when Admiral King, standing straight and fine before the crew, gave those splendid men the praise and credit that was their due. "Well done," he said. "It is men like you in ships like this that will play a major part in winning the war."

To such great seamen and born leaders as Captain Charles M. Yates, Admiral Daniel J. Callaghan, Captain Charles H. McMorris and Captain Cassin Young, the officers that trained us and worked the daylight hours out of us, goes the credit for everything that the San Francisco did. And when the old ship steams out of the Golden Gate in a short while, we'll pay them, by the grace of God, other and still greater tributes.

THE END

The battle-scarred San Francisco in San Francisco Bay

Dusch and their boys kept the ship afloat will always be a miracle of courage and stubborn refusal to be beaten.

Newspaper accounts have continually referred to me as coming to be the commanding officer of the San Francisco, which I never was. I was only officer of the deck and, through unusual circumstances, found that at the time I was the only man capable of duty on the flag bridge. And circumstances kept getting more and more unusual. Now the ventilating system went blooey, cutting off air from the central control station, but the men down there kept on the job, one taking up as another fell back, choking and half asphyxiated. "Stick, you so-and-sos," they yelled. "We'll all be walking Market Street in a month." And, thank God, they were!

### The Courage Invincible

Next thing, a Jap destroyer came out of the dark at high speed, running down our portside and letting go with all her guns. One of our own 5-inch babies was kept firing by three wounded men, one with a leg blown off, the second minus an arm, and the third with a gaping hole in his belly. This last man fell down with a shell in his hands, got up only to fall again, and was still desperately trying to load the gun when he keeled over. How can you beat fellows like that? We took

some ship, although I doubt if they know who or what it was even now, and all of the Japs replied enthusiastically. Suddenly I realized that we were out of the line of fire, and that the Japs were actually shooting at each other. And was that all right with me!

Off again, wobbly but still afloat, we were just nearing the gap between Savo and Cape Esperance, when out of the dark loomed a large ship that lost no time in letting go with her guns. From her fire I judged her either a battleship or a heavy cruiser. Any fight was out of the question, and swinging sharp left, I decided on a backtrack either through Lengo Channel or Sealark Channel. This, of course, put the San Francisco between such Jap ships as might still be on our left, and the land batteries of the Japanese-held portion of Guadalcanal. Even so, it offered a better chance than bucking the big ship that had us under fire.

Not only did I lack Commander Arison's skill as a navigator, but I knew nothing of those particular waters. Worse still, all of the charts were either burned up or blown to shreds. As a consequence, my navigation consisted entirely of steaming slowly eastward along the shore line of Guadalcanal, sheering off when it looked as if I was about to ground. Not so hot, but it worked. The next day I learned that some of our own had actually looked us over with a mean

# THE BOOK OF THE HOUR IN A WORLD AFLAME

## —THE SUPERB NATIONAL ENCYCLOPEDIA IN THE SERVICE OF EVERY AMERICAN TODAY!

WAR rages in Europe, in Asia, Africa, and on the Seven Seas. The United States has come to grips with the Axis powers. Five-sixths of the population of the earth is at war. The world faces the greatest crisis of its entire existence.

Americans—every family in every city, town, hamlet and farm in the broad reaches of our country—must be prepared, alert, ready to handle themselves in this new acting disquieting world. To keep up with the swift pace of our day, the first call is for knowledge—not the old worn-out obsolete knowledge—but knowledge in line with the time and keyed to our swiftly speeding era.

### KEYED TO OUR TIMES

Thousands upon thousands of men and women are finding the answer to these pressing needs for knowledge in the superb NATIONAL ENCYCLOPEDIA. These thousands of keen-minded Americans have found new help in sifting truth from propaganda, picking out the old clear facts, thinking soundly, for the NATIONAL ENCYCLOPEDIA is gauged to today's world and keyed skillfully to serve every man, woman and child.

Written by a brilliant array of contemporary scholarship and by men and women at the operating throttles of our country's destiny, the NATIONAL ENCYCLOPEDIA applies knowledge expressed in terms of today and viewed through contemporary eyes. The NATIONAL ENCYCLOPEDIA is the logical, authoritative tool for

all Americans—a work of consummate value to all in this throbbing world aflame.

### FAST, ALIVE—THE SYMBOL OF OUR NEW AGE

With world events power-diving as they are today, you need a *timely* encyclopedia. With the NATIONAL ENCYCLOPEDIA—no matter *what* happens tomorrow, in what country, on what subject—you will have a rich background of information always at your finger tips.

If you were to attempt to gather this information in individual volumes—histories, biographies, scientific treatises and other works—you would spend four to five times the price of *The National Encyclopedia*.

### NOW ALL CAN AFFORD THIS SUPERB WORK

Most wonderful of all, the price of this great storehouse of knowledge is within the means of every intelligent American family. In an era of rising costs and growing shortages, these volumes, at this present price, are an almost unbelievable bargain. For only a small down payment you may have The National Encyclopedia delivered to you—all shipping charges prepaid by us! And you may pay for it at the rate of only a few cents a day!

### "QUIZ" BOOKLET ABSOLUTELY FREE!

Send for this large, beautiful free booklet, containing a fascinating current-events Quiz—fifty questions on pertinent subjects which are engaging everyone's attention today, with complete answers from The National Encyclopedia. These will be intensely interesting, instructive and entertaining for the entire family. This superb booklet also contains colored plates, half tones, and other valuable information. It will be sent you absolutely free and without obligation.

### MAIL THIS COUPON TODAY

THE NATIONAL ENCYCLOPEDIA  
250 Park Avenue, New York City

Send me, without cost or obligation, the beautiful "Quiz" booklet on subjects of world interest taken from The National Encyclopedia. Also, please advise how I may secure the Encyclopedia by small monthly payments at its present low price.

## A dentist's dentifrice —

Calox was created by a dentist for persons who want the utmost sparkle and brilliance consistent with absolute safety. Look for these professional features:

1. Scrupulous cleansing. Your teeth have a notably clean feel after using Calox.
2. Complete safety—even for problem teeth. Calox Powder is a miracle of delicacy.
3. Especially lustrous polishing.
4. No strong medication, no mouth-puckering taste. Even children like the cool, clean flavor.
5. Made by McKesson & Robbins—a laboratory specializing in professional drugs.

## The Face of Danger

Continued from page 54

speak of much and are not proud of. Differences between people should be settled by day and peaceably, but some of our people must settle them violently at night.

"Last night some of them went too far. They were enraged at not finding at home the man they wanted and they fired his house, either not knowing or caring that his mother, a *vieja*, an old one, was in it."

The woman had become angry and almost eloquent. The color it brought to her face made her suddenly handsome and Eddie Bonham was staring at her, not paying much attention to the words.

SHE stopped talking suddenly, as though ashamed of her little outburst before strangers. The three young men were staring at her, Chapman and Darrell shocked, but not yet knowing it, and Bonham still in admiration of her.

Then, as though to cushion himself and the others—as for years their parents had cushioned them—from the contact with reality, Chapman said, "Then we're not going to get to hunt a bear?"

The woman spread her hands again. Bonham said, "But we don't have to have a guide. We can go into the bear country ourselves. Of course, there won't be much chance of jumping one without dogs, but we could go hunting without the dogs. You know where the bear country is here, don't you?" he said to the woman. "You could tell us how to get there?"

The woman looked directly at him a moment before speaking with a slight nod of her head. "Yes, I could tell you," she said.

"We'll probably have to take whatever horses we can get," Mike Chapman said, "the way things are here, now."

"And you think we have a pretty good chance of jumping a bear?" Joe Darrell said earnestly to the woman.

"No," the woman said, quietly and not unpleasantly. "If I thought there was much chance of you finding a bear without dogs I wouldn't send you up there."

They were all silent for a moment and then, finding nothing unpleasant in what the woman said, but only the grave and quiet statement of a fact, one of the hunters laughed a little uneasily. "Oh, we can take care of ourselves," Bonham said. He realized, quite suddenly that he was younger than the woman.

They went outside on the rough porch in front of the store and the woman told them where to go to get horses and then where to go if they wanted to hunt. She was without anger or more than passing interest in them. Her arms and, under her cheap dress, her figure moved easily and with a strong grace.

And it was this natural grace and dignity of the woman, and obviously a rather poor woman, as much as her strange remark about not expecting them to find a bear, that induced a silence in them as they rode slowly up a slanting mountain trail. . . .

It was high noon when they stopped in the shadow of a big pine to eat. The day had grown suddenly mild, even warm, up here at nine thousand feet. But below them, where the shade still held, the snow remained in patches, and above them and to the south it lay in long, glacierlike sheets on Truchas peak, and even as they stared at the great peak over their heads and miles south, a wind whipped the snow so that it streamed in

a long, tenuous band away from the mountain.

So we have come to a strange place, Joe Darrell thought, and it is only now that we are beginning to realize that is not like hunting pheasants on Mike's father's estate. They ate slowly, not realizing the slowness and, rising the languid from the long drive and st from the unfamiliar saddle, they saw it that the horses were well tethered at then, carrying the heavy rifles in both hands, began to move on foot straight up the mountain almost at right angle to the trail.

The going was difficult although not steep, and they panted like animals in the thin air of the place. Once wild turkey keys raced noisily through the brush and leaves ahead of them and they could hear the big birds but not see them. Chapman saw them moving in the underbrush, he thought, a long way ahead but didn't shoot. "We came here for a bear," he told the others, "and there's no point in letting one know we're coming."

After a time they came on a level place, a kind of mesa or tableland. Through this mesa, a stream wound, cutting darkly through the snow patch and marked even from a distance by the red willow shoots that grew along its banks.

Where the stream meandered sharply almost doubling back on itself at times the willows grew thickly, to the height of a tall man, and filled these almost circular places with their three or four shadings of red. As the hunters came to the first meander in the stream, they jumped a pair of mallard from under a steep bank, and paused, startled to see the heavy birds slowly gather flight and speed, the male leading the way, his bright green head gleaming and almost iridescent in the sun.

They moved thoughtlessly away from the stream to where rocks and big trees were close together and the ground began gently to slope again. . . .

WHEN the bear showed suddenly at the edge of the aspens and without noise, one shoulder and the swinish snout, not rising and spectacular as in the old calendar prints, but still and almost motionless, they, too, were motionless for a moment, more as if in disappointment that it had not risen and roared, than in fear or even surprise. It was Chapman always quick with a gun from his bird hunting, who fired first, but then all of them were shooting, so that no one knew who hit the bear and no one would ever know. There was only now the heavy clanging roar of the rifles and then, in the quick silence, the terrible, almost grieving roar of the animal as it turned and made off at a heavy trot through the aspens, quartering down through the curving edge of the aspens to the stream and its willows.

They shot at it again, seen almost tenuously through the pale gray trees, but they didn't hit it now, and still standing there they could see it going, stumbling once, into the willows thick in a bend of the stream. And then they could not see it at all.

"Gosh, what a grizzly!" Chapman said. They were all sweating and the others nodded, but did not speak for a moment. It wasn't a grizzly but a rather large black bear.

Bonham said, "Well, I guess we better go in after it. We can't leave wounded game around." He started to move, then hesitated, giving himself an odd, side-

se motion. He had hesitated because the others neither moved nor spoke. When he looked at them, Chapman said, "You've been reading too many books about hunting big game in Africa." "Well, for—" Bonham began in surprise and something else, and Joe Darrell, remembering this something else, hid, wetting his dry lips, "All right, let's not argue. We came here to hunt a bear and there it is."

THEY moved across the clearing of the mesa in front of the edge of the trees, their pace decreasing almost imperceptibly until Bonham walked just a little in front of them, and when they were all about ten yards from the willow shoots they stopped, although there was no communication between them. They did not speak, but they experienced the same disappointment and it helped crystallize the fear in them.

The disappointment was that they had hoped, even expected, to be able to see into the willows. Then they would see

## CHINA FLIGHT

By Pearl S. Buck

The easiest way out would have been to become his mistress. But she was an American girl, and he was a Japanese. So she became, for a time, a Chinese; and so found among those brave and compassionate people a way to the man she loved. A story for women by the most gifted woman writer of our times.

BEGINNING IN  
NEXT WEEK'S COLLIER'S

each other, they moved to either side of the willow clump, Joe Darrell thinking: *Well, is it yellowness or what is it if it isn't that?* With himself, it wasn't that. It was that the thing didn't seem important. If there was a good reason . . . but this didn't seem a good reason for risking one's life. Now, he could not be sure. Later he would be sure, almost.

They never knew how long they waited; it seemed like a long time, but was less than ten minutes. It seemed to them then, and even later, in dreams years later, that the sweat was cold and sudden on them just an instant before Eddie Bonham screamed. Then the second scream and the rifle going off once, but the screaming keeping right on going and no more rifle shots, but a sudden end to the screaming, as if the successive screams were words and the noise had stopped in the middle of a word.

Neither Chapman nor Darrell had moved. They were twenty or thirty yards apart and it was even a little while before they looked at each other. Then Darrell said, trying to speak loudly, his voice cracking, "I guess we maybe better go in there."

"I don't see what good it would do," Chapman said, in a steadier voice.

This seemed reasonable, even logical, to Darrell. He had a sense of being stunned or of walking in a mist. "Well, we ought to do something," he said. His voice and manner seemed feeble to himself and they were.

"Get the sheriff," Chapman said, without looking at Darrell. "Get Mirabal and the dogs. We couldn't do anything in these willows. The bear'd get us like it got Eddie."

"Maybe it didn't get him," Darrell said.

"Oh, for Pete's sake!" Chapman said, still without looking at Darrell.

"Well, if we're going to get the sheriff, we'd better get going," Darrell said.

They found it difficult to walk going down the slope. But gradually the strength came back into their legs and they began to hurry.

They left Bonham's horse tethered where it was and began to ride the horses down the mountain trail as fast as they would go, which wasn't very fast in that terrain. Why they were hurrying now, they would never be sure. They did not speak. They reached the village with the sun still in the sky and when they were riding past the first mud houses, they both slowed the lathered horses down, so that they were barely walking as they came up to the post office. The sheriff's posse was apparently back, because there were horses tethered about the plaza and a few dark men were moving in the rough square between the post office and the church.

DARRELL and Chapman rode slowly up to the post office because there seemed no other place to go to. The post office was crowded with people, almost all of them men. They were talking Spanish and smoking or drinking beer and pop out of bottles. They looked, with the impersonal curiosity of their race, at the two young hunters coming in, and then resumed the talk. In the blur of faces, Darrell looked for, with unconscious eagerness, and found, the woman they had talked to before.

She even sought them out, as though concerned for them in this place of violence and of strangers.

"Did you have good luck?" she said, over the shoulder of a short Spaniard between them.

"Why—why—no," Darrell said. "And your friend?" she went on. "The brash one?"

Yes, indeed, their friend, the brash

# HERE'S SOMETHING WORTH TREATING RIGHT

We believe any man who's grown used to the speed, the ease and the comfort of shaving with a Schick Electric Shaver would rather raise a beard than go back to any old-fashioned method of shaving.

And we'd like to go right on adding to the nearly 4 million men who already enjoy Schick shaving. But that's out, for the present, because our factory is now working day and night for Uncle Sam—and no more new Schicks can be built for the duration.

So, the next best thing to do is to

take care of you Schick regulars.

We urge you to treat your Schick Shaver right. But if you do damage it in any way—take or mail it in to any of the offices listed below. There you'll get renewal parts and expert service at low cost. And, for only \$3, you can buy a new 2-M Hollow-Ground Shearing Head, if your shaver needs one.

Just to be safe instead of sorry, why not take your Schick in anyway—let them clean, adjust and lubricate it for a most reasonable charge?

SCHICK INCORPORATED, Stamford, Conn., U.S.A.

★★

For the duration you'll want to keep your Schick Shaver in shipshape condition. Expert service and genuine Schick renewal parts—including the new 2-M Hollow-Ground Shearing Head—are available through Schick Service, Inc., at all of their offices listed below:

ALBANY 938 Natl. Sav. B'k Bldg.	DALLAS 611 Southland Life Bldg.	MILWAUKEE 152 W. Wisconsin Ave.	PROVIDENCE 508 Turks Head Bldg.

TO HASTEN VICTORY—BUY MORE WAR BONDS AND STAMPS

one, Darrell thought. His throat was quite dry. Chapman said, when Darrell did not speak, "We—he had bad luck. I—we think a bear got him." Then seeing the woman's face, he hurried on: "We came back here to get the sheriff and the dogs."

Along with the other things he was going to remember a long time, Darrell was going to remember the woman's face in this moment, the expression of puzzlement and concern first—"You mean, he is lost?" she asked—and then the wonder and scorn and even disappointment in it when he himself managed to say, "No, we heard him yell in the willows."

It was principally the disappointment in her face that got him then, as though the woman had somehow expected more of him than she had of Chapman. "You mean," she said, "you didn't go in after him?" Then, when she saw how difficult it was going to be for him to answer, she turned, and went quickly through the crowd to where a squat man in a leather jacket and wide-brimmed hat leaned against the wall and did not drink but smoked a thin handmade cigarette. She spoke quickly to him and the man glanced quickly up at them, his face more curious than anything else, his eyes pale and almost colorless. When they did not come to him, he moved toward them through the crowd, which parted slightly for him.

"My name is Mirabal," he said to the hunters. "I am the sheriff here. Mrs.—"

"The bear hunter," Chapman said, almost eagerly, as though the occasion were a happy one.

"Yes," Mirabal said, with a kind of impatience. "Mrs. Santistevan says—"

THEY told him then, alternately speaking as though unconsciously trying to share equally and obviously the burden of their shame. When they were finished the sheriff looked at them, from one face to the other, only his eyes moving, the rest of his features quite fixed. Then he said, the duties and obligations of his office heavy and obvious upon him: "Have either of you ever had a quarrel with your friend?"

They did not answer for a moment, while the implications of what the sheriff said occurred to them separately one by one. Joe Darrell could think of the thing he had thought just before Eddie went in: that Mike and Eddie had liked the same girl. But if that was Chapman's excuse or reason, what was his own? In a sense he had no reason, even an ignoble one. It was as though a heavy wall of water hung over him, ready to topple on him when his mind gave up its denial.

Chapman was saying, his features and voice almost the caricature of humor, "I—I guess we were just frightened . . . or didn't know what to do . . . or something."

The wall of water toppled and engulfed Darrell. They had been afraid, yellow. Now he had admitted it to himself, and Chapman had admitted it publicly for both of them. He felt the strain in him ease but not go away.

The sheriff looked at them and for a moment did not speak. He finally said, his face more grave and weary than anything else, "Well, there is not much else to do but go get your friend, or what is left of him. It is not so simple, either. Now the dark is coming on and it might be best to wait until morning, since it is apparent to me that he is not alive. And we are having trouble here of our own which is not yet over."

When they did not speak but stared at him hopefully and with a kind of conscious and assumed stupidity, the sher-

iff began to realize that they did not know—really, could not know—what had happened there in the willows. He himself knew and could see it all clearly in his mind: the young man moving slowly through the crossing, red branches, seeing perhaps ten feet whatever way he looked, not seeing anything really, or hearing, and growing more confident, but the gun not held at the ready, really. And nothing, nothing whatever way he looked. And then, quietly and without sound, close to him and an almost shapeless horror, the wounded bear rising and slugging at him with its paws like a young, fast and awkward boxer. The terrible strength of those short, round swings and the going down screaming into unconsciousness. The sheriff knew, for once he had been hit so himself, in just such willows, but there had been other people in there with him. . . .

Joe Darrell said, "We're sorry your own trouble here hasn't cleared up. Mrs. Santistevan told us something about it. I—I suppose, though, that your problems are different from our own. We—"

Quite different, the sheriff thought. He kept looking at them, trying to tem-

per watching them across the room, and when the sheriff kept talking, Joe Darrell broke first: "Oh, for the love of Pete, stop talking. I know we were yellow, I know it. Stop rubbing it in."

People had stopped talking and drinking and were looking at them. The sheriff, embarrassed, said, "I was not trying to pass a judgment. I was only saying that I thought you might feel rather strange, carrying him down yourselves, or trying to, after what had happened. And I am reasonably sure the bear may still be there, especially if you hurt him badly. The bear . . . at night . . . your friend . . ." The sheriff ended on a note almost of incoherence. He was not trying to hurt or embarrass. He was merely remarking the obvious fact: their cowardice, the wounded bear in the night, their oncoming grief and disgust with themselves. . . .

THE sheriff settled his hat on his head, made an almost unconscious gesture to reassure himself that his .45 was still on his hip. The men in the place took it as a kind of sign, and picked up their rifles leaning against the counter, a few of them already beginning to move toward

The dark came fast now, but not even in the dark could tears come to relieve the tension in them. They could see nothing but the moving shapes around them, and followed in the dark press of men and horses, moving at a trot. When the others halted and dismounted, the two young hunters followed them. The sheriff sought them out. "You stay here with the horses," he said. "Across the rise which you cannot see is the place where the night riders are."

"I didn't come along to watch the horses," Darrell said. The voice did not seem to be his own. His feelings toward Chapman verged on hate; he felt completely separated from him. He heard Chapman say, "I don't think I did either."

The sheriff hesitated, then said, "I don't know what you mean. . . . There may or may not be trouble. These are vicious men who have killed a woman. My men are not afraid of them. It is simply that my men are puzzled at what to do now that these others are in the morada. I wouldn't want you to get hurt."

"No," Darrell said. "You wouldn't want us to get hurt. Or to carry Eddie down. I—we—" He didn't know.

The sheriff knew before they did what was happening in them. He grew gentle without meaning to. He said, "As you wish. We will go for your friend in time. But first I must see how things are here. This is my first duty," he apologized.

THEY followed him through the night, seeing without fear or surprise where other men, with stiff gestures, rose as if out of the night to speak to him in Spanish.

"Why don't they rush?" Joe Darrell said without thinking. "Have one man go to each window, so . . ."

"There are no windows in a morada," the sheriff said, still gentle, "only a door. It has been open all day, so they could shoot across the fields at whoever might come."

"And what is to happen now?" Chapman said.

Their eyes had become accustomed to the light and they could see the sheriff shrug again. "They tell me there have been some shooting and they think they are almost out of ammunition in the morada, but apparently no one has been hurt. In time they will come out for food or drink. Although, I suppose—" He stopped.

"Then you have no objection?" Joe Darrell said.

It was a remarkable statement. I presupposed that a man they had known less than two hours, the sheriff, Estevan Mirabal, knew what was in their minds, when they hardly knew what was in them themselves, and certainly had given no direct, spoken expression to it. More remarkably still, perhaps the sheriff sighed and, in the night, nodded and understood. "As you wish," he said, his voice strange because so many things were in it. "It is you who have to live with yourselves, not I. And men of your age will all be soldiers soon. It is you who have to live with yourselves. I wish you well. Also, in case there should be an accident, I want you to know of my gratitude. This here in the morada is a bad situation, politically as well as in other ways, for us."

Now that the sheriff knew what had happened inside them, they knew themselves, and in the night, Darrell turned to Chapman. "All right, punk," he said completely without affection. "Are you ready?"

"I suppose so," Chapman said. They dropped forward on the now hard ground, dotted with tussocks of grass

per his own scorn by realizing how young they were, and by thinking of the men he and his posse had not yet caught for reasons in part similar to those of the young hunters for not going in after their friend. His own disappointment, his unsolved problem made him almost sorry for the two boys, gave him unconsciously a sense of kinship with them.

He said, "Most of the night riders are scattered throughout the mountains. We shot one. And two we have trapped in a morada. That makes for a complication, since most of our men are Penitentes, and the morada is like a church to them, similar, at least. They hesitate to go in and do violence there."

"But couldn't we go back to where Eddie is, tonight?" Joe Darrell said. "I mean if your own trouble would not interfere. I mean—" Something had started to come up in him.

THE sheriff looked at him and at Chapman, and knew that something was happening. He said, "If now you are so anxious to go back, perhaps we can go this evening. The morada where the night riders are trapped is not far, is really on the way to the place where you were hunting. But I should think you would not want to go back to where your friend is. . . . We can carry him out for you. I should think you would feel rather strange. If, now—"

The woman, Mrs. Santistevan, was

the door. Joe Darrell said, "We're going," with a kind of childish fierceness, and even defiance. Chapman's face seemed to be broken up in pieces; no one could have read the many and terrible things in it. The sheriff shrugged in a manner not unlike the way Mrs. Santistevan had that afternoon. "As you wish," he said wearily and without looking at them. Some things he did not understand, but like most of his race, his instincts were accurate.

Following him, both Chapman and Darrell glanced at the woman, almost furtively. It could seem to them then, to both of them, that no face had ever been so beautiful and so strange or so completely unapproachable. Standing there, silent and not judging, in her cheap dress, she had become the symbol of their despair. Almost gasping in a kind of grief, they followed the sheriff out on the porch. The rays of the sun were level now with the mountains. With the last sunlight striking the snow, they knew finally why four hundred years before, the first Spaniards there had called these mountains Sangre de Cristos. The red on the snow was luminous and unlike any other red they had ever seen. It was as though you could see through it into the mountains and that these glowed with a cold light, washing and changing even as they looked.

They mounted stiffly and rode with the posse back along the mountain road.

# RESOLUTION FOR AMERICA

This year must be the year of decision.

This year, all over the world, *America fights.*

Our factories and farms are producing the materials to make that possible.

Our ships, planes, guns, tanks, are taking swift shape in numbers to accomplish conclusive results.

These things must now get there — get where they're needed, where they will be — get there swiftly, on time, without fail or falter.

The railroads have a part in that job—a big part.

They accept it.

They could do with more engines, more cars, more everything when materials can be spared for them.

Until then and after, railroads and railroad men will continue to work as they never worked before to get the job done.

Now and then, that means inconveniences to you as a traveler, we are sorry. We are trying to avoid that, too.

But guns and the men who use them must come first.

The guiding rule of our lives—and

of yours—must be *right of way for the U. S. A.*

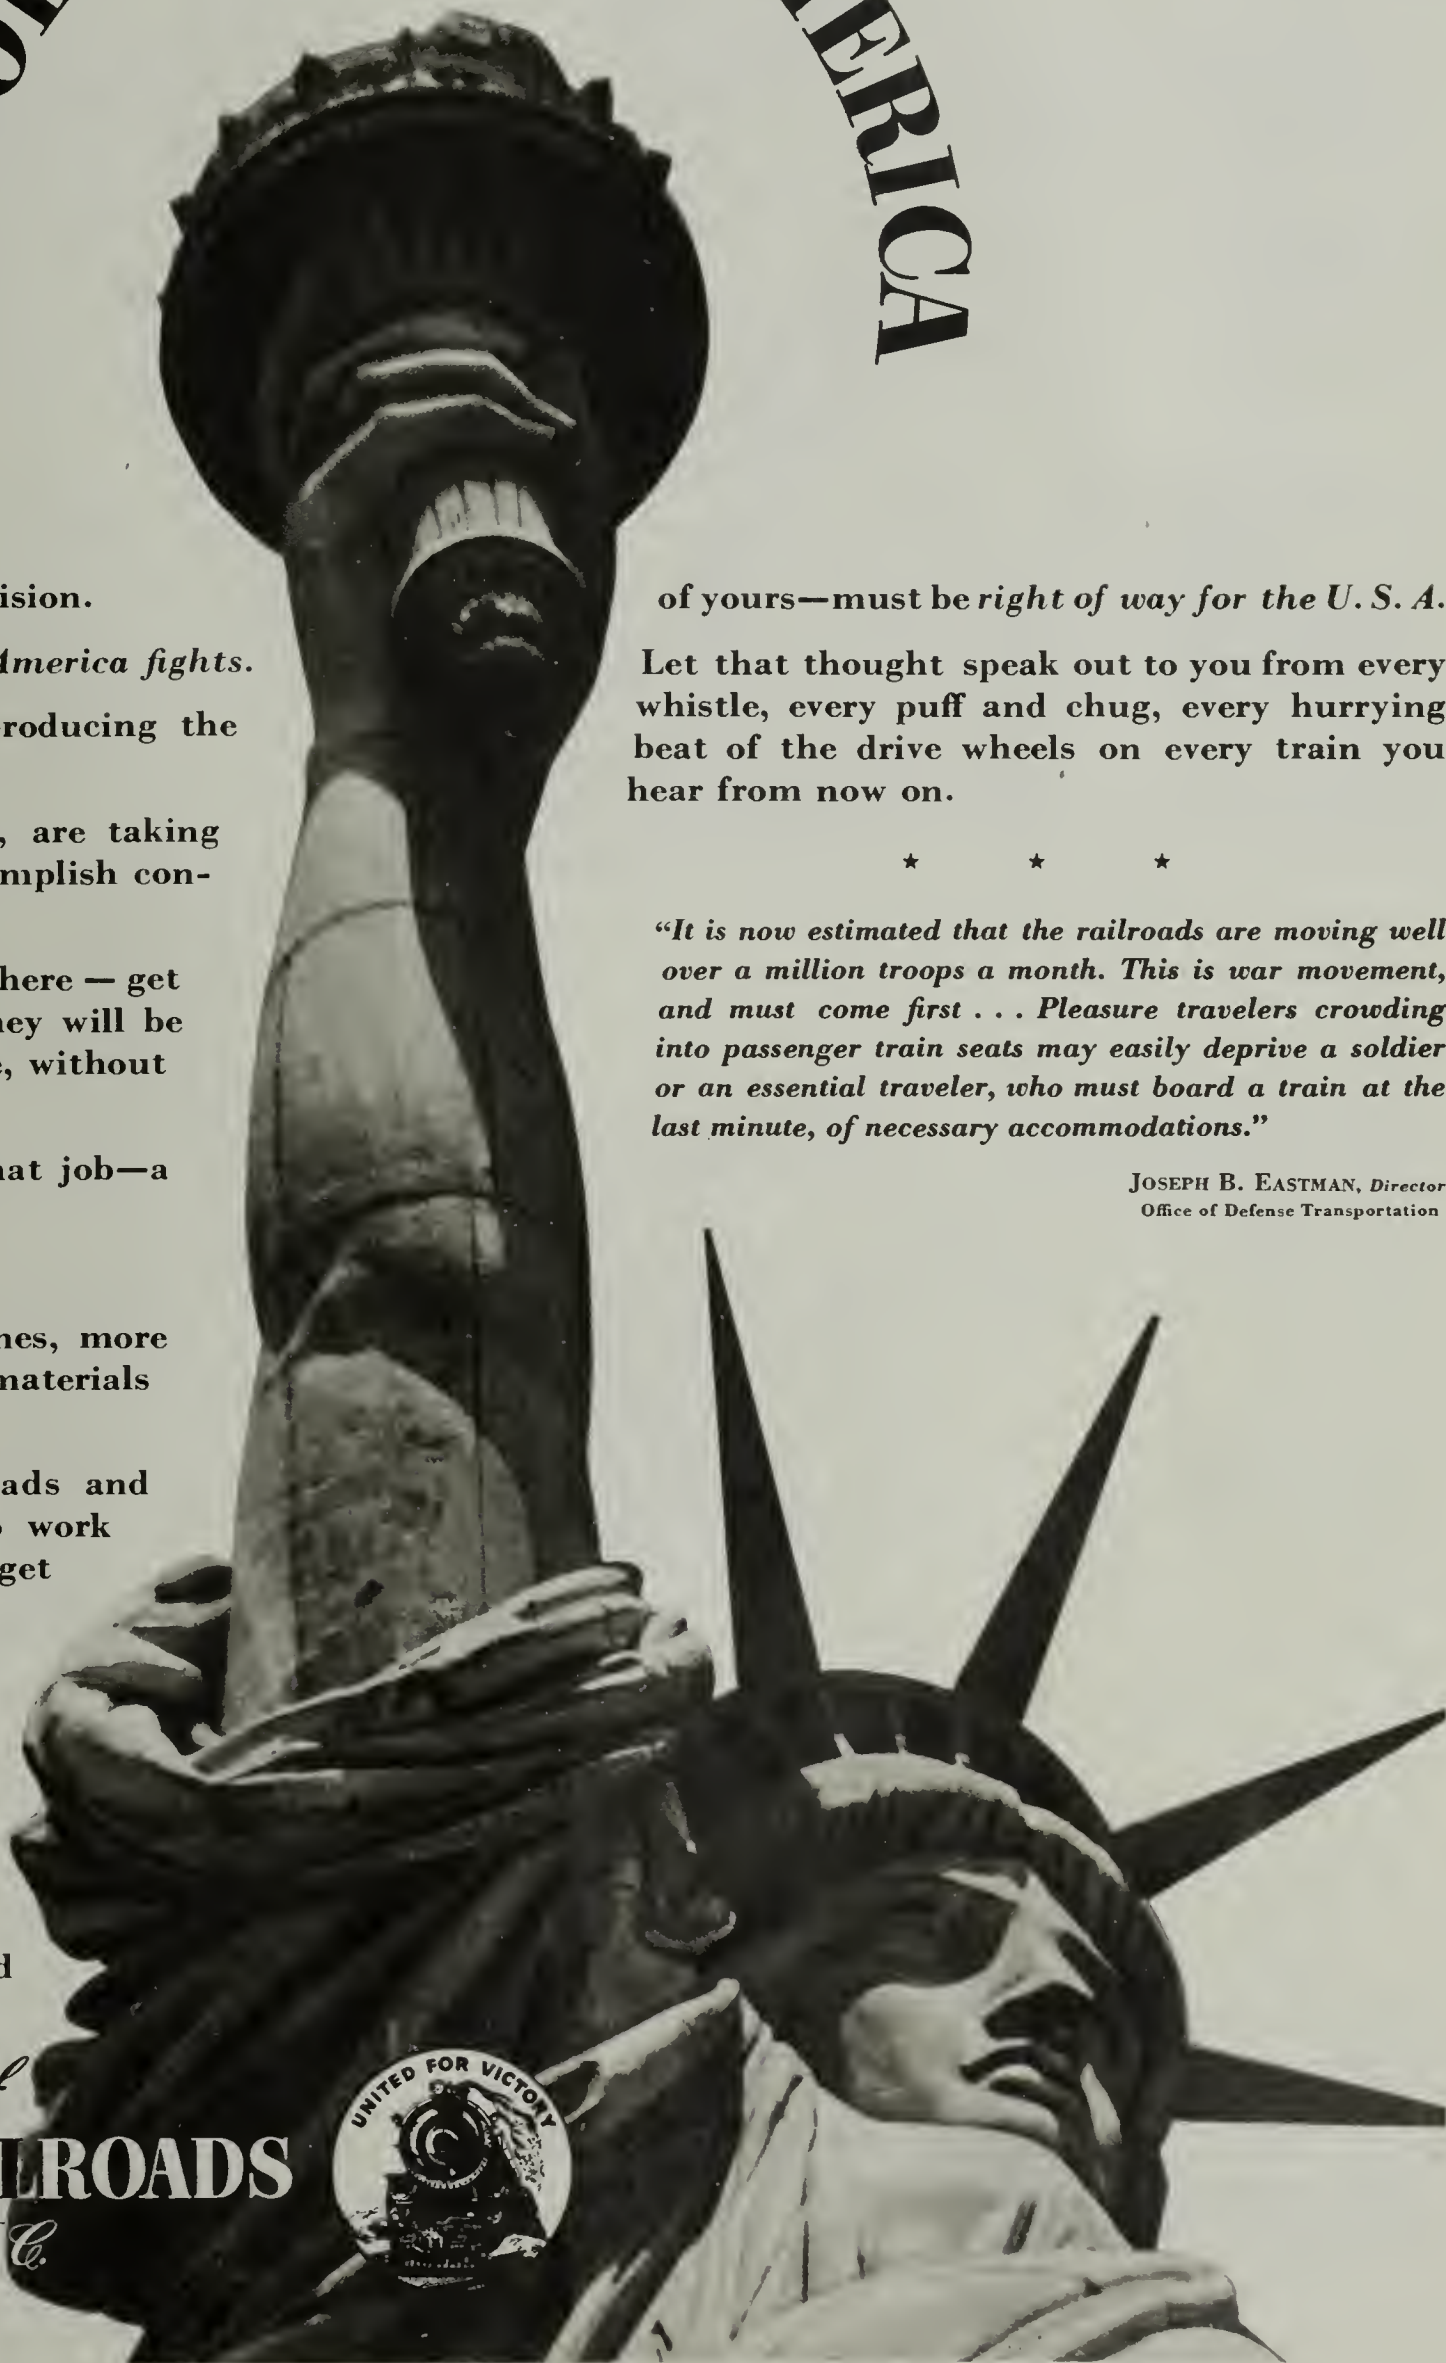

Let that thought speak out to you from every whistle, every puff and chug, every hurrying beat of the drive wheels on every train you hear from now on.

★ ★ ★

*"It is now estimated that the railroads are moving well over a million troops a month. This is war movement, and must come first . . . Pleasure travelers crowding into passenger train seats may easily deprive a soldier or an essential traveler, who must board a train at the last minute, of necessary accommodations."*

JOSEPH B. EASTMAN, *Director*  
Office of Defense Transportation

*Association of*  
**AMERICAN RAILROADS**  
*Washington D. C.*

## MOTHERS! FATHERS!

### YOUR CHILDREN NEED THESE WORLD-FAMOUS BOOKS

Are you as parents giving your children books that they need through their school years? Are you providing the means to make your boy and girl a competent student?

Here is a completely new library of ten volumes containing the greatest of children's literature—the answer to every child's impetuous desire for knowledge and the means of attaining the success that he wishes in school.

#### HELPS YOUR CHILD IN SCHOOL

The New Junior Classics supplements all school work. It helps in English, rhetoric, history, geography and reading . . . by bringing to your children a first-hand knowledge of the greatest stories ever written . . . an appreciation of fine English style and a thrilling acquaintance with the great heroes and heroines of every generation. It does what only great books can do. It fires the imagination and encourages growing boys and girls to establish for themselves higher goals of achievement.

Today parents and teachers, editors and educators recognize as never before that children develop faster who are given wholesome books and are guided in their reading. The New Junior Classics fills that need. Brilliant, full-color illustrations appear every four to five pages, the work of 127 world-famous artists—a total of 1,027 pictures in 21 colors. The set contains 4,830 pages, 2,000,000 words, the work of 257 authors. It is printed in large modern type and each volume is in a different color of binding.

Now, during their most formative years, your children should have these books. They cannot wait. It is your opportunity to inspire them with a love for good reading that will stand them in good stead the rest of their lives.

**A HANDSOME BOOKLET FREE**

You owe it to yourself and your children to find out more about The New Junior Classics. Before you do another thing, send for the booklet that tells what this beautiful library holds for your children. Fill in and mail the coupon below. It does not obligate you in any way.

**SEND FOR FREE BOOKLET**

The **JUNIOR CLASSICS**

and began to crawl toward the *morada*. Behind and now above them, they heard the sheriff speak to his men and the silence grow, now devoid of whispered voices, even, but stranger even than night silence should be. In the dark, the hunters crawled awkwardly—for they had never carried rifles so—over the hard, uneven ground.

Grief and shame had crazed other men before them, and it is not too much to say that they were briefly crazed. Certainly, apart from the crawling, they moved with the direct logic of the mad. It was perhaps this that saved them. They came on the *morada*, its open door a dark gash in the thick, moon-washed wall of the building. The rifles inside the building made bright marks in the darkness of the *morada*. The bullets went over their heads, although one, striking near Darrell, sent into the moonlight, small blades of dried and frozen grass, that floated in the cold air.

TO DARRELL, it came as no amazement that he was unharmed. The logic of the moment told him that all things were possible now. From the doorway he fired once, fired high at the blank dark of the place, as if the civilized part of him, now small and gathered inside him, shrank from killing people. There was no answering shot and he crawled inside hearing Chapman following him.

He felt the contact of the hurled, light body first, then the knife, burning, but rasping against his shoulder blade as he turned, twisting, fighting at once clear and closer, punching, and when he held the smaller body, kneeling upward freely, hearing the cry of pain, and sensing from the held body's movements, the coming of the knife and twisting away and slugging again, feeling the lighter body drop off and away from its kneeling position and lie, sobbing on the floor. Then flinging himself on it, half-conscious as it lay, and twisting from the feebly raised-backward arm, the knife, and lying across the man, twisting his arm so that he could not move, and then and finally hearing Chapman and the other man fighting near by in the dark. Hearing now, Chapman's cry, more of amazement than fear, "Why, the guy had a knife!" and being able to reply, with the first faint stirrings of humor and, therefore, of humanity: "What did you think he was going to have?"

Looking up, Darrell saw the sheriff's stocky body outlined in the doorway

against the bright, flooding moonlight. The other stranger's body that battled Chapman in the dark, sobbed and topled under the weight of the footballer's strength and fierceness. Holding his own opponent—so had Jack wrestled in the dark, not knowing he fought an angel—Joe Darrell heard Chapman's victory and saw the other dark forms come up behind the sheriff in the pale light. They came into the room, following the sheriff, and some one snapped on a flashlight. The men of the posse leaned with pieces of rawhide and the sheriff murmured dull and with the triumph carefully washed from his face, that they would take over now.

Darrell stood and walked outside. The clothes covering his left shoulder stuck to it. He could hear Chapman behind him, and turning, saw also the sheriff emerging, still without signs of triumph. Later—certainly so, years later—it might seem foolish and melodramatic to Darrell, but now he said what he had to say to the sheriff: "Now, it will be all right to go with you for our friend." It was neither a question nor a statement, but partook of both.

The sheriff sighed. "You misunderstood me," he said again. "I was not passing a judgment upon you. I was only thinking of how you would feel carrying him down. And then there was also the question of the bear in the dark. It was why I would not bring the dog. They are often fearful in the dark."

"But we are not," Darrell said. *I the day we were fearful but not in the dark.* Tears were now not far from him. The sheriff said, "If we are going, guess we had better go."

AT THE horses, he spoke to his men in Spanish and three of them rode with the sheriff and the hunters. Going up the dark mountain, Darrell knew that nothing could ever make full reparation for what they had done—even thinking now that they would probably have been too late to save Eddie, anyhow—but they had done what they could, if not for him, at least for themselves. *Or for something.* Carrying him down by night would be bad enough but now at least bearable. After a while they might even be able to live with themselves. They rode slowly upward toward where, in the sheriff's remembered words, waited "the bear . . . a night . . . your friend . . ."

THE END

## Men Without Weapons

Continued from page 62

stranger. I guess you don't know it, but you're kind of a hero."

Pierce laughed. "Heroes aren't rescued. They do the rescuing."

She wasn't smiling when she said, "We know something about the sea, Mr. Pierce. It's not just a job these days."

He saw now how this girl felt about things. Brought up near the sea, a part of it, she had the proper respect for it. But the war was kind of a holy thing to her. Clyde Nash had felt that way. He remembered the look on Clyde's face when he signed up again two weeks after being torpedoed in the Caribbean. He had seen the expression on the skipper's face when he shook Clyde's hand, and he had heard the crew cheer him. And Pierce had put it all down in his book as the good old come-on. To Roy Pierce, believing sincerely that he saw things as they were, the Merchant Marine was a job, and only a job—well-

paid, with a bonus and double-time for war.

The girl cut into a path which skirted the cove's head, and Pierce felt the drift of fog against his face. When they had climbed the hill, the town lay before them, centering on the white church steeple. Here and there men moved without hurry, but purposefully along the wooden sidewalk. Beyond the town and its winter-gray fields, stood a tall wall of trees, softened by the fog—a barrier which made this a land of its own.

He stood there, his square shoulder hunched forward, his feet firmly planted on the flat of the granite ledge, and stared at the scene before him. He had never in his life seen a town like this. But dreams, pulled from out of the city's noisy night, had given him this same street, these same houses, this peace and protection. Deep satisfaction grew in him like a drug.

Amy Lloyd had stopped walking. She waited, her face turned toward him questioningly. When he became aware of her, he took his eyes from the town and looked at her.

"You were born here," he said. "You think you know this town—you take it for granted. But I feel it belongs to me. That's because I would choose it out of all the places I've seen."

Then suddenly smiling, he said, "Let's go. I'm hungry."

The house was long and low-roofed painted white, and joined to its sheds and barn. Amy Lloyd opened the door and said, "Come in," and he followed her through a small hall filled with the staircase and the head of a ten-point buck.

"You better sit down," she said. "That was a long walk."

Pierce looked around, and felt the warmth and comfort of the place filter through his body, and the tautness left. He looked at Amy Lloyd, and she seemed now to be someone he had known for as long a time as he had known this town—and he had always known this town.

ADAM LLOYD stirred his coffee slowly, carefully, his eyes studying the swirl in the cup's center. He looked up at Pierce, and for a moment he said nothing.

Pierce waited, giving the man his time to select his thoughts. They could hear Amy in the kitchen softly humming to herself, and the occasional clink of a dish.

Then Lloyd said, "Mister—I think you ought to report that sinking to the Coast Guard."

"That's done," Pierce said. "Lifeboat Number 2 reached shore a long time ago. We were less than fifty miles from land, and she was fully equipped for navigation."

Adam Lloyd drank the coffee slowly, enjoying each precious swallow. Arresting the cup a few inches from his mouth, he said, "You'll be listed as lost at sea?"

"That's right."

"How'd the sub spot you? Someone must have been careless."

Pierce said grimly, "We weren't careless."

Lloyd thought a moment. Then he said, "Well, you want it this way: as far as the rest of the world goes, you're dead."

"It'll be that way if no one from here reports that you picked me up."

The old man sucked in his lips. "I should. But I won't. So long as the official report of the sinking gets to where it belongs, what you do about yourself is up to you. We don't pry into another man's business—unless we got business to do with him." The old man's keen, darting eyes caught on Pierce's, and held, waiting.

Pierce said, "Sure. I don't blame you. There's little to tell about me. I come from Brooklyn. But I've been around some. To sea, mostly. I was looking for something, I guess." He paused. "Six months ago I went back into the Merchant Service. The wartime wages got me. I've fooled around with machinery. I can hypnotize a marine engine, and I'll soon learn how to handle lobster traps."

Adam Lloyd brushed aside the words. "There are things a man's got to know about his business partner—not what he's done, but what he is. And one question comes first. Why do you want to give up a good-paying job for a life in this forgotten town? Your answer, honestly given, will tell me what kind of a man you are."

Pierce studied the fresh, neatly tied bandage on his arm. There were two answers to this question—one was the simple truth; the other, not a lie, but the

outer clothing of the truth—the trappings which were the excuse for the act. Pierce's first impulse was to hand back the answer with the trappings.

But when he spoke, he said, "All right. I'm quitting because I can't take it any more. That's all."

He'd let that stand as it was, without any whine or excuses to go along with it. There had never been anything easy in his life, and he had never run away from the things that were hard. But what had happened to him out there in the night, the sneaking hit of the torpedo, the sudden decision to give up his place in No. 2 lifeboat to Clyde Nash for no intelligent reason, the struggle under the film of burning oil, the utter darkness into which the boat had slipped—these were not the same fair stuff the sea had thrown at him before. He was not the fool to play into a second chance.

He looked up and saw the tolerant smile of an old man, and the gauging wisdom of the eyes. Adam Lloyd said only one word, "So?"

And Pierce knew then that he had been right in his blunt answer. Lloyd had wanted the truth; getting it, he was satisfied. The motives behind were not his business—an honest man can be trusted to handle his own conscience.

Pierce waited for the verdict. Then Lloyd got up from the table and went to the wall and took down the almanac hanging there. He turned through the pages and found what he was looking for.

"We'll haul at ten in the morning. Tide serves about right then." He let the book fall back into place, and standing there, a small tough man, who respected toughness, he said, "It took guts to cut through to the truth."

He picked up a leather coat and walked to the door. "Tell Amy I'm going to town. I'll see if I can rustle up a pair of boots for you." He closed the door behind him.

Pierce turned and saw Amy standing in the doorway. "Where did father go?" she asked.

"To town. He's looking up a pair of boots for me."

She laughed. "You going to dig clams?"

"No. I'm going out hauling with him tomorrow."

She looked puzzled. She said lightly, "Getting restless?"

"Maybe."

HE LOOKED at her standing there in the strong ceiling light. The short sleeves of her blouse pressed into the flesh of her arms. Last summer's tan was giving way in her skin to winter fairness. He walked nearer, and stood leaning against the doorjamb.

She said, "What are you thinking?"

"About you. You're quite a girl."

She moved nearer him, and he saw that although her body leaned toward him, she was holding herself back. There was this softness about her which covered the strength underneath.

He made no further move, nor did he let her see that he thought another move was possible. This he did to express for himself his respect for her—to break away from a past feeling about women, too easily recalled. It gave to this moment a certain dignity.

He waited to hear her first words. They would tell him much. Did she feel this moment as he felt it, and if she did, would she try to cover it with casual words? She was looking straight at him.

"You're making this important," she said. "Are you sure you want it that way?"

He said, "If I were to leave tonight, never to see you again, the answer would

## For Health— AVOID HARSH LAXATIVES

**LEMON and WATER IS GOOD FOR YOU!**  
Taken first thing on arising, it has a mild laxative effect sufficient for most people. And it's healthful—aids digestion, supplies needed vitamins, builds resistance.

Why not take this simple, natural health drink—lemon and water—in place of the usual laxatives?

Most people find that the juice of 1 lemon in a glass of water, taken *first thing on arising*, is all they need to insure prompt, normal elimination—*gently*.

### Lemons Build Health!

And lemon and water is *good* for you. Lemons are among the richest sources of vitamin C, which restores energy, helps you resist colds and infection.

Keep regular the *Healthful* way!

**LEMON and WATER**  
...first thing on arising

Copr., 1943, California Fruit Growers Exchange; Sunkist Lemons  
"Today of the Duncans"—CBS, 6:15 P.M., E.T.—Mondays, Wednesdays, Fridays

They're the only known source of Vitamin P (*citric*) and supply valuable amounts of B<sub>1</sub>. They alkalize—aid digestion. Millions take lemon and water just as a *health builder*.

Why not keep regular with this refreshing morning drink that builds health too? Drink the juice of 1 lemon in a glass of water *first thing on arising*. Try it 10 days—see if you don't benefit!

P. S.—LEMON & SODA • Some prefer juice of 1 lemon in half glass water with ¼ to ½ teaspoon baking soda (bicarbonate) added. Drink as foaming quarts.

## CASH REWARD

### To Collier's Readers!

As a reader of COLLIER'S you know what a colorful and exciting magazine it is! Don't you think you can show other folks in your community how entertaining Collier's is? As your reward, you will receive liberal commissions for looking after new and renewal subscriptions.

With mounting war taxes and the increased cost of living, you may need extra money more than ever. Give our profitable plan a real trial and see for yourself how easy it is to get started. Many of your friends are already subscribing—their renewals will bring you the same big commissions as new subscriptions.

There is an opening in your community—right in your own circle of friends. For full details of this money-making offer, *just mail the handy coupon or send a penny postal now!*

# Warning!

When You Say "Webster's Dictionary"  
You MEAN the MERRIAM-Webster

Accept Nothing Less Than  
the "SUPREME Authority"

LOOK FOR THIS CIRCULAR TRADE-MARK  
AND THE "NW" MONOGRAM ON THE COVER.

THROUGH four generations Webster's Dictionary has earned and maintained first place among reference books. When you are confronted with any question of fact, whenever you need to know, you think of Webster as the utmost in authority, the judge of judges, the court of last appeal. But that confidence is warranted only if you use the MERRIAM-Webster.

Look for the Merriam-Webster trade-mark when you buy a dictionary. The New Second Edition of Webster's New International (unabridged) is 20 years newer, contains 122,000 more entries than any similar dictionary. Provides information in all branches of knowledge. The authority in courts, colleges, newspapers. Prepared by 207 experts. 600,000 entries; 3,350 pages. 12,000 terms illustrated. Ask your bookdealer, or write for free booklet.

**GET THE BEST** The Merriam-Webster is the standard of schools and colleges; State Supreme Courts; the Government Printing Office; professional and business offices everywhere.

The unabridged Merriam-Webster is not sold at cut prices nor at fictitious "bargain" prices. Don't be duped! Be sure you get the Merriam-Webster—the "Supreme Authority."

RUBBER HEELS AND SOLES

be—no. I'd want it the way it started. But I'm not leaving. I'm staying here for a long time."

Amy Lloyd looked at him, startled. "What do you mean?"

"I'm staying here to work with your father. Don't worry—I won't stay in this house. I'll get a shack down at the cove. Your father told me of one."

"I don't think I understand."

"Don't you want me to stay?"

"Yes, I do—for my sake—not for yours."

He was surprised that her low voice had the power to hurt him. He said, out of this hurt, "It's a funny thing about people in their home town. They're swell to you, as long as you're the stranger. But the minute you want to settle down and be one of them—you get the cold shoulder."

"No," she said, "it's not that—with me."

He knew it wasn't. Underneath he knew she had another reason for not wanting him to stay—a reason he didn't want to probe too deeply. He said:

"Your father and I talked it over. It's settled. I knew the minute I saw this place I never wanted to leave it—and that was even before I saw you. So you see how solidly my roots have already grown into this soil?"

"Yes, I see. You transplant easily." Her voice hardened. "Well, since we're not strangers, passing quickly, we don't have to live all in one moment. I'm tired now, and I think I'll go to bed. You'll find everything you need in your room, I think. Good night."

Pierce saw her hesitate at the door leading into her room. But she did not turn back. The realization that her attitude toward him had changed, deepened. His mind said to him, "Women are funny." A door closed stubbornly in his thoughts, preventing any further reasoning than that.

THE shack he rented was on a low point, within the protection of the cove, and yet away from the activity around the dock. It was furnished with a stove, a built-in bunk, a chair and a table. Lloyd helped him supply it with needed things, and Amy brought blankets down from the house.

On her second trip she was alone, and she had brought a pair of curtains. He laughed, sitting on the table with a cigarette while she stood on tiptoe at the window.

"Why does a woman always put up curtains the first thing?"

"How do you know?"

"Well, don't they?"

"You mean all the women who've helped you furnish your hideaways?"

The words stung him. And he tried to persuade himself she had used it innocently. When he looked at her she was smiling.

"Okay," he said. "But I notice you don't seem to object to decorating this hideaway."

She shook her head. "You've made up your mind. I couldn't change it—or try to. But you're a neighbor now, and we're neighborly people."

He swung from the table. He saw how things stood now. But why should he make excuses for himself before this girl any more than before her father? He said, "I'll be hauling in twenty minutes."

"Father's glad for your help." Her voice was cool and clear when she added, "You'd better watch yourself. Lobstering's dangerous work, you know."

He walked over to her and took her roughly by the shoulders. "What are you trying to do—ride me?"

"If you want to take it that way." But her voice trembled a little now, and he

felt the softness again, and because a certain respect had gone from between them, he knew that this time he would kiss her.

The kiss was ruthless and bittersweet, and she pulled away from him, angry and humiliated. At the door she turned, and said from the bottom of her heart:

"Why did you ever come here—to come here to stay?"

"I'm here," he said steadily, "and you've got to reckon with me."

AFTER the morning haul through the sun-bright half-wintery day, Pierce stayed out on Lloyd's boat to work on the ignition system. He was going over the wiring when Lloyd came alongside the motorboat, and said, "You ever going to eat?"

"Sure," Pierce said, "I got some beans waiting."

"They'll keep. Come up to the house and eat a good meal."

"I'd better not."

"That's foolishness," Lloyd snorted. "We got plenty." A twinkle came to his

sound like you, Amy. What's troubling you?"

Pierce said, "Let's skip it. You're hired as my social secretary, Amy."

Adam Lloyd laughed, and his laugh carried them through the meal. . . .

Halfway down to the cove Pierce changed his direction and cut back into the town's center. A low-winged coastal patrol plane thundered overhead, veered suddenly to the south, dipped, and then went on seaward into the gray horizon. Pierce walked on. As he passed a green-front store, and saw the tall, gray-suited mayor standing at the window, he suddenly decided to turn in there. He looked over a few things on the counter and then spoke to the mayor. "If that invitation is still open," he said, "I'd like to say a couple of words to the boys."

The mayor looked pleased. "That's the spirit," he said. He rubbed his chin with a broad hand. "By the way, Pierce, what's on your mind to tell the boys?"

"I haven't given it a thought yet," Pierce said, "I talk from the cuff."

"Isn't it astounding? We've found that one  
can really keep quite comfortable with coal"

eyes. "Besides, Amy asked me to ask you—she's got something she wants to talk to you about."

"It's about an invitation," Amy said, as he followed her father into the warm, apple-smelling room. "I turned it down for you."

"What was it?"

"To make a speech."

He laughed. "I thank you."

"It wasn't a political speech," Amy said. "You remember our mayor? You met him down at the dock—a nice old man with a gray suit and rubber boots? If you plan to be a Wyman citizen, you'll have to know him."

"Thanks again—what's he got to do with the speech?"

"He wanted you to talk to the boys. We're giving them a goodbye party tonight at the school gym. They've just been called up. There are quite a bunch of them—kids, mostly. Well, you being sort of a veteran, you know—he thought you could give them a word or so of advice."

Pierce looked at her. He asked, "Why did you turn it down?"

She didn't answer for a moment. Then she said coolly, "I'd be a little bit afraid of what you might say to those kids."

Pierce said, "Okay. Maybe you're right. I might frighten them. What did you tell the mayor?"

"I told him I didn't think you were strong enough to speak yet—it might hurt your arm."

Adam Lloyd swung up from his rocker and looked at his daughter. "That doesn't

Outside on the street he turned left and walked back to the cove. He felt the wind against him and in the wind there was the smell of snow.

He had just closed the door of the shack when he heard Lloyd's voice, carrying urgency, calling from the cove. He walked down to the shore and saw him sculling his skiff from the motorboat. "Get your boots on," Lloyd shouted, "we got a job. I'll pick you up at that ledge in front of you."

Pierce went back to the shack, found his boots, caught a glimpse of the still unhung curtains, felt a brief smile come to his lips. He hurried back to the ledge.

Lloyd said, rowing now into the wind, "A small boat's ashore on Luke Martin's reef. The Coast Guard plane didn't report seeing anyone aboard."

PIERCE cast off as Lloyd jammed the gear forward. The long, narrow-beamed boat yawed in the following seas, which grew as they ran down the coast. There were no houses here and the high, granite walls held warped spruce close to their flanks.

"How did you know about this job?" Pierce asked.

"Coast Guard phoned me from Bar Harbor. I go out on this small offshore stuff for them."

Fine grains of snow, hard and wind-driven, swept across the forward deck and drifted into restless piles in lee corners. Lloyd shifted the course. "I'm going inside the reef. She must lay inside and to the south."

He was right. They picked up a buoy fit, then they saw beyond a point of rocks what looked like an oversized dry, until they got nearer and saw that it was a lifeboat.

"Port bow's stove in," Lloyd said.

Pierce jumped on the forward deck of Lloyd's boat to see over the gunwales of the other. He was already sure there was no one on board, and yet a curious timeliness came over him. The open forward compartment was filled with water. Amidships, Pierce could see a large, dark bundle, and as they drew nearer, he could see that it was a man's body. All along the gunwales, and below in the planks, he saw ripped holes, some as large as his fist. Inside, the planks were splintered; long slivers angling out in jagged lines, he stopped lightning.

"She's been shot full of holes," Pierce said.

The next wave breaking over the ledge swung the bow around, and Pierce saw that she was the Cyrus P. Conner's No. 2 lifeboat. He felt his mouth stiffen, and even in the cold wind, heat rose from inside his shirt.

"Can you come alongside?" Pierce asked.

Lloyd edged his boat forward, little by little. From where he stood at the ship's helm he could not see what Pierce saw.

The dead man's head had been shot through. Pierce recognized him—an older, but he didn't know his name. Farther aft were two ditty bags, sodden and rolling with the boat. On one he saw the stenciled initials—C. N.

"She's too heavy in the bow," Lloyd said. "She won't tow."

Pierce made no answer. He stood there, looking down at the boat. Bitter anger came to him, as he thought of the men, Clyde Nash, and Jensen, the mate, and this oiler. These men had been machine-gunned without a chance. And with the anger came a sure knowledge that this boat must not die, unknown to the world, on these black ledges.

Lloyd called sharply, "Well?"

"We'll get her out of here," Pierce said. "She's my job. Pass me a line."

NOLIGHTS were visible in the school gym when Pierce and Lloyd walked up the shell road into town, but the sound of dance music filtered out through the black curtains and drifted into the night air around them. A large bus was parked near the main entrance, its hood covered with a thick blanket. The sign, dimly lighted from inside, said SPECIAL, and someone had scrawled on the dark body in white chalk: WYMAN'S WILD-MEN WILL HANG HITLER.

Pierce walked faster.

"Watch yourself, son," Adam Lloyd said. "Remember, they haven't seen what you've seen."

"They will," Pierce said.

The crowd at the door greeted them and wondered about Lloyd's silence and Pierce's grim face. Even the mayor backed away and made room for them to pass.

Pierce saw Amy at the refreshment table, with stacks of pies, cakes and doughnuts before her. Her eyes lifted and met his. The brief moment of relief at their return was followed by apprehension as Pierce walked to the orchestra's platform with the mayor. He remembered her words: "I'd be afraid of what you might say to those kids."

They stood in a bunch beyond the long table, those young men, as though they knew themselves a group apart. There was something raw—unused about them, like a fuse not yet set off. They were laughing among themselves, nudging one another, their voices loud and light.

He heard one dark-browed boy shout to another across the room, "Hey, Gilly—here's one time we don't miss the bus! Boy, are we going places!"

Pierce thought: *They don't even know what they're going for!*

He signaled to the mayor and saw Amy leave the refreshment table and go to her father. She spoke to him, looking at Pierce, and Adam Lloyd gently placed his hand upon her arm.

The room became quiet. Pierce said, "I guess you all know how I got here. My ship was sunk off this coast away. I want to tell you how that happened—so you'll know the kind of rats you're up against. Here's how we got it that night. We saw a couple of distress signals off out starboard bow—then more. The skipper wasn't sure what ship might be there—but they were real distress flares. We thought it was some ship that had been hit. So we shifted course and ran over. It was too late when we saw that it was a Nazi pig-boat. She let go one fish—then another—point-blank."

He felt a stir in the crowd. He saw the face of the dark-browed boy tighten.

"You men have a lot of living ahead of you," Pierce said. "This town's a good place to do it in. But we can't—any of us—even make a start on that living, until we've done our job—and we know what that is."

They stood there in a close-packed group, those kids who didn't know what it was all about. Pierce's anger had been too big for one body to hold. It had spilled out and was running like a flame through these men.

THE bus driver threw away the cigar stub, said, "Sure," and climbed into the cab. He sat there, detached, filled with his own thoughts, while the engine idled, warming up. Pierce turned to Amy. He said, "He's got room for me. I'll take the train from Bangor."

The wind had died, and a winter sky held bright stars. They were standing on a step of the school building, overlooking the town. In this dim-out, the pin points of light here and there gave distance to the houses, and a feeling of unreality. For a moment Pierce harbored the thought that maybe this place existed only in his mind.

He looked at Amy in the faint glow of the clear night. "You make it real," he said.

She stood near him, her eyes searching the town, as if she were trying to see it as he saw it now—a place he had won, only to lose so soon. He saw her clearly now—the inner strength and the fineness of her grain. And he knew that more important than the place, he had found the heart of the place, and that had probably been the thing for which he had been looking.

"You're so near me now," Amy said, "and a week from tonight—I won't know where you are." Her face turned toward the sea.

Pierce said slowly, "But I'll know where you are. And knowing that, I'll know where to go, when I go home."

The door behind them opened, and young men poured out of the school. Some carried suitcases; others bundles and duffle bags. They piled into the bus, shouting, laughing, full of the joy of action. Pierce wondered if under that laughter, he had left a seed of determination.

The bus driver punched the horn twice. Amy turned to Pierce: "You know how I feel, Roy."

"I know," he said, "I've known all along."

The horn sounded again, and he turned then, and walked toward the bus.

THE END

"I confess—I did it for a pack of Sir Walter"

IT'S THE TRUTH! You'll get more honest-to-goodness pipe enjoyment out of better-tasting (and better-smelling) Sir Walter Raleigh. First clean that briar, then tamp down a load of this delightful Lurley blend. For a grand aroma all its own, try "the quality pipe tobacco of America."

MEDICATED FOR  
**CLOTHESPIN NOSE**

Has a cold pinched your nose shut—as if with a clothespin? Lay a Luden's on your tongue. As it melts, cool menthol vapor rises, helps penetrate clogged nasal passages with every breath...helps relieve that "clothespin nose!"

## A RE-DEAL ON LABOR

THE Congress which has just taken office is expected to "do something" about labor. We hope that what it does do will disappoint the extremists on both sides of the labor question. That ought to suit the great majority of us.

There is no doubt in our minds that something should be done about labor. Labor organizations have become extremely powerful in the last few years. They are treated by existing laws and a few Supreme Court decisions, however, as if they were frail and precious growths which ought to be nursed and petted to maturity.

Thus, labor is officially permitted to stage un-called-for wildcat or jurisdictional strikes, to force employers to hire "workers" who do no work, to keep new materials and processes out of public use.

Labor leaders are able to get away with things approaching murder in such matters as the rigging of union elections, the blacklisting of

workers whom the leaders don't like, the juggling of union finances, the dragooning of workers into unions, the intimidation or boycotting of employers.

All this is analogous to what the more piratical elements in business and finance were getting away with fifteen or so years ago. Business and finance have been paying through the nose for some ten years for those excesses of a few of their practitioners.

Labor in general will begin sooner or later to pay through the nose for the current excesses of a few of its leaders and members, unless a few needed reforms are adopted now and by labor's consent.

As we see it, these are the reforms that are now in order:

Compulsory periodic financial statements by all labor organizations, to be drawn up by impartial auditors and accountants, and to be published like any bank or corporation financial

statement. . . . Union elections to be supervised by public authority, with genuine secret ballots. Antitrust laws to apply to labor organizations practicing restraint of trade. . . . Virtual prohibition of jurisdictional strikes and feather-bedding (slang term for forcing creation of unnecessary jobs). . . . Compulsory cooling-off periods before any strike can be called. . . . An end to government-compelled "maintenance of membership" clauses in union contracts.

These are moderate reforms, which should send the racketeer on his way out of the labor movement and should help greatly to build that sense of responsibility which many a new, inexperienced union lacks.

If labor will consent to these reforms, it will probably head off a lot of far more drastic reforms which some labor-haters in the new Congress are itching to enact. Altogether, it is time for the American labor movement to call in the cleaners and tell them to get busy.

## HITLER'S MARTYRS

THE Western world was supposed to have been growing more and more civilized, decent and humane since about the time of the American Revolution. And, indeed, most of it was, including Germany.

It remained for Adolf Hitler, whom Winston Churchill once called a bloodthirsty guttersnipe, to reintroduce to the Western world the old practice of mass murder of the objects of one's hatred. Because Hitler hates the Jews, he has now caused the deaths of an estimated 2,000,000 Jews inside his empire, and is frankly determined to exterminate the remaining 5,000,000.

Some of the Nazis' methods of murdering Jews remind one of Nero or Tiberius aided by modern scientific and medical knowledge—about as horrible a perversion of science and medicine as can be imagined.

One measure of this brutality now running riot in the Western world is to be found in the fact that, in our time, comparable cruelties have been inflicted on human beings only by members of a still half-savage Oriental race; namely, by Japanese soldiers gone berserk at Nanking and Hong Kong.

The Allied nations are doing everything in

their power to halt Hitler's persecution of the Jews. It is questionable whether the Allies can carry fire and sword to the citadel of Hitler's power before Hitler can wipe out most of the Jews remaining within his reach.

We can still hope, however, that the old law of compensation will work out in this case in its own time. That means we are entitled to hope that this historic crime will meet its just retribution and that the Jewish race somehow, sometime, will reap happiness in proportion to the misery which have been visited upon it by this fanatic and his followers.

It takes nearly one-fourth of all the Pepsodent we can make just to supply the boys in uniform with their favorite dentifrice. They come first, so they will continue to get Pepsodent . . . even if the rest of us may have to use it more sparingly for the duration.

The biggest number of new customers in history are asking for Pepsodent these days. Yet, despite this record demand, there are wartime limitations on how much Pepsodent we can make. So it's easy to see why there may not always be enough to go around.

If your druggist has to disappoint you the first time you ask for Pepsodent, don't blame him. He, too, is limited. Try him again in a few days when his next allotment comes in. And remember: Don't hoard. Help save enough for others . . . and there will be enough for you.

*Keep your smile bright...but*

# DON'T WASTE PEPSODENT

**1. MOISTEN** your brush before applying tooth paste. Otherwise paste may wash down the drain. Finish brushing teeth before rinsing brush.

**2. MEASURE** out only as much paste as you need. About three-quarters of an inch is enough. Always squeeze and roll tube from the bottom. Replace cap after using.

**3. POWDER** should be held in the palm of the cupped hand. *Don't* sprinkle powder onto tooth brush. Dab—don't rub—moistened brush in powder to pick it up.

**4. SHOW** children that a small amount of tooth powder is all that is needed. About enough to cover a five-cent piece is plenty. Always measure it out for them.

**5. GET** the full effectiveness from tooth brushes by hanging them up to dry after you use them. Soggy, worn, wilted brushes are inefficient, waste Pepsodent.

**6. DENTAL SCIENCE** knows no more effective, safe ingredients than those in Pepsodent—so effective, in fact, you need only a little to make teeth far brighter.

# Don't Put a Cold in Your Budget!

DURING THE "COLD" SEASON I HIDE MY HANKIES, PRAISE THE THOUGHT AND PASS THE KLEENEX TISSUES. IT'S EASY ON HUBBY'S NOSE ... EASY ON MY LAUNDRY BUDGET!

## ANY WEEK

FROM Colonel Wm. L. Boyd, commander at Hickam Field, comes a rebuke. In our December 12th issue we published a paragraph by Freling Foster stating that six Japanese machine gunners had sneaked into Hickam Field in a milk truck on the morning of December 7, 1941 and shot down 80 American soldiers. This, says the colonel, who knows, is purely an old woman's tale. It didn't happen, despite reports. We are sorry.

EVER since Winston Churchill called upon the people of Italy to get rid of Mussolini—or else—we've been worried. Our readers have offered numerous solutions for the disposition of the fellow after he is given the much-demanded bum's rush. Some see a fortune in managing him as a wrassler. A group of advertising men want him to ballyhoo reducing foods—after treatment of course. A large packing plant wants to render him for lard. A circus wants to clown him. A department store in New York wants him for a blimp in its Thanksgiving parade. The Navy suggests he be used for target practice for dive bombers. A clothier who specializes in oversize pants wants to fit him out and stand him in his window. A theatrical producer would like to have him for a comedy role in a burlesque show. A chemist thinks that Musso could be transmuted into a rubber substitute. Several jobs as doorman are offered by hotels, night clubs and shops. But no one except our dependable friend, Colonel Dudley Silent Haddock of Tampa, Florida, has come forward with a suggestion for the deflated Duce's successor. The colonel nominates Fiorello H. La Guardia, now mayor of New York City, as first president of the Republic of Italy. "Of course," writes the colonel, "there would be a certain amount of confusion in Italy, to say nothing of quite a little noise, but Fiorello would soon have Axis affairs far, far beyond mending and Adolf would be glad to settle for a good night's sleep."

FREQUENTLY have we wondered why letters seldom if ever are written to us by Chinese. It's not that we lack Chinese readers. Consulting our circulation department, we discover that we have quite a number, some of them

being pretty important businessmen. Some years ago we heard occasionally from Mr. Leon Ming-shu from Manila, but either he got sore at us or just quit or something. Now, however, comes one from Mr. George Kwan Yen of San Francisco, whose letter concludes with: "With despic and disdain for the ultimate impotent enemies." Mr. Kwan's letter is filled with regret that the United States is not equipping vast armies of Chinese to barge eastward against the Jap, instead of sending "numerous and brave white boy soldiers westward, who learn with pain and reluctance the manner in which to kill the soldiers of Japan which is the only manner—complete killing and no acceptance of surrender. The Japanese," he goes on, "spread the propaganda that the white Western powers fear the too great strength of the Chinese and so will not arm too many. Gladly would the Chinese exterminate if given the arms and permitted to approach the enemy in his unlawful lairs. It is the difference between the Occidental view of humanitarianism and the Oriental. We the Oriental believe it is most humane to exterminate from beginning (the child) to the end (the adult) all Japanese. This we would do because it is merciful to the Japanese, who would not then hope to exterminate us, a hope that will always be Japanese unless he is removed from the possibility of hope—i.e. exterminated. For the Chinese, it would be a gracious gesture to do so."

BUT some of the letters lean toward the nasty side. Here, for example, is one from Pfc. Ray Hannagan of Fort Ethan Allen in Vermont. "That heavy wind that swept eastern United States a few days ago," says Pfc. Hannagan, "was not the ordinary atmospheric disturbance. It was the combined sigh of relief from a large number of guys who have just passed their thirty-eighth birthday." We detect a fear in other correspondence. From Mr. Herbert Belstein of Minneapolis, Minnesota, we learn that his son, Corporal Herbert Belstein, has written him from England to this effect: "Dear Pop: For years I had to listen to your stories of the first World War. Also I had to see you strutting around in that American Legion outfit of yours. Just wait until I get home. Oh, boy!" ... W. D.

NOW, FIFTEEN TIMES  
ON THE OTHER FOOT  
MR. ALLEN

**H**OPPING is hard work. Charley Allen is puffing, perspiring—and feeling foolish. But he gladly follows the doc's directions.

Charley's buying another life insurance policy—and, at the same time, another stake in his electric light and power company.

Probably, like most folks, he doesn't look past the policy. But it's a fact that *his* insurance company will take *his* premium dollars and put them to work for *him*—partly in utility securities.

Here are interesting figures furnished by the Institute of Life Insurance:

1. As of December 31, 1942, some 67 million people owned 134 million life insurance policies in 300 different companies.

2. These companies, in turn, owned \$5,060,000,000 of utility securities.

3. Through the life insurance companies alone, therefore, 90% of the adult population of the United States has a big stake in the utility industry.

The electric companies under business management—which provide the great bulk of the power for America's war production—are literally built by the savings of the same people they serve.

Clearly, almost every American has a real interest in preserving the American system of business management under public regulation

—the system that has produced more goods and more services for more people at lower cost than any other in the world!

## KEEP UP WITH THE WORLD

**By Freling Foster**

Hitler's high regard for the numeral 7 is shown by the fact that he holds Membership Card No. 7 in the Nazi party, that he allowed himself seven years to prepare for war and that he admits he will need seven years to conquer the world and another seven to teach the German people how to rule all humanity forever.

A warplane, when firing a torpedo, must travel very close to the water so the projectile will land horizontally. If the plane is too high, which occasionally happens, the torpedo may strike the surface at too sharp an angle, flip over backward and travel in the opposite direction.—By Roderick M. Grant, River Forest, Illinois.

Today London broadcasts the voice of Hitler more than that of any other man. Hour after hour and day after day for many months, the BBC has broadcast to Germany recordings of his war speeches so Germans will not forget his arrogant assertions and extravagant promises.

Among the many articles now in use that are better than those they have replaced, owing to scarcity, are nylon paintbrushes, which are superior to hog-bristle brushes: atabrine, which is superior in some ways to quinine in the treatment of malaria; and Foamglas, which is superior to cork, balsa and kapok as a filling for life preservers and life rafts.

New petroleum derivatives include ammonia, glycerin, toluene for explosives, butadiene for artificial rubber, styrene for plastics and a wide variety of alcohols for industrial solvents and extractants. Some of these petroleum alcohols are being produced at such a low cost that other kinds can no longer compete with them.

Sicily, the steppingstone between Africa and Europe, has a highly vulnerable coast of seven hundred miles, probably one of the reasons why it has been invaded and occupied, at one time or another, by fifteen different nations.

Nelson Stepanyan, an Armenian dive-bomber pilot in the Red Air Force, was recently made a Hero of the Soviet Union after he had destroyed five bridges, five ammunition dumps, seven long-range guns, twelve armored cars, thirty-three ships, thirty-six railroad cars, sixty-three anti-aircraft guns, sixty-seven tanks and seventy-eight trucks.

Plates of artificial teeth are now being held in place by magnets, four being inserted in the upper molars and four in the lower molars. Each set of magnets has like poles, which repel each other and therefore hold the plates firmly in place.

The United States Army today contains only about twenty corporals and twenty-five sergeants, of all grades, for every hundred privates. As the Army's Tables of Organization provides for ratios of approximately thirty-five corporals and forty sergeants, there is ample opportunity for promotion to these noncommissioned grades.

In Frascati, Italy, a prosperous town fifteen miles from Rome, the Germans have ordered out the entire population of 20,000, taken control of their homes, hotels and famous wineries, and made the place into a fortress. No Italian has ever been permitted to visit it since.

Five dollars will be paid for each interesting or unusual fact accepted for this column. Contributions must be accompanied by satisfactory proof. One, a national best-seller with thousands of readers thrilled by its intriguing, amazing, passionate heroine! The other containing nearly 100 of the most famous short stories ever written! Accept BOTH by subscribing to "America's Biggest Bargain Book Club" NOW!

## THE Strange Woman

BEN AMES WILLIAMS' 700-PAGE,  
\$2.75 Best-Selling Novel of a "Maine Cleopatra"  
as evil as she was beautiful!

JENNY HAGER was so fascinating to all men that when she was only four years

old she caused dashing, gay-Lothario Lt. Carruthers to elope with her mother! She drove her father, Big Tim Hager, to drown himself in rum, in fear of his own unholy desire for her! But as a child-bride, she brought banker Isaiah Poster a new zest for living—for all his seventy years!

A strange excitement shone in Jenny's eyes whenever she saw pain inflicted—a passion which drove her to do strange things under its impulse. To Ephraim Poster, Isaiah's son, she showed her true nature more naked and shameless and merciless than death itself! For why would she taunt Eph to kill his father—then jeer at him for a coward when he accidentally caused the old man's death?

### "Every Woman Is a Wanton"

Yes, she was more than a match for Ephraim, who had once boasted to his friend John Evered that "he saw a wanton in every pretty woman he met, and usually found it, too!" Eph tried to tell John the truth about Jenny. But the truth was beyond belief—and John, too, fell under her witch-like spell. Who wouldn't—after he had spent a bitter winter's night under a Cape Cod haystack with her?

But John was different. Jenny loved him and their four sons—until she deceived even him with pious Elder Pittridge, to whom she whispered, "You're really good, aren't you? I like making you do things you think are wicked. It torments you so."

In *The Strange Woman* you'll meet an utterly amazing, human character at the heart of a rich, gaudy, full-bodied novel—and a character you'll long remember!

### and THIS THRILLING, SHOCKING, 502-PAGE SHORT STORIES OF DE MAUPASSANT

IN addition to receiving free THE STRANGE WOMAN you ALSO get—on this special offer—the 502-page SHORT STORIES OF DE MAUPASSANT; complete, unexpurgated. Nearly 100 stories of love, hate, intrigue, passion, madness, jealousy—the frankest, most daring stories of their kind ever written! Read *Forbidden Fruit*—in which Henriette, tired of marriage, begs her husband to take her out one evening as he would a mistress! Read about "Ball-of-Fat," buxom girl of easy virtue who alone could save a party of more respectable folk in a dash through German-occupied France—and what she did! And read *The Diamond Necklace*, *Love*, *The Piece of String*, *The Mad Woman*, *Mademoiselle Fifi*, *Story of a Farm Girl*, *Bed No. 29*, *The Wedding Night*, all the best works that made de Maupassant "father of the modern short story."

### The Best of the New—And of the Old

Each month ONE of the Book League's selections is a modern best-seller by a famous author like Sinclair Lewis, Edna Ferber, John Steinbeck, Ethel Vance, Erskine Caldwell, or Somer-

set Maugham—a book selling everywhere for \$2.50 and up. The OTHER book is the collected works of a great writer, such as this de Maupassant volume.

The volumes of *Collected Works* issued by The Book League month-by-month are uniformly bound in durable cloth, stamped to simulate the beauty and brilliance of genuine gold. They grow into a handsome, life-time matched library. Other great authors whose collected works appear in this series include: Shakespeare, Poe, Oscar Wilde, Zola, Hugo, Dumas, etc.

The Book League—with OVER 150,000 MEMBERS!—is the ONLY book club that builds for you a library containing the best of the new best-sellers AND the best of the older masterpieces! The TWO books sent you each month are valued at \$3 to \$4. But—by subscribing to "America's Biggest Bargain Book Club"—you get BOTH for only \$1.39!

them as a gift; your subscription will begin with next month's double-selection. And the Book League will protect you for ONE WHOLE YEAR against any rise above today's money-saving price of only \$1.39 for BOTH selections every month. Mail coupon for your TWO FREE BOOKS now! BOOK LEAGUE OF AMERICA, Publishers, Dept. CLS.2, Garden City, N. Y.

## 5-DAY TRIAL—NO OBLIGATION

Send the coupon without money. Read THE STRANGE WOMAN and SHORT STORIES OF DE MAUPASSANT for five days. If these two books do not convince you that this IS "America's Biggest Bargain Book Club," simply return them; pay nothing. But if these volumes DO demonstrate that subscribing to the Book League is the wisest move a reader can make today—then keep

RACHEL  
... who avenged  
France because of  
just one German  
kiss too many!

### BOOK LEAGUE of AMERICA, Publishers, Dept. CLS.2, Garden City, N. Y.

Please send me—FREE—*The Strange Woman* (Retail price in the publisher's edition, \$2.75) and *Short Stories of de Maupassant*. Within 5 days I may return them if I care to, without cost or obligation. Otherwise I will keep them as a gift and continue to receive forthcoming monthly double-selections for a year—at only \$1.39, plus few cents postage, for BOTH books.

## Will he come back?

Miles high, meeting a stream of bullets, or holding steady through a volcanic eruption of explosive shells, or pulling out of a power dive with a shock that brings mental blackout—our eager young pilots have the physical, mental and spiritual equipment to master every danger. But whether the pilot comes back often depends on his plane, on what the engineers designed into it—on what the manufacturers built into it... and finally on the devoted servicing of the ground crew. Therefore, the men and women who are making Sealed Power piston rings, pistons and cylinder sleeves for airplane engines are keenly aware of the need for precision, for toughness and utter reliability in every part. These craftsmen are working hard for volume, but also working carefully for quality.

\* \* \*

On the home front Sealed Power engine parts are helping to save oil and gas, to keep our irreplaceable cars and trucks at top efficiency. Sealed Power Piston Rings are still available in packaged sets, individually engineered for each particular make and type of engine. Ask for them by name. They cost no more than ordinary rings. Sealed Power Corporation, Muskegon, Michigan and Windsor, Ontario.

Every gun, tank and ship is half scrap. Send your scrap to war.

## WING TALK

Former Texas cowboys, now in the Army Air Forces, ride the Gunnery School's fence line to safeguard straying cattle

THE Navy had the laugh on the nation's volunteer aircraft spotters recently. That Japanese Zero fighter they salvaged in the Aleutians and rebuilt at San Diego, California, was flown across the continent to Washington, D. C., without being detected. At least, say naval airmen, not a single report was made to a spotter control station during the entire flight, so far as the Navy can determine.

Of course, the captured Zero had been repainted and bore American insignia, but aircraft spotters are trained to recognize planes by their silhouettes. Painted insignia cannot be seen except at very low altitudes and moreover they can be easily faked.

And lest the Navy's laugh should turn out to be not so funny next time, naval experts are turning to a new system of aircraft identification which promises to outstrip existing methods. It was developed by Doctor Samuel Renshaw, professor of experimental psychology at Ohio State University, and is being taught at a new Navy school established at that institution.

The older systems of aircraft recognition require spotters to identify planes by their parts. Best known of these is the WEFT system. Students learn the shapes of the wings, engines, fuselages and tail assemblages of all American, Allied, enemy and neutral airplanes, and can determine one from the other accordingly. Several different types of planes may have the same shape wings, perhaps the similar number and outline of engines, but the silhouette of their tails or fuselages would hardly be the same also.

While the WEFT system has worked fairly well—training films of this type are still in use in the Navy—it has one failing. Spotters often have only a split second to decide whether a high-speed modern plane is friend or foe before it is on them, and the mental operation involved often takes longer than that.

The Renshaw system operates on an entirely different theory. Under it, recognition of planes depends, say Navy men, upon the visual perception of the whole plane rather than by analyzing and adding up its parts. A detailed description of how the system works cannot be

given but it seems to involve training in exercising the mind to instant and accurate perception.

Beginners first are shown a card bearing a half-dozen numbers for a split second. They then try to repeat them. At the start, they can remember only one or two of them, but with practice, they not only get them accurately, but can be given more numbers and less time to see them. More difficult mental exercises of this kind are given as the course progresses.

The Ohio State school is training Navy instructors now to teach the system throughout the service. Our Army and the British are also interested. American Army Air Forces officers, as well as members of the R.A.F. and the R.C.A.F. are under instruction there.

WHO said the horse no longer has a place in warfare, just because the cavalry is not so important as it once was? We've had Horse Marine mounted Coast Guard beach patrol and now the first horse Army Air Force unit!

Down at the new Army gunner school at Laredo, Texas, the government has leased large areas of ranch land for a gunnery range, which runs for six to three miles along the Rio Grande. Army authorities agreed, under the leases, to fence in the range and keep the cattle from wandering into the path of machine-gun bullets.

They hadn't counted, however, on one thing every rancher knew very well—that fences need tending. Lest the government be constantly presented with claims for shot-up steers, the Army commander at Laredo procured some horses and established a regular patrol. Former Texas cowboys who enlisted to fight in the air found themselves riding range mending fences again.

THERE'S such a thing as doing a job too well. Glenn Martin officially found it out after the camouflage expert got through with their airfield and plane. Field runways were not only invisible at any bombing height, they couldn't be seen by pilots trying to land. Result? The runways had to be enlarged to avoid accidents....

JOHN G. NORRIS

# HE'S GOT THE "DROP"

## ON EVERYTHING UNDER THE AXIS SUN!

OUT of the blue of the stratosphere he comes—a lad from the U. S. A. in a sleek silver bullet.

Woe to any Jap or Nazi that tries to slip away! This new Navy fighter has "got the drop" on everything under the Axis sun—

*The blazing, blasting sock of a mighty tank—on wings that fly it higher, faster than any Navy fighter now known!*

That's the *Corsair*—and the 2,000 horses that are its fighting heart—a Pratt & Whitney supercharged engine—are a Nash-Kelvinator war responsibility.

If, as it is said, the victory will be won by the ships that outfly the Axis—then

the men of Nash and Kelvinator can take particular pride.

For their colors have long been flying there. Swarms of British and American bombers that have been blasting the Axis are equipped with Nash-Kelvinator propellers. Yes, made by the men who yesterday built the refrigerators and automobiles for America at peace.

In this blood-bond of men at machines and men at the battle fronts is the strength of America.

They shall not fail, any more than our gallant flyers shall falter, until the last shot is fired—the last bomb finds its target in blazing Tokio.

NASH-KELVINATOR CORPORATION

## CHINA FLIGHT

BY PEARL S. BUCK

ILLUSTRATED BY MARTHA SAWYERS

Beginning a great new novel by one of the world's most distinguished women. In ten parts

THE three Americans standing in front of Shigo Kuyoshi drew a little more closely together. They had never seen one another before and it was altogether by chance that they met here now before the tall, slender, smiling Japanese who sat behind the heavy mahogany desk of an office, the Japanese Foreign Office, in Shanghai.

"Lieutenant Daniel James," Shigo Kuyoshi read slowly from the card in his hand. A few minutes ago Daniel James had written his name on the card at the door, two Japanese guards holding his elbows while he did so.

"Your name?" Shigo looked across his desk at the young American. He smiled, and his handsome face was instantly charming.

"Yes," Daniel James said shortly. This was the sort of Japanese he had never seen before, this fellow behind the desk. He spoke English like an Englishman and he was taller than most Americans.

"And why are you here?" Shigo asked gently.

"I was stopped on my way back to my ship," Daniel James said in the same curt tones.

"Your ship was—?" Shigo's pleasant

voice had the slightest of rising inflections.

"The U. S. S. Petrel," Daniel replied.

"Ah, she has sailed," Shigo said. "Regrettably you could not have caught her in any case. She sailed two days ago."

Daniel's heart stuck in his bosom for a second. "I left her two days ago on shore leave, so I don't believe you," he said.

"No?" Shigo said. He leaned forward and the light fell on his face. His skin was pale and fine and his oval eyes were as clear as a child's. The light glimmered upon his polished black hair. "Why not? It would only be usual for all ships to try to clear port before war was declared."

Daniel James did not answer this. It was perfectly true that Larry Harmon would try to clear his ship of port before he got caught and interned. But somehow he had felt by one means or another Larry would try to hold the ship until he got there.

"You were where?" Shigo's voice, resonant and low-pitched, put the question.

"I was—outside the city," Daniel said. "Naturally the moment I heard about Pearl Harbor—"

The words choked him. He could not bear to mention the name of Pearl Harbor before this foul Jap? The blood rose thickly

The houseboat had been furnished with everything to make a holiday gay, and Leone had been the prettiest decoration of all

up his neck and flushed his face suddenly crimson.

"Damn the lot of you!" he said loudly. Shigo laughed. "Were I in your shoes, after Pearl Harbor, I should be saying worse than that," he said gaily. He took out a gold cigarette case from his pocket, opened it and held it out to the American girl who had risen to her feet a few moments ago, with what purpose he did not know.

"Miss Barchet, a cigarette?" he asked. She shook her head, and the elderly American woman to whose side she had come to stand, smiled at her. "I'm glad one young girl don't smoke, my dear," she said in a loud, plain, comfortable voice. She was a short, stout, strong-faced woman, dressed in a plain gray suit of a cut worn ten years ago, and her white hair was drawn back under a man's felt hat with a large hatpin driven through the crown. "Seems like they all do, though. I know my girls always do when they come to the house, and I have a time breaking them of the habit. But I always try, for I notice that with us women one thing leads to another, and if I can get them to stop smoking it's often the beginning of a new life."

Jenny Barchet smiled faintly. She was an extremely pretty girl of the blond, blue-eyed American type whose ancestors had come from Sweden.

"I do smoke sometimes," she confessed. "But not now."

"That's right," the older woman said heartily. "Shipman's my name, Mrs. Shipman. Give it up for good, dear. It gives men the wrong idea about what you are. You listen to me, child—I know. Maybe you never heard about the Gate of Hope, but—"

"Yes, I have heard of it," Jenny Barchet said. "I am a newspaper reporter and there isn't much about Shanghai I haven't heard. I think everybody knows you, Mrs. Shipman, and the good you do."

Mrs. Shipman laughed. "Have we met before, my dear? I meet so many girls."

"No, we haven't met before," Jenny said.

She caught the dark eyes of the Japanese fastened upon her as she spoke, appreciative and warm. She pressed her lips together.

"This young lady is scarcely one of the girls you might know, Mrs. Shipman," Shigo said smoothly. "She is an honorable young lady from the United States of America, who is the correspondent for a very important newspaper, quite one of the leading American newspapers, and she was sent here to cover the war in China—am I correct, Miss Barchet?"

"Yes," Jenny Barchet said. "And now if you please, Mr. Kuyoshi, I would like my passport."

THE smooth black eyes slid away from her. Shigo turned to the older woman.

"And you, Mrs. Shipman—why are you here this morning? Do you want to go away, too?"

"You know why I am here," Mrs. Shipman said loudly. She held her large, worn, black handbag firmly over her stomach with both hands. "I'm here for exactly the same reason I'm here any day in the week. I want you to keep your men out of my house, that's what I want! That's the first thing. The second thing is that my rice allowance has been cut. Now you told me last week that wouldn't happen again. Last week you said—"

Shigo held up both his hands in front of his face, laughing and pretending to shield himself from her. They were striking hands, rather large and very muscular, but as smooth and beautifully kept as a woman's.

"Now, now, Mrs. Shipman," he protested. "Last week we were not at war with you."

"What do you mean at war with me?" Mrs. Shipman demanded. "You and I never have been friends."

Shigo dropped his hands and shook with laughter. "Oh, Mrs. Shipman," he sighed. "You will kill me with laughing! Dear lady—"

"Don't you dare call me dear lady!" Mrs. Shipman retorted belligerently. "I don't like being called out of my name by anybody."

Shigo rolled his eyes in mock helplessness from Daniel's face to Jenny's. In neither did he find the slightest response. They stood both of them motionless, their faces grave, and suddenly he sobered.

"Very well," he said sharply. "Here are the facts—for all of you. You, Lieutenant Daniel James, will go to prison—for the duration, if you live so long as that. You, Miss Jenny Barchet, will be interned. You will return to your hotel, and remain there within its bounds. I believe there is a compound about it large enough for you to exercise yourself. But you will not leave the gate. Mrs. Shipman, since we are not friends, we are enemies. You also will be interned. Because of your age and your good works, I will not put you in prison, although it is within my right to do so, and I will do so, if you give me any trouble whatever. If my men come to your house, they come. If you have not enough rice to eat, you will do without rice to eat—"

"You snipe, it's not for me but for my girls I want the rice," Mrs. Shipman said coldly.

"You will speak to me with respect or go to jail," Shigo said. He rose and shouted in Japanese to the four guards who stood at the two doors of the room. They closed in upon the three Americans and forced them together, bayonets at their backs.

"Forward—march!" Shigo shouted. Jenny Barchet walked proudly at the

side of the tall young man she had never seen until half an hour ago when he had been led in between guards. Now she looked up at him, and sent him a smile and he smiled down at her.

"We'll get out of this, one of these days," he said in a quick, low voice. "Meet me at Jack's, will you, in San Francisco?"

"Or before," she answered. At their backs two bayonets pricked.

"What's your hotel?" he asked against the pricking bayonet.

"Cosmopolitan," she answered.

"Floor?" he asked again.

"Third, room second to the right from the elevator," she said.

He nodded.

But Mrs. Shipman turned violently at the other side of him and gave the bayonet a great push with her bag.

"You take that thing out of the small of my back, you vagabond," she said to the Japanese soldier in her big flat voice.

"I'm goin' of my own free will anyway."

The guard crouched as if to prod her through, but Shigo Kuyoshi shouted suddenly in Japanese and the man fell back sullenly.

"You had better be careful, Mrs. Shipman," Shigo said. "I shall not always be at your side."

"For that, thank God!" Mrs. Shipman said firmly.

The door closed behind them on his peculiar bright smile.

OUTSIDE the door the two women turned together to cling to the young man's hands.

"Take good care of yourself," Mrs. Shipman said. Her large kind face was full of anxiety. "I don't like what I hear about these Jap prisons."

"Don't you worry," Daniel said. "I won't let them do anything to me. I'll be safe enough locked up in jail. But what about you two?"

# How Doth the Busy Beaver—

By Bill Cunningham

Nature taught the beaver how to build dams because he couldn't survive without them when winter cracks down. She also taught him to work hard, stay home and mind his own business—which makes this likable Little Guy one of our best citizens

**M**AINLY, it's because winter's here, and the Little Guy has to eat. Also, he has family responsibilities. There's the wife, for instance. He must love her, because in the spring he gets married for keeps and when the ice king cracks down through the birches and balsams there are from four to eight youngsters clamoring for groceries.

Nature forgot to teach the Little Guy how to hate and almost didn't teach him how to be afraid. He won't fight—so he has to work.

That's why he and all the other beavers build dams.

A beaver is a submersible woodchuck with a bigger displacement. Normally about the size of a well-grown Scottie, his sitting-up build is along the lines of a tenpin. He sits up a lot. He does a lot of two-footed walking. An average beaver is two and a half feet long, a foot high and will heft 50 pounds, although a big buster of 80 pounds is no startling exception. He's not exactly handsome in the Clark Gable sense, and except in hydraulic engineering he doesn't seem to be especially bright.

His back feet are webbed like a duck's, and his forefeet are little hands like a monkey's. Distinctive and generally misunderstood is his broad, scaly tail. This peculiar appendage, some ten inches in length and half as wide, is not a trowel, as some museum gazers suppose, but a rudder when swimming, a brace when sitting or standing, and above all, a means of transmitting bad news.

As soon as a beaver scents danger he spanks the water with that tail. On still days the ringing spat can be heard a quarter of a mile away and every beaver within earshot disappears.

Being a heavily furred citizen, he inhabits northern latitudes, and being amphibious, he resides in and near water, mostly in it, and never wanders far from it. His major diet is the bark of certain trees that grow along streams—poplar, alder, willow and swamp ash being his preference in about that order. Without these, he will die. Lily pads and water plants are an occasional entree, but bark is his staple.

Although big enough to fight, and armed with a personal sawmill and sharp claws, his disposition is so angelic that it's apparently never dawned upon him to battle it out with predators as they stalk him ashore or power-dive at him. Or maybe it's because he doesn't see very well in daylight.

Surprise a beaver on shore and he'll often run head on into a tree or a stump as he tries to make for his pond. And that's what he does make for against no matter what enemy. Clumsy and seemingly punch-drunk on land, he's grace itself in the water. He can dive and swim like a loon, or, closing his nostrils, relaxing his muscles and dropping his heartbeat from 100 to 50, he can sink like a flatiron and stay down 15 minutes, which is quite a trick for an animal as big as a dog.

However, if you keep him under much longer he'll drown. Water is vital to him. His entire existence rests on it and in it, yet he can live indefinitely out of it, and for only a limited period under it.

It's really the inevitability of the hard northern winter that makes the beaver build a dam. A beaver's routine is the truest long-range barometer ever devised. He's a citizen of the north, and north means winter, and winter means ice, and ice means no open water to plunge into for refuge. It means snow hard to track through for the cutting of bark. It means ravenous enemies able to stalk and even to sprint across what has been the pond before winter sets in. It means nowhere to duck and (Continued on page 59)

# Your Blood for the Wounded

By Ruth Carson

PHOTOGRAPHS BY IFOR THOMAS AT LEDERLE LABORATORIES AND BY LARRY MONAHAN

The use of blood plasma is one of the medical wonders of this war. In the last war we had to depend on whole-blood transfusion, which cannot be done under every emergency condition. Now blood plasma, collected by the American Red Cross, is aboard ships and on all the battle fronts. It comes in a neat little package, ready to use in two minutes' time, anywhere.

Three years ago the use of plasma was experimental. Today it is a proved success. Separated from the blood cells, plasma is dried and vacuum sealed. Unlike whole blood, it requires no typing, no refrigeration. It has the emergency life-giving qualities of whole blood.

"Astounding but true," says Rear Admiral Ross T. McIntire, Surgeon General of the Navy, "the Navy is losing less than one per cent of the wounded at Guadalcanal. Plasma," he adds, "is one of the greatest medical developments of the past century."

Tremendous amounts of blood plasma are needed. It has required as many as 22 transfusions to save the life of one man. Receiving now close to 50,000 pints of blood a week from donors, often from grateful service men, the Red Cross has stepped up its 1943 quota to 3,000,000 pints. Here is the story in pictures of what happens to your blood after you have donated it to the Red Cross.

1

2

PROCESS of blood donation (1) is painless. After medical examination, donor lies down, spot on arm is sterilized, anesthetized, needle inserted, bleeding takes about eight minutes for one pint. Afterward, donor feels cocky, proud. Many volunteer again. Within 24 hours, blood arrives in portable refrigerators at laboratory. Bottles of blood (2) ready to be examined for possible contamination. (3) Bottles of blood come out of machine which has separated plasma from blood cells by centrifugal force. Dried plasma must be completely free of red cells. (4) Samples of clear and cloudy plasma. Cloudy plasma is result of fatty foods eaten by donor. Donors are requested not to eat solid or fatty foods for four hours before giving blood, because too fatty plasma cannot be used. (5) Plasma is siphoned off several bot-

tles into one pool. After pooling, some plasma is further processed to isolate albumin portion, another valuable blood substitute. (6) Albumin ready for use. Shipped in liquid form, albumin does not require addition of any other material, takes up less space than dried plasma kit, yet does same lifesaving job. It takes over three units of plasma to make one of albumin, and the method of removing albumin is extremely intricate, requiring highly trained personnel. Therefore most plasma is dried after being put into final containers holding amount equivalent to that obtained from one bleeding. Like foods prepared for dehydration, it is first frozen to speed drying. (7) Freezing must take place within 72 hours after bleeding, is done by rotating bottles of plasma in trays of dry ice and alcohol. Frozen plasma looks like frozen orange juice.

Final drying takes place on these machines (8) by process called vacuum desiccation. Dried plasma looks about powdered milk. Vacuum-sealed bottle of dried plasma (9) along with needles and other material needed for transfusion. In another tin goes bottle of distilled water. They are packed together, a complete Reconstitution of plasma (9) takes about two minutes. One end of double-ended needle goes into stopper of diluent bottle, other end into stopper of plasma bottle.

(10) Landis D. Morris of Olar, South Carolina, wounded in action in North Africa, receives plasma transfusion at Walter Reed Hospital. Doctors say plasma transfusions here and abroad helped save his life. Morris, twenty-two, is a first lieutenant, Infantry, recently received Purple Heart decoration.

# KAYPEES DON'T FLY

BY ARCH WHITEHOUSE

ILLUSTRATED BY JO KOTULA

Meet Pvt. Flint. Armed only with a lowly spud, he soared into battle with such telling effect the Luft-waffe will think twice before engaging him again

WHEN the 47th Bombardment Squadron comes home and settles down to the horrors of peace somewhere in Tennessee, they'll probably erect an heroic statue of Private (2d Class) Albin Herkimer Flint in front of the Administration Building. Just Private Flint in his shirt sleeves, bearing a massive mурphy in one hand and a large service jackknife in the other.

K. P. duty seems to do things to a man. Any mess sergeant will swear that an excess of spud peeling, where a man is alone with his thoughts, continually thumbing the blade of a jackknife, is likely to nurture strange ideas or encourage flamboyant dreams. It sure did something to Private Flint.

Corporal Krause told me about this one afternoon when he came into the armament shed to see about a new drift for his No. 2 gun. Every time he tells it he either laughs like a banshee or he somehow mumbles it from a face that might pass as standard equipment for a professional pallbearer.

PRIVATE FLINT has a number running into about eight digits—which gives you some idea when they grabbed him. Not that he was an unwilling candidate, but right from the start little Albin wanted to fly and he didn't mind what he flew or where he flew it.

Instead, he was bounced through the Selective Service hopper and ejected out the other end to wind up under the cockerel eye of Sergeant MacColl in the Mess of the 47th. It seems that somewhere deep in Private Flint's history there was a short tenure of office behind the counter of a dog wagon in Blakely Falls.

"It's a good thing they never found out I used to deliver funeral wreaths, too," Private Flint had reflected on several occasions.

For weeks before they went overseas, Flint worked industriously at his calisthenics, broom duty and in putting the bee on anyone from the major down with reference to his learning to fly. He annoyed the mechanics, pestered the medical officer and wrote appealing notes on meat paper to the sergeant of the day.

Captain Frost of No. 1 Flight came as

near to settling Flint's mind as anyone when he put it this way: "Look here Flint. For the time being you're in the Mess. That can't be helped, but the minute we get a platoon or two of these Waacs to man the kitchen, I'll see what I can do about getting you a gunner's rating. How's that?"

Flint wasn't quite sure what this Waacs business meant, and there wasn't any answer to this new version of the old brush-off; but the strange word percolated through his memory long after the 47th had been bundled abroad. At any rate, they had cleared out long before any Waacs could move in and take over the chow program.

Private Flint rallied around Sergeant MacColl loyally while the squadron was settling down at Chuzzleton Priory which is in Rutlandshire and not far from a pub called The Spotted Dog. He hacked and gouged at the hefty British spuds, while Major Sprague eased the new Bastion B-39s through their first shakedown patrols.

Young Albin stood off beyond the girdle of glory and watched the newsreel men come in and take over, to perpetuate the activity of American bombing airmen. He wandered about, spud in hand, and listened while the bombardiers and gunners talked into a mike and made records to be broadcast the next night over the BBC.

"When we get some Waacs," he confided to a mechanic squatting on a bomb dolly, "I'm gonner go with Captain Frost as a gunner. I'll bet you I'll get me a 'Schmitter . . . an' go talk into that mike."

"Yeah?" sneered an Armament guy. "You'll get yourself a new spud-slasher—when you wear that one out."

There was another heart-warming ceremony to this overseas-squadron business which always left young Flint bubbling with pride and patriotism. This took place when each bombardier, escorted by two scuttle-helmeted sentries, armed with sub-machine guns, carried the secret bombsight in a special valise from the Administration Building to the oval doorway of each bomber. When the escort passed, Private Flint always felt the urge to stand at attention and salute.

(Continued on page 38)

"Get off those bombs, you fool!" the upper gunner yelled. But with a sudden swipe little Albin rammed the potato over the end of the copper tube

# ALL IN FOR VICTORY

BY HERB GRAFFIS

**Hollywood stars, on entertainment and bond-selling tours, take it on the chin from an enthusiastic, pushing public**

**W**HEN Hollywood's Pat O'Brien was putting on an Army show at Rantoul Field, Illinois, a surly soldier walked up to him and muttered, "Lemme sit down next to a draft dodger."

"Okay," O'Brien said. "But where's the draft dodger?"

"Why ain't *you* in?" the soldier asked.

"I was in the last one," Legionnaire O'Brien told him, "and they can have me for this one."

Other soldiers gathered around. "That guy's been beefing ever since he's been in," one of the group remarked, "and I'm fed up with it. I'll straighten him out first chance I get."

Pat laughed it off. "He'll get well."

Bing Crosby found himself in an upstate New York community to which he'd gone by government instruction, and at his own expense, to promote War Bond sales. He had been in Washington two days before, seeking advice on enlisting where he could do the most good, but had been told to continue the work he was doing. Bing was feeling low when he got up to northern New York, so he dropped into a tavern.

One of the customers was a soldier who had had too many. "You're Bing Crosby, ain'tcha?" he asked.

"Yep," said Bing.

The guy sneered. "I'm going over in a couple of weeks," he said, "to fight for lugs like you."

The insult froze action at the bar. Another soldier moved over to Crosby and volunteered to slug his fellow fighter. Crosby himself was twitching to go to bat, but he had to hold off the soldier who had come

in on his side. It wouldn't have looked good in the papers if Crosby had swung on a soldier in a saloon brawl; so all Bing could do was brush off the drunk and wonder why he hadn't obeyed his own impulse and got into a uniform.

The Hollywood boys and girls have really been taking a pounding in their bond-selling and camp-show trouping. You won't hear them complain out loud; they're always apprehensive that the public may consider them critical and ungrateful. But the film idols who have been hustled around the nation as bait for War Bond and Stamp buyers, and who have made all the stops between the Aleutians and England to entertain soldiers, sailors and Marines, have taken considerably more punishment than many members of the Armed Forces, and certainly more than a public trying to adjust itself to all sorts of rationing.

The illusion of youth many of the male stars put across on the screen draws wartime heat on them that they don't deserve. Most of Hollywood's favorites are forty or more—too old for training as combat personnel—and the majority are justifiably uninterested in desk jobs. Men who had the Jimmy Stewart and Clark Gable qualifications went in early at a rate comparing favorably with the enlistment rate of other industries. Those who haven't been taken are getting a steady campaign of headaches.

When they're on war service tours, the Hollywoodsmen seldom work less than eighteen hours a day. In addition, they can never be sure, after they've flopped numbly into a hotel bed, that they won't be awakened shortly thereafter by importunate ladies and gentlemen craving private audiences.

One night in a Michigan city, Jimmy Cagney was awakened by hammering on his hotel door accompanied by, "We gotta see Cagney." Jimmy dragged himself out of bed and admitted the visitors after they'd explained that they (Continued on page 22)

It takes a squad of Marines to help Philadelphia's police keep back the crowds when Hedy Lamarr arrives at the stage door. Bond-selling actresses consider themselves lucky if they escape without having souvenir hunters tear their clothes to ribbons

Even without her sarong, Dorothy Lamour, here exhibiting salesmanship in Portland, Me., is one of the leading bond s

With an audience of kids, Charles Laughton scrapped his pat address, substituted his own version of Mary Had a Little I

# MIKE MORAN'S MEN

By Frank D. Morris

In a midnight battle off Guadalcanal, the light cruiser Boise, aided by other ships, scored direct hits on six Jap cruisers and destroyers, two of them huskier than herself. The action lasted only twenty-seven minutes, but every one of those ships was sunk, and most of Mike Moran's men lived to tell the tale. This is the first of two articles

**I**RON MIKE MORAN was a happy Irishman. He was fixing for a fight. Leaning against the high shield on the flying bridge of the Boise, peering into a black velvet night, he knew that a thousand-odd men below were just as ready and eager for a fight as he was. Mike knew this because he had trained them himself for months.

In his tin hat and the aviator's zipper jacket he always wore, Mike looked like a fighter. His build was squat, husky, and his ruddy face ended in a protruding, determined chin. At the Naval Academy, Mike had done some boxing and more than half of his life had been spent in Navy fighting ships. He had always kept in good physical trim. Today, at forty-nine, he could still chin himself with one hand.

The Boise, a light cruiser, boiled along at twenty-five knots through a smooth sea ruffled only by long swells, holding her position in the column of light and heavy cruisers screened by destroyers. For days, the task group had waited impatiently just out of enemy scouting-plane range, waiting to land a Sunday punch on Japanese ships they knew had been disembarking troops at night on Guadalcanal. Reconnaissance reports hinted that another such landing party was scheduled this night, so the ships in the task group were hurrying to keep a date.

The Boise and her crew had a particular reason for wanting to keep this date—and soon. They wanted to throw off the label pinned on her by men in other Navy ships that had seen action. It wasn't a pretty label. They called her the Reluctant Dragon.

It wasn't the fault of Captain Moran or his men that she had barely missed a dozen scraps with the Japs. Things just happened that way. Before Pearl Harbor, the Boise had been cruising the Southwest Pacific for months. She was a hundred miles out of Manila when the first enemy bombers struck there. Balikpapan was attacked a day or so after she had left the harbor, and she hadn't been out of Macassar very long when the Japs let that port have it. The Boise had operated with the cruisers Marblehead and Houston and the carrier Langley before the latter two were sunk and the first badly battered. And it certainly was no fault of hers when she had to return to the West Coast for an overhaul.

Now the Reluctant Dragon was back in the war zone, skirting the tip of Cape Esperance and baring her teeth—six- and five-inch guns. Every man was at his battle station, and Iron Mike on the bridge knew the first name or nickname of them all.

Less than a half-hour before midnight, young Lieutenant Sam Forter—whose home town, of all places, is Boise, Idaho—was manning the main battery director in Spot One above the bridge. He'd been there for more than five hours, hopefully staring into black space. Now Sam blinked and spoke into his phone headset: "On the target!"

Captain Moran's reply was relayed through the gunnery officer standing beside him: "How many ships?"

"Seem to be five, sir."

"Pick out the biggest one and commence firing."

Iron Mike's order was followed a few seconds later by the roar of six-inch guns in the main battery below the flying bridge. All nine of them in the three forward turrets—plus two turrets aft—blazed away at the target Lieutenant Forter had picked out of the five available. The first salvo was a direct hit. Captain Moran knew that follow-up salvos were just as well aimed when he saw the target start blazing amidships and, in the brilliant light of that blaze, Lieutenant Forter's choice was justified. It was a Japanese heavy cruiser of either the Nachi or Kako class, mounting eight-inch guns in contrast to the Boise's six-inchers. The middleweight Boise had climbed into the ring with a light-heavy and scored a knockout in the first round.

For four minutes, the Boise's main battery poured hot steel into the blazing Jap. Most of the hits were amidships, and gradually the explosions and damage they caused cut her in two like a blowtorch slicing an iron bar. The heavy cruiser's guns were silenced, internal explosions rendered her helpless, and her screws were still turning on her up-ended stern when she sank. A heavy cloud of smoke formed a wreath on her grave as she went under.

"Shift target and resume firing!" Again Iron Mike barked an order to his gunnery officer, Lieutenant Commander J. J. Laffan.

That order was hardly necessary, for Lieutenant Forter in Spot One instantly had his director trained on a second target, a Jap destroyer, farther to the left of the cruiser just sunk, and the Boise's secondary battery of five-inch guns was giving it a working-over. Illumination from another blazing cruiser exposed the destroyer beautifully. The range was closing rapidly now, as the two opposing columns of ships closed in and started swapping short jabs.

## Sighted Jap. Sank Jap

Again the first shells fired by the Boise's guns hit straight and hard. Before many of them had been hurled at her, the Jap destroyer broke in two and in less than a minute she had disappeared permanently.

Ensign L. E. Davis, signal officer of the Boise, had never seen a more fascinating sight in his twenty-three years in the Navy. His description: "She looked just like an automobile going over the brow of a hill. She just slid under and went out of sight."

To the gun crews and the men on the directors, this was getting pleasantly monotonous. "Sighted Jap. Sank Jap." They were in the groove. The months of daily gun drills under Iron Mike Moran's relentless rule were understandable now. As soon as one target became

a shattered clay pigeon, another loomed up in the sights just waiting to be hit.

"Shift target and resume firing!"

The third victim was another Jap destroyer close astern of the one just destroyed. Both main and secondary batteries opened up on her and they were on the beam. They were still pounding her with five- and six-inch shells as she slid into smoke pouring from the other destroyers in the Jap force. The deluge of Boise gunfire was too much for her thin sides. She never came out of the smoke. There was plenty of illumination over the Japs then—three of their ships were ablaze, one of them with two fires burning brightly.

But the Boise herself wasn't shell-proof. About this time the signal bridge reported splashes on both port and starboard sides close aboard. These were straddles from an enemy heavy cruiser, a two-stacker, some distance ahead on the Boise's starboard bow. As Mike Moran's men fired on her, their current target, the Jap cruiser returned the fire with gusto. Splashes from straddles came nearer and nearer, throwing water over the Boise's decks and superstructure and anti-aircraft guns.

### Score for the Enemy

Finally, one of these shells, an eight-inch, didn't splash. It smacked into the Boise's starboard side just above the waterline and exploded in the crew's mess hall. Two lighter shells, probably five-inch, then hit the superstructure, and another pair pierced the side of the ship and exploded in the captain's cabin, wrecking the interior and setting it afire.

These hits were just the beginning of a duel that lasted four minutes. The heavier guns on the Jap cruiser continued to throw steel haymakers at the Boise, but fortunately most of the shells either screamed over the heads of the men on deck or fell short.

Meanwhile, the Boise's main and secondary batteries concentrated their fire on this fourth target, and Mike Moran had reason to be proud of the marksmanship of his gun crews. First, he saw a series of fires spring up on the Jap's deck, then there were several violent explosions aboard her, and this was the beginning of a very quick end for Target Number Four.

During all this hot action, the Boise also was proving she could take it. Below decks, repair parties led by Chief Carpenter Thomas were waging another battle against the fires and damage inflicted forward. The captain's cabin was a flaming shambles.

As Carpenter Thomas' men dragged their fire hoses in through the large hole the Jap shells had made in the bulkhead, they saw a twisted mass of metal furniture piled in the middle of the cabin, and everything inflammable in there was ablaze. Putting out a fire in a ship still being rocked by enemy shells is no choice assignment, but within five minutes, Carpenter Thomas reported the blaze was under control. A second fire farther aft in the mess hall was doused even more readily by another repair party.

Topside, the deck gunners were bearing the brunt of the enemy's return fire. Gun One, a five-inch, was put out of action by one of the hits, and her crew was hurled to the deck as shell fragments flew all around them. First-Class Seaman Pitzer, his knee mangled, was carried off to a battle dressing station. Sight-setter Lowry, on Gun One, felt a hot, sharp spray against his leg but he stuck at his post through the rest of the action. When he finally collapsed and was carried off,

"Mr. Amboy!" said a familiar voice above him. Jason's heart gave a sickening lurch. He stared at the plump little man who stood there

## FIVE WHO VANISHED

By George F. Worts

ILLUSTRATED BY GILBERT DARLING

### The Story Thus Far:

AWAKENED by a noise in his San Francisco apartment, Jason Amboy sees a girl—a stranger—in his bedroom. The girl knocks him out, steals some letters (from his brother, Wayne), and slips away. Jason's valet, an eccentric man whose name is Flack, follows her; he learns that she is Luana Topping of Hawaii.

Notified that Wayne—who has been working for the wealthy Grazzard family in Hawaii—has disappeared. Jason takes the first Hawaii-bound boat he can get. The head of the Grazzard clan—old Mrs. Hiram Grazzard ("Queen Bertha")—is on board. With her are Luana Topping; Lorrin Grazzard, Luana's fiancé; Channing Mace, manager of the Grazzard plantation, and his attractive wife, Natalie; and one or two others.

Luana Topping is a beautiful girl. Within a short time, Jason is in love with her. But, following a series of strange adventures, he strongly suspects that his brother has been murdered—by the Grazzards; and he trusts only one of the party: Natalie Mace. His suspicions are partly confirmed when a stowaway disappears and Natalie tells him that the fellow (Winfield Grazzard, the black sheep of the

family) and Wayne had been trying to blackmail the Grazzards!

To Jason's amazement, he finds Flack on board. Wearing a false mustache and using the name of "Rodney K. Kitchener," the man has numerous talks with his employer (in which he warns him to beware of the Grazzards)—and disappears.

Curiously, the ship's captain—Captain Horngold—discovers evidence which convinces him that Jason Amboy knows what has happened to "Kitchener." He sends for Jason, interrogates him (as well as some other witnesses). When Jason tells him the truth—that he is completely mystified by his valet's disappearance—Horngold has him put in the brig.

While he is there, Natalie Mace comes to him and has a talk with him. He is loath to believe that Wayne (whom he had loved) was dishonest; but Natalie is positive that he was. She tells him of one of the Grazzards—Uncle Colton—who is living on a small Hawaiian island, virtually a prisoner of Queen Bertha. Then, "The important thing," she says, "is that Uncle Colton, as a young man, did some scandalous thing in Burma and your brother and Winfield Grazzard found out what it was. I guessed that and I was right."

### VII

BECAUSE your husband said so?" Jason said quietly. "Has he any reason for lying?" Natalie cried.

"My dear girl, he has every reason in the world for lying. Doesn't he know—or suspect—you're seeing me? Don't you suppose he knows you're repeating all of this nonsense to me?"

The blond girl's face was suddenly pink. "Jason, it is not nonsense! I'm not a fool. I know Channing. He isn't making up any of it."

"Then he's repeating what he hears at headquarters."

Natalie stared at him a moment with her lips very thin, her eyes very large and round. "You can't be argued with," she said hotly. "You've made your mind up, you grabbed at some fantastic idea, just to save your pride—"

"You said," he interrupted her, "you had some of the information I wanted."

"But it isn't of any importance, Jason!

Stop being so proud! Be sensible. Your brother—"

"Maybe," Jason again stopped her, "my brother had the same fantastic ideas I have. What did you hear?"

"All right, Jason," Natalie said, with the air of a girl trying somewhat nobly to control herself. "I talked to Luana, too. Her father and mother were drowned on either the ninth or the tenth of March, 1921. That was easy. But she won't say why she came late to dinner last night. At least, she's sticking to her story that she was talking with some people and didn't realize how late it was."

"Find out who these people are."

"I tried to. She evaded it. She's still terribly upset about you. And Lorrin is having a fit because he knows why."

"Work on her," Jason said.

"Don't be so grim!" Natalie wailed.

"Was Winfield Grazzard in the Engineers?"

## ***GOOD AREN'T THEY?***

You bet they are! And what's more, Milky Way candy bars are  
as wholesome and nourishing as they are delicious. No  
wonder Milky Way is the favorite  
energy refreshment of young and old! Rich milk chocolate,  
smooth creamy caramel, and the luscious center of  
chocolate nougat flavored with real malted  
milk blend into that delightful taste  
found only in a Milky Way.

## All In for Victory

Continued from page 17

were war-factory workers on a swing shift and could see their ranking star only when they were knocking off work to go home. Although it was the first night in weeks that Cagney had got to bed at a civilized hour, the lads stayed for breakfast. They went home to sleep; Cagney shaved, showered and got ready for a bond-drive breakfast previously arranged by a local committee.

During last September, the film industry had 337 actors and actresses engaged in selling bonds and providing entertainment for the Armed Forces. In addition to the performers, the business had approximately 1,500 executives and press agents and others devoting virtually all their waking hours to the campaign to sell \$1,000,000,000 worth of bonds and stamps in more than three hundred American cities; to arranging for shows in seventy U. S. camps; the "personal appearances" of 184 cinema luminaries; and shows in Alaska, Ireland, England and the Caribbean area. During this one month, the players who were in the Stars Over America bond blitz, conducted for the Treasury Department, traveled more than 21,000 miles.

It was a lesson in geography and a postgraduate course in sleeplessness and slug-nuttiness for the men and women of filmdom. From the clamorous populace, the screen nobility saw more flares of temperament than Hollywood has experienced in a decade.

### The Price of Popularity

Politicians, industrial leaders, society women, Army and Navy officers and the ordinary solid citizen shoved, jolted, connived and strong-armed to capture spotlights, newspaper pictures, and seats at the right hands of thrones set up in various localities for the wandering idols. Charles Einfeld, Warner Brothers publicity chief, directed the Stars Over America tours. Einfeld, under what normally is considered delirium by Hollywood, manages to preserve a deep tranquillity. But he had butterflies in his midriff before the month of September, 1942, and passed into cinema history.

The doctors did get several whose energies were unequal to the strain of the Thanks a Billion sales campaign. Greer Garson collapsed from nervous exhaustion. Bette Davis was nearly a basket case when the campaign was completed and she was hauled off to the desert to convalesce. Rita Hayworth broke down with a severe case of bond-tour shock. When she was carried off to be repaired, threats of cancellation of War Bond rallies came from Wisconsin points to which she'd been scheduled. Eventually a desperate and eloquent genius managed to convince anguished committees that the primary purpose of the tour was to finance the nation's fighting rather than give an eager public chances to gaze upon the luscious Hayworth.

Generally, provisions were made by Red Cross nursing class students' services to attend crowd casualties. Excellent training was given the willing women, although the victims, in some instances, did not have complete confidence in the proffered services.

Spectators at a golf match in which Bing Crosby and Bob Hope were playing as an Army post recreation fund benefit were shocked to see a youngster partially impale himself on an iron fence he had attempted to scale in avoiding payment of admission.

A young woman snappily attired in a Red Cross uniform rushed around through the gate, speeding to administer first aid to the profusely bleeding kid. He was rolling in fright and pain on the ground when he saw the Red Cross woman headed his way, a stern look on her features. That was enough for the boy. He jumped to his feet and ran down the road with the ministering angel in desperate pursuit. Whether or not he ever got Red Cross emergency service, the crowd never knew; they quickly returned their attention to Messrs. Crosby and Hope.

In an Eastern city, one of the throng crowding around a picture celebrity on a bond campaign appearance was shoved off a curb and badly injured his knee. A freshly uniformed Red Cross lady bucked through the crush to put her first-aid training into use.

The patient's knee was swelling rapidly. The pinch-hitting nurse dominated the situation and had the patient's pants removed to get at the injury. A bystander held the trousers while the first aid was administered; then the casualty arose on one leg and demanded the return of his pants. He got them back, but he never recovered the comfortably padded wallet they had contained.

By the grace of the gods, there have been only two major casualties of the picture stars on tour. One victim was Carole Lombard; the other was Buck Jones, who died from burns received in the recent Boston tragedy. There have been narrow escapes by the hundreds, chiefly during wild drives by strictly amateur chauffeurs who have contended strenuously for the job of piloting Hollywood's precious cargo.

Parades were prohibited by Treasury Department edict during the September drive, but the picture people had to do what the local committees planned, and they usually planned parades. Jimmy Cagney seemed to be the pet prey of people who had to have a parade. Jimmy had to perch on the folded top of many an automobile waving hands to the populace as his car advanced by jerks.

### An Anchor for Cagney

Shortly before adverse weather cut the parades out of programs, Cagney worked out a life-saving system. A stooge of the Cagney party rode in the rear seat, sitting on Jimmy's toes. This anchor man, a frightened-looking press agent, was identified by the crowds as Cagney's bodyguard, Killer Somebody-or-other. At any rate, he had to finish each parade day by rubbing himself down after Cagney had kicked him calloused.

The picture people seem to be regarded as ambulating souvenir counters. Cagney had fifty-four handkerchiefs snatched from the breast pocket of his coat during a month of the Thanks a Billion push. Brazen visitors who get into the hotel rooms of the Hollywood rovers take to actors' neckties as public property. Only under lock is personal property safe from the trophy hunters.

Actresses on the bond-selling circuit consider themselves fortunate if they can escape from a swarming public without having dresses torn to tatters and taken away as mementos.

Some apparel has gone to finance the nation's fighters. Irene Dunne, shoving along a bond sale by offering her hat as a bonus for a \$50,000 bond purchase, got action so quickly that she auctioned off

Short Snorters in the Savoy Bar (l. to r.): Lt. Edwin Noyes, Capt. Bill Barrett, Miss Jean Nicholl, Lt. Col. Anderson, Lt. John Melady

CAPA

## Are You a Short Snorter?

By Corey Ford and Alastair MacBain

A GROUP of Army fliers in the grill of the Savoy Hotel in London reach for their wallets hastily, and each man produces a dollar bill scrawled with signatures. Two Ferrying Command pilots meet at Shephard's Hotel in Cairo and solemnly sign each other's greenbacks.

At the Baranof bar in Juneau, a very red-faced admiral searches his pocket-book, turns his pockets inside out and then counts the circle of grinning faces. "All right," he tells the bartender resignedly, "that's twelve drinks on me."

In Australia and China and India, at a remote Army staging field in Africa, aboard a Navy carrier in the Aleutians, at the Nevada Grill in Nome, you'll find these signed dollar bills displayed today wherever flying men gather; for this is the certificate of the Short Snorters, the thoroughly unscrupulous organization of airmen the world over.

Already the British and Canadian and Russian air forces have taken it up with enthusiasm. The Chungking chapter is growing fast.

The rules are simple. Three Short Snorters in good standing must be present in order to initiate a new member. In exchange for a token fee of one dollar each (supplied by the initiate), they inscribe their signatures on a crisp dollar bill (likewise supplied by the initiate) and declare him in.

After that, he sets out enthusiastically to get his three bucks back by challenging every Short Snorter whom he meets. If the challenged Short Snorter cannot produce his own certificate of membership within the allotted time of two minutes, he must pay a penalty of either one dollar or a drink—optional with the challenger.

All's fair in Short Snorting. A shower room, for example, is a perfectly ethical place in which to trap the unwary. Recently, we were cleaned out at Shaw Field when a group of Army pilots hid our pants while we were asleep.

There are no scheduled meetings, no treasurer's reports, no notices, no lists of members, although conservative es-

timates place the membership today around a quarter of a million. You'll find some illustrious Short Snorters among the ranks. There's General H. H. Arnold, chief of the U. S. Army Air Forces; General Eisenhower, who was initiated while in the clipper on his way to take command of our European forces; General Carl Spaatz, in charge of our Air Forces over there; General Ira Eaker, General Jimmy Doolittle, Alaska's General Buckner (from whom we secured a dollar last summer in Anchorage), Eddie Rickenbacker, the late Will Rogers and Wiley Post, Commander Jack Tate, Collier's Jim Marshall and Bill Courtney (we also got a buck out of Bill) and, of course, every veteran star-route pilot in Alaska—Al Monson, Robbie Robbins, Joe Barrows, Bill Lavery, Bert Rouff, Chris Christiansen, Sig Wein, Jerry Jones, Joe Crosson.

Joe Crosson is generally credited with founding the organization in Fairbanks, Alaska, one long winter evening back in 1925. His own membership certificate is now over six feet long, with all the signed bills taped together.

They still recall the nightshirt party which Joe gave in Fairbanks for a number of unsuspecting pals, greeting each pajamaed arrival with a bland inquiry: "By the way, have you got a Short Snorter bill with you?" They claim the evening netted Joe sixty-three dollars.

On the other hand, Joe recalls being hooked just once. He was swimming with a group of friends in Seattle, and they managed to lure him out to the float. At a given signal, each member of the party reached into the pocket of his bathing trunks, and produced his Short Snorter bill, carefully sealed in a waterproof envelope. Joe paid.

Perhaps the best advice was adopted by a recently initiated Army lieutenant in Australia, whose absent-mindedness was running him into debt fast. He solved it by having his Short Snorter bill neatly tattooed on his chest. Says it's a little trouble opening his shirt every time, but he hasn't had to pay for a drink since. ★★★

her earrings, then her handkerchief; but called the auctioning off when bids were made on her shoes and stockings. The auction method was highly effective in hiking sales, the bonuses ranging from actresses' kisses to Bill Robinson's golden dancing shoes. Bill's shoes went with a \$50,000 bond purchase made by a Chicagoan.

Those kiss auctions, innocent survivors of husking bees, left behind them family arguments you wouldn't believe could happen off the funny pages. Before Hollywood put on its big drive, it had conducted several successful bond-sales schemes of limited scope. At one of these affairs, in a Middle Western city, a woman who bought a \$500 bond was publicly kissed by Cary Grant. This public consummation of many a female's aspiration either went to the good woman's head or it didn't. Her husband never could be sure if she was jesting when she would say to him, "After Cary Grant, you? Phooey!"

Then Hedy Lamarr went into action with the bond blitzers. A local committee calculated the husband of the woman Grant had kissed would be good for a \$25,000 bond purchase if he could kiss the gorgeous Hedy. The idea was delicately mentioned to Lamarr.

"For a \$25,000 bond, why not?" Miss Lamarr agreed.

The crucial moment came. After the citizen had signed for \$25,000 in bonds, Hedy Lamarr pursed her lips, and the purchaser fainted.

#### Record Sale of Records

Bob Hope and Bing Crosby worked the auction plan probably more effectively than any other of the tourists. After their golf matches, Hope would run up bond bids by giving the high bidders the privilege of naming songs Crosby would sing. At Houston, Texas, after Crosby and Hope had completed a golf match with two noted pros, the Crosby record of Deep In the Heart of Texas was auctioned off for a \$1,500 bond, and another recording, The Eyes of Texas Are Upon You, went as a premium with a \$750 bond. Hope made it clear to the crowd that the records could have been bought at any Houston music store for 35 cents.

During one of his journeys as a bond salesman, Bob slipped the leash of the committee in Boston to eat at one of his favorite sea-food establishments. After he'd finished dinner, he found that the

throng around the theater blocked all foot approaches, expecting his arrival by car. Hope struggled to get through the crowd, kidding those who resented his elbowing by cracking, "What's that punk got that I ain't?"

One angry customer gave Hope an answer: "He ain't got five knuckles in his nose you're gonna get if you shove me again, ya chump, ya!"

The youngsters were a problem too. Squirring and scampering, yelling and demanding autographs, they had the celebrities suffering from the screaming-neemies. In one city, Charles Laughton was programmed to deliver a dramatic patriotic address written by Ben Hecht.

Laughton surveyed a huge and noisy mob of moppets and substituted Mary Had a Little Lamb. The urchins had heard nothing before and probably will hear nothing hereafter like the Laughton rendition of the Mary-and-the-mutton saga.

The players finished their concerted efforts punchy but proud. How punchy they got toward the end was made evident early one morning as Jimmy Cagney and Pat O'Brien met by chance in a railroad station at Detroit. Both of them were dizzy from lack of sleep, but before they'd unclasped hands in greeting, they were ganged for autographs.

An eager old lady of the type that keeps the Travelers' Aid Society busy held out a railroad timetable for Cagney to autograph. Talking to Pat, Cagney unconsciously signed O'Brien's name. The old woman looked at the signature. She peered at O'Brien and at Cagney. Then she turned away and jerked her thumb over her shoulder at Jimmy.

"The man," she publicly declared, "has gone nutty from too much Hollywood high life."

The picture people are proud that their campaign accounted for almost a sixth of the total sales of the biggest month's War Bond business in the nation's history. But they're also humbly grateful and somewhat mystified that they have gone through the nearest-to-combat campaigning that has fallen to the lot of any class of American civilians in wartime. The cinema rangers aren't bragging any about surviving grueling routines; they are the first to point out that thousands of unknown American men and nurses in combat zones are doing the one job deserving of headline billing. All else is merely carrying water to the elephant in this show.

THE END

## No war job for Nora

**NORA NEEDS A LAXATIVE.** But she's due to take a test for a job as a welder at 10.

"Relief will have to wait," Nora decides. She doesn't know about quick-acting Sal Hepatica.

**FEELING SLUGGISH** due to symptoms of constipation, Nora flubs her welding test.

"In times like these, folks ought to keep fit," Nora hears somebody whisper as she starts to leave.

## Mildred makes the grade

**MILDRED NEEDS A LAXATIVE.** She's taking a test for a welding job, too.

"Never put off till tonight the laxative you need this morning," says Mildred. So she takes Sal Hepatica, knowing that it usually acts within an hour.

**"GOOD WORK,"** approves the employment manager as Mildred zips through her trial job like an old hand. "Report for work tomorrow morning."

"It's lucky I took that Sal Hepatica," thinks Mildred, smiling.

## Whenever you need a laxative —take gentle, *speedy* Sal Hepatica

It's YOUR DUTY to keep fit in these trying times. Never put off till tonight the laxative you need this morning.

Take *speedy*, gentle Sal Hepatica. 3 out

of 5 doctors, recently interviewed, recommend it.

No discomfort. No griping. Sal Hepatica acts by attracting needed liquid bulk

to the intestinal tract. Helps counteract excess gastric acidity, too; and so helps turn a sour stomach sweet again.

Try Sal Hepatica, the next time you need a laxative.

Here are the active ingredients of Sal Hepatica: sodium sulphate, sodium chloride, sodium phosphate, lithium carbonate, sodium bicarbonate, tartaric acid. Your doctor knows best. Ask him about the efficacy of this prescription.

## Fourteen Dollars and a Girl

By Josephine Bentham

ILLUSTRATED BY HARRY BECKHOFF

How a heart full of love can be drained of same all in the twinkling of an eye. Stern warning to all girls who would frivol at a warrior's expense

HILARY CRAIG flexed his knees, the better to see himself in the mirror over his bureau. He had grown tall since the mirror had been hung from that particular nail on the wall, but it had never occurred to him to put the nail up a few inches. Casually he parted a mop of unruly brown hair and combed it back from a brow that was contorted now, in the effort to do

justice to a ballad he was shouting at himself:

*"I'll take a horse and a winding trail—  
Pack up my grub in the old dinner pail  
Put on my spurs an' say goodbye to the  
frail . . ."*

He broke off without embarrassment, seeing his mother. "Hiyah, Mom!" he said. "Keeping up your strength?"

"I seem to be, darling." Her smile lingered for a moment. "You should do something with that voice of yours. I don't know what."

He jerked up the knot in his tie and looked in critical approval at the line of his jaw. He was aware of his mother's eyes, resting on him in gentle amuse-

ment. But they had rested on him in just that way for the seventeen years of his life.

"Say!" he said. "Do you want to advance me fifty cents?"

"It doesn't seem practical," she told him amiably. "You'll be close to ninety by the time you've caught up with the advances you've already had—and I, probably, will be resting in Abraham's bosom."

"Where's that?"

"Never mind. Why don't you get out and earn some money?"

"But look! When do I have the time? I hope you realize I've been busy, Mom. I hope you realize I've been personally responsible for half a ton of junk for the junk collection in this town!"

"Well, yes, but that was a week ago," she said. "It isn't going to be the achievement of a lifetime, is it? You aren't going to rest on it?"

"Mom, you keep kidding me. I'll get an inferiority complex."

"Not you. . . . Why don't you get a job with old Mrs. Nesbit? I heard she needed a boy, and they say she pays the best wages in town."

"Fifty cents an hour. I know all about it, Mom. Old Lady Nesbit's got chickens. But she's the kind of old lady that anybody would be at the end of their rope before they'd work for her." Hilary shook his head. "A pretty terrible thing for an old lady to get a reputation like that. Don't you think so?"

# This is the Mayor

of BLUE RIBBON TOWN

...Who said to his neighbors: "Come on-and ride down"

"YOU know," said Mayor Peters,  
"I'm thanking my stars,  
That people have taken  
to sharing their cars,  
For somehow the spirit  
of helping a fellow  
Has made all the neighbors  
more friendly, more mellow."

"WE frequently stop on the way  
back from town  
At the home of a Smith or a  
Jones or a Brown,  
And top off the day with a  
bottle of Pabst,  
Formality, stiffness —  
completely collapsed.

"NOW frankly, there's nothing so  
nice and befriending  
As Blue Ribbon Beer with its  
*full-flavor blending* —  
That softer and kindlier taste,  
Pabst obtains,  
By blending it just like the  
finest champagnes."

Now more than ever —  
A Symbol of  
Friendly Companionship

Now that wartime has brought a return to simple pleasures in Blue Ribbon Town (your town — everybody's town), Pabst Blue Ribbon Beer has become, more than ever, the symbol of friendly companionship. Enjoy that softer, kindlier taste — obtained by the FULL-FLAVOR BLENDING of 33 master brews.

Pabst is blended like fine champagnes — to give you *all* the delicious taste tones of a well-rounded beer. There is no finer, friendlier beer in all the world than Pabst Blue Ribbon.

**33 FINE BREWS BLENDED**  
*into One Great Beer*

In standard 12 ounce and full quart size bottles.  
Also on draught at better places everywhere.

# They Can't Hurt Us, Kid

By Pete Pedersen

ILLUSTRATED BY WILLIAM REUSSWIG

The master of them all, Ring Lardner, might have written the story of Danny Gallaher, who paid an exorbitant price for being young and brave

THE first time Pudge Golder saw the kid was at Mart Frizbee's swat palace on Ninth Street. Pudge was browsing among the bums and the main eventers and the broken-down handlers when he heard the low staccato of the light bag. Slowly the tempo increased, and a cold chill ran down Pudge's backbone, as it always did when he recognized a master at work.

The two sparring in the ring stopped to stare. Pudge hesitated, turned to stare

also at the composer of such powerful music. There he was—young, white, powerful, vital. With the face of a choir boy and the body of a Greek god, he grinned in the joy of his creation as he beat his primitive tattoo on the bag. He was everything fresh and free for those few minutes. He put on a few twists with his elbows and finished with a tremendous burst that brought dust from the rafters.

He stood exultant, watching the bag

swing crazily to rest. Then the grin left his face and he looked almost bewildered as he noted the stares of the punks and the champs. He went to work on the heavy bag.

The grunting of a pair in the ring and the low hum of the railroads rose again. Pudge followed the kid with his eyes. He wasn't much with the big bag. He didn't know how to set himself for a right, and his feet got tangled when he tried to throw a left hook. Finally the kid draped a towel around his neck and danced off to a shower.

Pudge watched a pair of heavies maul through three slow rounds. He wondered how long it would take them to learn to jab with a left and cross with a right.

"How yuh like the dark boy?" It was Mart Frizbee. "He can hit, Pudge. Hit like Maxie Baer."

"Yeah? How much yuh pay a guy to stand still long enough so's he can belt him one?"

"He's a heavy, yuh know, Pudge. Yuh gotta give 'em time to come around."

"Yeah. I know. How's about the other boy that worked on the light bag? I'd like to see some more of him."

"Sure, Pudge, sure. He drops in every week to work on the bag. He'd be a natural for you at that. Remember Johnny Gallaher? You oughta. This is his brother Danny. He's a nice-looking boy . . ."

Frizbee's voice trailed on. Pudge Golder wasn't listening. Johnny Gallaher . . . the Fighting Irishman. His champion. Golder's boy. Johnny was dead. He'd been dead, let's see, seven years now. He'd died as he lived—throwing punches to the end, taking a half dozen to land one, and grinning through his broken face as he fell.

"I wanna see the kid," Pudge said. "I wanna see him right now."

"Sure, Pudge, sure."

DANNY'S body glowed as he rubbed down. He whistled an old Irish tune. Pudge remembered Johnny Gallaher whistling the same tune as he warmed up before a fight.

"Say, Danny," Mart Frizbee said. "Here's a guy that wants to meet yuh. Danny, this is Pudge Golder."

The kid's whistling stopped. He flushed to the roots of his short-cropped blond hair. Pudge didn't crack a muscle of his large stern face. He stuck out a meaty paw.

"Hiya, kid."

Almost solemnly Danny took the proffered hand. "Glad to meetcha, Mr. Golder. I was hoping I would, some day."

"Johnny never told me . . . I mean about him having a younger brother. Where'd yuh learn to punch the bag like that, kid?"

"Johnny rigged one up in the basement when I was little," the kid stammered. "Told me to stick to that bag till I could make it sing. Said he'd get me a robe and some gloves when I got

(Continued on page 54)

Willard turned, set himself, threw three left jabs to Johnny's unprotected face, then crossed with a right that could be heard in the galleries

# This might have been a scalpel!

STEEL that might have been a surgeon's life-saving scalpel . . . hands that might be working to attain a surgeon's skill . . . both have been forced into war.

This is not our choice . . . it is our necessity.

Only victory can bring our young men back to their homes. We must hasten the day.

You as an American have made this nation's industries strong by demanding ever better products in time of peace. That strength is strength for all of us today.

The skill and experience you made possible are turning out a flood of war material. The Texas Company is pouring forth vast quantities of 100-octane gasoline, special chemicals for making explosives and synthetic rubber and other war products.

Let's hurry victory . . . by working hard . . . pulling in our belts on food . . . buying war stamps and bonds . . . giving up pleasure driving . . . keeping under 35 . . . saving our tires and gasoline.

Let's speed the day when we can again put peaceful steel in the hands of our young men, not to destroy, but to create.

## China Flight

Continued from page 12

His eyes were on Jenny's upturned face. Suddenly they were like one family, the three Americans, strangers until an hour ago, and now close because they were alone in a world of enemies. And this beautiful girl, he thought, this lovely thing—how could she be safe?

"I wish you two could be together," he said earnestly. "I wish you would look after her, Mrs. Shipman. Somehow I believe you could."

The guards were beginning to growl around them.

Mrs. Shipman turned to Jenny: "Look, dearie, if you should get the chance, you could come to my place. It's right on the edge of the Chinese city and there are all sorts of ways out of my back door. I shan't run away, of course—I've got my girls to think of—but I've helped a good many to run out of that back door when their owners were coming in the front door. It's not far from the Willow Teahouse, child—there's a big Confucian temple and I'm right across the street from the back of that. You'll know the house because I have an American knocker on my gate—it's a Cape Cod knocker—a fisherman, and he raises his hand and knocks—it's a cute thing—"

THE guards were shoving in now, and pushing Daniel away. Two guards prodded him and one of them lifted his foot and kicked him on the ankles. Daniel stopped and squared his fists.

"Cut that out—" he began.

But Jenny cried out to him: "Oh, no, don't! Oh, please—you don't know how awful they are! I've seen the things they do to Chinese."

Before she could finish they had hustled him across the room and through a door.

Mrs. Shipman touched her arm. "Is he your young man, dear?" she asked in the gentlest voice.

Jenny started. "Mine? I? Oh, no—I never saw him before, but he's American. I can't bear for him to be hurt—needlessly."

"They ain't goin' to dare to hurt us,"

Mrs. Shipman said cheerfully. They walked together side by side to the door ahead. "Don't you go gettin' worried. Soon they'll be askin' from America where everybody is—"

"Nobody knows where I am," the girl said sadly. "The paper thinks I am on my way to India. I ought to be—and I thought I had everything settled. But they've held up my passport again and again. Every day they promised it would be ready the next morning. Three days ago I had it and I cabled home that I was on my way. Then when I was getting on the ship I was stopped—something was wrong with something—I can't read Japanese. But I was put off again, and now—Pearl Harbor."

The two remaining guards pushed between them and parted them.

"You remember my address, honey!" Mrs. Shipman shouted, over the tin helmet of her guard.

IN THE room which the Americans had left, Shigo stood by the window looking over Shanghai. His office was in the highest building that had been left standing after the bombing and it was now much higher than anything else in the city. What a useless devastation war was, he thought! His mind ran over the great cities he had visited and so enjoyed—London, Paris, Berlin, Warsaw, New York. Of them all only New York was as it had always been, and he was

angered at the thought. All those other cities war had mutilated, and why should that one arrogant American city, center of the most arrogant people on earth, be left standing?

"It is the one city I would not regret seeing in ruins," he thought. "It is in New York alone that one is kept out of the best night clubs."

Yes, his superiors were quite wrong when they said the Americans were a naïve and childlike people who could easily be put into confusion. The Americans were the most stubbornly proud people of all. See how that young man had held up his head, despising him, Shigo Kuyoshi, merely because he was an Oriental! Even though the man was

picable, although actually it was the foolish old man's fault. He should have understood that a guard is a soldier, and he is not to be passed as though he had no gun. True, the old man was deaf, but how was the guard to know that?

He sighed, and a delicate vein on his temple throbbed. The Japanese were so misunderstood, everywhere!

"But we are a complex people," he thought broodingly. "I, for example, I am complex. I do not understand myself. Why do I think of that American girl? It will only complicate my already complex life."

But he continued to think of her sadly. She had looked very beautiful this morning, so calm, so graceful. She had been

"Sir, she has just come in and gone to her room."

"This is the Japanese Foreign Office speaking. She is interned, you understand. All Americans are interned who are not imprisoned. She is to be allowed the freedom of the grounds but no more."

"Sir, I understand," the Eurasian clerk's voice was breathless.

"If there are any communications, they are to be reported to me direct."

"I promise, sir!"

He hesitated, then he said firmly: "I may be there myself, perhaps today or tomorrow, to question her further."

"Certainly, sir," the clerk's voice piped in his ear.

He hung up the receiver. "O fool that I am," he muttered. He banged a table bell and an obsequious Japanese girl secretary fluttered in, her shoulders hunched in humility. He turned his eyes away from her in loathing. Why were Japanese women such servile slaves? They tempted a man's foot to kick them!

"Take down this report," he said harshly. "Three Americans today were detained. . . ."
